"But I kept them in my pocket; and after the mine was abandoned, and we had all gone to Tucson, I showed one of the stones to an old German jeweller who used to keep a shop on the corner there, beyond the barracks, and asked him how much he would give me for it. He examined it a long while and tried to find out what I thought it was, where I got it, and so on. But I laughed and kept still.

"At last he made an offer of three dollars for it. I knew then that the stone had some real value, and, putting it in my pocket, I went to another shop. In fact, I offered it in several places; and an army officer, a captain, told me, later in the day, that the stone was a topaz. The captain was of the opinion that so fine a topaz was worth from thirty to fifty dollars in New York city.

"Two months afterwards I sold three of the

Digitized by Google

stones for twenty-five dollars apiece in Santa Fé; and I then resolved to go back to the mine and examine the ants'-nests.

"I considered the plan for some weeks. At first I thought of taking a party with me, but finally decided to go alone, although the presence of the hostile Apaches in the mountains made prospecting an extremely dangerous proceeding.

"From the Top-knot Mine, where I finally outfitted for my start, the distance was about forty miles. I made it in two nights' travel, with thirty pounds' weight of ham and hard-tack on my back. I carried a coarse sieve, a navy pistol and a Sharps' rifle.

"The people at the Top-knot thought that I was starting on a general prospecting trip; and they made bets of three to one, that the Apaches would get me.

"The trail over which the mine machinery had been hauled to the Twin Mesa was easily followed; but I found that the Indians had burned the mill. As I looked about the scene of my former labors the place wore a very desolate aspect, in the chilly gray of that early September morning.

"The battery of stamps had fallen over; and the tubular end of the boiler, which had been shored up on blockings, had settled down the hill-side, leaving the fire-box end tilted almost to an upright position.

"I looked down into the fire-box, where I had formerly thrown so many six-foot logs of mesquit. The furnace door was now rusty, and creaked dismally on its hinges. The interior of an old fire-box is not an inviting place; but I had often been inside this one, and it now occurred to me, since there was no other cuddy, that I might put my provisions in it, to keep them from the ants, and perhaps rig up a wicky for myself near by.

"With this in view, I laid down my gun. Then, unstrapping my heavy pack, I lowered it into the fire-box. It slid down upon the mass of old ashes, the ham upon the hard bread. As it was now out of my reach, I got in myself, to arrange my improvised pantry a little more to my liking.

"I had been in there, out of sight, for about a minute, when I was startled—and you can imagine, gentlemen, how much startled—to hear a gruff 'How!' apparently close beside the old boiler.

"I was so much taken by surprise, that I popped my head out without stopping to think, and there I saw two of those painted Apaches, standing within twenty feet of the old boiler-head. They had picked up my gun, and were laughing at my predicament.

"Very likely my astonished and terrified countenance was quite sufficient to excite their mirth. They were sure they had me caught; and it was plain that they intended to amuse themselves at my expense.

"The fact was that these two Apaches had been camping for the night, with a band of stolen horses, among the bushes on the creek a few steps farther up the hollow. I suppose they had heard the creaking of the old furnace door, and had stolen upon me the moment they saw me get into the fire-box.

"I knew that they would show me no mercy; and I had no doubt that my last hour had come. Yet the situation was not quite so bad as it appeared, for my pistol was still in my belt, and as only my head was out of the door-hole, I could draw the revolver without being seen.

"I have no doubt that I looked frightened. Both the savages had guns. They did not point their pieces at me, however, but stood and laughed, exclaiming 'Ho! ho!' and 'How do, brodder?' for they understood a good many English words.

"'Ho, brodder, come out!' said one of them, straightening his painted visage at last.

"Beginning to collect my scattered wits a little, I shook my head, dejectedly. Then they laughed again; and the other said, '*No tira!* No shoot! No hurt brodder. Brodder come out.'

"They were very large Indians, and hideously painted. I was somewhat boyish in appearance at that time and very badly frightened, so that they enjoyed my looks of terror exceedingly. I thought they would burst with laughter. It was the fun of the cat with the mouse.

"I knew enough of their cruelty to be perfectly certain, that, if I should attempt to clamber out, they would shoot me before my feet touched the ground outside. My only chance lay in using my revolver before they discovered that I had one.

"If I had been pusillanimous enough to drop my pistol inside the fire-box and creep forth, to surrender, I should, if spared for the time being, have been saved only for torture and a horrible death a few hours or days later.

"It was my life or theirs, as I knew from the outset.

"I parleyed a little, trying to summon all my nerve for quick work when the moment came for it.

"'*No tira!*' I said, questioningly.

"'*No tira*,' they replied, laughing.

"'All right,' I replied, after appearing to hesitate a little. 'Lay down gun.'

"I made signs to them to put their guns on the ground.

"Still laughing, and after exchanging a word or two in their own language, one of them laid down his gun, while the other, retiring a step behind him, covertly cocked his own piece.

"'*Bueno!*' (Good,) I said, pretending not to see anything suspicious in this. 'Indian now brodder. White man brodder.'

"I then put my left arm out of the hole, drew myself up a little, and, raising my right hand swiftly through the orifice beside my body, shot the savage who held the musket before he could level his piece.

"With a yell of surprise the foremost savage caught up his gun; but as he cocked it, I fired upon him and brought him to the ground."

"A cool bit of work," observed one of the little party of listeners.

"Well, I don't know about the cool part," replied the narrator. "My recollection is that I was terribly scared. I felt decidedly thankful that I had escaped the two savages.

"But I did not know how many more there might be close by. I jumped out quickly, I assure you picked up the loaded guns, and then lay behind the boiler for an hour, on the lookout.

"But these two were all there were in the vicinity. I found their camp and horses, later in the forenoon; and turned the horses loose—for I knew I could not get down to the post-road with them.

"Although I was about the mine for a week, sifting over those ant-hills, early and late, I saw no more Apaches."

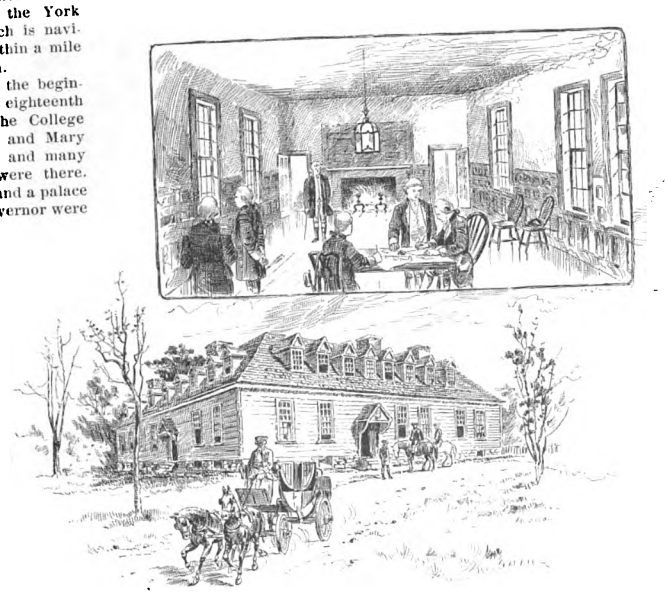
"And the topazes?" I inquired.

"I found a hundred and forty-two more of those stones," was the reply; "and the money that I realized from them was what first set me on my feet in the Territory."

For the Companion.

HISTORIC HOUSES.

The Raleigh Tavern.



By Benson J. Lossing.

Williamsburg, the oldest incorporated town in Virginia, was settled in 1632, and was known as "The Middle Plantation," being half-way between the James and York Rivers. It became the seat of government of Virginia in 1678.

Toward the close of the seventeenth century a college was established there by a charter, with endowments of twenty thousand acres of land and the receipt from certain customs duties, by the joint sovereigns of England, William and Mary.

At the beginning of the eighteenth century, the colonial governor laid out a city there in the form of a cipher, composed of the letters W and M, and gave it the title of Williamsburg. It lies on a ridge at the head springs of two creeks, one of which flows into the James and the other into the York River. Each is navigable to within a mile of the town.

At about the beginning of the eighteenth century, the College of William and Mary was open, and many students were there. A capitol and a palace for the governor were built, and a church, the finest then in America, was erected.

The Old Raleigh Tavern.

Population increased rapidly. It was made a market town. The city became the permanent and temporary residence of opulent planters. "Here," wrote Rev. Owen Jones, a Welsh ancestor of Martha Washington, "dwell several good families, and some reside here at their own houses, in public times. They live in the same neat manner, dress after the same modes, and behave themselves exactly as the gentry of London; most families of note having a coach, chariot, berlin or chaise."

The city was the residence of the colonial vice-regal court, and during the sessions of the legislature it became a theatre of great social enjoyment and gaiety. To that court and to society, the pretty, bright, witty and amiable Martha Dandridge—afterward Martha Washington—was introduced at the age of fifteen years.

In its palmiest days, however, the resident population of Williamsburg did not exceed about two thousand white persons.

The transient visitors at the capital, especially those who caused the periodical overflow there at the annual sessions of the legislature, required a public house of entertainment. At about 1710, when Spotiswood was governor, a spacious inn was built, at his suggestion and with his pecuniary aid.

It was named in honor of the famous knight and courtier of Queen Elizabeth's reign, Sir Walter Raleigh, the Raleigh Tavern.

It was constructed of wood, in the form of an L, one part extending back from the street at a right angle with the front. Like nearly every other edifice in that little city, it stood alone, with gardens between it and its neighbors.

The Raleigh Tavern was a story and a half in height, the upper portion lighted by numerous dormer windows that pierced a sloping roof, as seen in the illustration. Over the front porch was a leaden bust of Raleigh. That porch was at the entrance to a broad passage that extended through the building.

In the portion of the building which extended back from the street was a large apartment called the Apollo room. It was lighted by six large windows, and was handsomely wainscotted as high up from the floor as half the height of the windows; also over the fireplace.

The walls and ceiling were whitewashed, and the woodwork painted a lead color, when I made the drawing in 1848. At the further end, as seen in the engraving, were two doors, one of which was the entrance from the passage from the side porch, the other leading to a stairway that ascended to the dormitories.

At the period of the Revolution, a large square lantern made of iron and glass, and furnished with candles, was suspended from the centre of the ceiling, while at intervals around the sides of the room were several candelabra with small mirrors for reflections.

The Apollo room was devoted to public gatherings of every kind. During the gay season it was used as an assembly room for dancing, and in it might frequently be seen the most eminent representatives of titles, wealth and beauty of the colonial society of the Old Dominion, especially during the long administration of Governor Sir William Gooch (1727-1749).

Then the vice-regal court of Virginia, with its surroundings, was the most brilliant on the continent; for much of the old Cavalier element was left in that region. Much of the stately etiquette and conventional formality still prevailed at the Virginia capital. The great landholders vied with each other in their display of equipages, dress and retinues.

When the Stamp Act and other oppressive measures were put in operation by the British ministry, the English-American colonists were aroused to persistent opposition, and the voices of Patrick Henry and other patriots were sounding an alarum in the legislative hall of the old capitol near the Raleigh Tavern.

Almost daily conferences were held in the Apollo room, at which measures were devised that, in a quiet way, often effected more salutary results than the most eloquent declamations.

It was in that room that young Thomas Jefferson and two or three others prepared those counter resolutions and addresses in opposition to those of the British Parliament, in the spring of 1769. They were promptly adopted by the Virginia House of Burgesses or Assembly, and produced a crisis.

This act caused the royal governor to dissolve the Assembly. The members met the next day in the Apollo room, formed themselves into a Voluntary Convention, drew up articles of opposition against the use of any merchandise imported from Great Britain, signed and recommended them, and then repaired to their respective districts.

They were all reëlected except those who had declined to countenance the proceedings of the majority. This was incipient rebellion; and similar acts in that room from time to time afterward made the Raleigh Tavern to Virginia, relatively, what Faneuil Hall is to Massachusetts.

Virginia kept pace with Massachusetts in the adoption of revolutionary measures. Her voice was always quick to express sympathy with that generous sister in her struggles against cruel inflictions of British power during the hot ten years' quarrel between the Americans and the imperial government, before they came to blows.

When, in the spring of 1773, the Virginia Assembly received copies of an address issued by the Assembly of Massachusetts, in which the sore grievances of that province were set forth, they promptly declared their concurrence and sympathy with their New England brethren. Peyton Randolph (the Speaker), Thomas Jefferson, Richard Henry Lee and others urged immediate and bold action.

A committee of correspondence was nominated the same evening, at a private conference held by the members at the Raleigh Tavern, when strong resolutions were drawn up.

They were presented to the Assembly the next day and adopted, and the committee was appointed, with instructions to obtain trustworthy intelligence of all such acts of Parliament or the ministry as might affect the rights of the colonies. The committee was also authorized to open a correspondence and communication with similar committees of the other colonies.

The royal governor of Virginia at that time was Lord Dunmore, a Scotch nobleman. He was full of aristocratic notions; was deficient in sound judgment and that common-sense which is essential in public life, and was possessed of an irritable temper and vindictive spirit.

When he heard of the proceedings of the Assembly he hastened to their chamber. At that moment they were about to adopt other resolutions equally unsubmissive to royal rule, when the governor, with a loud voice, broad Scotch accent and haughty demeanor, proclaimed the Assembly dissolved.

The next day the committee of correspondence met at the Raleigh Tavern and despatched to the Speakers of the several provincial Assemblies a circular letter containing patriotic resolutions. Cordial responses came back.

So, through documents sent out from the Raleigh Tavern, was formed the first sound link of the chain that united a confederacy which gave birth to a great nation.

When, in the early summer of 1774, the British government declared its intention to punish the inhabitants of Boston for the destruction of tea in their harbor, by closing that port to commerce, the Virginia Assembly passed strong resolutions of condolence, and appointed a day to be observed as a fast.

The offended governor, by verbal proclamation, dissolved the Assembly.

Eighty-nine of the members—among whom was Washington—met in the Apollo room on the following day, organized themselves into a Provincial Convention, prepared an address to their constituents, in which they declared that an attack upon one colony was an attack upon all, and recommended the assembling of a General Congress of representatives of all the colonies.

This recommendation was immediately sent forth by couriers despatched from the Raleigh Tavern It was heartily commended by all excepting Georgia.

Twenty-five of the members of the convention remained at Williamsburg to participate in the religious observances of the appointed Fast Day. They issued a circular to all the burgesses, or members of the Assembly, recommending a meeting of the whole body at the Raleigh Tavern, on the first day of August next ensuing.

Eighty of the members who formed the convention in the Raleigh were present at the appointed time. They adopted resolutions to import no more slaves, nor British goods, nor tea; and resolved that if their grievances were not speedily redressed, to export no more tobacco to England.

They recommended the cultivation of other articles of husbandry; the improvement of the breed of sheep, and the multiplying of their numbers. On the Fifth of August they chose delegates to represent Virginia in the Continental Congress which was to meet at Philadelphia on the Fifth of September. They then adjourned, after each had pledged himself to do all in his power to effect the results contemplated in their proceedings.

During the war that soon broke out, the Raleigh Tavern and its Apollo room were frequently the rendezvous of civil and military officials of Virginia, when they were at the capital, and there the final arrangements for the siege of Yorktown were made by Washington and Rochambeau, in September, 1781.

The Raleigh Tavern at Williamsburg, Independence Hall at Philadelphia, and Faneuil Hall at Boston, have equal claims to the reverence of every American citizen.

For the Companion.

RUNAWAY BOYS.

First Paper.

By the Chief Inspector of the N. Y. Police.

A police official in a great city like New York has almost unnumbered opportunities to see different varieties of human nature. Of course many criminal acts come to his knowledge of which he can never speak, or can reveal only in such a way as to conceal the identity of the person or persons concerned.

One of the strange facts in my experience is the large number of runaway boys whose cases come to my attention. I call it strange, and yet it is so common that it can hardly be truthfully termed strange; nor is it a difficult matter to understand the wonderful fascination which the great city, seen afar off, exerts upon the boy in the country or the rural town.

I am convinced that the causes which induce boys to leave their homes without the father's and mother's consent are, in many cases at least, akin to those which have produced the abandoned farms upon the hillsides of Vermont and New Hampshire. In some cases their former occupants have gone to the villages and small towns not far away; in others they have found their way to the greater cities, and of course not a few have gone West in the hope of bettering their fortunes.

The number of runaway boys who find their way to New York, and are here discovered by the police and returned to their homes, will average over two hundred a year. There is a certain similarity among the cases, though the reasons why the boys come here are various; and now and then there is a case which stands apart in its peculiarities from all others of its class.

I think that the trashy and sensational novels and newspapers which so greatly abound, and which are so much read by young people of both sexes, are a prolific cause of this evil, as well as of other evils. These publications do vastly more harm than good.

I have no sympathy with those who contend that it is better to read anything rather than to be idle. It is true that Satan finds some mischief for idle hands, or minds, to do; but I greatly doubt if that mischief would prove as harmful as the results which flow from the reading of the so-called "flash literature" of the period. It is especially deplorable in the case of boys who are very sensitive to impressions received.

If I were to have the opportunity to impress indelibly one thing upon the minds of the fathers and mothers of the country, I should insist upon the importance—nay, the necessity—of wisely selecting the reading matter put into the hands of their children.

Of course I am aware that in some instances where the utmost care is exercised, the forbidden fruit is devoured secretly and the seeds of evil thus sown. But I would have the reading supplied at home so abundant and so attractive that the temptation to read prohibited and harmful matter would be very small indeed. In these days of

Digitized by Google

excellent and interesting publications for young people, this is not a difficult thing to do.

But there are very many families in which reading matter of any sort is a thing unknown. Hence the importance, in cities, towns, and villages, of establishing free reading-rooms and libraries.

Many of the runaway boys who come to New York provide themselves with a proper outfit in which to go West and fight Indians. This is a favorite fancy. They want pistols and big broad-brimmed hats and other equipments, and then they intend to set out on an expedition against the red men.

Usually we get on their track before they have quite completed their preparations, and thus their tragic career is cut short—to their poignant, but only temporary, grief.

Then there are boys who run away because they think they have not been properly treated at home. Sometimes they are the sons of wealthy parents, who are able and willing to educate them in the best way and to establish them in business or in some profession.

Such boys may want more money than their parents think it wise to allow them, or some other cause may lead to disputes which end in the sudden departure of the unruly lad from the home nest.

Generally he comes to New York without any fixed purpose, but with the vague hope of obtaining a situation. Such boys know nothing of the difficulty of doing this without references. Sometimes they have stolen the money to pay their fare to the city, and have little left with which to support themselves after reaching New York. In the natural course of things, unless their parents institute a search or they are found by the police wandering about the streets and sent back home, they drift into the cheap lodging-houses which are a bane to the city.

There they are almost inevitably thrown into contact with criminals, possibly with ex-convicts; and nothing is more easy than to initiate them in a career of crime, with all its dreadful possibilities.

Fortunately, in the great majority of instances the distressed and distracted parents cause speedy inquiries to be made by the police, and as a rule the runaways are soon discovered. Scores of them are brought to my office in the course of every year. Not infrequently the boys meet their fathers here, and I have been the witness of many affecting reunions.

I make it a practice to give the boys a good "talking to," and to point out to them how much better off they will be in their homes, surrounded by kind and loving friends, than in the great city with its temptations and pitfalls. Sometimes there is a stubborn case, but generally the boy breaks down in a few minutes, bursts into tears, and is glad enough to be taken back to his mother.

There is another class of boys who leave their homes on account of really cruel treatment on the part of their fathers. Brutality is not too strong a term to use in describing the conduct of some fathers toward their children. And when boys have been almost driven away from home in this way, it is not to be wondered at if the father is glad rather than sorry, and not disposed to take much trouble in searching for the fugitive.

So, too, such a boy, when sought for and found, is particularly reluctant to return to the home which has been so little a home to him. Still, after a few days of wandering about the city, when these boys are finally picked up by the police they ordinarily tell a straightforward story. Then their parents are communicated with, and come or send for them.

I remember one instance of undoubted brutality, in which the boy repeated his charges against his father, face to face with him, in my office. The father became so incensed by what was unquestionably a truthful narrative that he was unable to restrain himself, and lifted his hand and struck his son in the face.

I had him arrested immediately, and I think my readers will be glad to know that he was taken to court, and would have been adequately punished except for the lad's earnest plea for mercy for his father on account of his brothers and sisters at home. That father learned a lesson, I hope, from which he profited.

I do not know what happened to the boy subsequently, but his home could have possessed few of the qualities which we are in the habit of associating with that word.

The Society for the Prevention of Cruelty to Children, for whose work I have great admiration, is able to deal with no more than a fraction of the cases of real cruelty in the treatment of children by their parents.

There is, naturally, a good deal of similarity among the multitude of cases of runaway boys which come to the attention of the police of New York City. A few examples from the recent records of the Police Department, however, may be useful in pointing the moral of the result to which running away from home almost inevitably leads. I shall present them in a second article.

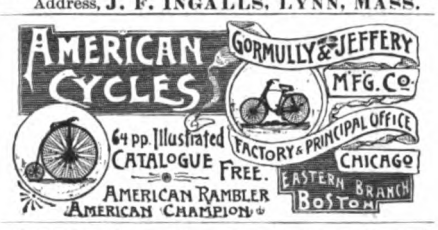
THOMAS BYRNES.

WELL-KNOWN.

He was a cabin passenger, and the steamship was one of the ocean racers. The company, even those who occupy the most expensive staterooms, is not always "select," in the society sense; but this man seemed more than ordinarily out of place. Who was he? No one knew.

One day the mystery was solved. He seated himself beside a distinguished lawyer, and opened the conversation.

"I've read your speeches in the newspapers many a time, and I'm pleased to know you."



"Thank you," the other answered, and then, improving the opportunity, he added, "Do you live in New York?"

"Why, bless you!" was the answer, "you must know who I am. I'm Mike McCarthy; everybody knows me. I've been a boss teamster in New York for more than forty years."

For Coughs, Sore Throat, Asthma, Catarrh, and diseases of the Bronchial Tubes, no better remedy can be found than "*Brown's Bronchial Troches.*" [*Adv.*

ANIMAL HAPPINESS.

All animals, from ants up to whales and elephants, play together in youth, and some are fond of taking such diversion at intervals through life. One might search the world over, and not find more playful creatures than puppies and kittens, but there are other dumb animals which not only frisk about, but actually descend to practical jokes.

A Brazilian parrot once succeeded in making a railway party believe that they had run over a child. Sudden cries, followed by a low moaning, rang out from beneath the wheels. The train was stopped, and the employees nervously searched the track, but no child was to be seen. No clue to the situation could be found, until a large green parrot, swinging in his cage, uttered a mocking laugh.

A monkey, on shipboard, used to amuse himself in the cook's absence by turning the water-cocks, in order to enjoy that worthy's surprise when he returned and found the water running over the floor; and there are scores of authenticated instances of actual deception practised by animals to gain some desired end.

A certain Skye terrier used to attempt deceiving its master by going through the action of killing a fly, and then assuming an air of success. One day, however, when proof was given him that his hypocrisy was detected, he slunk under the furniture, evidently quite ashamed.

The merry antics of monkeys are many and diverting. Humboldt was acquainted with a monkey in India which took delight in riding a pig. Every morning the creature caught one, leaped astride his back, and clinging there with great firmness, took his fill of riding. Another monkey, domesticated by a missionary, used to put the family cat, a strong, good-natured animal, to the same use.

The favorite game of others seems to be that of sliding downhill. They climb to the top of a high snow ridge, lie flat upon the stomach, with the forefeet bent backward, and, giving themselves an impulse with the hind-legs, glide down the hill, head foremost. In summer, they select a sloping river bank, which has a clayey soil, and where the water at its base is of considerable depth. Climbing this bank, they start from the top, slip swiftly over the sloping ground, and plunge into the water.

The gambolling of whales is often witnessed by sailors, and Paley says that any observer of fish must acknowledge that "they are so happy they know not what to do with themselves. Their attitudes and frolics are simply the effect of an excess of spirits."

All these facts are powerful witnesses to the truth that this is a happy world, and that creatures, as well as Creator, may pronounce it "good."

ARABS AS GUIDES.

It is not a little singular that the Arabs of the desert are far inferior to the natives of America in the faculty of finding their way through woods or over plains. They are apt to be near-sighted at the best, and often have the additional misfortune of diseased eyes. In her account of the "Bedouin Tribes of the Euphrates," Lady Blunt speaks of this incapacity of Arab guides.

We were no sooner out of the wady, and on the table-land again, than we found ourselves in a thick fog, which would have obliged us to stop if we had been without a compass. By the compass we determined the direction, and then kept to it by the wind, which blew from behind upon our right ears.

It is curious how little faculty the Arabs have of finding their way. Their course seems to be directed entirely by what, I believe, sailors call "rule of thumb." Once out of their own district, they are incapable of pursuing a straight line by the sun, or the wind, or by any natural instinct. They travel from landmark to landmark, and almost always in a zigzag, which costs them many a mile.

Here they had to depend entirely upon us for the direction of El Haddr, a place we had never seen or heard of till two days before; and our knowledge of its position, though simple enough to us, seemed very marvellous to the guides.

When the fog cleared, as it did in the course of the morning, they saw, to their surprise, El Haddr straight in front of them. It was still many miles off, but our course had been correct. I think this fog was a fortunate circumstance, as it raised us in the eyes of all our following, who now professed full faith and confidence in my husband.

THEIR OWN GRAVES.

The punishment which follows wrong-doing is sometimes so evidently just and appropriate that it is natural to speak of it as "poetic justice." The penalty is not only deserved, but is so neatly adapted to the offence as to seem almost ideal, or poetical, in its fitness. Under this head comes an order of General Scott's, lately printed in the *Magazine of American History*.

General Scott was in command at Rock Island when the cholera broke out there, and after various injunctions in this order as to sobriety and cleanliness, he adds this curious paragraph:

"In addition to the foregoing, the senior surgeon present recommends the use of flannel shirts, flannel drawers and woollen stockings; but the commanding general, who has seen much of disease, knows that it is intemperance which, in the present state of the atmosphere, generates and spreads the calamity, and that when once spread, good and temperate men are likely to take the infection.

"He, therefore, peremptorily commands that every soldier or ranger who shall be found drunk or sensibly intoxicated after the publication of this order be compelled, as soon as his strength will permit, to dig a grave at a suitable burying-place, large enough for his own reception, as such grave cannot fail soon to be wanted for the drunken man himself or some drunken companion. This order is given as well to serve for the punishment of drunkenness as to spare good and temperate men the labor of digging graves for their worthless companions."

A MAGAZINE editor once received a long story, in which there was not a single mark of punctuation, except an occasional period. At the bottom of the last page the author had written: "Please put in the decimal points to suit."

A SCHOOL-BOY who read in the Bible of "divers diseases," said he supposed they must be cramps.

Baby's skin and scalp purified and beautified by CUTICURA SOAP.

Kidney pains, backache, and muscular rheumatism relieved in one minute by the celebrated CUTICURA ANTI-PAIN PLASTER. 25 cents.

DONALD KENNEDY Of Roxbury, Mass., says:

My Medical Discovery seldom takes hold of two people alike! Why? Because no two people have the same weak spot. Beginning at the stomach, it goes searching through the body for any hidden humor. Nine times out of ten, inward humor makes the weak spot. Perhaps it's only a little sediment left on a nerve or in a gland; the Medical Discovery slides it right along, and you find quick happiness from the first bottle. Perhaps it's a big sediment or open sore, well settled somewhere, ready to fight. The Medical Discovery begins the fight, and you think it pretty hard, but soon you thank me for making something that has reached your weak spot. Write me if you want to know more about it.

STAMP COLLECTORS Send for stamp selections on approval. Sure to please. 33 1-3 per c. com. 10 var. Mexico, 10c; Mexico 1864, 4 var. complete, 20c. Price-lists and premium offers free. Add. MOUND CITY STAMP CO., 1501 Washington Av., St. Louis, Mo.

THE HEYGOOD TEA SERVICE.

IN FIVE CHAPTERS.—CHAPTER I.

Miss Dorina's Notable Errand.

IT was the afternoon of a raw November day. The grounds and gardens of the fine old Witheredge homestead in Habersham County, Georgia, wore a wintry aspect under the declining sun; but in the dining-room, overlooking the denuded rose-beds, a cheerful fire burned.

Around this fire were seated three people: Miss Dorina Witheredge, her brother, Colonel Frederick Witheredge, and their young cousin, Sally Witheredge Holmes.

Miss Dorina, a handsome old lady of seventy-five, attired in the fashion of her long-departed youth—scant skirts, high shoulders, balloon sleeves, and a short waist covered by a ruffled cape of whitest, sheerest lawn, crossed in front, and pinned into her stiff, wide belt—occupied her accustomed arm-chair at the right of the chimney.

The Colonel in his arm-chair on the opposite side was spreading his long, thin hands to the grateful warmth of the flames that played about the hickory logs, and repeated themselves in the burnished surface of the great brass andirons.

The Colonel and Miss Dorina were twins, and resembled each other strongly; but he was neither so careful nor so old-fashioned in his dress as she, nor so precise in his bearing. Miss Dorina sat up very straight, while he drooped and lounged slightly.

On a low stool in front of the fire, between these two old people, sat Sally Witheredge Holmes, "like to a rose in a withering bower."

Sally was a cousin two or three times removed; only Miss Dorina could have told the exact relationship. She was a gay girl, delighting in fun and frolic, thoughtless sometimes, as such girls are prone to be, but good-hearted and honorable, and carrying sunshine wherever she went.

The old Colonel was very fond of her, and insisted upon having her at the homestead whenever he could steal her away from her father, who was accustomed to complain jestingly that his only daughter divided her time very unequally between his house and the Colonel's.

Miss Dorina, too, was fond of Sally, but in a less indulgent way. As for Sally, she loved both her old cousins, and though giddy and light-hearted was never inconsiderate of their comfort.

She sat very still and quiet now, while Miss Dorina read the letter old Calamus had just brought from the post-office. It was a letter from kinsfolk in Alabama. Sally was quite sure that it contained exciting news, for there was an unwonted pucker in Miss Dorina's placid brow, an unusual flush in her delicate cheeks, and a tremor in the shapely white hands that held the dainty missive.

Sally thought her old cousin took a needlessly long time to read those four pages; but at last her patience was rewarded.

"Actually, the child is going to be married!" Miss Dorina announced, with tremulous indignation, glancing over her gold-rimmed spectacles at her brother.

The Colonel looked at his sister with an air of mild inquiry, but said nothing.

"Is it Dorina you mean? Dorina of Alabama?" cried Sally, eagerly. "Why, Cousin Dorina, she isn't a child; she is more than a whole year older than I am, and I shall be seventeen, my next birthday."

Sally made a charming picture with the fire-glow playing on her eager, upturned face—a face lighted by large and deep blue eyes that were merry and tender by turns, and softly shaded by a mass of brown hair that rippled over a broad, low forehead.

The Colonel looked at her and smiled with a quiet pleasure; but Miss Dorina frowned.

"I call you a baby," she said, with a glance of mild rebuke.

Miss Dorina found it difficult to realize that her namesake, Dorina Witheredge Heygood, of Alabama, whom she had never seen, was no longer a little girl in pinafores; but that Sally Witheredge Holmes should consider herself grown up was preposterous. "Seventeen is no age at all," she said, as she took up the letter again.

The Colonel looked at Sally with a twinkle in his eyes. He was always ready to accord his favorite the full benefit of her few years.

"Dear, dear!" pursued Miss Dorina, smoothing the letter on her knee; "the child wrote me something of this in the summer, but I paid no attention—she is so young! It's a Brent she is going to marry."

"Ah? one of the Georgia Brents?" asked the Colonel.

"Very likely. They are good people and well-to-do. But it is a long, long journey from Habersham County to Baybridge in West Alabama, and the wedding is only ten days off."

"Oh, if we might go! There is time enough," cried Sally, eagerly.

"Sally—Witheredge—Holmes!" said Miss Dorina, with rebuking emphasis.

Sally subsided with a sigh of resignation, for she knew well that her cousin, a recluse for many years, was not readily to be enticed beyond the gates of the Witheredge homestead.

"I have made up my mind to one thing," Miss Dorina announced with decision. "I shall present the bride with my Grandmother Heygood's silver tea service."

Sally gave the Colonel an involuntary glance of startled surprise. That silver tea service, massive and cumbrous, had occupied for long years before Sally could remember, a shelf in a brass-bound mahogany cabinet, fixed between the windows of Miss Dorina's sitting-room upstairs.

The cabinet was full of old family silver and other such treasures that Miss Dorina had been collecting during many years, at no small cost of money and of management, and even at some sacrifice of good-will and family harmony.

This particular tea service, however, was Miss Dorina's own of unchallenged right, for Grandmother Dorina Heygood herself had left it by will to the granddaughter who bore her name. Sally knew that of all Miss Dorina's possessions that tea service was most prized.

The Colonel knew this too; but his countenance remained so placid that Sally was sure he had failed fully to understand his sister's intention.

But the old Colonel was not taken by surprise, as Sally was. He was quite well aware that his sister had left the famous tea service in her will to Dorina Witheredge Heygood of Alabama, eighteen years before, when she was first made acquainted with the existence of her namesake.

"It does seem providential that I had it all cleaned last Tuesday," Miss Dorina commented, with satisfaction; "for now it is ready to pack."

"But—but—would you trust that silver to go by express?" stammered Sally.

"Sally—Witheredge—Holmes! I am surprised at you, truly!" said Miss Dorina, indignantly. "Trust your great-great-grandmother Heygood's silver tea service to the common express, when it has never been a day out of the family keeping since it came home, twelve pieces, marked 'Dorina Heygood'? No; Fred shall carry it with my blessing."

"H'm!" said the Colonel.

The Fred alluded to was not himself, but his only grandchild, the son of his only child, Frederick Lanis Witheredge, who had been killed in battle when the younger Frederick was but a few months old.

The old Colonel naturally thought he had a closer claim upon this youth of eighteen than any one else could have; but Miss Dorina, who took charge of the boy when his mother died in his third year, had asserted and maintained a superior claim. In accordance with her views, Frederick had been educated at home, and his travels, heretofore, had not extended ten miles beyond his grandfather's fireside.

Miss Dorina tells the news.

"Yes; I shall send Fred," Miss Dorina repeated, with secret self-applause of the boldness of her resolution.

Sally gave a little gasp of delight. She knew how great a pleasure the trip would be to Fred, and she hoped, in her heart, that the Colonel would not oppose the plan.

The Colonel had no idea of offering the slightest opposition. He had, indeed, long been of the opinion that his grandson should see something of the world. He had just given placid expression to this opinion, when Fred himself entered the room.

"Oh, Fred! Such awfully good news!" cried Sally, eagerly.

"Girls did not indulge in such modes of speech when I was young," remarked Miss Dorina. Then she proceeded to explain the matter to her grandnephew.

"Dorina Witheredge Heygood is about to be married, Fred, and I've made up my mind to give her my Grandmother Heygood's silver tea service as a wedding present, for the sake of her name."

Fred puckered his lips for a whistle of incredulity, but Miss Witheredge gave him no chance to utter it, but went on with her announcement.

"And you are going to take it to her, Fred, as my representative at the wedding."

"I?" exclaimed Fred, starting up breathless with astonishment. "Oh, Aunt Dorina!"

"Yes, my dear. I'm too old to travel," his aunt went on, with an emphatic little nod. "I shall have to depend upon you; for as to sending anything so valuable without an especial convoy, such a risk is not to be thought of."

"Certainly not!" Fred agreed, eager for the journey.

"And you need not regret the tea service, my dear boy, for there'll be your great-great-grandfather's solid silver soup-tureen for you, and his tankard and porringer."

"Oh, I'm quite willing to give up the tea service," said Fred, heartily. The untravelled youth would have given up the soup-tureen, the tankard and the porringer into the bargain, rather than forego the trip to Alabama.

"You can start to-morrow morning," said Miss Dorina.

"To-morrow morning?" echoed the Colonel. "Why, you said, just now, that the wedding is ten days off!"

"He must have time to become acquainted with our relatives," Miss Dorina reminded him. "I'll give you a memorandum, Fred, telling you who is who, and you must study it well. We'll send for Arnold at once and pack the silver after dark to-night."

Arnold was Sally's brother and Fred's best friend.

"I'll go myself, and bring him back to supper," cried Fred, hurrying out to order his horse.

"And Sally, my dear," Miss Dorina said, presently, after a few moments' musing that followed Fred's departure, "you shall not be forgotten in the distribution of the family silver; I always meant to give you the two big ladles——"

"When I am married?" interrupted Sally, gleefully.

"My dear," Miss Dorina admonished her, peering over her spectacles, "the age of twenty-two is quite early enough for any girl to contemplate matrimony."

It was at the age of twenty-two that the romance of Miss Dorina's life overtook her, and Sally, who knew the story, became grave.

Miss Dorina Witheredge, wealthy and beautiful, with a host of admirers, had set her affections upon a gentleman of straitened fortunes; and though her family might have overlooked this want of fortune, the young man had wooed and married another girl, not half so handsome as the

Digitized by Google

beautiful Miss Witheredge. Miss Dorina did not bemoan her fate, but from the day of the marriage she gave up the world, and had never again passed through the great red gates of the old homestead to visit or to shop, or even to attend church.

The country folk of the hill-sides said that she was "touched in her head;" but she retained quite enough mental force to hold her place in the family life, adorning herself, as had always been her pleasure, in rich laces, shimmering silks and gleaming jewels, and entertaining friends with grace and hospitality.

Her manner and conversation exhibited no trace of flightiness, and her friends said that she was but indulging a whim of which she would tire in time; but as the years went by, it was seen that Miss Dorina became only the more wedded to this whim, until there was nothing for her family to do but acquiesce in it.

No matter how the fashion might vary in dress, in horticulture, in house-furnishing, the cut of Miss Dorina's gowns was never changed, her prim flower-beds remained always the same, the ancient pieces of dark mahogany kept their fixed places against her walls.

Upon the death of her brother's only child, Miss Dorina's pride and hope had centred in her orphaned great-nephew, Frederick Lanis Witheredge, Jr.; but when this Fred the younger was scarcely a year old, there came news from Alabama that gave the boy a rival in her heart.

The daughter of the man whom the recluse woman had loved in her youth had married Mr. Lewis Heygood. Miss Dorina could readily define his relationship to the Witheredges of Habersham County; but that is no matter. It touched her more nearly that Lewis Heygood's wife had chosen to name her first daughter for the old cousin over in Georgia, whom neither she nor her husband had ever seen.

To make the compliment more acceptable, there was no other Dorina in the entire family connection, for Miss Dorina's determination to possess herself of certain pieces of the family silver had created some bitterness, and the name had lost its popularity in the later generations.

Fred returned with Arnold in time for supper, which old Martha, the wife of Calamus, was setting upon the table when the two lads came in.

Miss Dorina, by winks, nods, and frowns that could not escape her handmaiden, forbade any allusion to the silver, or to Fred's journey on the morrow.

Not until nine o'clock, when the Colonel, according to his custom, had gone to bed, and the house was bolted and barred with more than usual care, would Miss Dorina consent that the packing should be undertaken.

That labor was performed by the three young people, under her indisputable, and often contradictory, directions; and after much trouble, the elaborate tea service of Grandmother Heygood was at last bestowed, together with Fred's clothes, in an old-fashioned, rough-hide trunk, marked with a great W in brass tacks on each end.

Arnold had a better trunk which he was entirely willing to lend, but in Miss Dorina s mind, no other would serve so well as this bit of antiquity, which had been dragged out of the dust of the garret by the two boys.

"It will attract so much less attention than one of your brand-new affairs," she declared.

"Fred," said Sally, when Miss Dorina, satisfied with her arrangements, had gone to bed, "don't you remember the tradition in the family that old Father Noah's surname was Witheredge? Now you don't look old enough for Noah, but when the people in Alabama see that trunk, they will surely inquire whether you are Shem, Ham, or Japhet."

"What can a fellow do?" retorted Fred, irritably. "Aunt Dorina thinks the world stands still."

"Grin and bear it," suggested Arnold. "Cousin Dorina is paying your way; and it's a good, strong trunk. But don't forget that you are carrying treasure, young man."

"Oh, Fred!" cried Sally, "I do hope you may have an adventure—a real adventure, to put your courage and presence of mind to the test. If masked highwaymen——"

"Nonsense!" interrupted Arnold. "What a goose! There aren't any highwaymen nowadays."

"Oh, yes, it's an every-day, nineteenth century undertaking," said Fred, assuming a travelled air. "Railroad all the way to Baybridge. Grandfather and I studied out the route after supper, while you were telling Aunt Dorina about Cousin Polly Piper and the kin over the river."

"Well, goose or no goose, highwaymen or no highwaymen," said Sally, with some pique, "you'd feel pretty cheap, Fred, if you arrived at Baybridge without your great-great-grandmother Heygood's silver, and no adventure to boast of as a set-off."

"No danger, little cousin," Fred assured her, with a patronizing air that roused Sally's indignation.

"If my words come true, don't expect *me* to sympathize with you," she retorted. "This goose is going to bed; the fire is out, and it is cold; so good-night to you both."

Fred and Arnold followed her example, and soon were sound asleep. But about two o'clock Arnold awakened Fred, shaking him, and whispering excitedly, "Get up, I say, and snatch on some clothes! Somebody is in the house, sure! Do you hear that?"

Fred certainly did hear it. It was a noise of movement somewhere. In an instant he was wide awake.

The sound apparently came from the garret. It was followed by an interval of silence; but while the boys hurried on their clothes, the noise was repeated, as of some one stumbling about in unaccustomed places.

Cautiously they opened the door and peered into the hall. All was silent, and all was dark, save for the faint gleam of the clear, starlit sky that struggled through the half-turned blinds and showed the old-fashioned hair-trunk at the head of the stairs, just where they had left it.

The next instant a light flashed down the spiral garret stair, flickered, and was lost again in darkness.

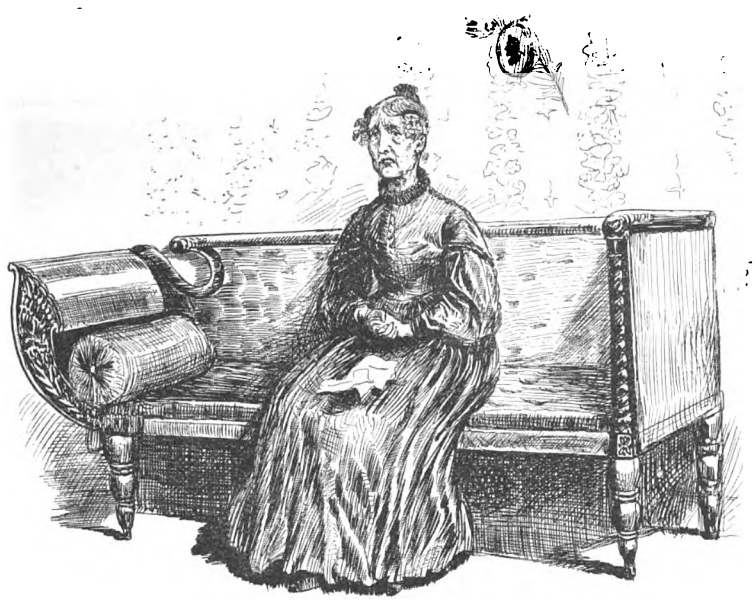
Fred opened his mouth to shout out an alarm, but Arnold laid his hand over his lips.

"Hush!" commanded Arnold, in a whisper, as he laid his hand on the other's arm. "Look there!"

He pointed upward, where, dimly defined in the faint, uncertain light that emanated from some point within the garret, but to them invisible, a dark-robed figure loomed against the shadows at the head of the garret stairs.

The two boys flattened themselves against the wall within the angle made by the big wardrobe which held the house linen, and waited in breathless silence.

It seemed to them an endless time before the mysterious figure gave any indication of movement, and they had almost persuaded themselves that what they had seen with so much alarm was but a harmless shadow, when a hand was slowly stretched out along the spiral rail, and that hand held a huge pistol.



ELIZABETH W. BELLAMY.

(To be continued.)

For the Companion.

ESTHER'S LONG WINTER.

The funeral was over. Old Mrs. Sparrow had been laid away to rest in the little village burying-ground, and the neighbors who had gathered about the grave had dispersed to their homes.

Priscilla Sparrow

Priscilla Sparrow sat in the barely furnished, dimly-lighted parlor of the little white wooden cottage which had been her home for more than forty years.

She looked the very picture of woe in her black dress. She was more than sixty years old, and very thin and angular. The close-fitting waist and plain, scant skirt made her look thinner and more angular still; it was a dress of her mother's that had been hastily altered, by unskillful hands, to suit her.

But it was not of her dress that Priscilla was thinking, as she sat bolt-upright on the little hair-covered sofa, nor yet alone of the newly-made grave in the churchyard. It was of a great and, to her, most terrible change that seemed impending; a change which her brother, a prosperous farmer in the adjoining county, appeared to look upon as a matter of course.

He sat opposite Miss Priscilla now. He was twenty years her junior, and had a plain, rather hard face, and a matter-of-fact air. He had come to the funeral in his own wagon, and it now stood at the gate, the horses pawing impatiently.

His daughter Esther, who had come with him, sat in the open doorway, apparently watching the horses, but losing nothing of the conversation between her father and aunt.

"It's all nonsense, your talking about staying here, sister. You can't do it. I didn't say anything as long as mother was living; but now you've got to make a change, and you might as well make your mind up to it, first as last."

"I don't see why I can't stay here," said Miss Priscilla, plaintively. "I can get along well enough, and it wouldn't seem home to me anywhere else."

"Pshaw! you'd get over that feeling in less'n a week. I've got a big house, and there's plenty of room for you; and as to staying here all alone, it's out of all reason. You're all run down now, nursing mother. It'll be a new life for you at our house."

"I don't want a new life."

"Oh, you don't know what you want. You've got sort of foolish, living here, so set off from other folks. Mother and the girls'll wake you up."

"I don't want to be waked up!"

"No; you want to stay right along here, and be taken sick some night and die, and nobody know anything about it. That's what you want! It beats me, what you see in this old rack of a house anyhow. It isn't fit for a tramp to live in."

"I've lived in it more than forty years."

"Well, then, it's high time you made a change."

"Oh, I can't go—I can't! It would just kill me, Hiram. I'm too old now to move. And then there's all my things."

"Oh, they don't amount to much. You can take what you need of 'em, and we can sell the balance. They won't bring anything worth mentioning, but they'd be out of the way. There wouldn't be any sense in storing 'em."

Miss Priscilla stared at him, too much horrified to make any reply. The little bunches of stiffly-curling ringlets on her temples seemed fairly to tremble with indignation.

"You'd better get on your bunnit now, and let's be moving. It's getting late, and we've got fifteen miles to drive. You can lock up the house. Nobody'll interfere with anything, I guess, and as soon as I get time I'll come over 'n' clear things out."

"I can't go; I can't; I can't!"

Miss Priscilla's voice rose to a wail.

"Yes, you can. You can't do anything else. You can't stay here, living way off from everybody else. Come now! Esther'll help you pack up while I go out and water the horses."

Miss Priscilla did not move. She sat still, staring at her brother as he walked down the board-walk that led from the little porch to the gate. The grass grew long on each side of it, and weeds were springing up in the two small flower-beds. Miss Priscilla had had no time since her mother's illness to attend to anything outside the house.

The farmer had watered the horses, and was hitching them to the wagon again, when he felt a light hand on his arm. Turning, he saw Esther beside him.

"Father," she said, "I don't think you'd better make Aunt Priscilla go home with you. I believe it would kill her."

"Kill her to go to a good home like that? She'd be pretty easily killed, then!"

"But, father, you don't understand. She's lived here forty years, and she's got used to things. She's too old to begin all over again in a new home. She wouldn't be happy at our house."

"Well, she can't stay here all alone. You can see for yourself she's broken down. She might be taken sick any time."

"I thought I might stay with her," said Esther, hesitatingly.

"Just for to-night, you mean?"

"No; all winter."

"You couldn't stand it. You'd be sick of it in a week."

"Oh, I guess I'd get along somehow."

"You couldn't go on with your music."

"No; I'd have to give it up for the present, but I think I ought to stay, father."

"Well, do as you like. I sha'n't make you go home."

"Well, then, father, you'll tell mother to send over some of my clothes. I sha'n't need many, it's so quiet here."

"Quiet! I should say so. I tell you it's all foolishness your staying; and I don't know what your ma'll say. I don't believe she'll like it."

"Ma won't care. She has Susie, you know. I'll write to Susie to-morrow, and tell her what things to send me."

Esther watched her father as he drove away, and then went back to the house. Her aunt still sat on the sofa. She looked up forlornly as the girl came in.

"I can't go, I can't!" she wailed. "And to sell all my things! Oh, dear! oh, dear! Hiram don't know what he's doing. I don't mind living alone; I'd get used to it. I can't go, I can't!"

She began to grow hysterical.

"Well, you needn't go, Aunt Priscilla," said Esther. "I'm going to stay here with you."

"Oh, one night won't matter much. He'll make me go to-morrow. He said he'd come over here and clear everything out. Oh, dear! oh, dear!"

"No, he won't, Aunt Priscilla. I'm going to stay with you all winter. Father said I might."

The old face brightened, and a look of relief came into the faded blue eyes.

"Is that so? Do you mean it?"

"Yes, I mean it, Aunty."

The tears came into Aunt Priscilla's eyes. "You *are* good, Esther! You are awful good," she said. "There aren't many girls that would do that for an old woman like me. But how'll you do about your music?"

"Well, I guess I can get along without it for just one winter."

"Your lessons'll have to stop."

"Yes, I know; but don't fret about that. I'm young. There's lots of time for me to take lessons."

Miss Priscilla rose stiffly and walked into the kitchen as she spoke, moving about it in an absent, troubled way, setting back a chair, and putting away some tumblers that had been left on the table.

Esther had followed her, and stood looking out of the window. The kitchen faced the west, and was all aglow with the sinking sun. Some late roses bloomed on a bush that grew to the edge of the low, wide casement, and the small vegetable garden sloped upward in a gentle incline to the tall privet hedge that divided it from the little strip of pasture in which Miss Priscilla's one cow was browsing.

On the doorstep lay an old yellow dog, half-blind and wholly deaf, but still considered a valuable protector by the old lady, who had raised him from puppyhood. She often said she never felt quite safe unless old True were around.

Esther slept that night in the room that had been her grandmother's, in a high, old-fashioned bed, which was hung about with a valance as old-fashioned as the bedstead. Beside it, neatly covered with worsted-work done by Miss Priscilla in her youth, was a small bench, on which Esther had to step in order to reach the bed.

She felt rather lonely and homesick when she got into bed, and perhaps a little inclined to regret the sacrifice she was making.

It was certainly a very great sacrifice. There was no pleasure to be expected in being shut up all winter with a delicate old woman and a deaf dog, a quarter of a mile from any other house; and Bondville, as Esther knew, was dull beyond all comparison. The dozen houses of which it consisted were widely scattered, and the only form of recreation the people knew was going to church once a month—which was as often as it was possible to have a minister in attendance.

But Esther stayed, in spite of homesickness and loneliness. Her sister Susie tried in vain to induce her to return home; and one day in February, when she had ridden over to see her sister, she asked her aunt at the gate:

"What are you going to do when spring comes, Aunt Priscilla? Esther can't stay here all the time, and you're only putting off the evil day."

The day was very mild—almost like spring—but Aunt Priscilla wore a little black worsted shawl about her shoulders, and had tied a woollen tippet over her head.

"I don't know what I'll do in the spring. I haven't thought," she said, a troubled look coming into her eyes.

"And you needn't think, either," said Esther, putting her arm affectionately about her aunt's waist. "Wait till spring comes."

"It'll soon be here, and Esther's got to come home before planting time; mother said so only this morning," said Susie. "You might as well make up your mind to move, Aunt Priscilla, for it's got to come to that very soon."

"Oh, perhaps it won't. Don't worry, Aunt Priscilla," said Esther. "Don't think about it at all."

But the troubled look did not leave her aunt's eyes.

Half an hour later, Esther, returning from an errand to the village, found Miss Priscilla packing a small haircloth trunk. She had a resolute look on her face, and her lips were closed tightly.

"What are you doing, Aunt Priscilla? Are you going away?" asked Esther, in unfeigned astonishment.

Digitized by Google

"Don't ask me any questions! Just help me out to the gate with this trunk," said Miss Priscilla, as she closed the lid, and bent stiffly down to lock it.

Esther did as she was bidden, without further question. The trunk was not heavy, and she carried her end lightly enough; but Miss Priscilla staggered under hers.

"I must be weaklier than common," she said. "I can't lift things as I used to."

The trunk was set down outside the gate, and then Miss Priscilla went back and put on her bonnet and shawl.

"You go to the kitchen, Esther," she said, "and just stay there, please."

Esther, though astonished and somewhat alarmed, obeyed. She heard her aunt go out and lock the door of the little parlor behind her. She listened anxiously, wondering if the poor old woman had suddenly lost her mind.

Presently she thought she heard the sound of crying. She went out of the kitchen door and followed the little path that led around the side of the house.

Outside the gate, on the trunk, sat Miss Priscilla, sobbing as if her heart would break.

"I can't do it, Esther; I've tried!" she said, brokenly, as her niece hurried to her side. "I can't go; I can't! It'd kill me. I can't, I can't!"

"Go where, Aunt Priscilla?"

"I've been pretending I'd left my house and was going to live with Hiram. I was seeing how it would be; and I can't go! I got just so far, and I looked back, and there was the house, and old True a-lying on the step, and it just seemed as if I'd die. I wish I'd been the one to go instead of mother. She wouldn't have minded moving. She'd got too childish to care."

"Now, Aunt Priscilla," said Esther, "get right up and come into the house. I'll carry the trunk. And don't ever say another word about going to father's. You are not going, you know. You worry yourself just for nothing."

"But Susie said that in the spring— "

"Never mind the spring. It isn't spring yet. You just come in the house and take off your bonnet and shawl."

Esther was deeply touched by this incident, and helped her aunt into the house very tenderly.

It seemed to Miss Priscilla, when she took off her bonnet and shawl and unpacked the trunk, almost as if she had been away. She was in a little fever of excitement as she stepped feebly about, putting away the things she took from the trunk.

"Suppose we have a little something extra for supper to-night, Esther," she said. "I'll get out my best tea-things. You've never seen 'em."

Esther was quite willing. She made biscuits, poached eggs, and toasted some bread. As a rule they had only bread and butter, jam and tea, for supper.

Miss Priscilla set the table. She went to a corner cupboard in her bedroom—a cupboard always kept locked—and brought forth her best china—blue, willow-pattern cups and saucers—shallow cups with high handles, deep saucers without a chip or crack to mar their beauty—plates to match, and a white and gold covered bowl for the sugar, oval, with a colored landscape on each side.

There was a fat little china cream-jug, too, which also had a landscape on each side; and for the milk there was a narrow white and gold pitcher with a long neck.

But the crowning piece of all was a glittering silver teapot, with a black handle; a teapot that had belonged to Miss Priscilla's grandmother, and was kept in wash-leather retirement except on rare occasions like this.

Miss Priscilla seemed to enjoy the supper greatly, but she appeared very tired when it was over. The excitement of her pretended departure, and the festivity of a tea-party with her best dishes, was too much for her.

In clearing away the dishes she did not show her usual activity, but sat down once or twice, as if quite wearied. And much to Esther's surprise she allowed her to put away in the cupboard the tea-set, and even the treasured silver teapot.

Esther then put her to bed very early, but she could not sleep. She lay awake until the clock struck midnight, wondering at the unusual excitement of her brain. Then she called Esther.

"I believe I'm getting to the end, deary," she said. "There wasn't any use, after all, in worrying about what I'd do in the spring."

Esther tried to soothe and quiet her, but in vain. She insisted upon talking.

"I want you to have all those tea-things, Esther," she said. "I've written it down that you're to have them; the paper's in the top drawer of my bureau. You'll take good care of 'em, I know. And be sure and keep the teapot in that wash-leather bag."

She talked for an hour, her mind wandering a little, and died as quietly as a child, just as the gray dawn came stealing into the room.

Only a little while before the end came she put her hand feebly on Esther's head, as the girl knelt by the bedside.

"It's such a comfort to die in my own house," she whispered, slowly, pausing between the words, "and I owe it to you, dear."

Did Esther regret then the sacrifice she had made? Did she regard then as wasted the five long months she had spent in the lonely cottage?

FLORENCE B. HALLOWELL.

For the Companion.

THE SENTINEL OF LIVE-OAKS.

"There's never been anything in my life just regular," said Eliza. She was perched on the top rail of a fence, while a little old lady in hooped gown, lace shawl, and wide hat with a tilting veil, stood beside her listening with pleased interest.

"To begin with," continued Eliza, chewing a wisp of her long, fair hair, "I told you we used to live below here in a 'mesh' country, and eight of us children and pa and ma died of malaria, one after another. 'Pears to me there was always somebody sick in the back room. I, being the littlest, couldn't get so many shakes in my system as they had, and I wasn't dead, but got to be a orphan at ten years old.

"That was three years ago. Then Uncle Beach took me, and I couldn't read nor write. He was squatting on your brother's land where you lived all your days, and you saw me, 'n' got int'rested and taught me. I tell you, Miss Vane, I'd lay down my life for you!"

"You must not talk that way; it is wicked," said Miss Vane, promptly. "I suppose, though, it's just your earnest way of speech. Now don't kiss my hand, Eliza; that is not pretty at all. Why, the other day you were kissing my gown. You make me feel like a heathen idol."

"I love you just to death!" cried Eliza, her big blue eyes glowing, her thin little face bright and eager. "Before you took int'rest in me, I settled down to be poor white trash like the rest. The Beaches didn't like me as well as their children, 'cause I wasn't their own folks, but a orphan. But that last year at the manor house with you has been just beautiful, like I dreamed it.

"I knowed it wouldn't last. I said to myself—when you came for me and said the slaves is all gone, and you'd pay Uncle Beach for my services—I just said, 'Lizer Jackson, it aren't true; you'rea-makin' b'lieve all this!'

"Sure enough, now it's gone! I heerd the soldiers was coming, and when I see the man with the buggy driving up, I knowed the Cap'n had sent for you, and I run away down here to cry it out."

She ended with a stifled sob.

"But the very idea!" cried Miss Vane, fretfully. "To leave the house and all my things, that have been in our family over a hundred years, and all my brother's wife's belongings—"

"She that died the bride of a year," put in Eliza, mournfully. She had heard the story so often that it was quite real to her.

"Yes, and all my mother's treasures. Just a few hours to get ready in, and no room to take anything. Just like a man to say, 'Give things up—it can't be helped!' Who will put pans under the leaks when it rains, or air the rooms, or keep the doors locked, and feed the hens? A woman can't give up so easily. O Eliza, it breaks my heart! I am not afraid of the soldiers. The ships will go up the river, and never see Live-Oaks at all. They've something better to do than to rob old women."

"Talking makes it wuss," said Eliza, promptly. "We'll go back and pack the things. When I heard you calling, I felt a chill—a real creepy one. I knew you'd got to go, and I'd woke up from dreaming I lived in the manor."

She helped Miss Vane up the avenue to the big white house, with its pillared portico, green blinds and general air of desolation and decay. It was hidden from the travelled road by a grove, and from the river by a great avenue of live-oaks that led down to the water's edge.

The estate had been in the Vane family nearly a century, but for years the fortunes of the race had been failing, and Captain Vane and his sister had barely sufficient to live upon—not enough to keep up the old place.

The ships of the Union navy were coming up the river, and the families along the shore were hastily abandoning their homes. Miss Vane's preparations for departure were soon made, and very tearful and complaining, the old lady was helped into the buggy.

Her modest bundle of clothing followed; then a package of the family silver, a few other relics, and a basket containing the cat. She bade Eliza return to her uncle's, and if she stayed, to keep an eye on the house.

"If the soldiers don't rob the house, tramps will. 'Taint but twenty-five mile from N'Orleans, and lots of 'em will be comin' this way," said the driver, "so you might as well say good-by to everything."

Too much overcome to speak, Miss Vane could only wave her wrinkled hand in farewell.

Eliza sat on the doorstep in the twilight, a pathetic little figure. A damp wind off the river soughed through the oaks, waving the long palls of moss. In the dim light some of the trees took on queer shapes of gigantic hags, with streaming gray hair and black, waving arms. In the deserted house floors creaked, doors jarred, and the stairway sounded as if pressed by ghostly feet.

Then there came the rattle of wheels. Eliza, hiding behind a pillar, saw her uncle and his family go by in their big wagon, dragging a cow tied behind, and the yellow dog following. Supposing the girl had gone with Miss Vane, her uncle did not look toward the manor at all.

"They're running away, too," said Eliza. "They'd take me if I hollered. But I'm going to stay and set them drip pans, air the mold off things, and feed the hens. I'm going to pay Miss Vane for that teachin'. Soldiers is men, anyway, an' maybe has girls of their own. I aint afraid."

She opened the great oak door, stepped bravely into the dim hall, and went toward the stairs. On her way she patted the big clock, which was nearly twice as tall as she.

"You're such a lively one," she said; "your tick-tock is real company!"

Up to her own room—the tiny one opening out of Miss Vane's—she climbed, and after saying her prayers went peacefully to sleep. The moon rose over the long avenue of live-oaks, traced graceful leaf-shadows on the shelly walks, turned the old manor to a palace of marble, and touched with kindly light the sleeping face of the sentinel of Live-Oaks.

All next day the child worked, hiding away under the eaves and in the cellar Miss Vane's treasures, and at night climbed the stairs, a shrinking, solitary figure. Few men would care to stay alone in such an eerie place as that old house, in the midst of a region overrun with lawless camp-followers and hiding negroes. The child, knowing little, feared less. And Live-Oaks, indeed, escaped robbery, probably because it was so far from a travelled road.

All those days the air resounded with the far-away roar of cannon, like distant thunder. The sentinel heard it, but went about her labors of love unmoved.

The second day of her watch she brought up to the head of the stairs, with great difficulty, a suit of armor. It was so mounted that it looked like a big man, and during Eliza's first visits to the manor, it had been a source of extreme terror to her. Now, however, it gave her a sense of companionship and protection. Before she locked her door she called out good-night to the comforting figure in armor.

One moonlight night a skulking figure crossed the fields. It was a black man in search of plunder. He noted the quiet house, and stealthily climbed the portico, swinging himself up by the stout old vines. Then he peered cautiously in at the hall window, which seemed an easy way to enter. His very wool stiffened as his wild eyes beheld a great figure in shining armor and helmet with visor down, in the moonlit room. His excited fancy gave it a slow and stately motion. He fled for his life; and the little sentinel never dreamed of his presence.

The sixth night of Miss Vane's absence was close and hot. Eliza, leaning from a window, saw a great red glow in the sky.

"Mebbe it's jest a fire in N'Orleans," she muttered. "Or p'r'aps its judgment day—everything's changing so. It smells smoky, too. If it's life everlasting come, I can't be in no better place then here, taking care of them fam'ly relics for her I love more'n all the world."

Secure in her simple faith, she went to her bed. All that next day she saw from a hiding-place, near the bank, great majestic ships go up the stream toward the city that had burned its stores the night before.

"They're going! They're going!" Eliza cried. "They haven't seen our house at all, and Miss Vane kin come home!"

She ran to the house and began a furious putting to rights. She baked a large loaf of corn-meal bread—she had only meal—and tried in her childish way to have everything as Miss Vane would have wished. At night, quite exhausted with her efforts, she sat down on the steps to rest, leaning her head against one of

the fluted columns. "I aint 'fraid 't all," she said; "being brave jest comes nateral after a while."

Was that queer noise the wind? That faint, far-away moan?

"If I was afraid, I'd just run in the house an slam the door," sighed poor Eliza. "That's a sure 'nuff human groan. If the Beaches was here they'd be scared outer their wits."

In the gray light, under the live-oaks, the stooping, limping figure of a man made its way from tree to tree. He staggered on, and then fell at the steps. When he opened his dazed eyes he saw, by the light of a lantern, a child's pale, earnest face.

"I knowed ye, Cap'n Vane! I respected you'd come home," cried Eliza, "and if you'll just try a little, I'll h'ist ye inter the house."

"Who are you?" he asked, when he had reached the hall, where, unable to move him further, she had made him a comfortable bed.

"You aint ben home of late, or you'd seen me," she answered. "I'm the poor white trash your sister teached. I'm takin' care of her prop'ty for her."

She dressed his wounds as he directed, and was such a careful nurse that he grew better rapidly.

"I reckon you're picking up," she said, one morning, as she brought him his breakfast. "But if I kills all the chickens for you, what'll Miss Vane eat when she comes? She's so dre'ful pertikler 'bout her victuals."

"Don't kill any more," he laughed. "What a brave child you are! Why, I wouldn't like to stay alone in this ghostly place."

"Being an orphan and having your relations sorter pick on you makes you 'customed to being lonesome," said Eliza, soberly, "and I do take such comfort in takin' care of her things like she wanted, and I've hid them relics of her arncesters where even soldiers can't find 'em. I haint really had no time to be scared."

One night, two days later, a sudden storm came up, and Eliza, mindful of the leaky roof, rose from her bed to set the pans. She opened the hall window to look out at the rain, so that she might judge of the number of pans required; and then it was that she heard voices and the thud of horses' hoofs.

Quick as a flash she ran to Captain Vane's room. He was sleeping on his sofa, in readiness to depart in the dawn, for he was in the enemy's territory.

"What shall I do?" he cried. "They are Union soldiers, and will make me a prisoner. There is no time to escape."

"Hide in the figger there; I've done it!" said Eliza. "There's lots of room. They'll think it's only a tin man."

Thundering knocks jarred the door, echoing through the house.

"The place is deserted," said a voice.

"What is it?" called Eliza, from the hall window.

"Soldiers seeking shelter. If you don't open the door we'll break it down."

"They've come, they've come!" wept the child. "They'll spile her things! What shall I do? They break everything! I'll let you in if you won't hurt things, misters," she called.

Digitized by Google

"That's cool," laughed a man. "Break in the door!"

But before he had finished speaking the door was suddenly opened, revealing the figure of a small girl in a queer calico wrapper. She held a candle in one trembling hand, and with the other pushed the long, fair hair out of her eyes.

Seven blue-coated soldiers crowded into the hall, looking at her with amused interest.

"Are you the sentinel?" one asked.

"I'm taking care of Miss Vane's prop'ty," said the child, bravely. "Her brother made her go 'way and leave all the family relics, and they can't never git no more, 'cause she and him is old an' hasn't no money even to put a new roof on. Mebbe some of you has girls like me, and you wouldn't wanter be mean, on that account. And all Cap'n Vane's wife's things, she the bride of a year, is jest as she left 'em, even her work-basket, an' you wouldn't hurt them things, I'm sure! You see I wasn't no 'count till Miss Vane teached me. Our folks is poor whites, but she's quality."

"You can't make me believe you've stayed in this old barracks alone," said a soldier, gruffly. "I'll stay here and watch. The rest of you go over the house."

He questioned her in a kindly way when the rest had lighted all her precious candles and gone about the house.

But she had suddenly become silent. If they should find Miss Vane's brother! She might say something wrong if she opened her lips, so she placed one trembling hand over her mouth to make herself silent.

She heard the soldiers clattering overhead, slamming doors and knocking furniture about. Then they trooped back, and one man hit the armored figure a sounding blow as he passed.

"A fine old chap," he said, carelessly. The child's heart gave a sudden leap as she drew a quick breath of relief.

They went out into the kitchen and pantry and returned with the meagre store of eggs and corn bread. They spread this meal on the parlor table, and put their muddy feet on the faded satin chairs.

"I kin git them mud marks off the parlor chairs," said Eliza, anxiously, "but them crumbs on the carpet is just awful!"

Every man laughed good-naturedly. Then all put down their feet, and took pains not to drop their food.

"She's an older maid than the old one with the cork-screw curls in the picture there," said a gray-bearded man. "I never saw such an odd one. I hope, sis, the time will come when the two of you can be living here in comfort, in single state, with forty cats apiece."

At dawn they rode away, and the wearied Captain Vane came out of his hiding-place.

"Eliza," he said, as he took up his bundle of provisions and his cane to aid his slow departure, "I'm off now. A friend of mine will see me down the river. I want you to keep these papers. I have willed my property to you when my sister is done with it. She is the only one of my family left, but the old place will be in worthy hands. When my sister dies you will be her heir. You saved the relics; and one relic of the line—the last of the name—will be grateful to his life's end."

He crossed the threshold for the last time, and with one farewell glance disappeared down the avenue, under the old trees that would shade the master of Live-Oaks never again. He fell in Virginia, and was buried there.

"He said I could go to N'Orleans," muttered the child, "and he'd give me money, and put me in some folks's care; but I aint goin' to give up now, if it is so lonesome. Cur'us how skeery 'tis when folks has been here and gone! Mebbe I'm gittin' to see things like loonytics, for there's been a something moving in them trees for ten minutes. I don't care what I sees—I'm just goin' ter be gritty and stay and take care of her things, for she'll come back, I'm sure. She's come!" shrieked the child, darting down the avenue. "That's her, I know, and the very basket she took the cat away in!"

A queer little bent figure in a calico gown and sunbonnet approached the house in a stealthy way.

"You blessed child, are you here?" cried Miss Vane, bursting into happy tears. "And I all the way dreading to be alone here, and bringing the cat for company! But I made up my mind, war or no war, I'd come back and take care of my property. Every time it rained I couldn't sleep for worrying, and I've been three days on my journey here — I'm so slow-footed. I borrowed the cook's gown and bonnet, and dearie me! I've slept in the woods, so I can hardly drag myself with rheumatism."

"All the things is safe," cried Eliza. "The soldiers come, but they only ate the food and greased the carpet a little, and they didn't catch Cap'n Vane neither, for he hid in the tin image and they never respected it! You come up and set down, and I'll tell you all about it, and where the relics is hid; and what a sight of company the cat will be! I wisht so that day you'd left it, but I was 'fraid if you thought I was goin' to stay here alone you'd stay; and if you was killed it would be all my fault—me that just worships the ground you walks on!"

Eliza, kneeling at Miss Vane's side, related all her adventures. The cat, curled up in its mistress's lap, purred a soft accompaniment.

"Don't you ever say poor white trash again," interrupted Miss Vane. "You are going to belong to my family now. You and I will take care of the old place—maybe live on it many peaceful years—and I sha'n't forget, Eliza, what you've done for me, nor my joy at seeing you here. I don't see how you could have stood it."

"I reckon 'cause I was a orphan," said Eliza.

All through the war Live-Oaks was tenanted by its two faithful guardians. The cat grew plump and round, for mice were plenty and bold, but Miss Vane grew thin and worn from short rations, and Eliza grew like a sapling, thin and straight. At last, when peace came, they had the old house still, but little else.

To-day, in New Orleans, in the French market, is a very neat stall kept by a meagre and sallow man named Beach. He will tell you he has always been "misfortunate"; he's lost all his folks but his orphan niece, Eliza, she that lives at Live-Oaks manor. The vegetables come from there; they're the finest in the market, too, and those flowers, the great fragrant roses and dewy violets.

"She's prosperin' as a female farmer," continues the solemn man. "She aint married—haint no gift that way. She's like to be a old maid like the t'other one. Miss Vane's quality, but she's made Lizer one too by eddication. Lizer's a powerful han' fur books. They comes up ter the city onct in a while to do tradin'."

If you are lucky, you may some day see a tall woman, daintily gowned—a beautiful rosy face under a becoming bonnet, a pair of resolute eyes and a firm mouth, a pleasant picture of womanhood; and leaning on her strong arm a tiny, frail old lady who seems very fond of her escort.

The "quality" of New Orleans have begun to recognize the heiress of the Vane estate. Her bright, brave personality, her devotion to Miss Vane and her courage and industry in making the old place a garden would win admiration anywhere. There is very little of the queer, unchildish Eliza in that beautiful woman; but she is the Sentinel of Live-Oaks still.

PATIENCE STAPLETON.

SONG OF THE LIVING.

How beautiful it is to be alive!
To wake each morn as if the Maker's grace
Did us afresh from nothingness derive
That we might sing, "How happy is our case!
How beautiful it is to be alive!"

—Henry Septimus Sutton.

For the Companion.

AN OLD BATTLE-SHIP.

On the morning after the old sailing frigate *Constellation* went ashore at Cape Henry, not long ago, probably some ten or twelve millions of Americans read in the newspapers the announcement of the mishap. A few hundred who had sons or brothers or sweethearts among the cadets or the crew felt some personal interest and anxiety; but how many of them recalled the fact that this vessel's keel was laid while Washington was President, or that her ancient timbers saw the greater part of the fighting in the French War of 1799?

How many, indeed, remembered that there ever was such a war, or thought anything at all about the affair?

It was quite different ninety years ago, when all Baltimore put on its best clothes and went down to the ship-yard to see the *Constellation* launched. There were scores of pretty girls in gowns with very short waists, and hats as big as any that are worn nowadays, and plumes, and long gloves.

Madame Jerome Buonaparte "that was to be" was present with her beautiful sisters, perhaps, and there were dignitaries who had driven over from Washington in their family coaches, scores of gentlemen in small-clothes, and a strong delegation of army officers in uniform.

The War for Independence was still a recent thing. Many a school-boy in New York could remember seeing the red-coated English garrison march down to the Battery and board the fleet that lay waiting in the harbor. But now French ships were plundering and capturing Yankee merchantmen on the high seas.

War seemed unavoidable, and we had no navy to speak of. The frigate *United States* had been launched two months before; the *Constitution* ("Old Ironsides") was still on the stocks at Boston. It was the seventh of September, 1797. Washington had just ended his second term as President, and was still living. Adams had succeeded to the Presidency.

Taken altogether, this launch was an event of national importance. The traditional bottle of wine was broken over the bows, the dog-shores were knocked away, and the United States frigate *Constellation* slid down the ways and into the water.

She was the second formidable war-vessel of what was then the "new navy" to bear the flag of the young republic, and she was destined, with her sister frigates above named, to compel a decent measure of respect from the contemptuous Europeans of that period.

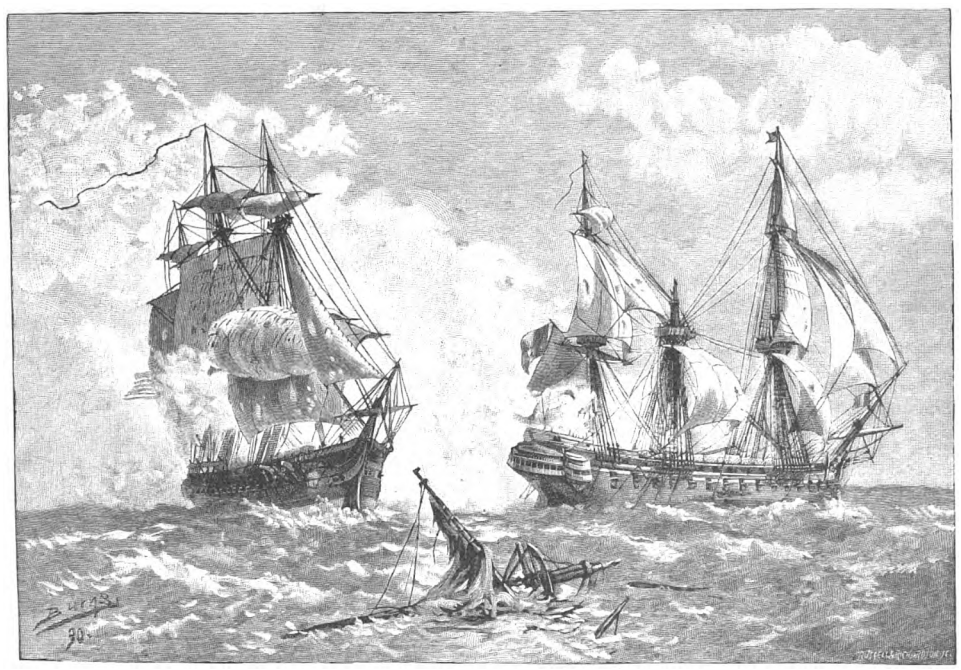
With all possible dispatch she was fitted out with her thirty-eight guns. They were twenty-four-pounders, and redoubtable pieces in their day. She went to sea as the flagship of gallant old Commodore Truxtun, who had orders to fight any French armed vessels that he might encounter.

War had not been declared formally, but in spite of all friendly protests French cruisers continued to capture American merchantmen, until the remembrance of timely help during the Revolution was well-nigh forgotten in present wrath. Congress formally abrogated existing treaties, and a state of things very like war was inaugurated.

Commodore Truxtun, with his little West India squadron, did good preventive service for some months without firing a shot. But it was only because he had not seen an armed Frenchman.

At last, on a beautiful February noon in 1799,—it was the ninth of the month,—just off the island of Nevis, the lookout reported a big ship in sight to the southward; and the *Constellation*, setting the Stars and Stripes, bore down toward her under all sail. She could reel off twelve knots an hour with a free wind, according to her log-book.

The stranger set the Tricolor of France, and fired a gun to windward as much as to say, "*Très-bien, monsieur;* I understand that you object to our little capture of your merchant *canaille*. What are you going to do about it? I'm all ready to fight, if you like."



Commodore Truxtun merely nodded to his executive officer, Lieutenant Sterritt. The battery was manned.

"Give her a good full, quartermaster," said Sterritt.

"A good full, sir!" answered the senior man at the wheel, and the gallant *Constellation*, with her yards straining at the braces and her crew at quarters, rapidly drew up within hailing distance.

The stranger proved to be the frigate *Insurgente*, carrying forty guns and four hundred and nine men, against the *Constellation's* thirty-eight guns and three hundred and nine men—a disparity in numbers of which the Yankee commodore was well aware.

"Commence firing!" was the word on board the *Constellation* as soon as her broadside guns could be brought to bear; and the Frenchman was nothing loath to return the compliment. A huge mountain of white powder-smoke rose against the blue sky and rolled down to leeward on the gentle wind.

"Constellation" and 'Insurgente.'

In the heat of the engagement, the foretopmast of the *Constellation* was nearly shot away at the lower cap, and Midshipman David Porter, captain of the foretop, hailed the deck to have the lifts cast off. But the guns were thundering and everybody was on the jump. He could not make himself heard, and all the time the old-fashioned, square topsail was straining at the mast to complete the ruin that the French cannon had begun.

There was no time to lose, so young Porter cut the stops without more ado, and down came the heavy yard by the run, saving the foremast and perhaps saving the fight, too.

It was a grave responsibility for a boy to take, but this boy was "Dave" Porter, afterward Commodore, and father of the present Admiral, and he was not of the stuff to hesitate when he saw a good spar in danger and possible defeat as an immediate consequence.

The battle went on, and just an hour and a quarter after the first gun was fired, the proud *Insurgente*, with spars shattered, rigging shot away, and twenty-nine of the crew dead and forty-one wounded, lay rolling helplessly on the sea, while the American frigate wore round and took position to deliver a raking fire.

Of course the Tricolor had to come down; and from that day the fighting qualities of the new American Navy were recognized by all maritime nations—except Great Britain, which had to be given a special course of instruction twelve years afterward.

Poor Captain Barreault, of the *Insurgente*, came aboard to give up his sword. A prize crew took

Digitized by Google

the captured frigate into St. Kitts, where she was refitted and sent to sea under American colors, and Captain Barreault was so much astonished at the treatment he received from the "Yankee barbarians," that he wrote this letter to Commodore Truxtun:

"I am sorry that our two nations are at war; but since I unfortunately have been vanquished, I felicitate myself and crew upon having been prisoners to you.

"You have united all the qualities which characterize a man of honor, courage, and humanity. Receive from me the most sincere thanks, and be assured I shall make it a duty to publish to all my fellow-citizens the generous conduct you have observed toward us."

Within a short time the refitted *Constellation* was actively at work again, sweeping up the small fry of the buccaneer-ridden West Indian waters.

It was nearly a year before another really worthy antagonist came in her way. The *Constellation* had heard of her, and was on the lookout for her at seven o'clock in the morning of February 1, 1800, just off Guadaloupe.

It was the French ship *La Vengéance*, a formidable sloop-of-war, carrying fifty-four guns, which the American Captain knew was cruising in those waters.

To the surprise of the people on the *Constellation*, the Frenchman did not make a show of fight on the appearance of the Yankee man-of-war. On the contrary, the commander, in spite of his fifty-four guns, for some reason sought to avoid an engagement. He crowded on all sail and made a run for it. Then followed a twelve hours' race that must have been exciting indeed.

Think of it, yachtsmen who find no mean sport in a six hours' run outside Sandy Hook or Brenton's Reef, with a silver mug or a bit of bunting for a prize! Think of these magnificent old square-riggers, with acres of straining canvas, plunging through the blue tropical sea from dawn till dark, with the probable prize of a fight to the death at the end of the race!

The prize was won in this instance, for at eight o'clock in the evening the Frenchman, seeing that he could not escape the fleet-footed Yankee, opened on his pursuer with his stern and quarter-deck guns. The *Constellation* returned the fire, ranged alongside, and a terrific combat was begun.

The fight lasted until one o'clock in the morning, when the Frenchman's fire was nearly silenced. In fact, he had hauled down his colors some time before; but in the smoke and darkness the signals had not been observed, and in desperation he had resumed the fight.

But now luck changed. Midshipman Jarvis, in command of the *Constellation's* maintop, found that the standing rigging had pretty much all been shot away.

All hands set at work with a will, Jarvis keeping his men aloft to lend a hand. Just at this juncture down came a West Indian squall, and the tall main-mast went overboard, the top-men and midshipman Jarvis with it. Only one of the men was saved, poor Jarvis going down with the rest.

Thus a brave young life was lost which has not been without honor in history, and the story of which must always inspire patriotic impulses in the breasts of American youth.

Thus crippled, the *Constellation* lost sight, for good and all, of her late antagonist. So suddenly, indeed, did she disappear, that it was feared she had foundered. She was almost in a sinking condition; but with her crew at the pumps, and feeling certain that the terrible Yankee could not pursue till he cleared away the wreck, *La Vengéance* effected a very lucky escape.

The *Constellation* went home to Norfolk for repairs after this action, and was laid up in ordinary till the second war with Great Britain. During that war she was blockaded by a British fleet in Hampton Roads, and only escaped capture through the ceaseless vigilance of her commander.

It was fortunate for the British that she was thus imprisoned, for she was a formidable ship, and if she had been on the high seas during that war, her record might have rivalled that of her sister, the *Constitution*, which was to become the more famous of the two.

The *Constellation* was destined in the main, thereafter, to a peaceful career, though she was in the Mediterranean during the war with the Barbary States in 1815, and took part in the operations of Commodore Decatur's fleet against Algiers.

After that she cruised to and fro to the Pacific, to the East Indies, to Brazil, and almost everywhere, carrying the flag often where it had never been seen before.

The brave old craft now serves as a training-ship for future captains and commodores, whom her very timbers seem to tell how battles were won.

It is inspiring to a youth when standing watch at sea on a stormy night, to look aloft and fancy he can see Dave Porter cutting loose the foretop sail-yard, while the antiquated twenty-fours are pounding away on the gun-deck, and the men, stripped to their waists and black with powder, are yelling themselves hoarse as the fight goes on.

The *Constellation's* model and equipment may be long out of date, but after all there is nothing like a square-rigged ship to teach a sailor his profession, even if he is destined to serve his time mainly on board a modern ironclad.

A man who can tack ship off a lee shore under double-reefed top-sails without the adventitious aid of steam can handle anything afloat—except, perhaps, a modern sailing canoe.

CHARLES L. NORTON.

WASTED VEHEMENCE.

Heat not a furnace for your foe so hot
That it do singe yourself; we may outrun
By violent swiftness that which we run at,
And lose by overrunning.

—*Shakespeare.*

For the Companion.

HOW REPORTS OF DEBATES IN CONGRESS GROW.

By the Hon. James G. Blaine,

Secretary of State.

The reports of Congressional proceedings are growing, or have already grown, so large as to be burdensome, and in imminent danger of becoming useless. There are two specific reasons for this increase: one is the printing of every trivial detail with stenographic exactness, and the other is the permission in both branches of using written essays instead of making actual speeches in debate.

In the beginning of the Government, and for many years thereafter, the habit of speaking from a manuscript in either branch of Congress was unknown. On every important measure that came before Congress, on the expediency of which members differed in opinion, there was an actual debate, in which positions were affirmed and contested with off-hand speech. In every conflict of this kind the members of Congress were, as a rule, in their seats, many taking part, and the mass so interested as to sit continuously through the debates.

The habit of speech has greatly changed. At this time, any one who will take his seat in the gallery of the Senate, as the Senators assemble, will be interested during the "morning hour," which is often marked by what may be called a sharp debate; but when the "morning hour" expires, and the "regular order" is announced, the spectator will very probably see a gentleman rise and unfold a mass of manuscript and begin to read.

He will next see, out of the eighty-eight Senators, probably seventy-five, and possibly more, if the Senate be full, absent themselves from their seats and retire to their committee rooms to write letters and transact both public and private business, until the pages shall inform them that the reading of the manuscript, in progress when the Senators left the chamber, is about to close.

In the House of Representatives, the spectator, when he seats himself in the gallery, will probably see repeated, as nearly as the analogy of proceedings in the two branches will allow, all that has been said of the Senate, with the addition of a habit which is not extensively, if at all, practised in the Senate, viz.: the permission to print speeches, not one word of which has been delivered; and also the setting aside of odd afternoons, generally Saturdays, for debate only, which means that some one deputed by the Speaker will preside, with the understanding that no business is to be done, and that any member who chooses can come there and deliver a speech upon any subject he may select, whether it is pending before Congress or not.

The essays which are thus read on a single Saturday would often fill a large sized octavo, more extended in point of matter than a volume of Bancroft or Motley.

Few have reckoned the magnitude of the increase in the reports. The general presumption is that it comes from the increased membership of both branches of Congress. This accounts for part of the increase, but is not a sufficient cause for the whole.

The Senate is larger than fifty years ago by a little more than one-half—fifty-two then, eighty-eight now. The House to-day is not one-half larger in membership than it was fifty years ago. But the volume of the reports of either house to-day, compared with those of fifty years ago, is prodigiously great.

The reports of proceedings in the Twenty-sixth Congress—March 4, 1839, to March 4, 1841—take scarcely one-sixth of the space given to the reports of the Fiftieth Congress.

But if we go back only half of fifty years, a striking illustration will be found. Take both Houses of Congress from 1861 to 1865, embracing the Thirty-seventh and Thirty-eighth Congresses, and covering the entire period of the war. One would suppose that the proceedings in two Congresses, with an extra session in one of them, during such a period as 1861-65 would be extraordinarily voluminous.

Both houses were filled with remarkable debaters, and the subjects that were continually before each branch were so absorbing in interest that almost every Senator and every Representative desired to be heard.

As the form in which the proceedings are reported has changed since that time, the comparison of different periods can be made with approximate exactness by stating the proceedings in uniform pages of one thousand words each. From March 4, 1861, to March 4, 1865, the number of pages filled by the proceedings was twenty-five thousand four hundred. Twenty-six years afterward the Fiftieth Congress convened. It lasted from March 4, 1887, to March 4, 1889, and the report of proceedings filled twenty-eight thousand three hundred pages.

In an uneventful period, then, with nothing especially to excite or disturb the country, the number of pages filled by the proceedings of a single Congress is greater than during the whole period of the war, with all its mighty issues at stake.

In an earlier era of the Government the contrast would seem still stronger. Take the first eighteen Congresses, from 1789 to 1825,—thirty-six years,—from the inauguration of Washington to the inauguration of John Quincy Adams. All the discussions on the subject of setting the Federal Government in motion, which were very able, and at that time supposed to be very long; all the proceedings on funding the National Debt; all the discussions on the famous Jay Treaty; all the debates during the stormy administration of the elder Adams; all the debates for the periods of Jefferson and Madison, on the Embargo and the War of 1812; all the proceedings for the ten years following the Treaty of Ghent; in short, the entire proceedings of Congress, under Washington, John Adams, Jefferson, Madison and Monroe are recorded in twenty-six thousand pages, actually less by two thousand three hundred than were recorded in the debates of both sessions of the Fiftieth Congress, and very little more than the words of the first session of the Fifty-first Congress, which adjourned on the First day of October last.

Other comparisons of interest may be made readily. One of the most exciting Congresses—supposed to be one of the most important ever held in the *ante-bellum* period—was the Thirty-first, beginning March 4, 1849, and ending March 4, 1851. The Compromise measures of 1850, involving all the phases of the Slavery question as it then existed, called forth a debate which for thoroughness and ability has perhaps never been equalled, certainly never surpassed, in the history of the Government.

Men who naturally belonged to a former period—Webster, Clay, Calhoun, Benton, Cass—were there in full vigor; and the younger men of prestige and power—Seward, Douglas, Chase, Jefferson Davis, Rusk of Texas—were also there in all the strength of mature manhood.

Four years later, the Thirty-third Congress convened, extending from March 4, 1853, to March 4, 1855. It was, if possible, even a more exciting and excited body than the Thirty-first. It was the Congress which repealed the Missouri Compromise—a measure which led to unparalleled acrimony and recrimination in debate. All the deep feeling which had been exhibited on the Slavery question in the Thirty-first Congress was greatly intensified, and the debates lasted on this single question for many months.

The first session of the Thirty-first lasted until September Thirtieth, and that of the Thirty-third until August Seventh, and the proceedings of both Congresses filled only twenty-three thousand pages, less by one thousand four hundred pages than the record of the proceedings of the first session of the Fifty-first Congress.

To make a comprehensive and most suggestive comparison, let it be stated that from the inauguration of Washington, in 1789, to the close of the Civil War, in 1865, the report of the proceedings of Congress, for the entire seventy-six years, filled one hundred and seventy-seven thousand four hundred and ninety pages. From the close of the Civil War in 1865 to the first day of October last, being twenty-five years, the number of words employed in reporting Congress was two hundred and eighty-one million.

Hence the Congressional reports for the last twenty-five years contained one hundred and three million five hundred thousand words more than all the reports from 1789 to 1865.

It should of course be said that the reports of the seventy-six years were not throughout in as full detail as the more recent and current reports, but that is the very thing that makes the first class valuable, and practically ruins the second class to the ordinary reader by its inaccessibility. The Annals of Congress in the first thirty-six years named are readily accessible, easily handled, and well indexed, and give an accurate report of all the proceedings and of all the speeches that had special value.

If the proceedings of Congress for the next thirty-six years from this time are reported upon the increasing ratio that has distinguished the reports since the close of the war, the aggregate will probably require four hundred large volumes, or six hundred million words—equivalent to a library of more than twelve hundred volumes of the ordinary octavo and duodecimo editions.

This evil has grown to such gigantic proportions that every one will admit a reform is not only necessary but inevitable. As to the various phases of that reform, much might be said. At the same time it would involve personal criticism, not of individuals but of classes; and if the reports are limited to readable dimensions, the remote, if not the immediate, effect would be to reduce the list of eligibles for effective service in Congress.

The methods of reform might, therefore, better be left to the day when Congress is ready to enter upon the work. It is sufficient at present to call attention to the abuse, and to illustrate its magnitude.

For the Companion.

MY PET.

Going into my study one morning, I saw something strange on the table. Upon examination I found a wooden, wire-windowed cage, and in it a white rat. I did not then inquire who had put it there, but carefully inspected the cage and rat at my leisure. For a time I did not open the lid, fearing that the little occupant might escape; but after a while I became so curious to see it that I overcame my scruples, and lifting the cover, saw the creature lying quietly in a little loft-nest which had a ladder leading up to it.

Totty—I named her Totty on the spot—looked sleepily up, stretched, and then settled into sleep again, taking no more notice of me than if I had been a fly on the window. I wanted to take her out, but dared not, fearing she might resent such intrusion, and bite me. In time I grew to know better, and handled her as much as I pleased.

In two or three days I became so bold as to take her out and hold her in my hands, and as she did not struggle nor bite, I decided that she did not object to it at all, but rather liked the notice taken of her.

After that I sometimes carried her about with me, and horrified not a few people who saw her mysteriously appearing and disappearing about my person. She liked my coat-sleeve best, and would lie in it for hours, warm as toast, and asleep most of the time. I grew so fond of Totty that I often caressed her, and though very likely she wondered at it, she never resisted more than at times gently to put up her little pink paw, and push away my hand.

As the entrance to the loft-nest at the top of the ladder to Totty's cage was hardly large enough, I made a larger cage of wood and wire, and put her into her new home. She did not at first seem inclined to take to it, love of familiar places being as strong with her as with us, perhaps; but upon climbing all over it, and finding that she could move about in it more easily than in the old cage, and noting, also, that there were several nice ladders to run up and down, she evinced her satisfaction by taking all the hay in the old cage and removing it to the new.

What a mighty bustle she made of it, to be sure! Such a pushing and tugging! Sometimes she would lift the hay up over the edge of the old cage, and drop it into the other,—they stood side by side,—or she would jump down and push it up, with such force as would have completely exhausted any less enterprising animal; but Totty was a worker, and did not leave off until she had her new home fitted to suit her ideas of housekeeping. She even carried a dozen nuts across the room to the cage, storing them away in the nut-bin in her eagerness to be quite at home.

I grew accustomed to having Totty at the table when I ate, and nothing amused me more than to see her pranks as she wandered about among the oases of eatables. She had a sort of routine which she regularly followed. She would first climb the milk or water pitcher, and standing on the edge upon her hind-feet, would dip the liquid out with her fore-feet,—or hands, as I called them,—sometimes using two, and sometimes one. This was always done so gracefully that I enjoyed the drink all the more for her play with it.

The next thing would be to come to my plate and eat daintily from it. Having found out what I had for my meal, she would walk all over the table, nibbling at the various viands until her little stomach was exceedingly full. She was especially fond of new bread, and would eat a small cave into a loaf if I permitted. Sitting upright, she would hold the loaf firmly with her hands, and then eat as if her life depended upon it, now and then stopping to look up, as much as to say, "*Isn't* this just delicious!"

It would be impossible to tell all the pretty ways she had. After she had finished her meal, she would go and stand at the edge of the table and gaze at vacancy with a fixed expression, looking very mysterious, and keeping her whiskers going at such a rate that they glimmered—and that was all there was to be seen of them.

Of course the routine was varied at times. For instance, if she was unusually hungry, she would show a little forethought, and seizing a lump of sugar in her mouth, would go to the edge of the table where there was a convenient chair—this failing she would use me—and climbing down, would run across the floor to her cage and stow the tidbit away, making it rattle as she vigorously pushed and patted it into place in the corner. In this way she would convey twenty or thirty pieces, according to the amount in the bowl, and finally, all being snug, she would proceed to take a "good square meal."

Sometimes I played tricks with her. Among them was this: Taking a bag of nuts into the corner opposite the one in which her cage stood, and shaking it to attract her attention, I soon had her at work carrying the nuts in her mouth, one at a time. When she had them all in her house, and while she went on searching for more, I would take some away from her hoard, and give

Digitized by Google

them to her to carry back again. Often she noticed that her heap had diminished; and then she would set off with a will, as if determined to get the nuts all in or perish. Often I played with her in this way for an hour at a time, pleased to watch the pretty little creature come and go, noticing that she always took the same path and never tired.

Totty's principal liking was for griddle-cakes. She would hunt all over the table for them whenever she smelled them, and, if I hid them from her, made much ado until she found them. Then it was her turn to make the cake disappear! When there was but little left, she would look about for another; and if she found it, would take it to her cage, lifting it up before her so that all there was to be seen of Totty, at times, was a pink nose, whiskers and a griddle-cake coming along as if by magic! Sometimes she stepped on the cake, and then there was a tumble; but that made no difference. She got the cake home and hidden in spite of all obstacles.

Totty was a very clean little rat, and was always washing herself. Her way of washing was pretty. She would hold her hands to her mouth and clean them; then she would rub them up and down the side of her face rapidly, reaching behind her ears at times. Then she would swing herself around, still sitting up, and wash the right and then the left side of her body, chewing refractory tufts of hair, and finishing by taking her tail in her hands and scrubbing it, as it were. Often, when she did this, she would lose her balance and roll over, but this was of no consequence to her. She would go on with her toilet all the same, lying on her back or side.

For a long time Totty was my only pet. But one morning I saw a little old man walking along, leading a small, brown, short-haired dog without a tail. On this dog's back were three white rats; and I could not resist the temptation to take one home for a companion to Totty. I bought one, made a new cage, large enough for both rats, and put them in it, each in its own space, and watched them. Totty bristled and puffed, and Tatty—that was the name I gave the other—kept quiet, as much as to say, "Oh, you needn't mind me, I'm only Tatty!"

About a week afterward I let them both out. In a moment the two rats were caressing each other with delight, and from that time were the best of friends.

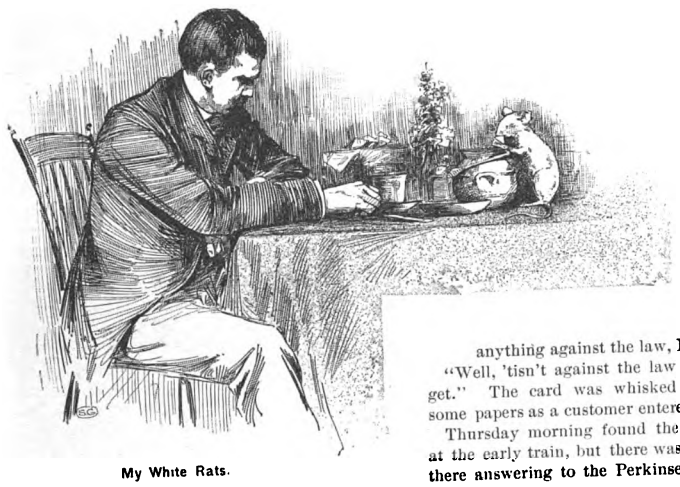
Not long after that I met again the little old man with the dog and rats, and bought of him another rat, who was so soft and gentle that I at once called him "Gentleman Tooty." Taking him home in my pocket, I introduced him to the other two. They took slight notice of him at first. After a while his gentle manners made them kinder, and all three were good friends. They ate their meals together, and played about the ladders as if they were born gymnasts.

This addition to my rat family made it necessary to have a larger cage. I built one with three compartments, all provided with ladders and places for food and drink—as jolly a cage as ever a rat lived in.

One morning, upon opening her compartment, I saw that Tatty had a wee rat in her nest. Tatty was happy and indefatigable, and brought up that pink, hairless, unopen-eyed baby rat in the most astonishing manner. Totty, the eldest, and the first rat, was also highly delighted at the affair. Whenever I would permit, she got into Tatty's compartment and made a great time over the young one, whom I named Tutty; and they never on any account fought over it or lost sight of it, but did all that could be done to make it comfortable.

Tutty grew to mature rat-hood, and, in the course of time, I had thirty-four rats from this small beginning! My little family never increased after that, and, really, I had as many as I wanted.

It was highly amusing to watch the elder rats take care of the younger ones. Totty, Tatty and Tutty constantly brought the stragglers back again to the place where they slept,—I had arranged a big loft for all,—and they had to submit to this until they were large enough successfully to resist their parents.



All these rats showed characters of their own. Totty was gentle, loving and wise. Tatty was kind to the little ones, but apt to "boss" the others. Tutty was concerned with nothing and nobody but her own fat self. "Gentleman" Tooty ate and slept and let the world wag on. The thirty ratties were of various dispositions, from kindness to selfishness, and it was a sight to see them rush pellmell for a bit of food thrown in to them.

"Grandma" Totty had that family in her special care, and did all that she could for them. As she grew old they sometimes treated her rather roughly, but she never retaliated, and it was touching to see Tatty come to her rescue when half a dozen ratties jumped over Totty in their eagerness to get something away that she was eating. Tatty sent them right and left, and then she and Totty ate the food together.

They did one thing that was most extraordinary. A whole row of them would cling to the wire sides of the cage and, opening their tiny pink mouths, gape, one and all at the same time, as if they were drilled to perform that way every morning.

Totty went beyond them all in her sweetness of character. Many times she would go to sleep in my hands, lying in any position in which I might happen to hold her,—often on her back,—her little hands clasped together, twitching in her dreams; and would stay as long as I would hold her, never once waking, and having no fear that she would come to harm while I held her in her sleep. She was a wonderful rat!

Cleanly kept and kindly treated, there is no animal, within my knowledge, half so intelligent and sweet in nature as a rat, white or brown; and this in spite of all prejudice to the contrary. Keep the rats in a cage made wholly of wire, with

My White Rats.

a movable tray. Give them little or no meat, but almost anything else. Keep them warm and dry, and they will live for years, and be meantime the most cunning and interesting of pets.

WALD GUSTAFSON.

For the Companion.

THE SQUIRE'S PERQUISITE.

"It ought to be here by this time," said the postmaster of Darby, as he shuffled in from taking a squinting view through his fist down the "turnpike."

"Well, I can't wait. If anything comes, send it up." Jake Perkins picked up his molasses-jug and went out.

The Darby mail was late; and when, a few minutes later, some one announced the approach of the mail, the postmaster felt called upon to vindicate his own position by censure of the mail-carrier, who clambered slowly out of the dilapidated old buggy called the "stage."

"You must have a powerful heavy mail, you're so long getting here," he began.

"Always have a heavy mail when Billy's aboard," said Uncle Billy Tate, winking as he entered with his usual deliberation and threw the mail pouch with a circular motion over the counter and around behind the small cluster of boxes known as the Darby post-office.

"That may all be so," said the Squire, "but the people of this town don't feel obliged to wait all day on a government official, on no solider ground than his being fat and his horse lean. This office is run for *the* people, not for *a* people, and they want their news on time."

"The news'll keep," said one.

"An' the Squire'll never let his perkisites spoil a-layin'," remarked another, with a wink.

These frequenters of the combination village store and post-office knew that the Squire at least wanted the news; and it was no secret that the newspapers and postal-cards that came in the mail for the families living on the outlying hills, gave him an opportunity for supplying his wants—an opportunity not enjoyed by the less favored residents.

In reality the Squire had rejoiced over this fact when he took the office, looking upon it as one of the perquisites of the position, and "perquisites" he always had an eye upon.

He had always reasoned that any one had a right to make a good thing when he could. If he had a better chance than most people for news, why, if there was anything to be made out of it, who had a better right to use it?

He distributed the matter among the boxes, with great deliberation, and entered the sitting-room adjoining the store as soon as the crowd had departed. He slipped a postal-card into his wife's hand.

"Perkinses coming, S'liny."

In a very short time his wife thrust her head into the store.

"Why, it don't concern us; there's no news on it," she said, with evident disappointment. "What of it?" she questioned, as she slid back to the office and reached up to place the postal-card among the P's.

"I'll put that card up, S'liny. Just you leave it down there. So you think that isn't news, and don't concern us! Well, I reckon it does. You wait till I get this mackerel kit down cellar."

Presently he came up from the cellar. "Isn't it eleven miles to Perkins's?" he asked. "And isn't Raf free as water with his money? The man that takes 'em up there's going to get paid for it, and I'm going to be that man."

"You! Why, Dan'l, where's your t'other horse and your wagon?"

"I've thought that out. Fry's mare for a half-dollar, and Job's big wagon another, and I'll clear a full five on it."

"But Jake'll go after 'em, sure, if he gets wind of it."

"Just so! But he's got to get wind of it. To-day's Monday, and I'm thinking he won't get that card before Thursday. See?"

"La, yes, I see, but don't you go to doing anything against the law, Dan'l."

"Well, 'tisn't against the law to forget." The card was whisked among some papers as a customer entered.

Thursday morning found the Squire at the early train, but there was no one there answering to the Perkinses' relatives.

"Perhaps the folks you are looking for will come on the night express," said the conductor, of whom he inquired. "That's due at six."

"At six o'clock it'll be dark," he mused, "and they'll pay almost any price to get there. I'll wait; but what ails that horse's foot?"

Inspection proved that the borrowed animal had cast a shoe, which had to be set. Then he had to have crackers and cheese for the day of waiting; but night and the express came at last, and no Perkinses upon it!

"Well, it's queer, mighty queer!" mused the Squire, as he drove slowly homeward. "They said Thursday, and here 'tis Thursday night—Whoa-p!"

He had run full into a wagon which was being driven along the dark road. By the light of a match he discovered a badly wrenched wheel.

"You come, Dan'l?"

It was late when his wife peered out into the gloom as he stumbled in out of the dark.

"Yes, I have, and that's more than other folks have!" he answered, gruffly.

"Didn't Raf's folks come?"

"No, they didn't, and I don't see what folks want to be writing to make folks traipse 'round after them for like this all for nothing! Anybody been for the mail?"

"No, but a man's been here to buy the old gray, and he said he guessed, seeing that neither you nor the horse was here, he'd back down."

"Jiminetty! If I didn't forget I'd set the day! There's the last chance gone to get rid of Bob. I tell you, S'liny, those Perkinses ought to pay me for this! I'll be out nigh three dollars before I get through with that wheel business!" he groaned. "And all because they didn't come up to their word."

Next day, after the Squire had distributed the mail, Jacob Perkins entered the store.

"Hello, Squire! What's the matter with Uncle Sam this week?"

"Uncle Sam?" the Squire asked, somewhat agitated. Did Perkins know anything about that postal?

"Yes, he's powerfully behind time. I didn't know but Uncle Billy 'd had the apoplexy or his horse 'd got choked by an extra oat, and government hed stopped accordin'ly. I ought to have had a postal from nephew Raf last Monday."

"Perhaps it got delayed. Lots of new men in the service, and Darby's out in the country. Maybe that's it."

He handed out the card with an effort at unconcerned indifference.

"I should say 'twas—and the day after ther fair. If I'd got it when I ought, he wouldn't 've had to got a livery and express-wagon to bring 'em all up, and their trunks."

"Hey! Raf come?" the Squire exclaimed.

"Bag and baggage, Tuesday, just as he wrote he would."

"Tuesday! You sure it was Tuesday?"

The Squire's surprise had got the better of his discretion.

"See for yourself. It's plain as daylight."

"Why isn't that an *h* in there?" The Squire pointed to the word, as he viewed it through his glasses.

"No, sir! You aint so used to Raf's writing as we are."

Perkins laughed, knowing the Squire's curiosity. "As I was saying, if I'd have known it in time, I'd have got you to go after 'em—I was working so like a beaver, and the roads are bad. You might as well have had that ten dollars Raf threw away on the livery fellers—an' better, too. I told him so."

"S'liny!"

"Why, what's the matter, Dan'l?" his wife asked in rising accents of alarm, as he put his head in at the door a few moments after Perkins's departure, a woe-begone expression on his face. "One of your attacks coming on?"

"S'liny, the Perkinses have come—the whole family."

"Land sakes!" She bounced up indignantly. "When?"

"Tuesday," he answered, slowly and solemnly. "Just what that postal said, too. Here we both of us had that thing here since Monday, and read it Thursday every time. And if I'd been attending to my own business I'd 'a' made ten dollars. As 'tis I'm out of pocket instead of in."

"It's a mortal shame!" she exclaimed, sympathetically. "Folks ought to stop writing cards if they can't write 'em plain enough to be read straight."

"Well, I can tell you what's right now." He sat down impressively on the nearest nail-keg. "If this government expects I'm going to spend my time making out its postal-cards to get news, it's going to find itself much mistaken, that's all."

He went back to the post-office with his new determination and a dejected air. His perquisite had lost its value, and such open communications in Uncle Sam's mail were thereafter passed by unnoticed. When his lessened stock of information became a matter of comment, as occurred very soon, he had but one explanation.

"News," he declared, "isn't to be depended on."

But to S'liny he remarked, "It's losing business attending to other folks's affairs without being asked."

So it is a question whether his disastrous speculation ever forced upon him a conviction of the truth in Jake Perkins's opinion, delivered to Raf with a knowing chuckle:

"The Squire haint got as much of a nose for news as he had 'fore he got his come-uppences. I reckon he's learned that his 'perkisites' pay best when they're taken on the square."

SARAH BIERCE SCARBOROUGH.

PURE PLEASURES.

Fresh as the houres may all your pleasures be,
And healthfull as Eternitie!
Sweet as the floure's first breath, and close
As th' unseen spreadings of the Rose
When she unfolds her curtained head,
And makes her bosome the Sun's bed

For the Companion.

PURSER WATKINS.

[For this Story the author received the Third Prize, Two Hundred and Fifty Dollars, offered by the Publishers of THE COMPANION for the third best Story of Adventure, competition of 1889.]

There was a fierce competition on Puget Sound between two rival lines of steamers. For a long time one company had controlled the traffic between Victoria and Tacoma, but when some enterprising men started an opposition line, there was a sharp struggle between the two.

I obtained a position as assistant engineer on one of these opposition boats. She was a steamer called the *Occident*, brought from San Francisco, where she had been used about the Bay.

The chief engineer was named George Starr. He was a grim, elderly man, who never spoke unless he was addressed, and then replied in the fewest words possible. He was a good mechanic, and kept the machinery in as good working order as it was possible to keep it.

The *Occident's* engine was probably the most complicated and untrustworthy piece of machinery afloat. Sometimes the steamer would make excellent time, easily distancing any steamer on the Sound. At other times she could, only with the greatest difficulty, be made to move at the rate of eight miles an hour.

Ordinarily the trip from Victoria to Tacoma, touching at Port Townsend and Seattle, occupied about twenty hours; sometimes we would do it in seventeen, and again we would be twenty-five or thirty hours on the trip. Once, to our great chagrin, we were forty hours on the way.

Our orders were to make time at all hazards. The travelling public on Puget Sound cared little in those days for safety, and a great deal for arriving at their destination in the shortest possible time.

The Captain knew every foot of the Sound by day or night. He never tied up for storm, fog or darkness, but drove the *Occident* to her destination. Years of exposure to the rains and fogs had given him a disease of the lungs. Often he stood in the pilot-house all night when he should have been in bed, but he had a family dependent upon him, and must keep going.

The purser was a young man who had been educated to the business on the Columbia River. He was bright, dapper, energetic, wide-awake, red-haired and red-moustached. His obliging disposition made him a great favorite on the Sound. He was, too, always looking out for the interests of his employers.

The steamers of both lines left the terminal ports, Victoria and Tacoma, at the same hour, and the boats lay at adjacent docks. Competition had reduced fares and freights to a very low figure, and the rush of business was tremendous. Our lower deck was crowded at every trip with freight and Chinamen, while every state-room was occupied, and the saloon floor often covered with mattresses.

As the hour for departure approached, there were crowds shouting, pushing and struggling on the docks; freight was being rapidly run on board, and carriages and wagons were in seemingly inextricable confusion.

On these occasions Harry Watkins, our purser, seemed to be everywhere at once, securing business for his boat by means that were extraordinary and often comical.

Digitized by Google

One evening we lay at Tacoma, preparing for the trip north. The hour of starting was ten o'clock, and it lacked but twenty minutes of the time. Our trip down had been the fastest on record; we had distanced our competitor by more than four hours, and taken the cream of the business at Port Townsend and Seattle.

I was in good spirits, and even George Starr's grim face relaxed a little when he looked over the machinery, which, after hard work, we had successfully got into passable shape.

"If we don't beat our own record this trip," said, clambering down after making some complicated repairs, "I'm mistaken very much."

"Don't be too sure," said Starr.

Having a few moments to spare, I went to the gangway of the boat and glanced out. It was a cold, dripping night. The fog was so dense that the lanterns on the dock made little pelots of yellow light, revealing nothing.

Trucks loaded with freight were coming down the gang-plank with a crash and a rattle.

The Farmer's Children.

I was just turning away when Harry Watkins came sliding down the gang-plank. In one arm he carried a little girl, while with his other hand he dragged a boy about nine years old.

"Hadn't time to go around by the passenger," he said, breathlessly. "Here, Billy," as he caught sight of me, "show these kids about the engine-room, and somewhere where it's warm. They're 'most frozen, poor little things! I'll take care of 'em when we get under way."

Thrusting the little girl into my arms, he was off like a flash.

The little girl, who was about four years old, was trembling violently from cold and excitement. I made my way carefully among the piles of freight and crowds of Chinamen that blocked the main deck to the engine-room, through a narrow passage piled high with freight.

The engine-room was a comfortable place. There was a brond cushioned seat across the end.

As I came in, the Captain was leaning over one of the half-doors that opened into the side passages, talking with the chief engineer. He was on his way to the pilot-house to spend the long, cold, wet night there. No one else qp board was capable of running the Occident in such a fog as this. His glistening eyes, hollow cheeks and harsh, hacking cough told plainly enough that he should have been in his bed rather than in the pilot-house.

I placed the little girl in one corner of the cushioned seat, and told the boy to climb up beside her, and keep perfectly quiet.

Starr growled a little at having the engine-room littered up with passengers.

"Oh, we can't be particular those times," said the Captain. "There's no part of the boat where Watkins wouldn't stow people for the sake of getting business. I hope we'll make as good time as we did coming down."

"There's no depending on that machine," said Starr.

"She looks pretty well now," said the Captain.

"Yes, Billy has polished her up pretty bright." But he shook his head as he spoke.

"Well, do your best, boys, to get her through on time," said the Captain, walking slowly away, coughing as he went.

Promptly at the hour the start was made. The complicated old engine creaked and strained as the many parts were put in motion. Starr handled the engine. I stood by ready to give assistance.

When we were off, I never saw the Occident engine work more smoothly. With a good pressure of steam, the various parts click-clacked merrily, and the boat moved ahead at a good rate.

I stood the first watch. Before Starr retired, he went to look for the Navigation Company's boat, but returned and said that he could not see ten feet from the guard.

Their Story.

About half an hour afterward I sat down upon the broad, cushioned seat beside the boy, keeping my eyes upon the engine. There were not many moments during the whole trip when either Starr or myself was not watching that engine.

"Please, sir, how soon before we get there?"

The little girl was fast asleep, but the boy was sliding bob upright. They were healthy-looking children, poorly but neatly dressed—the little girl very pretty, with a tangle of brown curls about her face, and as shy asbby asbby in the corner.

"Where are you going?" I asked.

"To Seattle, and we want to get there awful quick, if you please, sir."

"What's the matter hurry?" I asked, amused at the boy's earnestness.

"Mother hasn't seen Ally and me for more than four months—" said he, confidently.

"How's that?" I asked.

"Why, you see, father and mother moved up to Seattle and left us with grandma till they got settled. We were going by the other line."

"Were you, indeed! And what changed your minds?"

"Oh, the purser met grandma on the dock, and said he'd take care of us, and he just kind of run us on this boat. It's a good boat, isn't it?"

I smiled, knowing Harry Watkins's way of picking up passengers.

"And who's to meet you in Seattle?"

"Oh, mother. She's expecting us, and won't be far off, I guess. She said in her last letter she was going to see me and Ally. My father has got a job at fishing on the Sound. He's a great fisherman. He's caught salmon so long." The boy stretched out his arms to their utmost extent.

Just then Harry Watkins looked in over the half door.

"It's all the nights I ever saw on the Sound," he said, "this is the worst. I thought Columbia River fog couldn't be beaten, but it's nothing to this. Ought to have seen how I got those two passengers! Their grandmother was bound to send them by the Navigation Company; but I rushed her over to our office, and, bein' a person personally responsible for the safe delivery of those young ones."

He eyed them benignantly as he spoke. "Hey! but we're stepping it lively to-night, eh? Navigation boat away behind."

"Yes, she's doing pretty well to-night," I said, "but there's no telling how long it will last. She's very uncertain."

"Well, I'll relieve you of these children now. But what I'm to do with the youngsters I don't know. They've stowed into chinks like rats. I don't like to turn them in with the crowd."

"Leave them here," I said. "I'll be on duty till we get to Seattle. It's a pity to disturb the little girl, and there's room enough for the boy to sleep on the seats. They won't be in my way."

"All right," said he, "I'll just make a pillow for the little girl, and settle the boy right."

He opened the door and came in. In a few minutes he had arranged a very comfortable bed for both.

"Oh, I'm used to it," he said; "I'm the oldest of a family of nine. This is the most comfortable place in the boat.

"I wouldn't like to have anything happen to these children," said the purser, seriously, pausing at the door. "I don't know what makes me feel so, but I'll never take the responsibility of doing any thing like this again. It's all right for people who voluntarily take their chances with us, but to force children, with no one in particular to look after them, on board this boat, is another thing."

Watkins went away, glancing back at the chil dren.

In a short time the boat settled down into comparative quiet. The clattering of the Chinamen ceased, the thumping caused by the men moving the freight was stilled and nothing was heard but the blowing of the steam, the clanking of the engine and the paddles beating the water, as the Occident rushed rapidly along through the fog.

A Series of Accidents.

We were about three hours out from Tacoma when I heard a commotion among the men forward. Presently the bell sounded to go at half speed.

Soon I learned that the Captain had been taken suddenly ill, bleeding from the lungs, and had been carried to his room in an unconscious condition.

The mate had taken charge, but was not at all sure where he was going, for the night was thick and black.

This news made me very anxious, for I knew that no one on board was capable of taking the Occident to Seattle on such a night as this except the Captain.

Soon the gong sounded the signal to stop the engine. We lay quiet, except for the slight rocking of the steamer caused by the swell.

As I stopped the engine, I noticed that something had gone wrong with the machinery. Just what it was I could not at the moment make out, but I was sure, from the jar that I felt, that some part of the complicated machinery had got out of order, as it often did just as suddenly.

I ran hastily over the engine, but could find nothing broken. I concluded that it must be in some of the many hidden parts.

Expecting every moment to hear the signal to go ahead, I stepped to the speaking-tube which connected the engine-room with the room of the chief engineer, intending to call Starr. The speaking-tube was near the door, through which I could see out on the gangway over the guard, aft of the paddle box.

As I paused a moment at the door and glanced out, I was startled to hear a peculiar roar, which I knew did not come from any part of our steamer. Almost at the same moment, right on our port quarter aft, there appeared a great luminous glare through the fog. At the same time the blast of a steam whistle sounded, and following it a scream of terror on our boat, and a scuffle about out of the fog.

Before I had time to use the speaking-tube, the angry clang of the gong sounded, giving the signal to go ahead, followed immediately by the speed bell.

I sprang to the starting bar, but my heart sank like lead as I went. In a moment my worst fears were realized; the engine would not move. Frantically I strove to start it, but without avail. Again and again came the sharp, impatient clang of the gong, and I heard once more the scream of terror; but I knew that if that engine could be started a collision would probably be prevented, but in spite of all my efforts, it remained immovable.

A Collision.

Just then Starr, aroused by the stopping of the engine and the concussion, rushed half-dressed into the engine-room. "I saw him strike a large wreck, and run forward among the wrecks, and I never saw him again.

The next moment came a grinding crash. The Occident heeled sharply over to the starboard. The bow of the Navigation Company's steamer, which had overhwhisled us while we were running at half speed, struck us on the port-quarter aft of the paddle box, and cut through the guard deep into the hull of the Occident.

Amid the crashing timbers, and the clouds of steam escaping from a broken pipe, Harry Watkins came bounding into the engine-room.

"Billy," he shouted, "I must look after these children. I'm stranded in—"

He snatched up the little girl, who had awakened and was crying loudly.

The Occident would probably stick in a few minutes, for there was a hole in her side through which the water was rushing with frightful speed. It had already reached the furnace fires.

Some life-preservers hung in the engine-room These I seized, and, throwing two to Watkins, buckled one upon myself and another on the boy.

I looked around for Starr, but could not see him. He died at his post.

Seeing that I could be of no further use in the engine-room, I followed Watkins, who, carrying the girl and leading the boy, was stumbling to the starboard gangway.

In the meantime the mate and crew were occupied in getting out the boats, which were few and almost useless.

The frightened Chinamen were quite after the first shock, and patiently submitted to be driven back from the boats.

The steamer with which we had collided had drifted away into the fog, but her shrill whistle could be heard not far away.

As Watkins reached the rail of the sinking steamer, a boat in charge of the second mate, full of passengers, was just pushing off.

"Jump in, Watkins!" cried the officer.

"Here, take these children!" said the purser.

"Curs—barely room for one," said the man. While he spoke, the men in the boat, fearing she would be overloaded, pushed off.

A Promise Remembered.

The Occident was now sinking rapidly. It was plain she could float but a few moments longer.

"We must jump into the water, and try to get as far away from the wreck as possible," I said. "The boats from the other steamer may pick us up."

We made our way to the stern, as that afforded the best chance of clearing the wreck.

"Here, Watkins, let me take care of the boy" said I. "You can't look after them both."

"All right, Billy. Don't lose him. Their mother is waiting at Seattle for them, and I promised to see them safe there."

I grasped the boy by the hand, and holding him fast, jumped into the chilling waters of the Sound. Watkins, holding the little girl in his arms, followed immediately after me.

We all rose near together, and drifted rapidly away from the wreck. So dense was the fog that, in a few moments, we lost sight of everything, although we could plainly hear the cries and screams of the drowning people.

Presently Watkins exclaimed, "Billy, one of the life-preserves is gone!"

I saw that the life-preserver he had strapped on the little girl had broken loose, and was nowhere to be seen. The preservers would support fairly well the weight of one person; but I saw that it would be impossible for the purser to keep afloat long, and support the child, too.

"Billy," said he, "I can't keep her above the water this way. I'm going to put my life-preserver on her."

"But," said I, "how will that help you? It won't support any more weight upon her than upon you."

"Oh, perhaps not," he gasped, between his breath "but she don't like water as any rate. Billy, I don't want to die, but I'd rather die than let these children drown. They'd have been safe aboard the other boat if it hadn't been for my meddling. I've got to see them through."

In spite of my remonstrances, he took off his life-preserver, and strapped it upon the child. He could swim but little, and it was hard work for him to make the change. When it was done, the child floated buoyantly, but his head was almost under water all the time.

In the meantime we shouted till we were exhausted. The sounds about us grew fewer, the cries fainter; we could hear the splash of oars, but no boats came our way.

I felt a numbness creeping over me, and I saw Watkins's face deathly white against the gray water of the Sound, almost overwhelmed. He was struggling violently to keep afloat, but with his re maining strength was still assisting the child.

Then I heard the splash of oars near at hand, and a boat suddenly darted out of the fog. There were shouts, and I felt a strong hand grasp my collar. Then I knew no more.

When I recovered consciousness, a few minutes later, I found myself in a boat with two men, one of whom was wrapping the children with his warm, thick coat. The other was chafing my hands. The boy was crying. "Father! Father!" and the little girl was strongly clasped in the man's arms.

It was the children's father, who had been fishing near the scene of the disaster. It was not very strange, under the circumstances, that it was he who happened to pick us up.

"Where is Harry Watkins?" I cried, as soon as I could find my voice.

"That must have been the man who went down just before we could get hold of him," said the fisherman.

TRADING WITH A BUMBOAT-MAN.

In the eyes of the law a sailor is regarded as entitled to almost as much protection as an infant, and Jack often is as helpless a great, hulking infant, no doubt, but still an infant, in his helplessness on shore. Even in foreign climes, and aboard his own ship, Jack is extremely likely to be victimized; and of all the sharpers whom he meets on his travels, none is more astute and yet more completely honest than the bumboat-man.

Did you ever meet a bumboat-man? If not, take a trip with me to Calcutta, and I will introduce you to the king of his class.

Our good ship *Kindness* is bound up the Hoogly to load at Calcutta for the United Kingdom. The pilot is picked up off the Sandheads.

Talk about "duties!" There is nothing in all the realms of tippery that can surpass the Calcutta pilot. When he boards a vessel he brings a whole establishment with him. He has three native servants, and generally a cook. He has as many changes of raiment as Beau Brummel had; and his servants fan him, dress him, shave him, wash him, and, in fact, attend him as if he were a help less invalid.

In spite of all this effeminacy, the Calcutta pilot understands his business, and is virtually master of the vessel from the time he boards her till he gives her up to the harbor master.

After an interesting sail of about a hundred miles up the Hoogly, the vessel is at last moored head and stern, to a triple line of about nine hundred dollar craft above Garden Reach, a beautiful suburb of the city.

Among the first visitors to the ship are the bumboat-men, of no importance the captain for a chance to supply the crew. It is the bumboat-man who caters to Jack's taste for fruit, "soft tack" and eggs; and, when he goes ashore, acts as his guide and purveyor.

The men of the crew are generally allowed to run up an account of from ten to twenty rupees with him, according to the length of the vessel's stay in port; and this sum is paid by the Captain, and deducted from their wages at the end of the voyage The bumboat-man then leaves the skipper the largest house generally on the job.

The native who manages to carry on a row with the Captain of the *Kindness* styles himself "Yankee Sam," and flies a burgee or swallow-tailed pennant at the stern of his boat, with his Down-east

Digitized by Google

cognomen painted on it. Yankees are proverbially smart, but this black impostor is capable of cheating the most knowing one that ever peddled clocks at home or traded to the East Indies.

He appears as black a specimen of humanity as could be found anywhere, but he is clothed from head to foot in white satin-jean, and perhaps the contrast makes him look darker than he really is.

Trading with a Bumboat-Man.

As soon as he has ingratiated himself with the Captain, he goes forward among the boys and begins to call his rivals in trade black rascals, robbers, swindlers; nothing is too bad for them. Having exhausted his stock of slander, he opens a ledger account with the sailors, giving each man a page in his book. Then, making a signal to his assistants, who pull his boat up alongside, he begins to show off his stock in trade.

There are beautiful loaves of milk-white bread, with pats of nice fresh butter beside them. Then come fruits of all kinds, including mangoes, bananas, pineapples and pomegranates; and here are dozens of fresh eggs. Another basket contains jars of preserves and pickles, with tins of sardines and pots of marmalade.

Now he offers you a tempting cheese, and then turns suddenly to call your attention to a package of Burmese cheroots. But his eyes are wandering around in all directions, never still for a moment, and he is suspicious of the slightest movement on the part of his new customers.

Each morning, just before breakfast, he pays the ship a visit, and the spread which every sailor has before him at that meal testifies to the growing popularity of Yankee Sam.

Sunday is his great trading day, and then it is that he shines forth in all his glory. On that day he wears a black suit and a beautifully laundered white shirt, and jewels sparkle in his ears and on his fingers.

The character of his merchandise is changed completely for that day. Here are elegantly embroidered garments for ladies, and lovely Cashmere shawls and opera-cloaks; hand-wrought lace of the most costly kind; jewelry and ivory goods; sandal-wood boxes and cabinets and toy pagodas; Chinese and Japanese curios of every description; fans and fancy screens, and silk dress-goods in great quantity.

This is Jack's opportunity to purchase presents for wife or sweetheart at home; and it is a poor Sunday when our friend does not make two or three hundred rupees out of our vessel alone.

To look at him and hear him talk, one would think Yankee Sam one of the most honorable men alive. There is something almost ministerial about his appearance on Sunday. But, for all that, he is the agent of the worst cheats and swindlers in Calcutta.

Every night his boat comes along under the bows of the *Electron*, and some of the crew go ashore to be introduced by him to some worthy "gentleman" of his acquaintance, who fleeces Jack, and shares the profits with Yankee Sam. The money expended, or rather squandered, on these occasions, is lent by the bumboat-man, and charged on his book to cigars or curios.

He is continually prying around the forecastle, and if he sees a nice blanket or a good overcoat he will kindly inform the owner that he knows of a "gentleman" who would like to buy just such an article.

The article probably goes ashore the same night, and is sold for a mere song. Yankee Sam pockets his commission, and poor Jack, when sober and homeward bound, off the Cape, suffers for want of the overcoat.

"Liberty-day" is our bumboat-man's harvest time. Now you see him at the head of a procession composed of the ship's company in holiday attire. He has promised to "show them around," and he does it well. Every buggy-driver, palanquin-bearer and bootblack knows our friend, and the one who pays him best is recommended to the sailors.

The guide's friends are as rascally as himself, so that poor Jack is unwittingly surrounded by thieves. In the bazaar he introduces his charges to the best paymaster. Sam backs up the dealers in the praise of their wares, and gets an absurdly large price for them while he appears to be making a good bargain for the purchasers.

Each of our "liberty-men" takes a month's pay ashore; and it is safe to say that half of it finds its way, by a circuitous route, into the bumboat-man's pocket.

The last week of the ship's stay in port arrives, and then other attractions are added to our friend's stock in trade. These consist of live-stock—monkeys and parrots.

Miserable green birds are sold to the men, with the solemn assurance that they come of a good race and will "talk like a Philadelphia lawyer" when a little older. Ten to one, before the ship reaches the Cape, each and all of them, bird and quadruped, will have found a watery grave.

The day for sailing arrives. "Yankee Sam" goes aft to settle with the Captain, gets his money after some growling at the amounts debited to the seamen, and leaves in the Captain's hands a good round sum as bonus. Then he goes forward and shakes hands with the boys, wishing them a pleasant trip; and only when the moorings are cast off and the tug begins to forge ahead does he bid farewell to his customers—or his victims.

Strange to say, though he has swindled them right and left, the sailors vow that he is the best fellow for a "native" that ever lived. In their future career, whenever they come across a fellow-seaman bound for Calcutta, they will recommend to him Yankee Sam, the king of bumboat-men.

A. J. GRANT.

SCHOOL-GIRLS.

They are brimming with innocent laughter,
They are blushing like blossoms of spring;
Will the fruit of their distant hereafter
Be as sweet as the blossoming?
Yet I would that life's school were beginning,
And I could commence it well.

Selected. —*Julia Harris May.*

GERMAN EXPANSION.

For many years the Germans have sturdily emulated the English in seeking to occupy and colonize distant regions, and to find new homes and new occupations beyond seas.

There are many reasons why large numbers of Germans should leave their native country to find larger opportunities elsewhere. Germany is overcrowded in population. Its soil is already scarcely able to support its forty-eight millions of souls, especially now that German industries find keen rivals in America, Australia, and other parts of the world.

The heavy taxation and the burdensome military conscription in Germany, moreover, tend to drive many German artisans and farmers to emigrate, and seek a sustenance in regions where such burdens do not weigh so heavily.

We therefore find German communities and colonies established in many parts of the world, and growing larger as time goes on.

The Germans naturally look to this country as one in which opportunities for success are various and large, and where liberty is freely assured to all who work and prosper.

A large proportion of Germans who come to this country repair to the West, and so rapidly have the numbers of Germans increased in our Western States and cities that in many localities they now hold a large, and sometimes a controlling, political influence.

This is notably the case in such young Western cities as Chicago, Cincinnati and St. Louis. There are besides, in Wisconsin and other Western States, whole communities comprised wholly of persons of German birth or parentage.

It must be said, too, that the Germans in America are, as a whole, peaceful, thrifty, law-abiding citizens, whose intelligence and industry are a distinct gain to the country.

But the United States is not the only American country where the Germans have made their qualities felt for good. There are twenty thousand Germans in the extreme southern Argentine Republic, and several thousand in Brazil, and in these countries they comprise the most active and thrifty of the commercial class.

Germans are also found scattered through all the Central and Southern American States.

In Europe the German population has long since overflowed its political boundaries, and has established large communities in neighboring States. The German population in France is very large, and whenever there is an outbreak in that country of the ever-smouldering hatred of the Teutonic race, a popular outcry is made against the foreigners who are insinuating themselves in all the best places.

There are not far from half a million Germans in the Baltic provinces of Russia; and they comprise by far the best element among the dwellers in those provinces. While the Baltic Russians are for the most part ignorant and indolent, their German neighbors are industrious and full of energy. They found and manage the factories, comprise the merchants and artisans, and are the doctors, teachers and land agents.

The superiority of the Germans in the Baltic provinces, indeed, has been such as to arouse both the hatred of the Russian population and the jealousy of the Czar's government; and this has resulted in the deprivation of many of the rights and privileges they once enjoyed.

Besides the Germans in various parts of Russia, there are five millions in Austria-Hungary, two millions in Bohemia, and a quarter of a million in Transylvania; and in all these localities, they comprise the most active promoters of the industries and culture of the community.

The latest German expansion is that toward Africa; where we shall, no doubt, erelong see German colonies growing up, and contending with the British colonies already planted in that continent for commercial and military supremacy.

For the Companion.

MARCH.

O March, thou art a noisy, blustering lout!
What is this yearly uproar all about?
Too rude art thou, with whistle, trick, and shout.

Go, learn thy sister April's gentle ways!
Then shall thy gift of earliest spring days
Be gladly welcomed, and thyself accorded praise.

EMMA C. DOWD.

RECIPROCITY WITH BRAZIL.

The President of the United States recently made known, by proclamation, a modification of the tariff law of Brazil, made by that government in the interest of the United States, and in return for the free admission into this country of sugars, molasses, coffee and hides produced in Brazil.

This proclamation was simply the public announcement of the consummation of an agreement between the Governments of Brazil and the United States. The exchange of products in this manner is properly called reciprocity, and though it does not mean reciprocity in the sense of a completely free exchange of products, it covers practically all the articles of commerce in which there is for a long time likely to be much exchange between this country and Brazil.

The President's action in the matter was taken in pursuance of a clause in the recent tariff act commonly called the "McKinley bill," and although sugars, molasses, coffee and hides are exempted from import duties, in general terms, by this act, a clause of the law imposes a duty upon each of these classes of merchandise when coming from any country that maintains a tariff system hostile to the introduction of American goods. The President is empowered to decide whether the tariffs are friendly or the reverse.

The articles with respect to which the Brazilian tariff is modified in favor of the United States are in two classes, or schedules. The first schedule includes a large number of articles that are to be admitted free when taken from this country to Brazil, and the other includes many more articles which are to be admitted to that country at a reduction of twenty-five per cent. from regular tariff rates.

In the first, or free, schedule are included wheat, corn and other grains, and the flour and meal made of them, potatoes, hay, salted pork except hams, coal, agricultural implements, and nearly all kinds of machinery except sewing-machines.

In the second, or reduced, schedule are included hams, lard, manufactures of cotton, leather, except boots and shoes, manufactures of iron and steel, wagons and carriages, and manufactures of india-rubber.

This arrangement, it is expected, will greatly increase our export trade to Brazil, which has heretofore been very small, although this country imports nearly one-third of all that Brazil has to sell, including almost the whole of her coffee crop.

Of the articles that are now to be admitted free from this country, Brazil has imported, on the average, twenty millions of dollars' worth yearly; and less than three and a half million dollars' worth of these has come from the United States.

Of the articles to be admitted at a reduced rate, almost forty millions' worth per year have been imported into Brazil, and less than two and a half millions' worth has come from the United States.

Of cotton goods, which are to be admitted into Brazil at a tariff rate one-quarter cheaper than at present, Brazil has imported twenty million dollars' worth annually from Europe, while the United States has sent her only half a million dollars' worth a year.

In this one branch of commerce, our manufacturers expect to increase their exports to Brazil twenty-fold.

The immediate effect of the new arrangement, so far as the United States is concerned, will be in exports rather than imports. But it is probable that the Brazilian production, particularly of sugar and molasses, will be stimulated by reciprocity, and her exports of these commodities to this country increased.

Up to the present time, our trade with Brazil has been an importing trade rather than an exporting one. We have imported yearly from sixty to seventy million dollars' worth of Brazil's products, and exported to that country only about nine millions of our own.

One article which we import largely from Brazil is not affected by the present agreement. Crude india-rubber was already free of tariff charges, and remains so.

Unless the commercial arrangements of Brazil with other countries are modified as the result of the new bargain with the United States, we shall have an advantage in that country over all European nations.

Moreover, it is expected that this arrangement with Brazil will compel other countries to modify their tariffs in the same way as the new South American republic has done, in order to enable them to secure the advantages offered by the reciprocity clause of the tariff act, and thus to compete with Brazil for the export trade to the United States.

BETRAYED.

The winter sunset was glowing in the south-western sky, and the lady who was walking toward it seemed to see in it once more the Spanish castle of her youth, and the faces that long ago looked out at her from its windows. She began to hear far-off voices sound, and to dream the old dreams over again. Suddenly a very different voice close behind her broke the spell.

"Sing for nothing? Well, I should smile! I get pay for it when *I* sing, and don't you forget it."

The lady cast a hasty glance over her shoulder, and saw the speaker—a girl of perhaps twenty, well-dressed, with a quick, buoyant step, and a pretty face. Yes, it really was a very pretty face; and the simple yet good toilet looked like a lady's choice; but her speech betrayed her. Slang is not the language of well-bred maidenhood. When you hear a girl finish her sentence with an interrogative, "See?" you need search no farther for indications of what she is. "Well, I should smile!" is as comprehensive as a biography.

In a West End horse-car, the other day, sat a girl dressed as a well-dressed girl should be. If she owned diamonds she had left them at home. She wore good and simple clothes, and had a quiet, self-contained manner. Beside her sat another girl, with diamond ear-rings, a much-feathered hat, and a general air of thinking nothing too good for her. The two girls were talking—and it soon appeared that they had come from the same school. Presently the conductor came along.

The girl with the diamond ear-rings gave him a nickel, and mentioned the street where she wished to stop with an air that was nothing short of arrogance. Then the low voice of the well-dressed girl said, gently, "Will you please stop at Arlington Street?" and the other, who had said Berkeley Street, exclaimed, "After all, I'll get out when you do." When they left the car, the well-dressed girl said a gentle "Thank you!" to the conductor who had remembered her wish, and had taken care to stop in precisely the right place.

"Well, I must say," remarked the other girl, as they walked along, "you couldn't have thanked that man any more graciously if he had been the handsomest fellow in Boston, and had just brought you a bunch of orchids."

The well-dressed girl smiled—what a bright, winsome smile it was!

"Don't you think," she answered, "that there is a certain kind of pleasure in being courteous to those who don't expect it? The people who are used to pleasant speeches take them as a matter of course. I think those to whom almost everybody is rather curt must like a change once in awhile."

The girl of the diamond ear-rings looked at her companion a little curiously, for a moment.

"You are a crank," she said at length, as if she had found in her own mind the word of the enigma, "You are a crank—that's what you are—but I think you are a nice kind of crank, after all."

You see it is all in the point of view. Perhaps the High Priest and the Levite would have thought the Good Samaritan a crank if they had happened to look back, and see what he did when he came up to the man they had "passed by on the other side."

HIS OPPORTUNITY.

The story was told recently in several daily newspapers of a Southern boy who was ambitious to do great work as a journalist. He had a ready pen, broad ideas, and a strong faith that right and justice ought to conquer in the world.

He was eager to help in the fight for them. If he were but the owner or editor, he thought, of a great newspaper or magazine, what blows he could strike for the truth!

But he was only an insignificant reporter on a small daily paper. One hour he was sent to report a fire, the next to find out the price of beef. Now he described the speeches made at a dinner; again, the gowns worn at a ball.

What use was in these things? How petty the work was! How could it tell in the world's progress?

Still he tried, however small the task, to do it well, to put his best self in it.

At last came the great disaster at Johnstown. He was sent to report it, and made his way to the scene at the risk of his life. When some other reporters were alarmed at the outbreak of illness and other dangers, he induced them to stay in order that the nation might know the facts of the case, and send relief. When this work was done, he came home, with his health shattered by exposure, to die.

His chance had come. He had struck his blow for the right, and given his life for it.

Digitized by Google

Let no man think because his life is obscure and his work humble that there is in it no mighty opportunity.

It is generally from among the mass of obscure men that God summons His heroes to greatly live and nobly die.

THE LAFAYETTES.

The recent death in France of Edmond de Lafayette, the "last of the Lafayettes," and the grandson of the friend of Washington, has called anew the world's attention to the virtues and public services of the family, now extinct, to which he belonged.

M. de Lafayette was a senator of France, and a faithful and intelligent public servant. He was also a very modest man, and was impressed with the conviction that, while it was his duty to give to his country the best of his abilities, it was also his duty, out of respect to the preëminent greatness of his famous ancestor, to withhold himself from any career of ambition.

"The name will die with me," he said. "It is my duty simply to keep it intact. I cannot add to it."

The famous family to which he belonged had given to the world several soldiers, diplomatists, engineers and financiers. They were always characterized by public spirit and devotion to freedom, and by want of personal ambition.

Everything in their circumstances tended to attach the Lafayettes to conservatism, and to the elegant life of the court; but they set aside everything in their devotion to the principle of popular freedom.

The unselfishness of the great Marquis de Lafayette was well illustrated by an incident of the Revolution of 1830.

The people were at first slow to rise against the monarchy, and it was proposed by some hot-headed young students to throw the old General de Lafayette into the river Seine, in order to incense the people and stir them to revolt.

He was so greatly loved by the people that, these foolish youths argued, such an outrage, if nothing else, would move them to mutiny.

Some one went to Lafayette himself, and told him of this astounding proposition. He answered, with entire seriousness:

"Well, well! That is quite an idea. It's worth thinking about!"

The children of the great Marquis de Lafayette, the "hero of two worlds," inherited his fondness for America and Americans, and at the burial of Senator Lafayette, on one of the first days of the present year, the official representatives of the United States in Paris followed, on foot, his coffin to the grave.

DOVETAILING TWO LECTURES.

Yankee sharpness, which tries to get the most for the least, was amusingly illustrated one night in a country village. Mr. Wendell Phillips, having been announced to lecture in the parish meeting-house, found on his arrival that the committee were not agreed as to the subject of the lecture.

"How many lectures have you brought, Mr. Phillips?" asked the chairman.

"All of them are here," answered the lecturer, tapping his forehead.

"Well," continued the chairman, "we'll ask those in the audience which one they prefer to hear."

The audience was also divided; some called for "Toussaint L'Overture," while others asked for "The Lost Arts." At last an old man arose and said:

"S'pose we have both. Couldn't you give us both?" Mr. Phillips.

"Yes," answered the orator, taking in the humor of the situation—two lectures for one fee.

"He gave both, winding from one to the other," says his biographer, the Rev. Carlos Martyn, "with such deftness that it was impossible to detect where they were joined. The audience retired, feeling they had got their money's worth!"

Mr. Phillips's lectures were all carefully prepared, though never written out. They were all in his head, and he was always preparing them. For he read, studied, thought, with one eye on the platform, and ready to appropriate whatever would increase his mastership of his subject and his ability to make the audience think as he did.

He disliked the pen, and used to say that "Writing is a mild form of slavery—a man chained to an ink-pot."

NEW YORK BOYS' BAND.

There is something very pleasant in the city of New York in the way of a Boys' Orchestra. The boys are rather old boys, ranging from fifteen to twenty years of age, and many of them have had several years' practice upon their instruments. A few are students preparing for college, but most of them, sons of well-known business men, are themselves preparing for business, and regard music chiefly as the solace of leisure hours.

Their original object in forming themselves into a band was improvement in their favorite art, but since they have acquired skill and force as a musical body they have frequently played at asylums, homes and hospitals for the entertainment of the inmates.

The band at present consists of about fifty members, of whom thirty play stringed instruments, such as the violin, violoncello and double bass. There is one pianist among them. Their leader, a lawyer of note, has been a distinguished musical amateur for many years, a man of science as well as skill, who is not content with merely drilling the boys as performers, but gives them instruction in the theory of music.

This is not the only youthful orchestra of the United States. Many of the Conservatories of Music, which have become so numerous of late years, have classes of youthful performers, which naturally develop into bands and orchestras, contributing much to the enjoyment of such public occasions as school festivals and charitable fairs.

After all, the present prevalence of musical ambition among our young people is only a revival on a great scale of a fashion of our colonial period

Men of distinction in the last century, particularly in the Southern colonies, learned to play on musical instruments in their youth, notably Patrick Henry, Thomas Jefferson, and many of their young Virginia friends.

In 1760 there was an amateur orchestra of young players at the capital of old Virginia, some of whom met every week for practice at the home of the royal Governor, himself one of the performers.

PLANNING THE CAPITAL CITY.

The city of Washington was long known as the city of magnificent distances. Yet how few of us have ever heard of the man who, with a grand faith in the future, planned the city and designed its first public buildings. Peter Charles L'Enfant was born in 1755, in France. He entered the French army with the commission of a Lieutenant, and prepared to scale the slow and difficult ladder of military promotion. But when the American colonies raised the standard of revolt, he watched their course with keen interest.

As soon as the colonies proclaimed the doctrines of freedom, and declared themselves an independent nation, L'Enfant resolved to give his skill as an engineer to the cause.

He came over with Lafayette in 1777, and almost immediately received a commission in the Continental army. On the Eighteenth of February, 1778, he was made Captain of Engineers, and was a remarkably active and able officer.

In the attack on Savannah he displayed the utmost gallantry, and was severely wounded. On his recovery General Washington appreciated his merits so highly that he placed him on his staff. After the war he employed his skill on various engineering and architectural works at Fort Mifflin.

The selection of a district for the seat of government was a subject of long discussion, and when the present District of Columbia was fixed upon, Major L'Enfant was selected to lay out the city of Washington, and to select the position. He drew the plans also for some of the public buildings, and sketched others as a part of his projected arrangement of the city.

In 1812 this able veteran of the Revolution received the offer of a professorship of engineering in the Military Academy, West Point, but declined the position. He died at his home in Prince George's County, Maryland, June 14, 1825.

AMERICAN ENTERPRISE.

An amusing story is told in connection with the building of the tramway between the towns of Zacatecas and Guadalupe in Mexico, which are a few miles apart. The way from Zacatecas is down grade. The cars go at great speed by their own gravitation; no animals are attached, for the descent is as steep as a toboggan slide.

It requires six mules, however, to draw each car back again. The animals are harnessed three abreast, like the horses in the Paris omnibuses.

Even the projectors of the tramway had no fixed idea as to how it should be operated, and an American overseer has been in charge from the beginning.

The cars were ordered from Philadelphia, and while they were being built, the steel rails, which came from Liverpool by way of Vera Cruz, were laid down from one end of the route to the other.

When the cars arrived, it was found that they would not run on the track, as the rails had been laid on a gauge three inches narrower than that for which the cars were designed.

The Mexicans, in their ignorance, saw but one way out of the difficulty: that was, to rebuild the cars, make the bodies narrower and cut off the axletrees to fit the gauge of the rails.

The present superintendent, a practical American engineer, was in Zacatecas at the time, and took in the state of affairs at a glance. He offered for five hundred dollars to show the owners how to get over the trouble without altering an article on the cars. The money was paid, and with twenty men and proper tools the American took up a few rods of the track, made a gauge for the rest, and in one day had the cars running over the short distance!

The managers of the road at once put the American in charge, and he has held the position ever since.

HALF RIGHT.

Abraham Lincoln was one of the talkers to whom every one loves to listen. His ideas and his language were his own, and whatever might be the topic of conversation, he was certain to say something which no one could have anticipated. An anecdote which has recently been told about him very well illustrates this trait of his character.

A writer in the *Century* says that Lincoln seemed to enjoy the public receptions at the White House, and was surprised when people commiserated him upon being obliged to stand and shake hands with such a crowd of perfect strangers, as they pushed one another past him.

Much of the time, indeed, he appeared to be almost unconscious of the throng, taking hand after hand in an almost mechanical way; but now and then, as he caught sight of a familiar face, or one of his callers made a remark which struck his fancy, his eye brightened, and he would perhaps break into a hearty laugh.

Many of those who shook his hand uttered some little carefully prepared speech, and now and then they received a swift answer.

One night an elderly gentleman from Buffalo said, "Up our way we believe in God and Abraham Lincoln," to which the President replied, as he shoved him along the line, "My friend, you are more than half right."

SOMETHING FOR NOTHING.

The world is full of people who want to run before they know how to walk. Such people are the ready prey of sharpers. Sometimes this trait of wanting to get something for nothing is exhibited in an amusing way.

A young man afflicted with this failing was offered a situation in Peru, but upon investigation it was found that a knowledge of Spanish was requisite.

"Devote a year to the study of the language," said the manager, kindly, "and you will become sufficiently proficient to be useful."

But that was too slow a method for the aspirant. He spent three months in trying to devise a shorter plan, until one day his eye met an advertisement, stating that directions for learning any language in twenty-four hours would be sent for the small sum of two dollars.

Ah, here was the solution of the problem! He sent the two dollars, and in reply received this printed slip:

"It is extremely simple. Just divide the language into twenty-four parts, and learn one each hour."

He deserved to be thus "humbugged." Let us hope he profited by his lesson.

Great special Offer, all for $1.25.	55c.

CLINTON STAMPING CO., IRVINGTON, NEW JERSEY.

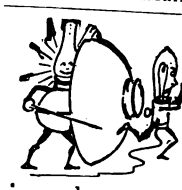
Your Razor

will get dull and your strop fail to sharpen it. A "clean shave" is then impossible, and you are liable to cut your face.

Here is just what you want.

In metal box, containing coarse and fine. Enough to last years. Can be used on any strop. Every "shaver" knows the **Torrey Strops.** It is this dressing that has made them famous. To be had from dealers, or direct from factory.

Price, 25 cents, post-paid.



Send for Catalogue C. Tells How to Sharpen a Razor.

J. R. TORREY & CO., Worcester, Mass.

Out of 252 styles of Fishing Reels, adapted to all kinds of Fishing, you can easily select one just right for your use. The Hendryx reel is offered you at a cost that will admit of throwing away your old reel and starting the season with a new outfit, and yet in no case is quality sacrificed to price.

Our Multipliers, Quadruples and Rubber, are all Screwed Reels, with interchangeable parts, and in Brass, Nickel or Rubber Plate are elegant in finish and action! All up-to-the-times dealers will supply you; if not, write us for Catalogue, and we will send any kind of Reel by mail, on receipt of price.

THE ANDREW B. HENDRYX CO. New Haven, Conn.

The "Pittsburgh" Lamp gives four or five times as much light as the common incandescent electric affair; and the light is as soft and smooth and steady and good in every way, and the lamp is almost as easy.

Send for primer.

Pittsburgh, Pa. PITTSBURGH BRASS CO.

EASTER CARDS BY MAIL.

We will send the first five packages for **$2.40, postpaid,** and of the complete sets for **$3.40.**

No. 1.—For 50 Cents, and 4 Cents for Postage, 17 Prang & Co.'s and other fine Easter Cards, together with a Birthday Booklet.

No. 2.—For 50 Cents, and 4 Cents for Postage, 10 large and finer Cards from the above publishers, together with a shaped Booklet in monotints.

No. 3.—For 25 Cents, and 2 Cents for Postage, 10 Prang's, Tuck's, Ward's, and other beautiful Cards.

No. 4.—For 50 Cents, and 4 Cents for Postage, 5 Easter Booklets, including one Shaped Booklet.

No. 5.—For $1.00, and 8 Cents for Postage, 7 handsome Souvenir Books, with appropriate selections from best authors; retail price, 25 and 50 cents each.

No. 6.—BIRTHDAY PACKET. For 50 Cents, 17 Fine Cards of Prang's or Tuck's.

No. 7.—SUNDAY SCHOOL PACKET. For 50 Cents, 25 Cards of Marcus Ward's, Prang's Cards, assorted.

STAMPS OR POSTAL NOTES RECEIVED.

Novelties at **15, 25, 50, 75 Cents and $1.00** each for Birthday or Anniversary, which will be selected with care for different tastes and ages as specified.

FOR TEACHERS. **50 Marcus Ward's, Prang's,** and other beautiful Cards, no two alike, for **$1.00** and **8** cents for Postage. And for **50** cents, and 4 cents for Postage, **25 Cards,** no two alike.

PAPER BY THE POUND
BEACON HILL LINEN. For Fashionable use is the Best Paper made.
COMMONWEALTH LINEN. A Medium-priced but fine grade.
U. S. TREASURY BOND. Toughest Paper made. Is very fashionable.
CARTER'S TYPE-WRITING PAPERS. "Best and Cheapest in the market."
We guarantee our prices **lowest** in America. Sample sheets of paper and envelopes from **10 cents** a pound and upward, with prices and number of sheets to a pound, sent on receipt of **15 cents.** These papers are the correct sizes and finish for fashionable correspondence.

SPECIAL OFFER. On orders of $10.00 and over we will prepay freight charges to nearest railroad station. Club your orders with friends and take advantage of this. *Agents and Dealers should correspond with us.*

ENGRAVED VISITING CARDS. **For $1.75** we send a copperplate, finely engraved, with 50 cards. Crests, and Stamping. Samples free on application. Estimates furnished for Wedding and Class-day Invitations, Street Dies, the best workmen and use the finest cards. We guarantee satisfaction. All the work is done on our premises. We employ only **Handsome boxes of fine Stationery,** plain or illuminated, **for 35 cents, 50 cents, 75 cents, $1.00 to $2.00** each, **sure to give satisfaction.**

THE SPANISH MAIN.

DEVON, 1575.

Come, shake out the sails, and clear up the decks,
The wind is piping and free;
Clap hard down the helm, till in snow-storm of flecks,
The foam flies up from the lee;
Once more we begin to live again,
We are off, brave lads, for the Spanish Main!

Get cutlass and matchlock ready for use,—
We are going for more than play!
For throat of the Spaniard get ready the noose,—
The yard-arm is ready alway!
For quarter who begs will beg in vain,
When we settle scores on the Spanish Main.

A galleon sails for Cadiz with freight
Of pearls and opals and gold;
Alert in her track will our stanch vessel wait,
Her ingots shall stuff our hold.
The black-bearded dogs shall lose their gain,
And reckon with us on the Spanish Main.

Queen Bess with a mouth-filling oath shall declare
We're ne'er lads more worthy her grace;
Old Devon shall ring with the names that we bear,
And think of the pride in Drake's face!
Then, hearties, be quick; the very planks strain
In their eager zest for the Spanish Main.

Remember the comrades starved in the dark
Of Spain's black dungeons' despair;
We fight in God's quarrel; what man has a spark
Of soul, and yet could forbear?
Up, lads, we are off to the proof again
If England or Hell rules the Spanish Main!

ARLO BATES.

For the Companion.

WOOD UP!

"The young people of to-day," said the old squire, "can have no idea of the difficulties and dangers of travel fifty years ago. I remember a journey that I made in 1835 from Pittsburgh in Pennsylvania to New Orleans. My chance of success in an important undertaking depended upon my reaching New Orleans before a certain day.

"It was then late in November. The cold was becoming intense. The Ohio River was full of large blocks of floating ice, and there seemed to be imminent danger that the channel would close over before we could reach the Mississippi. If it should do so, there was no chance of my reaching New Orleans by land. Tracts of unbroken wilderness intervened, and the storms were frequent and heavy.

"'Can we make it, Captain?' I asked, as I stood beside the master of the *Messenger* on the deck, watching the wheel laboriously plowing its way through the masses of ice.

"'I don't know, sir,' he said. 'The channel is nearly closed. If we can cut our way through to warmer water to-day, we are safe; but the ice is making fast. Every minute counts.'

"I was trembling with excitement. My future largely depended on the progress of this lumbering old boat. She seemed to me to creep, to crawl; finally, she stood still.

"The wheel was deliberately reversed. The boat quivered, ran to shore, stopped.

"I leaped to the edge of the deck. The pilot stood idle, the captain and clerk joked leisurely together.

"'What has happened?' I shouted. 'Why do you stop? I am ruined if you do not go on!'

"'We are wooding up,' calmly said the wheelman. 'Taking on fuel.'

"The black deck-hands below were throwing the wood to the boat from a heap on shore, accompanying their motions with a slow, melancholy chant.

"I grew wild with impatience. I counted each lost minute as a step towards disaster.

"The boat started again in half an hour, but twice that night it stopped to 'wood up,' each time, as I thought, losing ground hopelessly. But when morning came she steamed triumphantly out of the caking ice into free water. We had passed on our way two boats lying caught among the icy hummocks.

"'They had not fuel enough to keep their engines going,' said the Captain. 'They wouldn't stop at the last station—thought they could make it. In a run like this, you have got to make haste slowly if you want to win.'

"I often think of the Captain's saying, when I see ambitious young people starting on their run for life. They're too anxious, too eager. They are not willing to stop to take on fuel.

"When I see a lad growing thin and yellow over his books, making haste to win his honors at college or his degree in a profession, I feel like saying to him, 'Lay by! Play ball—walk—sleep! You're burning up the fuel in your body; take on more.'

"Or when I see a middle-aged man driving night and day at one idea,—business or book-writing, or even preaching,—I think, 'You're using up all your fuel. Stop. Go out among other men. Take in fresh ideas, fresh emotions—make haste slowly.'

"More than all, when I see men who profess to be Christians, living with no other instruction for their daily life than that of a weekly sermon, I want to say to them, 'You must take in fuel. Read your Bible. Do not omit prayer. You cannot make spiritual progress simply with good intentions. Wood up, or the motive power will die out, and the better life stop midway in its heavenward journey—frozen in the ice!'"

MOTHER SPRATT.

"One of the regular weekly visitors to the school I attended when I was a boy," writes a correspondent, "was an old lady known to all in the district as 'Mother Spratt.' She usually came on Friday, because, as she herself said, 'I wash of a Monday, and iron of a Chewsday, and bake of a Wednesday, and sweep and clean of a Thursday, and that don't leave me no day *but* Friday.' By coming on Friday, moreover, Mother Spratt gave herself the pleasure of being present at the weekly 'literary exercises,' which always took place on that afternoon.

"While other visitors came in for an hour or two in the afternoon, Mother Spratt always came early in the morning, bringing her dinner with her in a little tin pail, and stayed all day.

"I can see her now, in the teacher's chair near the desk on the little platform, knitting a seemingly forever unfinished stocking, and at the same time keeping a sharp lookout over the school.

"'Jimmy Piper's whispering!' this self-constituted monitor would cry out in her shrill, piping voice.

"'I *aint!*' the accused would perhaps retort, angrily.

"'Now, Jimmy, Jimmy,' Mother Spratt would say, in mild expostulation, 'you was, too! I see you with my own eyes.'

"'I was only asking Sam Sharp how to do this example, and the teacher allows me to do that!' Jimmy would explain, triumphantly.

"'Well, it's whispering just the same, and — Sally Plumb is making pictures on her slate! Sha-a-me on ye, Sally!'

"'I wasn't doing any such thing! I was only drawing a map,' Sally would reply.

"'Oh, was that it? Well, well, child, go on and draw your map, and mind you draw it well. Oh, I've got my eye on *you*, Robbie Baggster, and I'll tell the teacher if you jab Joe Hunt with that pin another time. How'd you like to have somebody jab a pin into *you?*'

"Of course interference of this kind was not agreeable to either teacher or pupil, but Mother Spratt was seventy-four years old, and every family in the district was indebted to her for kindness in times of sickness and trouble. So she was never told that it might be better if she did not visit the school quite so often, or seek to take upon herself duties that belonged to the teacher; and there came a time when we were glad of it.

"It was so stormy and cold one Friday morning in midwinter that we felt sure Mother Spratt would not appear, but the few of us who were there had hardly taken our seats when she came in, wrapped in shawls, nubias and veils.

"'It's terrible lonesome to a body living all alone on sich a day as this,' she said, 'so I come to have comp'ny as well as to be comp'ny.'

"She brought the teacher's chair from the platform, and seated herself in a cozy corner near the stove, and there she sat all day, almost finishing the blue-and-white stocking she was knitting.

"After recess in the afternoon we had our usual 'literary exercises.' It was customary to ask visitors if they would make 'a few remarks' on these occasions, and this courtesy was always extended to Mrs. Spratt, who invariably replied that she 'b'lieved she'd nothing to say.'

"On this particular Friday, however, the old lady slowly rolled up her knitting work, and said, in a feeble, broken voice:

"'Well, boys and girls, I don't know as I've got much to say. I aint no gift at speakin' in public, like some, but somehow or other I feel as though I'd like to tell you all how much I've enj'yed coming here Friday after Friday, and hearing you and seeing you.

"'It's kept me from many a lonesome day, me living all by myself, as you know, and I've tried to help your teacher keep you good, and have you mind the rules. It pays best to be good, boys and girls. I'm an old woman, and I've had a sight more experience with this world than any of you, and I know that it pays best to be good. Keep that in mind.'

"We always closed the school on Fridays with a hymn—hymns being all the songs we knew. Mrs. Spratt joined loudly and shrilly in the one we sang that evening, her cracked voice rising highest in the refrain:

"'My home is not below,
My home is not below;
I'm journeying to a better land,
My home is not below.'

"On Monday morning, as soon as we were in our seats, the teacher rose behind her desk and said, solemnly:

"'Boys and girls, I want to tell you that our old friend, Mother Spratt, will not be with us any more. She died suddenly last night. Her house is so near the school-house that I want you to be very quiet on the play-ground to-day, and I wish you would remember what she said to you last Friday.'

"Some of us remember it to this day."

GLYCERINE.

Many years ago, in an obscure mining village in Sweden, an apothecary was making lead plaster in the ordinary way by heating olive-oil with litharge and water, when he chanced to notice that the liquid which was mingled with the pasty lead compound had a strangely sweet taste. On further investigation, he found that the sweet taste was caused by the presence of an oily liquid which was dissolved in the water. No such substance was described in the books of the day.

Scheele—that was the apothecary's name—knew that he had discovered a new substance. He soon found that this sweet liquid was not the product of olive-oil alone, but that other oils and fats would yield it under the same treatment. So he named it the "sweet principle of fats" or "oil-sugar."

More than a century has passed since Scheele's discovery, yet it is scarcely fifty years since "oil-sugar" was found to be of practical value, except for a very limited use in medicine. Chemists have given it the more formal name of *glycerine*, derived from a Greek word meaning sweet.

Every one is to-day familiar with the clear, thick liquid so commonly used for toilet purposes. Its soothing and softening effect on dry or inflamed skin is the quality for which it is best known in most households; but few people have any idea of the variety of purposes to which it is applied.

Among its most striking and valuable properties are its great solvent power, its chemical stability and its sweetness. Moreover, it is digestible, will not evaporate, and owing to this and its hygroscopic qualities, will prevent the drying and hardening of materials with which it is mixed.

These peculiar qualities make it most valuable in the preparation of medicines, unguents and various food products, as preserves and mustards; likewise in beer, wines and other bottled goods, where it is said to act as a preservative. The fact that strong solutions of glycerine and water will not freeze in the lowest winter temperatures has caused its use in our wet "gas-meters."

Some of the more important industries in which it is used are vulcanizing india-rubber, silvering and gilding glass, dressing leather for kid gloves, preserving anatomical and botanical specimens, and the manufacture of what is, perhaps, the most powerful explosive known to science, without whose aid some of the grandest triumphs of modern engineering would have been impossible—nitroglycerine.

In a pure state glycerine is one-fourth heavier than water. After long exposure to a freezing temperature, glycerine will deposit rhombic crystals resembling those of sugar-candy. Its boiling point is four hundred and ninety degrees Fahrenheit. Pure glycerine will burn readily, if first heated to about three hundred degrees. It gives a pale-blue flame similar to that of alcohol, and to the chemist glycerine is an alcohol.

A process has been invented by which animal fats are directly decomposed into stearic acid and glycerine, by subjecting the fat to the action of super-heated steam, at a temperature of several hundred degrees. The resulting glycerine is concentrated, and purified by steam distillation, while the stearic acid, which much resembles wax, and in no way answers to our ordinary conception of an acid, is in great demand for candles.

For the Companion.

LEARNING.

Child! if thou wouldst with truth and honor live
(Better, without, that thou shouldst cease to be,)
Thy first best years, thy first fresh efforts, give
To learning; all beside is vanity.

Learn, while the glorious sun in heav'n rides high,
And nature groans beneath his fervid scars;
Learn, when the silver moonlight floods the sky
Like veil of Artemis on clouds and stars.

Learn, ever learn, while yet thy youth is fair,
When womanhood is lovely in its strength,
When age, like frost, lies lightly on thy hair,
And when thy journey's end is near at length.

Learn! and thy sheaves of gathered learning bear
To brighter regions; thither shalt thou come
With songs of triumph; learning even there,
Amid the gladness of the Harvest Home.

MARGARET THOMAS.

BRIGHT STREET ARAB.

There are various sorts of punishment, and when a gentleman tries to be funny in some disgraceful way, he is apt to receive his just dues in the way of personal mortification. Lord Charles Beresford and Mr. Gerald Coxe, two well-known society men in London, were taking a walk together, when a little crossing-sweep asked them "for tuppence."

"No," said Lord Charles, gruffly, "I'll not give you a penny!"

Then a bright idea occurred to him, and he added, "You see that constable yonder? Well, if you'll go and mop your broom up and down his back, I'll give you half a crown."

The boy rushed away, promptly performed the act, and was promptly arrested.

Lord Charles, his conscience pricking him, went over to remonstrate with the officer, and was himself taken in charge. Mr. Coxe then attempted to throw in a few dissuading words.

"Aha!" quoth the officer. "So you want to interfere, do you? Well, I fancy I shall have to run you in, too."

So the three culprits were conducted away to the police station. The inspector in charge there gazed at them austerely.

"So you've been interfering with the constable?" he said, with solemnity. "A serious charge; a very serious charge! Now tell me, sir, what is your name?"

"Mr. Gerald Coxe," answered the gentleman addressed.

Now this name was perfectly well known to the inspector, and it seemed to him extraordinarily funny that it should be claimed by a man who would take the part of a crossing-sweep.

"Oh, you're Mr. Gerald Coxe, are you?" said he, sarcastically. "Yes, you look like Mr. Gerald Coxe! Very good! Capital! And who are you, sir?"

"Lord Charles Beresford," answered that gentleman.

This, in the mind of the inspector, deepened and complicated the joke.

"So you're Lord Charles Beresford!" he chuckled, grimly. "Well, this is splendid! You look like Lord Charles, you do! Splendid! splendid! Now tell me," he added, turning to the small boy, "what's your name?"

The ragged urchin was in a serious quandary. He looked at Lord Charles and Mr. Coxe.

"Look a-here," he said, "I don't know who ye are or what's yer game, but I aint a-goin' back on a pal!"

Then, turning boldly to the inspector, he said, in a tone full of heroic confidence, "I'm der Dook of Wellington!"

ATTACKED BY A BUFFALO.

Sir Samuel W. Baker, in his latest book, "Wild Beasts and Their Ways," narrates an adventure which shows that a hunter's life may depend upon his attention to small details. Sir Samuel and Mr. Dick were shooting in Africa, when they saw a solitary bull buffalo on the opposite side of a small creek. The bull was evidently in a state of great excitement, for as the hunters drew near the creek, he faced them, tore up the turf with his horns, and looked down the perpendicular bank, twelve feet high, as though meditating descent.

Dick, who carried a little rifle, a single barrel, which shot a small spherical ball, had, by Sir Samuel's advice, doubled his charge of powder.

"Aim at the back of the neck, if the buffalo lowers his head," said Sir Samuel to his companion, throwing a hard clod of earth so that it fell into the water at the foot of the bank. The splash caused the animal to look down, exposing his neck. Dick fired. The bull convulsively turned round, and fell upon his side.

The two men waded across the creek at a shallow place, and ran to where the prostrate animal was lying, apparently dead. Dick, standing in front of the bull's head, revelled in the delight of his first buffalo.

"Never stand at the head of a buffalo, whether dead or alive!" exclaimed Sir Samuel, whose experience had taught him to be cautious. "Stand upon the side facing the back of the animal well away from its legs, as I am standing now."

Scarcely had he uttered the words when the bull sprang to his feet, and blundered forward straight at the astonished Dick, not three feet distant. He jumped backward to avoid the horns, but tripped and fell upon his back right in the path of the savage bull.

As quick as lightning Sir Samuel drew his long hunting-knife, and plunged it behind the buffalo's shoulder. The animal fell to the blow. He had received his death-stroke.

If the hunting-knife had not been tempered steel, with a keen edge and a sharp point, the story would have had a tragical ending. The blade, a part of an old "Andrea Ferrara" Highland claymore, was eighteen inches long, two inches in breadth, double-edged, and as sharp as it was possible to make it.

Sir Samuel saw to it that it was always in the condition of a surgeon's lancet. He never left the camp for a day's shooting without first examining its point and edge. No servant was allowed to handle it, and when it needed sharpening, he himself honed it. When he struck the buffalo, the sharp double edge of the long knife divided the great artery of the heart.

WOULDN'T SAY GOOD-BY.

Are there still left any of those dear, old-fashioned people who "hate to say good-by," and who will not watch the departing friend out of sight, "because it is a bad sign?" Aunt Sophia was one of them. She would stand at the railway station, beside the car window, carrying on a soliloquy somewhat like the following, but keeping as far as possible from any allusion to parting:

"I put the doughnuts and cheese right on top of your bag. They won't get jammed there, unless you cram somethin' in on top, and I don't see no need of that. Don't grease your gloves with 'em.

"Dear land! whatever I've come down here to this platform for I don't know. I aint got nothin' to say, and my bread 'll be riz, before I can get back. There comes Elder True's wife. My sakes! if she aint got a new bunnit; but she's put on the old bugles and them lavender flowers.

"'Hear me?' No, she won't, she's deef as a haddock. That reminds me, I found a bone in that picked-up fish this morning. It's a sin an' shame to hire a girl that'll pick up fish, and let her eyes go travellin' down to the Long Medder. If 't had been *her* throat it got stuck in, wouldn't I have pounded her back, an' paid off old scores!

"My! how these cars do jump! I guess I'll stan' aside. You shut the winder, for I don't want you sticking yer head out, and gittin' it cut clean off by them telegraft poles. Well, I guess I'll see if Dolly's stanning quiet. I b'lieve I hitched her out this end of the platform, after all. Wouldn't it have been funny if I'd ha' gone the other way? Now look out for your gloves, with them doughnuts!"

So the cheery soul stepped briskly away, unfastened Dolly and climbed into the farm-wagon.

"Get up there, Doll!" she called, shaking the reins, and no one was there to see that the shrewd blue eyes were wet with tears, and that the mittened hands were trembling sadly from the shock of parting.

WHY HE BLUSHED.

The poet Whittier, who even in his old age is as bashful as a girl, was once embraced and kissed by a man in a crowded Boston parlor. The incident is told by the Rev. Carlos Martyn, in his Life of Wendell Phillips. Dom Pedro of Brazil, on his visit to Boston in 1876, expressed a wish to meet Mr. Whittier, with whom he had corresponded for many years concerning poetry and slavery. A notable Bostonian gave a reception to the Emperor, at which the poet promised to be present.

The Emperor was conversing with Wendell Phillips when the venerable poet entered, but he immediately rose, threw his arms about the blushing Quaker, and kissed him on both cheeks. Then seating him on a sofa he placed himself at the poet's side, ad chatted with him for half an hour.

When the conversation became general, the Emperor told of his driving over to Charlestown to see Bunker Hill Monument. It was six o'clock in the morning, and the keeper was in bed. When aroused, he refused to let the Emperor in, until he paid the entrance fee, half a dollar.

Dom Pedro, having left his purse at home, was obliged to borrow the coin from the hackman. The company laughed, and Mr. Phillips said:

"The story does not end with the payment of the entrance fee. I will tell your Majesty the rest of it. Two hours later, a well-known leader of Boston society entered the visitor's room at the base of the monument. Glancing over the book in which every visitor registers he saw your Majesty's signature.

"'Why,' said he to the keeper, 'you have had the Emperor of Brazil here, this morning. How did he look?'

"The keeper, putting on his glasses, examined the handwriting, and scornfully muttered:

"'Emperor? that's a dodge; that fellow was a scapegrace, without a cent in his pocket!'"

OLD AND YOUNG.

Old age is a relative term. Some men are old at forty, and others are young at seventy. Much depends upon health, and more, perhaps, upon temperament. The Boston *Transcript* describes an amusing little scene in a railway car, as the train was nearing the city. A gray-haired man, bent with age, took up his overcoat, hesitated, and glanced nervously about. Then he spoke to a fellow-passenger across the aisle.

"I shall be much obliged," he said, "if you will help me on with my coat."

"Certainly," answered the man thus addressed, as he rose quickly.

"There—ow! I'm a little stiff. Thank you," said the old man. "You are very kind. Some day you may be old yourself, and then you will be glad of a younger man's assistance."

The other passenger laughed. "Perhaps, sir," he said, "you wouldn't object to telling me how old you are."

"I? Oh no. I'm sixty-three—almost sixty-four," answered the old man, with a sigh.

"Indeed!" said the other. "So old as that? Well, well, I shall be seventy-one on my next birthday."

He spoke the truth, but the man of sixty-three went out of the car looking as if he thought himself the victim of a rather poor joke.

ONE SHORT.

A ship-load of fine horses was recently consigned from Calcutta to Bombay, under the charge of a very honest but somewhat dull agent in the employ of the East India Company. While the horses were being landed at the slip, they managed to break away from the men in charge, and ran like wild animals through the city.

The agent caught one of them, and mounting him, gave chase. After several hours of exciting work, with the help of his men he had captured all but one of the horses, as he counted them.

Finally he made his reluctant way to the superintendent's office to give an account of the matter. The superintendent came to the door, and listened to his story.

"And you say there were one hundred and twenty-four horses in all, and you have eighty of them in the company's stables, and forty-three back in the steamer temporarily?"

"Yes, sir, all safe but one, and we cannot find him anywhere."

"What is that horse you are riding? Have you counted him?" asked the superintendent.

"Well, I am an ass! Of course this is one of 'em!" and the agent rode off in disgust, while the superintendent roared with laughter.

DAISY'S CALENDAR.—III.

Now M A R is ahead of the rest;
Just what it means can scarce be guessed;
You'd think from the way it blows to-day
That Winter had made up his mind to stay;
But as soon as there comes a day of sun
The sap in the maples is sure to run,
And Daisy, my dear, we'll help this year
At the sugaring off—my! won't it be fun!
And so we'll say, tho' the clouds are dark,
That it stands for songs of robin and lark;
For little red weeds wherever we pass;
For dear little, brave little, green little grass;
For big brown buds where the maples arch;
For rough old, bluff old, jolly old March.

A TRUE MAKE-BELIEVE STORY.

"Please, mamma, tell me a story," said Tommy.

"What sort of a story?" asked mamma,—"a true one, or a make-believe?"

"I—don't know," answered Tommy, slowly, "I like both kinds."

He thought a moment, then he shook his plump shoulders, and a light danced in his eyes.

"Mamma," he said, brightly, "a make-believe story is always a make-believe *true*. Now, why can't you tell me a true *make-believe*?"

"Perhaps I can," said mamma, smiling too.

So she began:

"Once upon a time—"

"That's the make-believe part,—they always begin so," whispered Tommy.

"Once on a time, six small, round, black things lay upon a bit of cotton, inside a tight little box, in the very farthest corner of a drawer. They looked very much like the pills which Dr. Gray gave you to swallow, when you were ill, last winter, yet they were not pills at all, but something quite different."

"Shot?" suggested Tommy.

"No. Listen, and you shall guess again.

"Quietly as they lay in the box, they were really all alive. By and by, one said to the others, 'How dark and close it is here!' 'Yes, indeed!' answered another. 'If we only knew what the sunshine was like!' 'I am so tired waiting!' said the third. 'And I!' 'And I!'

"But the sixth said, 'Brothers, we must be patient. Do you not remember what the dear vine-mother told us, while she rocked us in our song cradle? When spring came, she said, they would lay us in the damp earth—'"

"I know!" cried Tommy. "Seeds!"

Mamma smiled, and went on:

"'And then—when we felt the lovely, moist fragrance all around us, and the soft warmth coming down from above—we should know that our time had come, and should reach out each a tender foot, and lift a tiny hand, and climb upward into the beautiful light. Every day, she said, we should grow taller and stronger, the gay breeze would frolic with us, and the fleecy clouds give us drink. We should be dressed in soft green, and crowned with pink blossoms, and hold cups of honey for the thirsty bees and butterflies. O brothers! it must be a rare world, and well worth waiting for!'

"So they whispered to each other, and a little boy heard them.

"'The spring is a long way off,' he thought, for the snow was still on the ground. 'Why need they wait so long?'

"So his mamma gave him a pretty earthen pot, and the gardener filled it with moist, mellow earth. The little boy covered the tiny balls carefully, and set the pot in a sunny south window.

"The small, blind things thrilled and trembled. 'It must be time!' they said, and they began to climb.

"The little boy was watching for them. How he laughed with joy, one morning, to see the six wee heads peering up from the brown mold!

"It was not the great, out-of-doors world which they had expected, but it was pleasant there in the parlor, and they were very happy.

"So they grew and grew, and twined their soft fingers around the delicate trellis which the little boy had made for them. The sun smiled on them through the clear glass, and the little boy through his brown eyes, and every evening he brought water lest they should be thirsty.

"But, at length, there came a change. Something was amiss. The earth in the pot was dry and crumbling, and their dainty green robes hung fading over the rim.

"'How the sun burns me!' said one. 'Ah! how faint I am!' whispered another. 'I must be dying!' gasped a third. 'And I!' 'And I!'

"But the sixth, gathering all its strength, said sorrowfully,

"'Dear brothers, we have been cheated. It was not the spring, or our time to arise. Out there under the blue sky, the dew and the raindrops would never have forgotten us. Here, there is nothing for us but to die!'

"And it, too, drooped its withered head, and was silent."

"O mamma!" cried Tommy, "my poor, dear, pretty sweet peas!"

And he ran for his little watering-pot.

MARY A. P. STANBURY.

A Lesson in Politeness.

Dear Wind, last summer in the fields
We played together, you and I.
You were the gentlest playmate then
I ever had for company.
You kissed my cheek, you stroked my hair,
You scattered blossoms at my feet,
You fanned me when the sun was hot,
With puffs of perfume, cool and sweet.
But now you're grown so strong and rude
My summer friend I scarcely know.
You try to tear my frock away,
And order me my face the studio.
You pull me, pushing here and there,
And whirl me round and round in glee.
Such sports may do for sturdy boys
But they are quite too rough for me.
You stealthy up, but and gayly up cheek,
And pull my hair all out of curl,
Indeed you might remember, Wind,
You're playing with a little girl!

For the Companion.

A QUEER OVERCOAT.

A very odd man who walked out in a storm
Thought he'd wear a brass knocker to keep himself warm;
"Because," said he, "I can plainly see
An outside wrap is the thing for me;
And a knocker is made for an outside rap,
So perhaps it will serve for a coat and a cap."

A. M. P.

For the Companion.

A LITTLE THIEF.

Mrs. Plumb, across the alley, thinks her yellow cat, Buff, the most knowing cat in the world. I begin to think so, too.

I was sitting at my upstairs window this morning when the milkman came and left milk in a bowl on the table on Mrs. Plumb's back porch.

Buff was sunning himself under the table, and never opened his eyes till the milkman was gone. Then, as quick as a wink, he hopped on the table and began lapping the milk, often stopping to look around at the window, as though he feared his mistress might see him.

Two or three times he seemed to think he heard her coming out, and he jumped down and scurried himself under the table as if he were asleep. But no one came out, so he hopped up again.

He ate till he had enough, evidently, then he jumped down, washed himself, and lay down to sleep. Just then his mistress came out.

She looked sharply at the milk, as she took it up, and then at Buff. And would you believe it! That cat opened his eyes and began to stretch and yawn as though he had been asleep a week, then followed her into the house, mewing to be fed!

Later in the day, when my window was open, I heard Mrs. Plumb say to her husband,

"We must get a new milkman. He cheated us shamefully this morning!"

Buff was near by, and it seemed to me he looked as though he understood,—but he said never a word. Wasn't it too bad?

For the Companion.

DOLLY'S BOLSTER.

"It's papa's birthday, and I'd like to have something extra nice for dinner, but I can't go out and leave baby," said mamma. "Could you go to the market to buy a lobster, Dolly?"

Dolly thought she could. So off she went very grandly, with her little basket on her arm.

"What would you like this morning, miss?" asked the old marketman, looking at her kindly over his glasses.

"A bolster, if you please," said Dolly, promptly. "A middle-sized one, not too large nor too small," just as mamma had told her.

"A *what*?"

"A bolster."

"I can't think what you mean," said the old man, scratching his head. "What is it for?"

"To eat for dinner," replied Dolly, a little mortified at being misunderstood.

The old man turned slowly around and looked over his shelves and boxes.

"What color would it be?" he asked at length.

"Red, very red indeed."

"Well, I don't see nothing here at all like a bolster or a pillow neither, so I guess you'd better run home and ask your ma over again."

So Dolly, much mortified, went back with her empty basket.

"It sez a bolster you sent for, wasn't it, mamma?" she asked.

Mamma had to laugh, but she wrote out the word *lobster* very plainly on a piece of paper for Dolly to carry back, and she never forgot it again.

Enigmas, Charades, Puzzles, etc.

1.

WORD-SQUARE.

When March is here my *first* will whistle
Without regard to tune;
My *second* is found in every head,
And the brighter, the greater boon.
Both cousins and aunts I'm sure to see
And my *fourth* you'll see as soon
As you take your pen a letter to write,
Before the sentence you first indite.

J. P. B.

2.

DOUBLE ACROSTIC.

(Words of seven letters.)

1. A mild species of onion.
2. One who speaks.
3. To strangle.
4. Worn by rubbing.
5. To take back.
6. A picture of the Virgin Mary.
7. A city of Belgium.
8. The crowfoot.
9. To repeal.
10. Pertaining to a mountain.
11. Unripe; low on the ground.

Primals—A pleasant occupation for March.

3. The ancient skate was a simple bone,
Secured by cords or thongs
With these the skaters of old sped on,
Propelled by sticks with prongs.
Such skates in Sweden first were used.
Then Norway, Holland, too,
And Denmark, England, Iceland, all
Followed the Swedish cue.
The Dutch then invented iron keels
On boat-shaped soles of wood;
And men and boys for centuries
Pronounced them very good.
Now fancy skating is all the rage.
Both sexes, old and young, gather,
And women and girls cut figures and queels,
Thus vying with husband and brother.

For the Companion.

ON THE STAIRS.

Baby footsteps patter,
Up the winding stair;
Mother watches, smiling
At her baby fair,
Thinks, "In this world could there be
Baby quite so sweet as he?"

Now he reaches landing,
Takes his lofty place,
Sees way down below him
Mother's smiling face,
Says, through red lips, eyes of blue,
"Mamma, aint oou tummin too?"

Mother running swiftly
Up the winding stair,
Catches little baby,
Kisses golden hair,
Whispers in his tiny ear
"Mamma loves you far too dear."

Twilight shadows gather
All about the room,
Mother by the window,
Sitting in the gloom.
In her hand no more to use,
Lie a pair of tiny shoes.

Now the sunset glories
Bathe the western skies,
Mother looks up sadly
Through her tear-dimmed eyes,
But for her the sun-shaft bears
Just a flight of golden stairs.

Far up on the landing,
Smiles a baby's face,
Little hands are beck'ning
Through the airy space,
Calls a child's voice sweet and true,
"Mamma aint oou tummin too?"

ROSAMOND HOYT.

IT WAS AN ANCIENT EYE.

In the human brain, just in front of the cerebellum and beneath the arched mass of the cerebrum, or larger brain, there is an odd little protuberant body, about a third of an inch in height by a sixth in diameter, which has puzzled anatomists of all times.

It bears the name of the Pineal Gland,—although it is in no proper sense a gland. The anatomist Gray thus describes it: "The pineal gland is very vascular, and consists chiefly of gray matter with a few medullary fibers. In its base is a small cavity. . . . It contains a transparent, viscid fluid and occasionally a quantity of sabulous matter, composed of phosphate and carbonate of lime, phosphate of magnesia and ammonia, with a little animal matter."

In all the standard works of anatomy, the use and function of the "pineal gland" is declared to be unknown. The classic philosophers believed it to be the seat of the soul. Descartes, even, taught that it is the seat of consciousness and the intellect.

But the science of comparative anatomy has made wonderful progress within the last few years; and something definite may now be said of the "pineal gland."

It is found in animals; and when we descend among the lower and simpler orders of life, such as first inhabited the earth, particularly the reptilian order, we find it still in active use,—namely, as an *eye!*

Take the little green lizard of the Southern States, for example; an examination of this small saurian will disclose the fact that it has three eyes, one of them on the top of its head and in the exact position of the "pineal gland" of the higher animals, before the development of the cerebrum eclipsed it.

In many of the turtles and other reptiles in which this third, central eye has fallen into disuse, it still remains more or less perfect as an eye, showing the nerve, eye-socket and pigmentary coats. In man and the higher animals, these evidences of ocular structure are not as conclusively retained, the organ having been longer out of use, and hence more shrunken in size and more rudimentary in structure.

Yet in different animals, from the lizard upward, the steps of the gradual obliteration of this ancient eye can be clearly demonstrated, and a presentation of these facts, by means of a stereopticon, would make a very interesting evening lecture. The subject is one that could be easily popularized.

The "pineal gland" is by no means the only instance of organs which mankind, in its physical development, has outgrown, and which have consequently fallen into disuse and so far shrunken as not to be easily determinable.

The thyroid gland in the throat is the remains of a secretory organ for which man has apparently no longer any use. It is a disagreeable heritage in that it sometimes becomes diseased and greatly enlarged, as seen in goitre.

The same is true of the suprarenal capsule of the kidney, the office of which is still a mystery, but which likewise may become the seat of a fatal disease, known as Addison's disease.

The vermiform or worm-like appendix concerning which so much appears in the newspapers, on account of the fatal inflammations that follow the lodgment of cherry stones, or orange seeds, in it, is still another instance of a disused organ, the shrunken remnant of which we inherit in our bodies from ancestors in the long past.

At one time, in some earlier order of animals, it apparently served as a second stomach, for the temporary storage of recently swallowed food. The ruminant animals have a somewhat similar provision in active use, where hastily eaten grass, or hay, lodges for a time, to be afterward raised and remasticated.

To the modern student of comparative anatomy, indeed, the human organism is a repository of evidences of its humble and very ancient origin;—a record of the thousand vicissitudes and changes in habits, food, habitat and climate, through which man has risen to his present estate of power and eminence on the earth.

NEW ENGLAND EPITAPHS.

"All that pass by
May look and see
That I was killed
By the fall of a tree."

So runs the epitaph of Rufus Walker, who died January 11, 1821, in the twenty-eighth year of his age, and was buried in a little hillside cemetery near one of the Deerfield River towns of southern Vermont. It is disappointingly brief. How did it happen? Did Rufus Walker write that himself? If he expected to be killed by the fall of a tree, why did he not keep out of the way? Did he leave any small Walkers to stand wide-eyed about this stone, and spell out their father's last message? An examination of the crumbling stones near by discovers nothing. The demise of no "relict," or other member of the family, is recorded.

Many equally quaint and interesting inscriptions are to be found in old New England burying-grounds. The early pioneers in some sparsely settled districts have left few other records. Between the awkward lines one may read eloquent unwritten poetry. The hardly legible, faulty stanzas are fragments of history of the homes and hearts of the past century.

The following curious epitaph is from a burying-ground at Stafford Springs, Conn.:

"In memory of
the well beloved Mr.
Robert White Jun. whos
Parents and Friends raised
hops were soon mantled
in Darkness (& grate
Expectations environd with
Pitchey and Gloomey
shads) by his falling asleep
in the cradle of Death
on the 22nd day Novem.
A. D. 1746 aged 31 years
7 months and 6 days.
Made by Julius Collins, Lebanon."

In the same cemetery is buried a grandson of John and Priscilla Alden, whose epitaph reads:

"In memory of Daniel
Alden Esq. who Died
May ye 31, 1767 in ye 77th year of
his age.

"The Corpse beneath this Grave
Stone lies in Silent Dust with
Closed eyes. Not honour, wealth,
Nor Grace can save
A Dying Mortal from ye grave
See you in him both low and
high that all of you are
Born to die
Keep in your view Eternity."

CATTLE AND MUSIC.

An English writer on the "Effects of Musical Sounds on Animals" has published some curious observations on this subject. A few of these relating to oxen and cows will be of interest.

Opposite to our house was a large field, in which some twelve or thirteen cows were put during the summer months. One day a German band began to play on the road which divided the house from the field. The cows were quietly grazing at the other end of the field, but no sooner did they hear the music than they at once advanced toward it, and stood with their heads over the wall attentively listening.

This might have passed unnoticed, but upon the musicians going away, the animals followed them as well as they could on the other side of the wall, and when they could get no further stood lowing piteously. So excited did the cows become that some of them ran round and round the field to try and get out; but, finding no outlet, returned to the same corner where they had lost sight of the band, and it was some time before they seemed satisfied that the sweet sounds were really gone.

I have often noticed the power music has over oxen. The other day we had a brass band playing in our garden. In a field adjoining were four Scotch oxen.

When the band struck up, they were at the far end of a nine-acre field, quite out of sight, the field being very uneven. They set off full trot to the garden wall, put their necks over, and remained so till the tune was finished, when they went back to graze; but as soon as the music struck up again they came and put their heads once more over the wall. This went on till the band left, after which they ate little all day, and were continually lowing.

There are many anecdotes that show that the ox or cow has a musical ear. The carts in Corunna, in Spain, make so loud and disagreeable a creaking sound with their wheels, for the want of oil, that the governor once issued an order to have the wheels greased, but the carters petitioned that this might not be done, as the oxen liked the sound, and would not draw so well without their accustomed music.

"PAY BEFORE YOU EAT."

The proprietor of a French café in Paris, on the Rue de Pontoise, was very much annoyed by poor customers who took advantage of the temporary absence of the waiters to step out without paying their bills.

Finally he put up all around the café, inside, large notices—"Pay Before You Eat." The principal dish was a very thin but palatable soup served in large, deep bowls.

One day a man came in, and sitting down before a large bowl of soup which had just been poured out, he began to help himself.

A waiter came up and said, "Pay Before You Eat."

"I guess not. I always eat first."

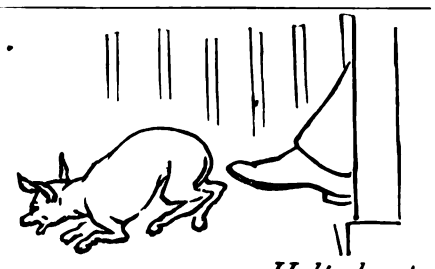
"Not here. Our rule is, as you see, pay first."

"I don't pay first," said the man, and he continued to help himself to the soup, when, to his intense astonishment, the waiter pulled out of his pocket an immense wooden syringe, and dipping the nozzle of it into the soup-bowl drew the soup all out of the bowl into the syringe.

"Will you pay now?" said the waiter, holding the syringe suspended over the edge of the empty bowl.

The man concluded he would obey the rules, as the waiter had him at his mercy, and back the soup went.

The proprietor of that café must have had a little Yankee blood in his veins. He would make his fortune in America.



Itching Piles.

MUSICAL COMPETITION.

Jealousy among persons ambitious of musical renown is not as rare as might be wished. When it leads to the taking of an unfair advantage, the envious one does not often receive so immediate a rebuke, and find his satisfaction so suddenly transformed into bitterness of spirit, as did Jacob McWilliam, who figures in one of Gordon's sketches of Scotch life. The office of leader of psalmody in the parish kirk, worth perhaps ten pounds a year, was eagerly contested for in Carglen.

Twelve months before there had been a trial of vocal skill, with the result that Willie Jenkins became the new precentor.

Jacob McWilliam considered himself a wronged man from that moment. His vexation had not been shown in any way, except by tremendous musical exertions in the kirk on Sunday. Here was a man, to all outward appearance, lustily singing divine praises, with laudable, albeit grotesque, zeal; but we all knew that, in reality, it was only an opposition pipe to the precentor's.

"Beat that, my birkie, if ye can," plainly said every note.

To do Jacob justice, he had not hitherto indulged in counter-singing to the precentor in a different tune, but had contented himself with shrill sound and portentously lengthened quavers; but lo! to-day we hear something different; the precentor is singing one tune and Jacob another!

All Carglen, in the parish kirk, is horror-struck. In two minutes' time every voice is stilled, and Willie and Jacob alone sing praise. All at once Willie sinks down in his seat, and Jacob remains a triumphant conqueror.

How long he would have continued to shout no one knows; but Saunder Macdonald, the preacher, scandalized with this most unseemly episode, cries in saddened tones, "Let us pray."

Thereupon Jacob stops, with the utmost complacency, his face plainly saying, "I've dune ye noo, birkie, without ae doot."

The minister sorrowfully pleads for the peace of Jerusalem, and for prosperity in its courts, for those persons who have come into the sheepfold like devouring wolves, for those who are sure to go out from us because they are not of us, who desire to serve God for filthy lucre, who seek the praise of men rather than the praise of God.

Then Jacob seizes his hat, and with heavy tread marches down the passage and out of the kirk.

"Brethren, we will now resume our singing," cries Mr. Macdonald, and the place having been purged of its misguided intruder, the exercise proceeds without unchristian interruption.

DONALD KENNEDY

Of Roxbury, Mass., says:

My Medical Discovery seldom takes hold of two people alike! Why? Because no two people have the same weak spot. Beginning at the stomach, it goes searching through the body for any hidden humor. Nine times out of ten, inward humor makes the weak spot. Perhaps it's only a little sediment left on a nerve or in a gland; the Medical Discovery slides it right along, and you find quick happiness from the first bottle. Perhaps it's a big sediment or open sore, well settled somewhere, ready to fight. The Medical Discovery begins the fight, and you think it pretty hard, but soon you thank me for making something that has reached your weak spot. Write me if you want to know more about it.

GREAT TRIAL OFFERS.

The new **Day-Blooming Moonflower** or **Mammoth Morning Glory,** from Brazil, is the grandest of all vines; climbs 50 feet; leaves a foot across; large rose-colored flowers from July to Oct. $500 FOR A TOMATO

This **Prize Tomato** is the largest ever offered. The engraving shows one plant grown by O. R. Foster, Florence, Mass., hight is **11 ft. 5 in.,** and completely loaded with large, smooth, bright red tomatoes. Hundreds of my customers have had equal results. The quality is excellent; after you once test it you will grow no others. Two plants if well cared for will produce all Tomatoes one family can use. If started early, fruit ripens from July 4th until frost. Single Tomatoes have grown 6 inches in diameter and weight nearly 3 lbs., and as hard all through as a hard boiled egg, with only a few seeds in a Tomato, and entirely free from rot. This mammoth strain can only be obtained from me. I want to get a tomato weighing 3 lbs., and will pay **$500 cash** to any person producing it. Plant some, you may get the 3 lb. Tomato — grow rapidly and are very ornamental for garden or lawn.

SURE HEAD CABBAGE

Is all head and sure to head, very uniform in size, firm and fine in texture, excellent in quality and a good keeper. Single heads have weighed over 64 lbs.

EARLY SNOWBALL TURNIP

Is the earliest in the world, easy grown, good size, excellent quality. Will be far ahead of your neighbors.

☞ I will send a packet each of Prize Tomato, Cabbage and Turnip with my catalogue of bargains, for only 25 cents.

☞ Every person sending silver for above collection and addresses of 3 persons who buy seeds, will receive free a packet Silver Ball Lettuce, finest variety ever grown, and a fifty cent certificate for seeds, your choice from my catalogue, free. Address **F. B. MILLS, Rose Hill, Onon. County, New York**

TROPICAL PLANTS.

A WILD MAN.

Lately there was discovered in the Green Forest, in Normandy, France, not far from the city of Rouen, a veritable wild man of the woods, who, dressed in skins, and wearing long hair and beard, slept beneath the trees, and fled on the approach of human beings. It was found that he spoke French very well, and was apparently intelligent, for upon being asked by a forester who he was, he answered, "What business is it of yours? Have I not a right to go where I please in the public forest?"

A "wild man" in a French wood is so much a curiosity that this one, when he was finally hunted by the authorities, was hunted out by several parties of curiosity-seekers who came from a distance. A good part, the wild man promptly disappeared.

It was found that he had taken refuge in the impenetrable thickets of Roumare, where if it quite still lives in security. He is said to sleep on the ground in the coldest winter temperature, and to live upon a store of nuts, and possibly upon some animals which escape the investigations of the officials, who have ascertained that his name is Vesny, and have gathered all his history.

His father and mother, it appears, were excellent people, but they died while he was very young, and his child, leaving his mother to make a hard struggle for her livelihood.

He developed a singular and adventurous disposition, though he was perfectly well behaved, and at the age of eighteen he left home and joined a show who travelled about from town to town with a cage of wild animals. It became his duty to feed the animals, and with the daughter of the proprietor, who was their trainer, he

To this young girl Vesny became much attached, and at length obtained permission for her mistress when a suitable age was reached.

One day the young girl went into the cage, and so terrible a blow to a tiger that her skull was fractured. She did not survive the wound.

Vesny was very ill, but was spared to life himself by saving the life of a sailor boy who had fallen overboard.

He wandered several years about the world, perpetually haunted by the memory of the dreadful disaster in the tiger's cage. In 1887 he returned to France, and lived quietly two years with his mother.

He was supposed to be cured of his wanderlust tendency, but last year he suddenly disappeared, to appear as the "wild man of the Green Forest."

Vesny is quite willing to see his mother, who sometimes visits him in his house in the woods. She declares that he is not insane, but that his desire to live so strange a life is the result of his unfortunate and partly to a too eager reading of "Robinson Crusoe" in his boyhood.

THE "IRISH" POTATO.

The planting of a potato by Clusius, in 1588, in the Botanical Gardens at Vienna, is named as the introduction of the potato into Europe. But there is good reason to believe that it was introduced into England and Spain a few years earlier, and from Spain into Italy and Belgium. It has been said, too, that Christopher Columbus was the first European who ever tasted a potato. What he tasted at Cuba, in 1492, and brought home to Genoa, was the sweet potato.

The potato is a native of Chile. It had been brought from South America by the Spaniard, when Sir Walter Raleigh found it in Virginia and introduced it to England.

During the seventeenth century it was quite a rarity in England. The Royal Society, in 1662, urged its

possessed land should "plant potatoes and raise corn," which is the same, in order to alleviate the distress that would accompany a scarcity of food.

Before this a peculiar law existed against it, being poisonous and unwholesome, probably because it was a member of the nightshade family, and because generally known, and it had even been eaten raw. In 1728 the first field of potatoes was planted in the peninsula of Scotland. He called it the Irish Potato, and the Dutch East Indies, China, and Australia, it is conspicuously recognized.

It is not only as a food plant that the potato is so valuable. It is also a source of starch, and is used for the manufacture of farina. The dried pulp, from which the starch has been extracted, is used for feeding horses. From the stem and leaves a sweetness can be extracted. In some places cakes and puddings are made from potatoes.

The potato disease, which has been the cause of famines in Ireland, is a species of fungus. It appears to dissolve the cells, then spreads to the tubers, devouring the starch, then spreads them, reducing them to a pulp. Various remedies for the other diseases are to render the potato unfit for food.

PAID BACK.

Some years ago I lived in a small town in Southern Iowa, writes a correspondent. There was but one store in the place, and we were in the habit of sending to Chicago or New York for such articles as could not be bought at home.

I frequently send small sums of money with my orders, without taking the precaution to get a receipt for the same, as was my way of doing business. To my horror I received a letter, and it was counted as lost or stolen till about a year after, when, to my surprise, was surprised to receive the following communication, printed with red ink and evidently by the proprietor himself, who I had lost

I found two dollars. First I opened it and sent in my pocket. Within were in it I had not a letter, nor any way of doing business. To

I thought if I ever got that store I'd try to pay you as soon as I could. I have got it now, and Thank you all the and that you have never blamed Sincerely person I am not a man to forget a favor. I am the same with me a part of the

I can only write in red ink but you can read this and this as my now as we. We

I'll send it to-day the Knight.

JOHN PETERS.

This may get be but if it does good how I carry your name all this time in my pocket.

Use "Brown's Camphorated Saponaceous Dentifrice" for the teeth. It has no equal. 25c.

A Successful Life.

JOHN P. LOVELL, President of the JOHN P. LOVELL ARMS CO.

In the half a million homes where THE YOUTH'S COMPANION is read each week, there are perhaps a million or more young people growing into manhood and womanhood, who would not fail to know some of the leading features which make up a successful business life. Every city and town has its men with whom some are familiar, but seldom have a full knowledge of the traits of integrity and uprightness which have become so widely known, as in the person of Mr. John P. Lovell who recently celebrated the golden anniversary of his establishment in the business now known as the John P. Lovell Arms Co. in Boston. Some of the most prominent men of our country have furnished the characteristics which have led to this man's success, and a brief sketch of his life may inspire many a young man to follow the example which is not only leads to personal happiness, but successful and a benefit to the world.

Mr. Lovell was born in East Braintree, July 25, 1820. At the age of fifteen he left school and went to work in a printing factory. One year later he entered the celebrated boarding house in Boston, and Judge Story, who was then a boarder there, became much interested in the industrious determination boy. Through his influence he entered into the service of his brother-in-law, Mr. Faulkner, who was then a leading merchant of Boston. After an eventful life in California, where he was surrounded. After an eventful life in California, where he was engaged in the mercantile business, he returned to the employ of A. D. Fairbanks, in Boston, in 1850, and remained at a weekly salary of $7, with $10 yearly increase. He was then married, and his wife had to live on $10 per week additional clothing allowance. He was then succeeding year until the year of fourty-one.

In 1851, with a capital of $1,000, he started in business for himself, and his success was so great that in the year 1855 he was admitted to the firm of A. D. Fairbanks & Co., as a partner with one half interest. At this time the firm was doing a business of $1,000,000 per year.

In 1865 Mr. Lovell went to Europe for the firm, which was represented by the great house of John P. Lovell & Son, whose business embrace throughout the world.

In 1868 Mr. Lovell decided to start for himself. In 1871 Mr. Fairbanks retired from business, and Mr. Lovell purchased the entire stock, and with his son Lovell, formed the present firm, which has been steadily increasing in business ever since. In 1884 Mr. Lovell admitted his son Lovell to a partnership, and Mr. Fairbanks was admitted to the firm in 1888. Mr. Lovell has been for many years at the old location, substantially look the same as when he first started in business, and he has always been a firm believer in the old saying that "Honesty is the best policy." The business is represented by the great house of John P. Lovell Arms Co., whose business embrace throughout the world.

The business is located in the manufacture of sporting goods, and Mr. Lovell has been a leading manufacturer of guns, and has been a leading manufacturer of guns, and has been a leading manufacturer of guns, and

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

NESTS OF DISEASE.

Houses which are built upon "made land"—made, perhaps, by dumping the refuse of a city upon muddy flats—need to be continually watched, lest they become breeding-places of disease. Not only should the cellars be thoroughly cemented in the first place, but particular care should be used in searching out and correcting all subsequent flaws, as well as all breakages in the drain-pipes due to the settling of the earth.

But a dwelling may be well located, and yet be come a nest of disease; by a concealed leakage beneath the cellar floor, perhaps, or, if the house is situated on a declivity, by sewage from a neigh bor's drain.

Houses are often rendered unfit for habitation by a neglect of proper disinfection after a case of contagious disease. New tenants fall victims to the disease, and in turn become themselves centres of contagion.

Even a country house, with the great advantages of pure air and sparseness of population, may become a nest of disease through the carelessness of its owner or inmates. Slops of all sorts may be thrown out upon the ground, or the well may be so near the cesspool or outhouse that the drinking water is impregnated with the germs of filth diseases. In fact, such diseases—diphtheria, scarlet-fever, typhoid-fever and the like—are relatively more common in the country than in the city.

In crowded cities, however, whole districts are sometimes unclean. Says a recent writer, in speaking of the houses of the poor in some quarters of London:

"Family after family goes into a house only to die of the fever which killed off its previous occupants. In many cases the very ground is saturated with miasma. Here originate epidemics which sweep through more favored districts. These places, too, are the hot-beds of drunkenness and crime.

"In view of this condition of things, a bill has been introduced into Parliament which gives the municipal authorities the right, on sanitary grounds and for the public good, to take possession of such houses at their market value, and utterly clear them away, and provide for the construction of others on sound sanitary principles.

"Experience in Liverpool, Edinburgh and Glasgow has already proved the practicability of the scheme. Hitherto, when philanthropic societies have wished to purchase and purgate such spots, the price has risen to an extravagant figure. Every large city should have the advantage of a similar law. Religion, philanthropy and enlightened self-interest unite in urging its enactment."

For the Companion.

PLANETS AND STARS VISIBLE IN MARCH.

An observer of the starlit sky in the evening of the Fourth of March will see Saturn rising above the eastern horizon, about the time the sun sinks below the western horizon; for the planet will then be in opposition or opposite the sun, and in the best position for observation, being nearest the earth and visible through the entire night.

He may be easily recognized by his leaden tint, by the absence of any bright star in his immediate vicinity, and by the first magnitude star Regulus in the handle of the Sickle on the northwest.

Those who remember the brilliancy with which Saturn shone in 1885 will be disappointed at his present aspect, for his rings are closing around him, his northern declination is decreasing, and he shines with the murky hue that probably led astrologers to consider his influence "malefic" when they cast their horoscopes.

Saturn is, at this time, the only visible planet. Venus shines with transcendent, though lessening, lustre in the morning sky. Jupiter is her companion, but is nearly lost in the sunbeams. Mars is too small, and Mercury too near the sun to be seen, and Uranus, which otherwise would be visible to sharp-sighted observers as a star of the sixth magnitude, is below the horizon.

But the stars that look down from the March sky are always the same. The brilliant red star, northeast of Saturn, is Arcturus. Between Arcturus and Regulus is the cluster of tiny stars known as Berenice's Hair, and north of Arcturus is the semicircle of stars known as the Northern Crown, where long ago a new star shone with fitful splendor, and then faded slowly away.

Vega, recently discovered to be a double star, is close to the horizon in the north, and only the upper part of the Swan can be seen. Perseus, with its wonderful variable, Algol, is farther south, and above Perseus is the brilliant Capella, a guide to Castor and Pollux on the south. The starry Twins point out Procyon, which brings us round to Regulus, a guide to Saturn, our starting-point, and we have made the circuit of the heavens.

The superb winter stars are congregated in the west and southwest. Aldebaran and the Pleiades are in fine position for observation. Orion is in the southwest, and Sirius, the brightest starry gem of the heavens, still nearer the horizon, seems almost to rejoice in his own supremacy.

UNDER DIFFICULTIES.

The native Greenlander is said to have a remarkable partiality for a stooping position. The family food is usually served in a dish, which is set upon the floor, while the partakers sit round upon a great bench, and dive into it with their fingers. They have no tables, and it seems rarely to strike them that the dish might be set upon a chest, or anything which would bring it into a convenient position.

Fridtjof Nansen, in "The First Crossing of Greenland," tells the story of a young European lady's housekeeping experience on the island.

She had one day some Eskimo girls to do her washing, and when she went into their room to see how things were going on, she noticed that her handmaidens were all stooping over the tub, which stood on the floor. Naturally thinking this an awkward position, she had some stools brought in, and placed together, so that they might serve as a support for the tub.

She then left the girls to their own devices, but entering the room an hour later, was astonished to find that the tub was still upon the floor, while the washerwomen stood upon the stools, and bent down to their work from that elevation.

DROPPED.

The aversion of the average Englishman to the eighth letter of the alphabet is perhaps exaggerated by Americans, but it gives rise to many good stories.

An American who is in London for several months every year returned from one trip with a handsome umbrella, on the silver knob of which was engraved a complicated monogram; the gentleman's initials were H. A. B.

One day a friend took up the umbrella, and after squinting at the knob for several minutes, said, "This is rather a queer monogram on your umbrella, Mr. ——. I can see the A and B all right, but for the life of me I can't find the H."

"Why," responded the owner, quickly, "I lent the umbrella to an Englishman just before I left London, and I presume he dropped the H!"

SELF-DEFENCE.

The following suggestive little dialogue appears in the *Home Companion*. A touch of surprise tends to fix the attention, and so to assist the memory.

"Do you think it would be wrong for me to learn the noble art of self-defence?" a religiously inclined young man inquired of his pastor.

"Certainly not," answered the minister. "I learned it in youth myself, and I have found it of great value during my life."

"Indeed, sir! Did you learn the old English system or Sullivan's system?"

"Neither. I learned Solomon's system."

"Solomon's system?"

"Yes; you will find it laid down in the first verse of the fifteenth chapter of Proverbs: 'A soft answer turneth away wrath.' It is the best system of self-defence of which I have ever heard."

SHARP.

Mr. Martin was talking at the dinner-table, in his usual clever manner, about the inconsistency of women.

"These young ladies who protest that they are never going to marry!" he broke out. "Everybody knows they will belie their own words at the very first opportunity."

He paused, and evidently hoped that Mrs. Martin would come to the rescue of her sex; but that discreet woman held her tongue.

"Why, Mary," he continued, "you remember how it was with yourself. I have heard you say more than once that you wouldn't marry the best man alive."

"Well, I didn't," said Mrs. Martin.

PIE-PLANT.

An apple-tree bears apples, and a grape-vine bears grapes, but it does not follow that all plant names are to be taken thus literally.

An exchange relates that a young husband came home to dinner the other day, and found his wife in unusually high spirits.

"O Willie," she said, "the nursery-man was here this morning, and I ordered some pie-plant. He is going to have it set out right away, and by next summer, he says, it will be ready for use. Won't it be nice? I can go into the garden any day and pick a fresh pie for your dinner!"

STRICT.

In the government of a large school it is necessary to have strict rules, and abide by them.

"Thomas," said the teacher, "I saw you laughing just now. What were you laughing at?"

"I was just thinking about something."

"But you have no right to be thinking during school-hours. Don't let it happen again."

THE Indianapolis *Journal* offers the profane suggestion that a locomotive is always spoken of as "she" because of the horrible noise it makes when it tries to whistle.

The best worm medicine is "*Brown's Vermifuge Comfits.*" Sold everywhere. 25 cents a box. [*Adv.*

THE HEYGOOD TEA SERVICE.

IN FIVE CHAPTERS.—CHAPTER II.

Two Adventures.

"We've no weapon," whispered Fred, excitedly, "but we are two against one!"

"Do as I do!" Arnold whispered.

He had resolved to spring upon the intruder the moment he set foot upon that last turn in the stairway, which would bring his back toward them.

But the hand that held the pistol was presently withdrawn, the figure disappeared within the garret, and the light that had faintly illuminated the winding stairway was removed. There were stealthy steps in the garret above, and then a great stillness.

"Let's rush up there!" whispered Fred, rashly.

"Better wait till he comes down again," said Arnold.

A moment later the figure reappeared, bearing a lamp that burned dimly, and was carefully shaded by the hand that still held the pistol—a very clumsy old weapon. The lamp-bearer's face was completely hidden by the hood of the waterproof cloak in which the tall form was closely wrapped.

Slowly this mysterious figure descended; another step, and the turn in the staircase would be reached.

"Now!" whispered Arnold.

"Now!" answered Fred, bracing himself for the spring.

But the figure stood still, peered over the railing into the shadows—and laughed.

"Sally!" exclaimed both the boys. Arnold burst forth angrily:

"This is an outrageous prank, Sally! I'm ashamed of you!"

"Sh!" said Sally, lifting her finger. "You will wake the Colonel and frighten Cousin Dorina out of her wits, you boys!"

"Well, that's cool!" said Fred. "*We* wake the Colonel! *We* frighten Aunt Dorina! What are you up to, Sally?"

"Did you hear any noise?" she asked, uneasily.

"Of course we did," answered Arnold, "up there in the garret."

"Well," said Sally, coolly, "*I* went up there—and found nobody."

"Weren't you afraid?" Fred asked, in involuntary admiration.

"Yes, I was terribly afraid," the girl replied. Her face was very pale, and she shivered slightly. "But there was only a bat up there, and I pulled the hood over my head."

"Suppose there had been a burglar?"

"I was much more afraid of meeting you two boys," Sally answered. "But I had taken care to provide myself with a pistol," and she laughed again as she lifted the clumsy old weapon. "Great-great-grandfather Heygood must have carried this when he fought the Indians. I thought it would match that ancient trunk, Fred."

Fred laughed rather sheepishly, but made no motion to take the pistol.

Early the next morning Sally carried the pistol to Miss Dorina.

"You are a dear, thoughtful girl, Sally," said the old lady, with a devout faith in the effectiveness of the ancient family relic. "I don't approve, in general, of carrying deadly weapons; but self-protection is a duty, and must be remembered when a young man is going into distant parts."

Alabama had been very far away in Miss Dorina's youth, and she had heard that there were Indians and outlaws there.

As Miss Dorina never drove out, there was no need of a carriage in the Witheredge establishment, and the buggy was too small to accommodate the Colonel and Arnold, both of whom wished to see their traveller safely in the train.

Fred, therefore, with his grandfather and his cousin, and the little hair trunk, took his departure for the town and the railroad station in the market-wagon.

It was just as he took his seat in this conveyance that Miss Dorina presented him with the pistol.

"Remember, my boy, it is for defence only," she said, "and not to be vaingloriously displayed."

Fred took the pistol with a rueful glance at Sally, whose broad-brimmed garden hat hid her laughter.

"And whatever you do, don't lose sight of that trunk, Fred," Miss Dorina cautioned. "It is a good idea to sit on it."

"Cousin Dorina thinks you are going to sit there all the way to Baybridge, Alabama," whispered Sally, and the three young people laughed.

"Dear, dear! It's a very solemn occasion—a very solemn occasion, indeed," said Miss Dorina. "I wish you wouldn't laugh."

She wiped her eyes on a silk handkerchief, kissed Fred tenderly, and taking Sally's arm, walked slowly back to the house.

"Don't look after them, Sally, my child! don't!" she entreated, as they walked along the straight, brick-laid path that led from the gate to the piazza steps. "It is bad luck to watch a departing friend."

Miss Dorina was evidently depressed. Whether it was because she was parting with the silver or parting with Fred, she was disposed to take most gloomy views of life.

She had never been given to crying, but she sighed, and assured Sally again and again that this is a world of trouble, until the gay, light-hearted girl was taken with such a fit of sobbing that Miss Dorina herself cheered up.

"Come, come, child!" she coaxed. "It will never do to fall into the dumps, for we two shall be all alone until dinner-time. The Colonel has business in Rigdon that will delay him, so we must do our best to comfort each other. We'll have some mulled wine and spice-cake for our lunch.

"In the good old days that are gone forever, Sally, we always had mulled wine when we were droopy over a friend's departure. Old Martha shall make it by my Grandmother Heygood's recipe, the same that has been used in this family for many, many years.

"Yes, and we'll have it served in that silver bowl that was your Great-aunt Sally Witheredge Holly's christening-bowl; and I've changed my mind about the ladies, Sally. I'll give the ladies to Hetty Gage Witheredge, and you shall have the christening-bowl; so do, my dear, cheer up!"

But Sally, notwithstanding this comforting assurance, only cried the more, and sobbed out that she did not deserve the christening-bowl.

Old Martha, who had been Miss Dorina's maid, and was now her self-willed housekeeper, came in and made the mulled wine under Miss Dorina's vigilant eye; but they disputed over its compounding, and Miss Dorina pronounced the brew a total failure.

It did not taste at all like the mulled wine her mother and grandmother used to serve, she said.

"Hit's you what aint the same, Miss D'rina, chile," said old Martha. She was younger than Miss Dorina, but had always patronized her.

"Perhaps so!" sighed Miss Dorina, and sipped and sighed again, while Sally's tears fell into her great-aunt's christening-bowl. At that moment Sally hated the family silver, and wished she had never seen a piece of it.

Old Martha, who went out with a goodly portion of the condemned beverage for her own refection, remarked, as she shared the spoils with Uncle Calamus, her husband:

"Dat pranky gal is repentin' some o' her sins, sho's you bawn."

Meantime Fred was making the first stage of his journey from his home to the station. Arnold drove, with the Colonel seated beside him; Fred was perched on the hair trunk behind them.

"Fred," said the old gentleman, over his shoulder, as soon as they had turned the bend in the road, "better give me that old shooting-iron. It's only fit to make you ridiculous, and get you into trouble, perhaps."

Fred gave it up willingly.

"It's a joke of Sally's, sir," he explained; "only Aunt Dorina would not take it as a joke."

"She need be none the wiser," the Colonel assured him, as he hid the pistol under the horse-blanket in the bottom of the wagon.

"How do you suppose I've managed with her all these years?" he grumbled, confidingly; and then, repenting this domestic treason, he began hurriedly to give his grandson a great deal of advice, the sum of which was that he must keep a strict guard over his tongue, and not be seen to watch the trunk too closely.

"Of course you *can't* sit on it all the way!" he concluded, testily. "Women, bless 'em, are too mortally exacting; but there's one comfort: once out of their sight, a man needn't do all they expect, poor things! Your Aunt Dorina never was inside a railroad car in all her days. She never saw more of the cars than the smoke of the locomotive across the creek."

The old gentleman would trust nobody but himself to buy Fred's ticket and check the trunk.

"Here you are," he said, dolefully, as he thrust the bit of paper and the bit of metal into his grandson's hand. "Don't lose 'em. You'll change cars twice, remember. It will be by daylight, as near as I can make out, and you must be on hand in an off-hand sort of way, you know, to see your baggage transferred.

"Take care of yourself, dear boy, and if anything goes wrong, telegraph me at once. But—if anything *should* happen to your Great-great-grandmother Heygood's silver, better keep still the rest of your days, or your Aunt Dorina's days, poor soul!"

The bell rang, and Fred, with his heart in his throat and a strange mist, that was not sorrow, in his young, eager eyes, was off at last. He felt like a bird let loose as he waved his handkerchief to Arnold and to his bare-headed old grandfather who stood uncovered in the wintry day to honor his grandson's departure.

It is not necessary to follow this inexperienced traveller all of his way from Northeastern Georgia to West Alabama. It suffices to say that he kept his eyes wide open by day, and only closed them at night when sleep overpowered him.

But he was not watching the trunk; he was taking in impressions that almost effaced his great-great-grandmother's silver tea service from his recollection. He remembered it, indeed, when he changed cars, and assuming an air of travelled experience, he sauntered forth to see his baggage transferred to his new train.

He had trembled lest the little hair trunk should be missing, but when he saw it he was ashamed of it, and turned away whistling, but greatly relieved in mind.

Having seen the trunk safely through the second ordeal of this kind about noon of the second day,—it was a slow train, with many stops and delays,—Fred felt that he might congratulate himself upon having escaped all probable risk of robbery.

He expected to reach his destination at about ten o'clock that night, and already he pictured himself telegraphing his grandfather, "*Arrived safely. Trunk intact.*" He had never sent a despatch in his life, and this one was of great importance in his eyes.

But late in the afternoon Fred heard news that sorely troubled him. He asked the distance to Baybridge, and was informed that the railroad, which was a new one, had not been completed as far as Baybridge. It extended only to Hollow-Cane, about twenty-five miles from Baybridge.

"Only twenty-five miles!" said Fred, between relief and despair. "How am I to get there with—with—with my trunk?" he stammered. The words were out before he knew.

His question was addressed vaguely to a group of men in the seats opposite him. They all turned, and one of them said, running his eye over the lad's trim figure: "Well, youngster, if the wust comes, and your shiny shoes don't pinch, you can walk. Sling your trunk across your shoulders; onleast it's heavy."

"For defence only."

Digitized by Google

This was followed by a very boisterous laugh.

"What sort of place is Hollow-Cane?" Fred asked, uneasily, of a sober-looking, middle-aged man, who sat apart, and only smiled when the others laughed.

"It's a roadside hotel," he answered, slowly. "Maybe you can get a bunk to sleep on."

"Could I get a conveyance on to Baybridge?" Fred asked. This time he did not mention his trunk, but he thought of it the more.

"There's a coach running regularly to Winwood—four miles. You might get a conveyance from there to Baybridge to-morrow."

Just as the whistle blew to announce their approach to Hollow-Cane station, the sober-looking man who had given him this information came from the other end of the car, and sat beside him.

"The conductor tells me," said he, "that you can go on to Baybridge to-night. Tom Meyrick runs an open wagon three times a week, and this is one of his nights. He is a trusty fellow, has a good team, and the road is easy. I'll hunt him up and make you acquainted."

They stumbled out into the darkness. The station-house, a rambling building of rough planks, loomed up in the fitful glare of two or three pine torches held aloft in the hands of ragged negroes.

Fred, stiff and half-giddy with long riding, was conscious of a confusion of sights and sounds. How he managed it, he hardly knew, but he had singled out his trunk, and was seated on it when his self-appointed guide introduced Tom Meyrick.

He was not a very tall man, but was powerfully built. His hair and eyes were black, and he had a heavy black beard and bushy eyebrows that were knit in an unprepossessing frown. Fred did not like his looks. In his anxiety for the safety of his treasure, he exaggerated the man's hard expression, and felt sure he was a villain. The young traveller was very homesick and despondent.

"What time do we reach Baybridge?" he asked.

"Put you there by three o'clock. Start right away," Meyrick answered, with a rigid countenance.

"Not an agreeable hour to rout up a family. I suppose there's a hotel I can put up at?"

"Oh yes. Any baggage?"

"Only this trunk."

Meyrick snatched it up to fling it into the open wagon that was drawn up at the end of the platform.

"Well! Well!" he exclaimed, with a grin. "I picked up that old grandmother for a feather, and it feels like it was full of silver bricks."

Fred was glad of the darkness, for he knew that his face told tales, though his tongue was silent.

"Oh, books are always heavy, you know!" said a voice at his elbow. Fred recognized his friendly mentor. "Your passenger looks just like a medical student, Meyrick, hot-foot for the college in Mobile. I know that kind; they always sit on their baggage as if they were hatching the eggs of wisdom."

At this half-untruth, Fred in his anxiety was pleased; though ordinarily he would not have approved of the man's attempt at deception.

"Then it isn't a coach we are going in?" he asked.

"Better 'n a coach," said Meyrick. "Free circulation of air. Aint afraid of chills, are you, Doc?" with a laugh.

"Perhaps I'd better telegraph my friends, in case I should find the night air fatal," said Fred, entering into the joke of the moment.

He had not thought of this before, but it now seemed to him an imperative duty to let the Heygoods in Baybridge know definitely that they might expect him in the morning. As it turned out, it was most fortunate for him that he did so.

At eleven o'clock, Mr. Lewis Heygood received this message:

Arrive at 3 A. M. Stop at Hotel. Breakfast with you.—Fred Lanis Witheredge, Jr.

"Why did he come that way?" was the wondering comment of Mr. Heygood's family. "The A. & C. would have brought him all the way by rail."

"Well, you can't expect those Georgians to know everything about Alabama," said Mr. Heygood. Wishing to do signal honor to his Cousin Dorina's representative, he went down to Baybridge's cheerless "hotel," and lay on the sofa in the stuffy little parlor, in order to be on hand to welcome Fred the moment he should arrive.

Fred, meanwhile, was on his way, seated on the little hair trunk, with his overcoat closely buttoned. He was the only passenger, and it was a lonely road, with never a house in sight, and never a word from Meyrick, who sat with his head bent down—meditating villany, Fred thought, suddenly, as the road turned into a sombre wood where hardly a star twinkled through the intermingling boughs.

On the instant he remembered the remark about the silver bricks, and his heart came into his throat. What if this Meyrick was the villain he appeared? He could easily murder him, and hide his crime in this wood.

Fred reflected that he had nothing but a pocket-knife with which to defend himself. He opened this, and held it ready in his hand, keeping his eyes fixed on Meyrick's rigid back.

"He is trying to make up his mind to the attack," Fred said to himself. "We are going more slowly; before we are out of this wood—"

Just then the wagon came to a sudden standstill. Fred sprang to his feet. The wagon started again, with such force as to throw him violently against Meyrick, who rose, but did not turn as he muttered something inaudible, and got out of the wagon.

Fred got out also. He thought, wisely, that he would be at a disadvantage in the wagon.

They were close upon the edge of the wood, at the corner of an old field grown up in saplings, and separated from the road by a ditch and a steep bank. Meyrick jumped the ditch and climbed the bank, still without looking back.

Fred stood in the road and watched him. He saw him feel in all his pockets, and heard him mutter, "Confound such luck! I've lost my knife." When Meyrick said this, he turned around, and seeing Fred in the road, exclaimed:

"Hello! Didn't know you'd lighted. Snatched a snooze and dropped my whip. I thought I'd cut a saplin'. Have you got a knife?"

"Yes, *sir!*" shouted Fred. "I've got a knife for you! If you come a step nearer you shall have it!"

Meyrick, as he stood on the bank above him, seemed for an instant to hesitate; then he gave a vigorous leap across the ditch, and in doing so stumbled and fell full upon Fred.

Fred made a lunge with his knife blindly, but with frantic force.

Meyrick uttered a scream, and called for help, but then clutched Fred fiercely.

"Coward!" panted the young fellow. "But I shall sell my life dear!"

Again he struck with his knife.

"I've dealt with such as you before now," muttered Meyrick.

Fred, struggling vainly, went down under his antagonist's superior weight. His head struck the gnarled and rugged roots of an oak that grappled the roadside, and he knew no more.

For the Companion.

JARED HARPWICK'S TASK.

The task was brought upon Jared Harpwick by a letter, which came to him one September afternoon as he sat reading on his vine-shaded porch. He rose promptly, lifted his straw hat from the floor and put it on, and walked through the front gate to the pike.

Through the long village street and a half-mile along the dusty pike he trudged; then, turning aside into a narrow by-road that branched off at the foot of a steep hill, he came to a rude sawmill. A stalwart man sat upon a large moving log, from which a perpendicular saw was rasping a board.

"Good afternoon, Neighbor Gray," said Jared.

Gray eyed him keenly from under his shaggy brows; then rising, he walked to a lever, pulled it aside, and stopped the saw.

"Sit down on the log, Jared," he said. "We can't hear each other when the saw's going. I see by your face that something unusual has happened."

"I've got a letter from Joe. He's in trouble."

"Just as I supposed. Bankrupt, I'll warrant?"

"That's about it."

"And he has written to you to get me to help him?"

"That's true; but, John, don't be angry. This matter must be considered with our coolest judgment."

"I'll not consider it with cool judgment nor any other kind. He'll get no help from me, Jared."

"Very well, John, very well; but you'll hear what the trouble is, won't you?"

"Oh, I suppose I can listen," replied the father, taking a piece of bacon from a shelf and proceeding to grease the saw.

"Well, Gray, it's a bad embarrassment. A customer bought a thousand dollars' worth of Joe's patent machines, promising to order twice as many more soon. Joe supposed he was perfectly good for it, and on the strength of this ordered two thousand dollars' worth from the man that manufactures them. Well, the customer turned out bad; he didn't pay the thousand dollars, nor order more. Joe lost the machines, and owes the manufacturer two thousand dollars, which he is unable to pay.

"Joe writes that he might have stood this if a fire hadn't broken out, and burnt up this two thousand dollars' worth of machines."

He glanced up quickly, and caught a shade of sympathy upon the sawyer's face.

"The manufacturer is unluckily in a tight fix himself, and he is pushing the boy. Joe writes that this will ruin him, and just when his business was most promising. I tell you, Gray, it's hard on your boy."

"Well, I don't pity him a bit—not a bit. He was determined to go to the city; now let him dig for himself. I gave him a thousand dollars to start his crazy business, mortgaging our little place here, and that's enough. Mother has pinched herself and worked her fingers almost to the bone, and I have slaved early and late to pay it off, and now that it's paid, do you think I'm going right back into that struggle again?

"No, Jared, not for a boy who forgets his old mother, as Joe has done. Why, he hasn't written a line—not a line—to mother or me for a year, and now, when he wants help, he writes to you, Jared.

"Does he deserve help? Just answer me that; does he deserve it? I don't want to hurry you away, but I'm going to start the saw."

He turned decisively, and pulling the lever, set the saw rasping again.

"Very well, John," said Jared, coming nearer. "If that's your decision, I've nothing more to say. I shall have to write to Joe that you refuse. It does seem a pity to leave him in his trouble. He's not a bad boy, but dear knows where this will drive him. Good afternoon, John."

At home he sat down upon the porch again to think it out. He knew well the character of this father and son. Since Joe had been old enough to assert himself there had been antagonism between them. The father was arbitrary in his ideas of right; the son obstinate, and inclined to waywardness.

Jared's relation to the family was almost that of a son. He was to have married Sallie, the daughter, five years before, but she had been taken ill three weeks before the appointed day, and died ten days later. Her last request to Jared had been to watch over Joe as an older brother, and to help to keep him from evil ways.

"Father is growing old," she had said, "and if ever you have a chance to bring him and Joe to a good understanding, do your best. I know you will do your best, Jared—even to sacrificing yourself a little, for my sake."

The final estrangement came when Joe declared that he intended to leave home. He had invented a machine for compressing sawdust into ornaments, and was wild over his prospects of wealth.

Through the mother's influence, aided by Jared, who hoped that gratitude would touch the boy's heart, the farm was mortgaged.

"Here are a thousand dollars," the father had said on the morning Joe went away. "You want to leave us, so go! This is all the help you can expect from me. If you lose it, you must shift for yourself. If you succeed, I shall look for you to pay it back. I wish you success, but I don't expect it."

No sympathy was in the words or tone, and Joe went away, feeling that there was no love for him in his father's heart.

Jared knew that Joe had been lacking in his duty to his parents. He had written enthusiastically of his prosperity, but had not offered to pay back a dollar; so there was at least a little reason for the father's refusal of help.

But something must be done. This trouble and his father's refusal would be likely to drive Joe into recklessness and ruin. As he sat upon his little porch, he almost fancied he heard Sallie telling him that here was the opportunity she had hoped for.

But he did not know what to do. He had little knowledge of business. His early life had been spent in farm toil, and subsequently a lucky rise in land values had brought him resources sufficient for a quiet, humble life.

He saw that help from the father would certainly touch the boy's heart now; but without it, he felt that a hard task was before him. Sallie's request, however, was strong upon him, and he decided to go to Philadelphia next morning.

He arrived in the evening, and sought Joe's room. As he tapped, he heard Joe's voice:

"Come in, fellows!"

Jared entered, and Joe, who had come half-way to the door, stopped in surprise, and then turned, confused, toward a table.

It was too late to hide what lay upon it—cards, a box of cigars, and two or three unopened bottles.

"I wasn't expecting *you*, Jared," Joe stammered. "I thought it was the fellows knocking."

Jared walked forward, and clasping his hand warmly, said, "I see you weren't expecting me, Joe. But I'm welcome, aint I?"

"Yes, yes—certainly. Sit down. Here, take this rocking-chair, and give me your hat."

Joe was handsome, and in stature, attire and bearing a striking contrast to plain little Jared Harpwick.

"I see that I've come at a wrong time, Joe," he said, pleasantly. "Just when you're expecting company."

"Yes, you did—but don't worry about that, Jared."

"Joe, my boy, what kind of company were you expecting?"

"It wasn't good company," said Joe, recklessly. "I've just fifty dollars left of what was a prosperous business, and I don't know where more is to come from. In sheer desperation, I invited two dissipated young men here in the hope of winning more from them at cards."

"And suppose you had lost the money—what then?"

"I don't know, and I don't care."

"Why didn't you wait till you heard from me, Joe?"

"Well, I didn't expect any help. I knew just how father would act when you went to him—hardly listen to you, and maybe go on sawing. He never has treated me right; but, Jared, I haven't done right either. I know that now better than I ever did. I was never a good son at home, and I've been worse away."

His voice had sunk from harshness to softer tones, and as Jared, looking his sympathy, let him go on, he proceeded in words that showed that now was the time to touch his heart.

"I have thought, Jared, that if father would help me a little, now when I don't deserve it, I could feel better toward him, and we could be as a father and son should be. I should know that he thought something of me. But I can't expect it, and I'm not going to ask you what he said, for fear he has been hard on me, and to save you the pain of telling me."

"I've come with help, Joe," said Jared, "and I—"

A loud, confident knock interrupted. Joe opened the door and stepped into the hall. Jared heard him explain that he "could not have the game." There were angry expostulations in unsteady voices.

By and by Joe returned, and he and Jared talked long into the night, Joe fully telling the circumstances of his failure.

"I've come to try to help you," said Jared, "and to-morrow I'll call upon your creditor and see what arrangement can be made."

"I would go with you," said Joe, "but we had a quarrel the other day, and I guess I used pretty hard language. He says he'll not see me again, and is pushing me now harder than before."

"I'll go alone, then, Joe."

"If you succeed, Jared, I promise you I'll try to be better to father, to compensate him for this!"

A shade passed over Harpwick's face, and he did not reply.

Next morning he went to see the manufacturer, and Joe met him anxiously on his return.

"I've arranged for the payment of your debt," said Jared, quietly, "and the manufacturer agrees to furnish you fifty machines, on time, to start again with. You are on your feet once more."

"God bless father!" cried Joe. "I'll write him a letter thanking him for his goodness."

"No, Joe," said Jared, knitting his eyebrows a little, "I wouldn't if I were you. Let me report it to him."

"Very well, Jared, but I'll go home in two weeks for a visit, and I hope we can meet then as a father and son should meet."

Jared went home, and next day he again trudged out to the sawmill. Gray was rolling a log into place.

"John," Jared began, "Joe is on his feet again."

"He didn't deserve it, Jared," he replied, glumly, picking a cluster of lichen from the log.

"And he is coming home to see you in two weeks."

He saw the old man crush down his pleasure, and his effort in making the incredulous response, "We'll see him when he comes."

He showed no curiosity to know how the matter had been adjusted, and Jared left him.

The two weeks brought the evening of Joe's arrival. Jared met him at the little station, and walked with him toward home. They heard the rasping of the saw from a distance, and as they went nearer, Joe's eagerness to clasp his father's hand and enter upon a closer relation impelled him to start ahead.

Jared quickly caught him by the arm, and said, "Joe, I wouldn't—say anything to him about the money. A word might ruin my hopes. Just act as if there had been no trouble."

The father sat upon a log, and they came quite near before he heard them. He hastily arose. Joe sprang forward, extended his hand, and said:

"Father, I've come back to be a *son* to you."

It had been two years since they met, and Jared, anxiously watching Gray now, saw the old hardness come to his face. But as the father looked upon his boy, he saw a manlier look than he had seen before, and a look of regret and hope as well.

The hardness was driven from Gray's face, and clasping his son's hands in his, he said, with tears starting, "Joe, Joe, you're welcome home, and I'm your father!"

Gray turned quickly and stopped the saw. Then, hurrying to the end of the mill, he called loudly, "Mother! mother!"

His wife soon appeared, hurrying, as if she feared an accident had taken place. Joe was hiding behind Jared, but the old father caught him by the arm, and asked joyfully:

"Mother, who is this?"

"Joe!" she cried; 'my son!"

"And mine, mother; and all forgiven and forgotten."

They walked toward their little home, but Jared said good-by very strangely, the three thought, and turned away.

He stopped after taking a few steps, and called Joe to him:

"I wouldn't say anything until to-morrow, my boy," he said, in low tones. "It might spoil it all. It's glorious that this has been brought about."

He turned away, and the three, watching him, thought he had never looked so sad and lonely since he had lost Sallie.

Next day Joe and his father went to town to see Jared. Their rap at his cottage brought a stranger to the door.

"Jared Harpwick?" he replied. "Why, don't you know that he has sold his place here, and left this morning on the early train? I thought every

Digitized by Google

one knew it here. But are you John Gray? Harpwick left a note that he wanted me to give to you."

He brought it, and the old man read:

"DEAR JOHN.—I have lost all my money, except a very little, and am going far into the West to begin life again. God bless you and Joe. Always be kind to him. He is a good boy at heart. Good-by.

JARED."

Father and son turned to each other, knowing then how Jared had performed his task.

For the Companion.

GOING FOR THE DOCTOR.

Wisconsin is one of the most picturesque of the Middle Western States. In the north, it is heavily timbered and full of game. Thirty years ago two-thirds of the State was a vast wilderness of pine forest, tamarack swamps and hard-wood ridges undisturbed by the whistle of the engine or the steamboat.

Upward along the rivers the lumbermen were slowly pushing year by year, felling the great pines that stood near the water, and letting the sunlight into places where for ages it had not been.

One of the stories I have heard my father tell, relates the adventures of two loggers who were sent up early one fall to prepare the hay for a camp on the Chippeway River.

With an ox-team, a wagon, a sled, and a quantity of food and necessary tools, they pushed away from La Crosse up into the forest, cutting out the road where there was none, and taking advantage of all trails wherever possible.

Miller, the younger of the men, was a short, jolly man, and was called Chub, while Holland was a tall, sinewy young man, with keen gray eyes and curt of speech.

Their progress was slow; but passing at length the last camp—not yet occupied—they pushed on for a river bottom, nearly twenty-five miles beyond.

There they felled logs and made a sort of pen, into which they led the oxen. Then they gathered the branches into a great pile for a bed, and rolling up in their blankets near the fire fell asleep.

In the night, they heard a bear and her cubs eating acorns near by, but they did not allow such a little thing as that to disturb their rest.

In a few days they were busy at their haying. They worked hard, for it was late, and the hay was getting poorer each day, and the snow likely to come. Besides their haying, they had much to do in building a stable and preparing the camp.

The wolves began to come around the camp every night, and sniff and peer and howl among the shadows of the clearing, especially after Holland killed a deer and "slung it"—that is to say, bent down a sapling, and tying the carcass of the deer to it, let it swing back to place.

All went well, however, until the hay was cut and stacked, the barns built, and things made almost ready for the coming of the loggers.

There remained hardly a week's work when Miller fell violently ill one afternoon, with severe pains and vomiting, quite like the effects of poisoning.

It was about four o'clock in the afternoon when he was taken ill, and by night-fall he lay almost like a dead man, rousing only at intervals in paroxysms of agony.

All night long, while the wolves howled outside, Holland sat beside the bed of his friend, using every means in his power to ease the sufferer.

At last, just as the gray dawn was lighting the tops of the pines, and the wolves grew quiet, Holland rose with sudden resolution, and said to the sick man, whose eyes were on him:

"Chub, old fellow, you're a sick man—you're an awful sick man. Now there's but one thing to do. I've got to lock you in here, and run down to Jinnytown. Doctor Adams, of La Crosse, is there hunting. Now, what do you say? Shall I go?"

Miller shook his head, and with a look that made his friend's heart stop beating for a moment, said, "I don't care."

A Hard Day's Tramp.

Holland arose, pushed a chair near the bed, put a cup of water on it, and a plate of bread and meat. Then he went out, cut a pole just the right length, brought it back into the hut, and put one end of it against the side of the room. He took the butcher-knife as a weapon, and said:

"Now, good-by, old man. I've got forty-five miles to make to-day, but I'll do it. Don't worry about the wolves; when this stick falls into its place, all the wolves in Wisconsin can't break the shanty in. Good-by!"

Holland slipped out through the door, holding the brace with his left hand. He felt it slip down to the cleat—he withdrew his hand. It fell below the cleat. The sick man was safe from that quarter.

The sinewy young fellow settled his coat around his shoulders, put his knife into his pocket, and turned his face to call again from without, "Good-by! I'll be back soon!"

Then he plunged into the forest on his twenty-five mile run.

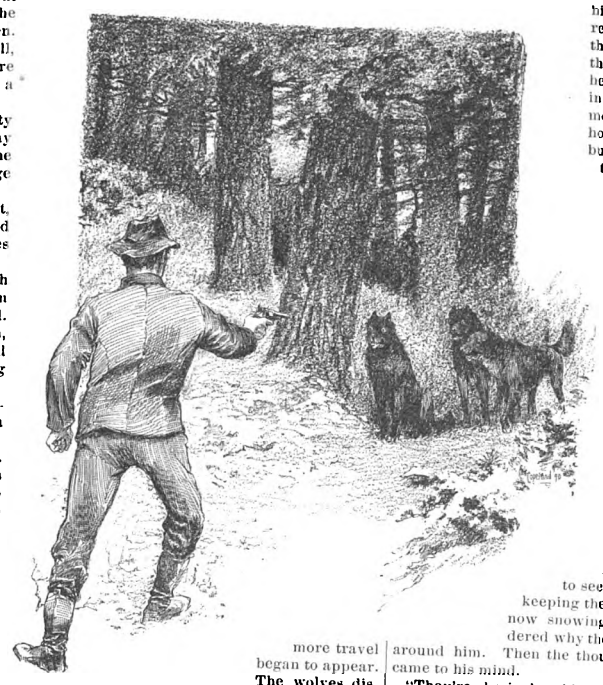
The dawn was gray and threatened snow, but the air was bracing and full of the odor of the pines.

In the shadows beside the trail, and stretching away under the interminable forests, a noiseless carpet of pine needles lay, brown and crisp, over which the wolf and deer ran soundless as shadows. Snow-birds chattered in the air at times, and in the low places partridges flew up.

Holland ran with a peculiar gait learned from the Indians, a kind of lope that brought all the muscles into play, and was less tiresome than the regular running gait, and much faster than a walk.

Up hill and down, with unflagging pace, the young man pushed, his legs working like some machine of inexhaustible power. At the end of the first half-hour he began to get his "second wind," as he would say, and pushed on at a swifter pace.

Two or three times he saw wolves slipping through the shadows of the wood on either hand, and heard a short, warning sentinel howl behind him answered far ahead. But Holland knew the habits of the wolves, and had no fear of being surrounded by them during the daylight.



Nevertheless, he was startled, as he rose from a spring where he had lain to drink, to find himself face to face with two great gaunt creatures squatted on their haunches and looking at him. It seemed so easy for them to spring on his back at any moment!

They snarled at the clubs he threw at them, and slipped into the thicket.

In making a sudden turn in the path, he came plump upon a brown bear which was seated in the road, looking very much like a fire-blackened stump.

Holland gave a great shout, and charged down upon the surprised and scared animal; and it crashed into the bushes by the brook, like a huge pig. He could not help laughing at the comical look on the bear's face.

His anxiety for his friend, the twists and turns of the road, and his fatigue and painful breathing made the way seem endless. But at last signs of

more travel began to appear. The wolves disappeared, and at about eleven o'clock he dashed into the clearing around the hotel, sawmill, and dozen houses that made Jinnytown.

All was silent; there was no one to be seen. In the barn some oxen were eating hay peacefully. Holland had forgotten that the day was Sunday!

He rushed up to the hotel where he had been before, and shouted, "Hello, Benson!"

The door opened as he came up, panting and dripping with sweat. A tall, grizzled, elderly man appeared.

"Where's the doctor?" Holland asked.

"Out in the woods somewhere. What's up? what's up?"

Holland explained the case. But there was not a man left in the camp except Benson, and not a horse. Mrs. Benson made coffee hastily, while the men talked.

No plan seemed worth considering. Holland made up his mind that the only thing to be done was for him to return. Benson was too old to make the trip on foot and did not know the way, and the snow was beginning to fall.

Holland leaped up. "Give me a revolver. Put up a little bundle of something to eat—a bottle of milk—not much; I can't carry much. And, Benson, the moment the boys come, you drive like lightning, and overtake me if you can. Dick Wood knows the trail. Bring the doctor, and take your rifles. There'll be a hundred wolves on top of that shanty."

The Return.

It was noon when Holland started on his return run of twenty-five miles, back to the camp.

He saw that he must reach it before night. It was autumn, and night came early. With dark sky and threatening snow, it would come earlier than usual.

He could keep up his jog-trot but an hour or two at the most, and the snow was likely to make the walking slow. Pushing on, not daring to think of giving out, he entered the forest, which began to roar now with the rising wind.

His chief fear was the terrible one that Miller might be dead before help reached him; that the wolves might force him, Holland, into a tree, to wait until the party came from Jinnytown—too late for succor.

A hope rose in his breast that the boys might return early because of the threatening snow. With these thoughts, and a vague comprehension of the awful presence of the wood and wind, he presently became conscious of a new terror—a pain in his chest and a numbness in his thighs.

Just after he fell into a walk, because of the unsupportable pain in his lungs, a wolf not far behind gave a peculiar note at the end of his howl. It went to the man's heart like a cold knife. The siege had begun!

Far ahead the call was answered. Another howl to the right was answered to the left. Shadowy forms crossed his trail, or stepped along in the shadows of the firs and tamaracks in the hollows.

The snow was only threatening. It had not covered the ground fairly, so that he pushed on with a dogged, swift walk, his revolver swinging in one hand, the bundle of food in the other.

Preparing for Trouble.

This bundle troubled him. If he hung it over his shoulder, it seemed to hinder him, and in his hand it clogged him. At last he put the milk in his pocket, ate a little of the meat, and dropped the rest of the bundle in the road. He felt freer.

He reached a creek which he knew was just ten miles from his cabin. Night was beginning to fall.

The young man stopped, and hardly daring to lie down to drink, dipped a little water with his hand. Then he stood still to listen.

There was nothing—save the moaning snarl of the pines, the patter of stealthy feet in the covert of firs, and the call of a lone wild-goose lost from its flock.

For the first time his heart failed him. He had made a run of forty miles over broken ground. He could run no more. The ground was getting white now, and while it helped him to see, it made the footing slippery. He walked on, his revolver in his hand. Thus far he had refrained from shouting, though the wolves showed themselves freely. Now he came on three, seated in the trail, refusing to move. He shouted at them hoarsely as he came up, but they only showed their teeth hideously.

Holland stopped, and taking good aim, fired at the largest of the group.

The animal bounded into the air without a sound, and disappeared with the rest.

Holland now remembered that in his hurry he had not asked Benson for cartridges. He wondered if the pistol had six charges left, but he did not stop to look.

It was now too dark to see, and he staggered on, keeping the pistol ready. It was now snowing fast, and he wondered why the wolves did not close around him. Then the thought of the sick man came to his mind.

"They're besieging him! Well, so much the better; it will let me reach him," he reasoned.

Twice more he cleared his way with a shot from the revolver, only the pure white of the snow enabling him to see the snarling brutes that waylaid him. Once he looked behind, and saw a dim shadow creeping upon him noiselessly. He could not waste a shot, and he was forced to look behind him constantly.

A new fear tormented him now. He was so weak that he feared his ability to climb a tree if the worst came. He had but one hope, and that was to reach the cabin.

But how was he to get in? The door was barred, and would he not be too feeble and too much hurried to climb upon the roof and tear off a slab?

A Welcome Sound.

Suddenly, far ahead, he heard a rifle-shot. The blood rushed to his heart, hot as a flame. Some one else was abroad in the forest!

It cleared his brain and warmed his whole body. The forest was not all the possession of night, the wolves and the snow! A stalwart arm and resolute heart was behind that rifle-shot.

The wild howling of the wolves and their angry, short yelps told the practised ear of the woodsman that the creatures had met their match somewhere.

Crack! sounded the rifle again. The wolves' turmoil ceased for a moment, but soon began again. Those dim gray forms which had followed the runner disappeared, attracted by the noise in front.

Holland kept on the trail, with set teeth and with his eyes peering into the darkness ahead. His thought was that some hunter had taken to a tree, and was firing upon his besiegers. He must reach him somehow.

Crack! went the rifle, so near at hand now that it almost seemed as if he could hear the bullet. Breaking into a feeble run, Holland tried to shout:

"Keep it up! I'm coming!"

He rounded a point of bushes, and stood, stupefied with amazement, not knowing where he was.

Before him was a shanty. From chinks and crannies shone a dim light, and also from a hole in the roof. While he looked a savage, grizzled old wolf, reckless with hunger, leaped on the low roof, and with open mouth and lolling tongue glared down into the room.

Again the rifle cracked, and the brute rolled from the roof. Then a loud voice called:

"Oh, come on! come on! I'm ready for you!"

It was Holland's own shanty, in which the hunter had taken refuge. With a joyous yell, he rushed down upon the camp, shouting:

"I'm coming, Chub! I'm coming!"

The wolves, surprised at this new assault, retreated. As he rushed up to the door, Holland called: "Open the door! Open the door! It's me, Holland!"

He was answered by a sonorous shout within. There was a leap, and the door swung open. Holland, half-fainting, fell into the arms of a large, full-bearded man.

"Why, doctor, is it you?" he gasped, as he sank into a seat.

"Yes, it's I," the doctor laughed, as he closed the door and braced it again.

"How's Chub?"

"He's easier. I always carry a little case of medicines with me. He'll pull through."

"How did you come here?"

"Oh, I thought I'd make you a little visit. I started this morning, and got here about dark. Now sit right down by the fire, Holland. I've got some venison broiling there—that's one thing that brought these wolves."

As he looked up at the hole in the roof, he said:

"I had to rip off a slab to get in. I saw there must be something wrong, and I found Miller pretty low. But he's better now. He's dozing. But you see, I couldn't sleep myself—too many wolves on the roof!"

Chub stirred in his bunk. "That you, Hank?" he said, feebly.

"It's me, Chub—what there is left of me. How are you now?"

"Oh, I'm all right. But I was afraid the wolves 'd down you, sure."

The stalwart doctor clambered out upon the roof and fixed the slab in place, while Holland stood, revolver in hand, to keep the beasts at bay. Then they went back and built up a rousing fire.

"The boys are likely to come in on us at any minute," said Holland.

It was very pleasant to smell the meat cooking, and see the doctor moving about the fire, making coffee and gruel. Sitting thus, the shriek of the wind and the gleaming eyes of the wolves, sullenly squatting in the snow at the edge of the clearing, had no terrors.

When Holland had eaten, he fell fast asleep against his bunk.

"There's a man!" said the doctor, as he rolled him into his blanket. "Fifty miles to-day! Talk about your heroes of chivalry! They couldn't come up to that."

About midnight the relief from Jinnytown came, shouting and shooting through the snow and darkness, making a "lark" of it all, while the wolves slunk away into the forest. The next day the sick man was moved down to Jinnytown.

To this day Holland's breath comes quick as he tells of that long day's run, and the terror of that stormy night.

HAMLIN GARLAND.

For the Companion.

TWO BIRDS.

There is one bird that comes to nearly all parts of our Northern and Eastern States in the fall and winter that is, perhaps, the least known and observed by country people of all our birds. I refer to the butcher-bird, or shrike.

When I was a boy on the farm, and when I was a young man, I do not remember ever to have seen one. Probably not one person in a hundred has ever seen one of these birds, yet they are to be seen every autumn by any one who has his eyes and ears open. Since I have been an observer of the birds, never a fall or winter passes that I do not see one or more shrikes.

It is a good test of one's powers of observation—the hearing or seeing of this bird. It is solitary; never yet have I seen two butcher-birds together. It prowls about the leafless landscape, flitting from tree to tree, uttering its harsh note or indulging its discordant warble, and pouncing upon any small bird it may chance to meet.

It is an assassin in feathers. It murders the small birds,—goldfinches seem its favorites,—and scoops out their brains, leaving the body suspended upon a thorn or from the fork of a small branch. I have never known it to eat any part of the bird but its brains.

Sometimes it catches mice. One winter day, near sunset, as I was walking along a country road, I saw a shrike fly to an apple-tree by the roadside, and proceed to adjust some small object amid the branches. A small owl, that sat in his doorway in an old apple-tree not far off, saw the shrike, too, it seems, for presently he came sailing straight as an arrow and silent as a shadow to the point where the shrike was busy, whether to seize the bird or its prey I could not tell.

The shrike screamed and rushed to the other side of the tree, while its game, a small shrewmouse, fell to the ground. The owl regarded me for a moment, and then flew straight back to his retreat in the old tree.

If the owl could have fastened his talon into the shrike he would have made short work with him. The power of the shrike is not in his talons, but in his beak, which is strong and hooked. But he carries away his victim in his talons.

The other day one of my farmer neighbors asked me if I had seen the new bird that was about. This man was an old hunter, and had a sharp eye for all kinds of game, but he had never before seen the bird, which was nearly as large as a robin, of a dull blue or slate color marked with white.

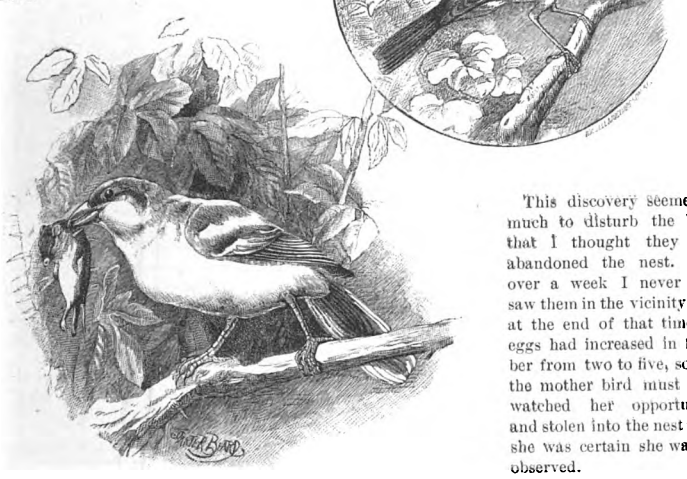
Another neighbor who was standing by said the bird had appeared at his house the day before. A cage with two canaries was hanging against the window, when suddenly a large bird swooped down as if to dash himself against it; but arresting himself when near the glass he hovered a moment, eying the birds, and then flew to a near tree.

The poor canaries were so frightened that they fell from their perches, and lay panting upon the floor of their cage.

No one had ever seen the bird b fore; what was it? It was the shrike, who thought he was sure of a dinner when he saw those canaries.

If you see, in late autumn or winter, a slim, ashen-gray bird, in size a little less than the robin, having white markings, flying heavily from point to point, and always alighting on the topmost branch of a tree, you may know it is the shrike.

He is very nearly the size and color of the mocking-bird, but with flight and manners entirely different. There is some music in his soul, though



Digitized by Google

his murderous beak nearly spoils it in giving it forth.

One winter morning, just at sunrise, as I was walking along the streets of a city, I heard the shrike's harsh warble. Looking about me, I soon saw the bird perched upon the topmost twig of a near tree, saluting the sunrise. It was what the robin might have done, but the strain had none of the robin's melody.

Some have compared the shrike's song to the creaking of a rusty gate-hinge, but it is not quite so bad as that. Still it is unmistakably the voice of a savage. None of the birds of prey have musical voices.

The shrike had probably come to town to try his luck with English sparrows. I do not know that he caught any, but in a neighboring city I heard of a shrike that made great havoc with the sparrows.

The little hawks come to town after sparrows, and are very deft in taking them. One day in February, passing along a street where a number of sparrows were feeding, I saw a little hawk swoop down from behind a high board fence, seize one of the sparrows and bear it away, in the twinkling of an eye. It was one of the cleverest feats of the kind I ever saw performed.

The rest of the sparrows, a dozen or more, followed on screaming, in the direction in which the hawk disappeared, and alighting in a plum-tree, sat there a long time, looking very depressed.

"If we can be snatched up in that way," they seemed to think, "when are we safe?"

The birds do not appear to be afraid of the shrike, as they are of the hawk or owl. Indeed, he is quite an innocent-looking bird. I have never seen him seize his quarry, but I suspect he avails himself of his harmless appearance, and draws near and strikes like the assassin that he is.

One day in October I saw one "working" a flock of goldfinches in some bushes. He had killed one, and suspended it by thrusting its head in the fork of a small twig, and was manœuvreing about to strike another when I appeared upon the scene.

Another bird which will prove a good subject for the young observer to exercise his powers upon is the great crested flycatcher—a bird about the size of the shrike, reddish-brown in color, a barbarian in voice, a pugilist in manner, and sly and cunning in habits.

Like the shrike, these birds are never numerous, but as they come to us in the breeding season they are usually seen in pairs. They may be looked for in old orchards where there are likely to be hollow limbs and decayed trunks, as it is in such places that they build their nests.

They may be expected early in June, and usually disappear by or before August. To me their arrival is announced by a loud call that resembles that of a frog or toad.

The great crested flycatcher's cousin, the king-bird, comes about the same time. The king-bird is the much more elegant and familiar bird,—a bird of every orchard,—while the great crested flycatcher is much more rare.

One of the most curious facts about this bird is that it is said always to use a snake-skin in building its nest. To all my correspondents who write me about birds I say, "If you find the nest of the great crested flycatcher, see if it contains a snake-skin." Some respond that they find the snake-skin; others that they do not.

One correspondent reports an onion-skin, which strikes one as a very good substitute. A nest which I examined in one of my old apple-trees did not contain a snake-skin, but in lieu of it a large number of shad scales.

Apparently, this was the nearest the bird could come to it. Shad scales are not hard to find in early June in the valley of the Hudson, but snake-skins are rare.

I have seldom seen a wood-thrush's nest that did not contain in its foundation a fragment of newspaper—a poor material to build upon in any case, I think, and doubtless every great flycatcher's nest would contain a cast-off snake-skin if it were as easy to be had as newspapers.

The flycatchers nested in my old apple-tree, beneath which we passed many times daily for several years before I discovered the exact place. I made frequent search, but without success, till one day I chanced to see the mother bird fly straight into the end of the stub of a large limb.

With a step-ladder I climbed where I could look into the hollow, and the bird darted out, brushing my face with her wings.

This discovery seemed so much to disturb the birds that I thought they had abandoned the nest. For over a week I never once saw them in the vicinity; but at the end of that time the eggs had increased in number from two to five, so that the mother bird must have watched her opportunity, and stolen into the nest when she was certain she was not observed.

I have never known any other bird so shy about its nest. I could never detect these birds carrying in food to their young, and never at any time heard a sound proceed from the latter; and when they flew away, they stole out as it were in the night, and were never seen in the vicinity afterward.

JOHN BURROUGHS.

TEMPERATE LIVING.

For fear the flesh should wrongly think
To lord it o'er the deathless soul,
Let abstinence in food and drink
The guilty pride of flesh control.
—*St. Ambrose.*

AUSTRIA-HUNGARY.

Probably the most difficult European State to govern well and to keep in peace and order is the Empire of Austria-Hungary. The reason for this is clear. The Empire is composed of a number of ancient kingdoms, duchies and principalities, inhabited by different and rival races, which have interests often conflicting with each other, and which are only kept together because they are ruled over by the same sovereign.

Less is said in the daily newspapers of Austria-Hungary than of its neighbors of equal rank, yet its history from year to year is peculiarly interesting to observe and study.

Its form of government is very intricate and complex. The Empire is, first, divided into two great Kingdoms,—Austria proper and Hungary,—each of which has its own Parliament, its own ministry, and control over its own local affairs, and in these senses, therefore, is independent of the other.

When the sovereign is crowned Emperor of Austria at Vienna, he also repairs to Pesth, the Hungarian capital, and is there crowned King of Hungary, to show that Hungary is a separate Kingdom.

But the two Kingdoms are subdivided into a number of lesser States, which, in their turn, enjoy a certain degree of local self-government. The most important of these lesser States are Bohemia, Moravia, the Tyrol, Silesia and Galicia.

The two Kingdoms are, moreover, united under one general imperial government, with a legislative body called "the Delegations," chosen one-half by the Parliament of each Kingdom, and with three ministers, of war, foreign affairs and finance respectively, the chief of whom is the Chancellor of the Empire.

The duty of this central government is simply to guard the interests of the two Kingdoms as they exist in common.

But the fact that the Empire contains three leading, separate and rival races gives rise to frequent dangers, and keeps it continually in political unrest.

These three leading races are the Germans of Austria proper, the Magyars of Hungary, and the Czechs (a branch of the Sclavonic race) of Bohemia and Moravia.

The recent politics of Austria-Hungary have turned on the demand of a large party of the Bohemians that that portion of the Empire should be made, like Hungary, a separate and self-governing Kingdom, with a ministry, a Parliament, and the right to make local laws.

The "Czech" party, representing this demand, also urge that the Emperor should be crowned King of Bohemia at Prague (the capital of Bohemia), as he already is crowned King of Hungary at Pesth.

But these demands have always been earnestly resisted by the German element of the Empire, and less strenuously by the Hungarians.

The present Austrian Ministry, however, at the head of which is Count Taaffe, has long been trying to make a compromise with the Bohemian Czechs; and while not yielding to their extreme demands, has been willing to give them larger rights of local government, to allow the official use of the Czech language, and to establish separate schools for the Czechs.

These offers have failed to satisfy the extreme party in Bohemia, and Count Taaffe seems now to have given up the attempt to satisfy them.

On January Twenty-sixth he dissolved the Austrian Reichsrath, or Parliament, and the elections for the new legislature will take place in the middle of March. Upon the result of these elections will depend the continuance of the effort to conciliate Bohemia, or the return to the former Austrian policy of relying upon the German element to maintain the government of the Austrian Empire, without making any large concessions to the discontented race.

These facts serve to illustrate the great difficulty which Austrian statesmen have in keeping the various races in the Empire in tranquillity and order.

For the Companion.

SHIP AHOY!

In dreams I was a ship, and sail'd the boundless seas,
Sailing and ever sailing—all seas, and into every port,
or out upon the ocean,
Saluting, cheerily hailing each mate I met, little or big,
"Ship ahoy!" thro' trumpet or by voice—from me some
friendly merry word at least,
For companionship and good-will to all and each.

WALT WHITMAN.

A YEAR'S FOREIGN TRADE.

The exchange of products between this country and lands beyond the sea increases steadily. The returns showing the extent of the foreign trade for the calendar year 1890 have recently been issued. They show that goods were imported to the value of eight hundred and twenty-three million dollars; the value of domestic goods exported was eight hundred and forty-six millions.

While several of the countries of Europe show a larger average value of foreign purchases and sales, dividing the whole value by the number of inhabitants, we must remember that the extent of this country and the variety of its resources make the foreign trade of less relative importance than it is in small European lands.

To illustrate this fact, if the United States were divided into two countries by an east and west line, every pound of cotton entering New England would become an export of the South and an importation by the North. Thus the whole cotton movement would be counted twice in the foreign trade, the number of people remaining the same, whereas it is now not counted once.

The same statement would be true of every other commodity crossing the line we have imagined. What is known as the internal trade of the country is a great many times as large and important as the foreign commerce.

Nevertheless, the exchanges of merchandise with foreign countries are of huge proportions, and the increase of intercourse is always a matter of satisfaction. To augment it is the object of commercial and reciprocity treaties. To control it and turn it in desired channels is one of the objects of existing tariff laws.

Of the importations of the year 1890 rather more than one-third of the value consisted of goods free of duty. The value of free goods was two hundred and eighty-eight millions; of those subject to duty five hundred and thirty-five millions. The largest single item of importation was coffee, of which more than eighty-four million dollars' worth was received during the year. This, however, was but one million dollars more than the value of sugar and molasses, which has heretofore always held the first place on the list.

The value of textile goods imported is also very large, in spite of the efforts made to secure the market for these goods to domestic manufacturers. Woollens and worsted goods imported were worth fifty-four millions; silk forty-one millions; cotton thirty-three millions; linen, hemp and jute twenty-seven millions.

Other important items of importation are chemicals and drugs forty-six millions, and iron and its manufactures forty-four millions. The articles we have mentioned represent quite one-half of the total value of imports. There are no other articles of nearly so much importance as any one of these.

On the export side the trade is even more closely confined, in its large items, to a few articles. Not less than two hundred and fifty-four millions of dollars was the value of cotton exported, and this alone stands for thirty per cent. of the total.

Provisions is second on the list, one hundred and forty-three millions; breadstuffs third, one hundred and forty-two millions; and petroleum, crude and refined, fifty-one millions, is next. There is no other class of goods which represents as much as forty millions. But the merchandise enumerated includes nearly three-fourths of the value of American exports.

Where do we buy, and where do we sell? The returns of trade by countries are not complete, but the character of the foreign commerce does not change much from year to year.

By far the greatest amount of trade is with Great Britain. One-fourth of all the imports are from that country, and one-half the exports are sent there. Germany is second and France third, counting the trade both ways; but the imports from the West Indies are greater than those from France.

There are three things which public men are now trying to effect, in connection with the foreign trade, namely, to increase the amount of exports of manufactures, to augment the trade with Central and South America, and to restore a part of the carrying trade to American ships. During the year 1890 less than one-seventh of the imports and less than one-tenth of the exports were carried in American vessels.

"NOT WISELY, BUT TOO WELL."

There can be such a thing as loving not wisely, though too well. The mother who slaves all day that her daughter may be gracefully and plettir esquely idle, and so has no time to be her own best self and her daughter's friend and companion, is making a fatal mistake.

We could point out a certain woman whose one object in life is the success of her children. She keeps a simple boarding-house, to which a humble company repair for their daily meals, and all day long in her hot kitchen this woman stands and cooks, till soul and body are weary, and her very heart faints and fails within her.

Of the two children for whom she toils, the son is at college, and he makes gay and prosperous friends, to whom he never speaks of his home.

He would be mortally ashamed should these friends discover that his father drove from Monday morning till Saturday night his peddler's cart, and that his mother cooked the daily food of a score of hard-working young men.

The daughter of the family is a girl as fair and almost as frail as a spring anemone, and she, also, has been well-taught. She can speak French fluently and correctly. She plays, and that not badly, on the piano.

She is gentle in manner, and wears tasteful and dainty clothes. She would seem as out of place in the hot kitchen, where her mother toils from morning till night-fall, as would be a La France rose-bush in a kitchen garden. The mother is content, since she believes that she is doing her best for her children. What matter how hard her own lot? Her son shall be a gentleman, her daughter a lady.

And this self-devotion has its noble and beautiful side; but, after all, it is not wise.

Son and daughter would be better, truer, and even more really happy, if they were more intimately allied with the mother heaven gave them; if they shared to some extent her work and her cares; if they lived within, and not outside, the dull round of her daily life, and warmed her heart with their loving sympathy.

"It's too expensive to be rich," said little Tommy in "Very Short Stories." "Rich people have to buy such a lot of things, and to wear fine clothes!"

Truly, it is too expensive also to be learned and graceful and beautiful, if one has to pay for all this the price of solitude at home; to turn away from the tenderness of household unity; to become a stranger to the daily life of her whose arms sheltered one's babyhood, and whose love is the truest and tenderest that any of us will ever know.

Fair and charming looks the girl whose mother is cooking in the hot kitchen. She goes forth clad daintily, and the very day seems glad of her; the sky, that is no bluer than her eyes, smiles on her.

But the time will come when those busy hands at home will cease their struggle; when the tired mother will lie down for a rest so long that she will never remember to get up from it.

And standing beside her at that last hour, will not the daughter long, with hopeless, unutterable longing, to have the dead past back, in which to be other and tenderer than of old; to share the tasks that she had shunned; to gladden with her responsive affection the heart that had so loved her?

Pity, ah pity, those whose tears of repentance fall on the unanswering face of the dead!

"GOOD SOCIETY."

Mr. Adams, the new pastor, and his wife had taken up their residence at the parsonage, and the leading members of the congregation flocked to call upon them.

"We have very good society in our church," said old Doctor Pratt, drawing the minister aside. "That is, here on the hill. I suppose we ought to be more neighborly than we are with the valley folks, but they are just a little upstartish, you know. All the old families live on the hill, and you will find your congenial associates among them."

An hour later, Mr. Pine, one of the mill-owners of the valley, called on the minister.

"You must learn to know your parishioners in the valley," he said. "You will find excellent society there; fine houses, every luxury of city life, progressive ideas, a liberal hospitality—well, in a word, every good thing which wealth can provide. These poor old fogies on the hill have nothing but their ancestors to boast of. *We* have nothing to do with them."

Mr. Adams and his wife looked at each other hopelessly, when their visitor took his leave. But they heard the same story on all sides. Each clique assured the pastor that he would find "good society" only among its members. Outside of their lines lay barbarism.

Not long after, an old crippled negro, a faithful member of the church, came to pay his respects.

"Mighty fine people in dis church, sah," he said, nodding and smiling. And then it came out that Doctor Pratt had been attending to this poor man for seven years without charge, that Mrs. Pratt and others had been willing nurses, "And all de people on de hill is mighty kind to us, sah."

Digitized by Google

"You do not visit the people in the valley then, Jacob?" said Mrs. Adams, her eyes twinkling.

Oh yes, he hastened to say; the valley people were as good friends as he had, and were continually helping him and other poor people of the parish with money, provisions and clothing.

"Old Jacob knows the secret of finding 'good society,'" said Mr. Adams, after Jacob had gone. "He goes below clothes and position and education, and lays his hand on the heart. If we can only do the same, we shall be able to do some little good in the world."

EMERSON AND YOUNG PEOPLE.

Our most useful friends are perhaps those who expect the most from us. The best of men are in danger of being too easily satisfied with themselves, and should be thankful for a wise friend who is always counting upon their improvement.

This attitude of expectancy was one secret of Emerson's peculiar power over young people. His hopefulness on their behalf made them ashamed to do anything short of their best. As his son expresses it, he seemed always to expect from them "something better than had yet appeared, so that he always inspired affection and awe, but never fear."

One of the distinguishing features of Emerson's view of the world was his cheerful belief that things were bound to grow better.

"I hope he will never get over it," he said to Mrs. Lowell, when she told him that her son Charles was discontented with the present conditions of society.

When his own son came home from school after "Speaking Afternoon," he always asked, "Did you do well?"

"I don't know."

"Did the boys study or play, or did they sit still and look at you?"

"Several of them didn't attend."

"But you must oblige them to attend. If the orator doesn't command his audience, they will command him."

"I make no allowance for youth in talking with my friends," he wrote in his journal. "If a youth or maiden converses with me, I forget that they are not as old as I am."

How great his power was upon susceptible minds is illustrated by an entry in Miss Alcott's journal, written on the day of his death:

"Our best and greatest American gone. The nearest and dearest friend father has ever had, and the man who has helped me most by his life, his books, his society. I can never tell all he has been to me. Illustrious and beloved friend, good-by!"

PARTNERSHIP CORPORATIONS.

One sees nowadays over stores in the large cities such signs as "The Smith & Jones Company," or "Wright, Brown & Parker, Limited." What does it mean?

Smith and Jones formed a partnership twenty years ago, and built up a large business; perhaps they are now getting old, and wish to retire from the active management of their affairs, but wish still to keep their money invested in it.

So long as the concern is a partnership Smith can dispose of his interest only by selling it to a new partner, and a buyer of even a half of that interest may not be found easily.

Moreover, so long as he retains any interest in the business as a general partner, his whole private fortune is held for the debts of Smith & Jones, in case of bankruptcy.

In order to avoid this and other disadvantages of the partnership system, it has become common lately to transform partnerships into corporations. The old partners take most of the stock, and usually are directors; and the corporation retains the name under which prosperity was won.

Stockholders in such corporations risk only the money which they invest. The old partners, also, are no longer liable to lose all their property if the corporation fails.

The practice of changing partnerships into corporations began in England, and has been carried on there to a far greater extent than in this country. In England, indeed, it was a great speculative craze. Well-paying properties were sometimes sold to eager investors for two or three times their real value, and there was great disappointment when the exaggerated statements of the prospectuses were found to be not true.

Thus far, in the United States there has been little scandal in floating the companies, and there have been no serious failures to realize the promises made when the change was effected.

TO YOUNG WRITERS.

On Victor Hugo's birthday it was for many years the custom in France to send him flowers. They came in baskets, in bouquets, in poor little bunches tied with grass, in costly masses.

The old poet declared that he could tell which were bought at the shops, and which had been plucked by the hands which had planted and tended them.

"That magnificent lily," he would say, "might be bought at any florist's shop. It means nothing but the money which paid for it. But that bunch of herbs could grow only on the Garonne, and that blue star-flower can be found nowhere but in Normandy.

"They have an individual flavor. They speak to me the peculiar language of their place and people. They alone have real value."

There is for young contributors a wise and significant suggestion in this remark of the great poet.

Every editor receives contributions which, like the odorless, common lily might have come from any person or place. They are usually correct, grammatical, written in accordance with the hackneyed rules of composition; but they have no individual life or color. They are, as a rule, a composite photograph of all the stories or poems which the author has ever read.

Occasionally, however, an editor receives a story or a poem which has a distinctive life of its own. Like the weed from the meadow in Normandy or the rush from the banks of the Garonne, it has the flavor of its place of birth; the earth in which it grew still clings to it; its own sky has colored it.

Even if it bear signs of immaturity, it is worth a thousand plants grown to order, as in a hot-house.

Thousands of made books appear and vanish, forgotten in the course of each year; but the little story or verse which carries some of the author's life to the hearts of its readers becomes immortal.

STRANGELY FORGETFUL.

A poor memory for names and faces is a serious disadvantage to a clergyman. The New York *Tribune* says that Doctor John Hall was leaving his house in Fifth Avenue, not long ago, when he saw a young man looking at the numbers on the doors. From something in his dress and manner Doctor Hall concluded that he must be a recent immigrant from the Emerald Isle, and therefore a fellow-countryman.

The stranger was evidently at a loss, and Doctor Hall asked him if he could be of any assistance.

"I am looking for Doctor John Hall," said the young man.

"I am he," modestly replied the clergyman.

"Are you Doctor Hall?"

"I am."

"Did you come from Ireland?"

"I had the good fortune to be born there."

The stranger looked at him for a moment. "Don't you know me, Doctor Hall?" said he.

"I regret to say that I cannot place you at this moment, though I may have seen you before."

"Well, I think you have. Why, you baptized me twenty-five years ago in the old country, and yet you have forgotten me entirely!"

"It was not a time for levity," said Doctor Hall afterward, in relating the incident; "otherwise I might have reminded the young man how strange it was that he should have forgotten the face of one who had sustained such an important relation to him in his infancy."

INDIAN MAPLE SUGAR.

The question has been raised occasionally whether the Indians learned of the white settlers to make maple sugar, or the white men from the Indians. According to Prof. Henry W. Henshaw, who recently addressed the American Association on the subject, the Indians were indebted to their own powers of observation and invention for their method of sugar-making.

They collect the sap in birch-bark vessels, which hold in some cases a hundred gallons. They take advantage of cold April nights to freeze the sap, and in the morning throw out the ice. They evaporate it by throwing hot stones into the sap.

The sugar is eaten mixed with corn. Sometimes the pure sugar is their only diet for a month. They boil venison and rabbits in the hot sap as they evaporate it. They also make sugar from the silver maple and box elder.

That the Indians made sugar from times unknown is proved by their language, festivals and traditions. Several authors of early times, telling of their visits to the Indians, mention maple sugar, and one of them, in 1756, describes the Indian's method of preparing it. The gathering of sap and making of sugar formed one of their annual religious ceremonies.

APPLE-BLOSSOMS IN WINTER.

We all love the beautiful, deliciously fragrant apple-blossoms that charm us for a short season in the spring, and note sadly the last shower of white petals over the emerald green carpet beneath the trees. All persons do not know, however, how easily these lovely flowers may be caused to bloom indoors in winter.

If large branches are broken from the trees and placed in water in a warm, sunny window in January or February, they will soon flower; and many of the blossoms will be as beautiful and fragrant as those that bloom on the trees in spring.

Care must be taken to select such branches as have an abundance of plump blooming buds, and some of these should be removed, as well as some of the more pointed leaf buds.

Wild pear and wild cherry branches may be flowered in a similar manner; but not so satisfactorily as apple-tree limbs. No doubt many other kinds of early blooming shrubs and trees could be made to blossom in this way.

Here is an interesting field for experiment for flower-lovers, particularly for invalids and children. The satisfaction of sending to a sick neighbor or presenting to a friend a bunch of fresh apple blossoms in winter amply repays the trifling labor required to produce them.

SPOILED BY LUXURY.

Luxury and ease never bring out the highest qualities in a man's character: work and hardship are required for his best development.

William H. Seward, it is said, once ran away from college in a fit of anger at his father, and went to teach a school in a Southern State. After some months Seward thought better of his college, was reconciled to his father, and returned to his studies. A class-mate, one of the most brilliant men in the college, took charge of the Southern school.

Years after Seward met this classmate, who had married a rich Southern lady, had settled down on a large plantation, and had grown fat and lazy, doing nothing in the way of study, and turning out a very commonplace man, without ambition or intellectual power. A fine scholar had been spoiled by a life of luxury.

Mr. Seward congratulated himself on his own escape from such an ignoble fate.

"Had I married a rich plantation," he used to say, "I might have been satisfied with a life of easy indolence."

TOO MUCH "BAWL."

Twenty years ago the energetic Professor Schwarz was conducting a musical society in a New Jersey city. They were studying Mendelssohn's "Elijah," and had reached the chorus, "Hear us, Baal; hear, Mighty God."

The men's voices were booming out sonorously, when the conductor cried out: "No! No! de dreadful vowel! *Don't* say '*Ba-a-l*,' soften a leetle—give de more musical sound, '*Bäl*'—"

Whereupon the chorus took up the strain again: "Hear us, *Bael*—hear us, Bawl," but they quickly realized the peculiar fitness of the sentiment, and broke down in laughter, to the great amazement of the little German, who never saw the joke, but who reluctantly consented to the old pronunciation.

Fifty thousand "Multum in Parvo Songsters" sold in 5 months! See page 142 last week's COMPANION. [*Adv.*

America again takes the lead. "We could hardly believe our good luck when we ventured to ask for Burnett's Extract of Vanilla in Paris, to have it handed us; it was like meeting an old friend." [*Adv.*

For Throat Troubles, Coughs and Hoarseness "*Brown's Bronchial Troches*" are a simple, yet effective, remedy. Containing nothing injurious, they will not disorder the stomach like cough syrups and balsams. For forty years they have been recommended by physicians, and are known all over the world as one of the few staple cough remedies. Sold only in boxes. [*Adv.*

BARBOUR'S LINEN THREAD

ADAPTED TO ALL KINDS OF

HAND & MACHINE WORK.

LACE AND EMBROIDERY, now of so much interest to the Ladies, especially considered.

SOLD BY ALL RESPECTABLE DEALERS IN THE COUNTRY.

ASK FOR BARBOUR'S.

VASELINE.

FOR ONE DOLLAR sent us by mail, we will deliver, free of all charges, to any person in the United States, all the following articles carefully packed in a neat box:

One two-ounce bottle of Pure Vaseline,	10 cts.
One two-ounce bottle Vaseline Pomade,	15 "
One jar of Vaseline Cold Cream,	15 "
One cake of Vaseline Camphor Ice,	10 "
One cake of Vaseline Soap, unscented,	10 "
One cake of Vaseline Soap, scented,	25 "
One two-ounce bottle of White Vaseline,	25 "
	$1.10.

Or for stamps any single article at the price.

If you have occasion to use VASELINE in any form be careful to accept only genuine goods put up by us in original packages. A great many druggists are trying to persuade buyers to take VASELINE put up by them. Never yield to such persuasion, as the article is an imitation without value, and will not give you the result you expect. A bottle of Blue Seal VASELINE is sold by all druggists at **ten cents.**

Chesebrough M'f'g. Co., 24 State St., New York.

Bailey's

PATENT FOOTHOLDS are made with a *flexible rubber tubing*, vulcanized on the inside of the rubber, which hugs close to the shank of the boot, preventing water, snow or mud from passing it. Ladies', 50 cents; Gents', 75 cents per pair. For sale by all dealers, or sent, prepaid, upon receipt of price. In ordering, give size and width of boot you wear.

See that every rubber is stamped "Bailey's Pat." on the inside, and accept no other.

SUGGESTIONS

THE EYE.

Notice a cat's eye in a very light room, then in a rather dark one.
Repeat, using a mirror, with your own eye.
Why do we, when in a dark room, see better after a time than at first?
Why does very bright light make us scowl?
Why can some animals see better by night than by day?

For the Companion.

EL TEKBIR.

"Do ye hear the voice of angel or of mortal
Chant the praises of the Prophet, far or near?
From the desert round about us, or Heaven's portal,
Falleth any sound of worship on the ear?"
Thus the Caliph questioned close of his attendants
In the still and lonely watches of the night,
While the crescent of their faith with its resplendence
Rendered all the desert landscape ghostly white.

"Not a whisper low from angel lips or mortal
In the stillness of the desert do we hear,
Not a strain of song escaping from Heaven's portal
Cometh to the eager soul or listening ear."
Thus the soldiers spake the Caliph;—by this token
Well their chieftain knew he heard the low Tekbir:
This it was of which his heavenly guest had spoken,
Sounding only to his hearing soft and clear.

Glad he was, for in his light, unquiet sleeping,
In the deep and silent watches of the night,
All unseen, past guards their faithful vigils keeping,
To his tent had come a messenger of light.
By the bedside of the Caliph stood the stranger,
Bade the troubled sleeper be of hearty cheer,
For a voice should lead his people out of danger,
Such a voice as no one else but him should hear.

"Follow," said the stranger, "where that voice shall call thee,
Though it lead thee through the desert wild and drear;
In obedience no evil can befall thee,
Let thy people also follow without fear:
Where it ceaseth thou shalt found for them a city.
War and pestilence shall never more come near;
Rise and lead thy trusting followers in pity,
Rise and listen for the mystical Tekbir."

At the dawn the Caliph forward boldly riding
Bore the standard of the Prophet in the van,
Followed close upon his low mysterious guiding,
Careless aught of earth or sky above to scan.
When at even the mystic chant no longer sounded,
There the tired legion halted, horse and man;
There the Kiblah of the Prophet's faith was founded,
There was traced the holy city of Kairwan.

ISAAC BASSETT COATE.

For the Companion.

THE PATCH OF SKY.

It is a paradox of human nature that they who have the most want the most. The possession of little often cultivates contentment, and sympathetic observers are frequently touched to see how easily the poor are satisfied.

A benevolent woman found in the attic of a six-story tenement-house a simple-minded lame woman who was supposed to need charitable help. She had a cordial and thankful greeting for the lady visitor, and the privation and poverty evident in everything about her gave no sign in her cheerful face.

Her little room had but one window, and this was so placed, under the roof, that it let in no sunshine; but a pitying remark on the scarcity of light through that window brought out the beautiful spirit of the cripple.

One could see, she said, by peeping out at a certain angle through one of the corner panes, a patch of sky; and her pleasure was complete when her visitor, by a twist of the neck, contrived to catch the same glimpse, and she knew that her little bit of prospect was shared by some one else.

"Over that patch of sky I love to watch the white clouds go," she said. "Sometimes they make me think of the sheep and lambs I used to see in the country; sometimes they are snow-drifts; then they sail along like great ships on the sea.

"Once in a while I fancy they are a bridal procession, marching to a grand wedding in the church. And when there are no clouds, and the sky is blue, it is like the blue eyes of my baby that I lost long ago."

Nothing could embitter the sweetness of this poor woman's good-nature, or tempt her from the pleasantest view of life. No one would have called her "bright," but she had a genius for the bright side.

By observation, and by gentle inquiries, the lady learned the woman's most pressing needs; but it was a refreshing surprise to note in that dim garret not only the entire absence of the usual whining complaints and appealing airs of beggar misery, but a temper of cheerfulness and peace that was a real inspiration.

The visitor did not go away without leaving a contribution for the cripple's comfort, but she felt that somehow she had received as much as she had given. That journey up six flights of stairs had been like climbing Jacob's Ladder, and coming down with an angel.

Most of us have, providentially, something more to do than to sit at a window and "watch the white clouds go," but one does not need to be simple-minded to feel thankful for abilities while they last, or for what little is left when these are gone.

The needful thing is the spirit of trust which believes that God never wrongs us.

Contentment, as Epictetus has said, consists not in having more but in wanting less, and true happiness remains if when misfortune reduces our possessions it also reduces our desires.

Christian poverty can say, "I have all and abound," for it looks up and claims heaven. No disaster can take away the humble believer's "patch of sky."

"— What is misery but want of God?
But God is never lost while faith remains."

A TOTAL ECLIPSE.

Few readers of *The Companion* have ever seen, or are likely ever to see, a total eclipse of the sun. The attenuated cone-shaped shadow of the moon sometimes does not reach the earth at all—in which case the eclipse is known as either "annular" or "partial"—and at best makes hardly more than a black dot upon the earth's surface. So small is this shadowed area, from which alone the observation is complete, that, as Professor Langley says in "The New Astronomy," "Many centuries usually elapse before such a total eclipse occurs at any given point."

Professor Langley, at the time of his writing, had witnessed three total eclipses,—in 1869, in 1870 and in 1878,—but had not found the spectacle less impressive upon repetition. Indeed, there is a general agreement that the sight is one to inspire a feeling of awe, not to say terror.

The eclipse of 1869 was nearly central over Louisville, Ky., and Professor Langley's station was not far from the Mammoth Cave. He had some special observations assigned to him, and of course tried to give his undivided attention to them during the few precious moments, but he says:

"A mental photograph of the whole spectacle seemed to be taking without my volition. First, the black body of the moon advanced slowly on the sun, as we have all seen it do in partial eclipses, without anything noticeable appearing; nor until the sun was nearly covered did the light of day about us seem much diminished.

"But when the sun's face was reduced to a very narrow crescent, the change was sudden and startling, for the light which fell on us not only dwindled rapidly, but became of a kind unknown before, so that a pallid appearance overspread the earth with an ugly livid hue; and as this strange wanness increased, a cold seemed to come with it.

"The impression was of something unnatural; but there was only a moment to note it, for the sun went out as suddenly as a blown-out gas-jet, and I became as suddenly aware that all around where it had been there had been growing into vision a kind of ghostly radiance, composed of separate pearly beams, as though the black circle where the sun once was bristled with pale streamers, stretching far away from it in a sort of crown."

Professor Langley was struck with "the extraordinary globular appearance of the moon." "Owing to its unwonted illumination," he says, "its actual rotundity was seen for the first time, and the result was to show it as it really is—a monstrous, solid globe, suspended by some invisible support above the earth, with nothing apparent to keep it from tumbling on us, looking at the moment very near, and more than anything else like a gigantic cannon-ball, hung by some miracle in the air above the neighboring corn-field.

"But in a few seconds all was over; the sunlight flashed from one point of the moon's edge, and then another, almost simultaneously, like suddenly kindled electric lights, which as instantly flowed into one, and it was day again."

The reader will be interested to compare these impressions of the man of science with those which the same spectacle produced upon the ignorant plantation negroes, who had gathered in considerable numbers about the astronomers' tents.

"Those trees there," said one of the observers to Professor Langley afterward, "were black with negroes, and they kept up their noise till near the last. Then they suddenly stopped, and all at once, as 'totality' came, we heard a wail and a sound of tumbling, as though the trees had been shaken of their fruit; and then the boldest did not feel safe till he was under his own bed in his own cabin."

RASH DRINK OF WATER.

A correspondent sends to *The Companion* an account of his experience in killing a tiger. He was travelling through India on official business, and in one of the villages heard of a tiger which committed nightly depredations. He bought a calf for bait, and the natives took it to a point outside the village, and fastened it to a stake under a convenient tree, where a branch, some twenty feet from the ground, hung over it.

Just before night, armed with two rifles and two pistols, all the firearms I had with me, I established myself alone upon that branch. I did not even take my one servant with me. He would only have gone to sleep and fallen to the ground.

Quietly I prepared for business. I hung my ammunition belt over the limb, where I could reach it easily. My pistol belt I hung beside it, with one pistol on each side, so that I could lay my hand upon either, instantly. One rifle I balanced against the tree, and as there was no place for the other, I held it in my hand.

All was ready, and I patiently waited. An hour went by and the moon rose, making it almost as light as day. I could see everything—everything but the tiger.

I had chosen this spot, because there was a spring not far from the tree, and the first thing the tiger would look for after lying all day in the jungle, would be a drink of water. If he came there to drink he would be sure to see and hear the calf, and make for it at once.

Between the tree and the spring stood a cluster of low shrubs. Beyond the spring there was open country, and then the jungle whence I supposed the tiger must come. I had not taken my eyes from it, but though I could see even the jackals on the edge of the jungle, there was no tiger.

Another hour went by. I was growing sleepy, and seeing no danger I took my gun and went to the spring for a drink. I was slowly walking back to the tree, when the struggles of the calf attracted my attention. It was making a most peculiar noise, and a low growl came from the bushes between me and the tree. If blood can run cold, I am sure mine did at that moment.

There I stood, in an open plain, with just one shot at my command, and a tiger between me and my only refuge.

He had evidently been there for some time. He had seen me in the tree, and had been waiting for me to go before he dared to touch the calf. If he was growling, now, at the calf, preparing for a meal, there was hope for me; but if he was growling at my coming back, it meant that he was ready to spring upon me, and there was not one atom of hope.

I did not dare to move. The calf kept up its crying, and the low, ominous purring never ceased. Then each noise grew a little more emphatic, and it was evident that between us two the tiger had decided upon the calf. A little later I saw his huge form stealthily moving about the tree. He was evidently afraid of some trick, and was investigating.

I did not move till he made the leap. Then I hurried up behind the bushes, and could see him crouching over the poor calf, drinking its blood. It was impossible for me to reach the tree. Now, if ever, was my chance. One shot must do the work. I aimed at his head and fired. I saw him loose his hold, heard him give one savage yelp, and then, to my horror, saw him turn, gnashing his teeth furiously, and come creeping toward the bushes.

I sank down on my knees, to get as much shelter as possible, and waited for what seemed as sure a death as ever faced a man. But the growling subsided into a hoarse breathing. Was the tiger dying? I cautiously rose till I could see through the upper branches. Two bright, yellow eyes, like fire-balls, and a sharp growl sent me to my knees again.

The tiger is a coward, and slow to spring upon what he cannot see. He is naturally patient, also, and for the present I dared not be otherwise than patient. So we waited. The rough ground tortured my knees till I thought I would almost rather die than bear the pain longer. Then the breeze would stir the leaves, and a low growl would convince me that I had better bear it a little longer after all.

It was a long time before I dared risk another look. There was nothing there! I crept from my hiding-place. The calf lay dead beneath the tree. The next moment I saw the tiger, almost half-way to the jungle, lying stone-dead upon the ground.

For the Companion.

MY REWARD.

Beside my path a slender tree
Drooped 'neath a winding-sheet of snow,
Its fettered arms appealed to me,
I shook it free, and bade it grow;
Next spring it bore me fruitage rare,
Repaying many fold my care.

Beside my path a fellow-man
Lay prone upon the frozen heath,
Wretched his raiment, pale and wan
His features with the hue of death;
I held my hand to him, and lo!
He scowled, and cursed, and bade me go.

"Alas!" I sadly thought, as then
I left him to pursue my way,
"Have trees more gratitude than men?"
I heard a voice within me say;
"Patience, 'twas Heaven gave the tree
The fruitage that rewarded thee."

W. B. SEABROOK.

ECONOMY AND STINGINESS.

"I declare to goodness," said the farmer, as he leaned on his hoe and watched the lawyer walk by, "that man's stingy as all creation! Got a hoss in the stable, an' walks to and from the station to save wear and tear on his old buggy." It never occurred to the farmer that the lawyer, who was cooped up in his city office all day, was walking for his health. In the same way he misjudged the young doctor, who took care of his own horse to save the expense of a hostler that he might have money to buy books and instruments.

Economy is doing without what you don't need; stinginess is doing without what you ought to have. The man of ordinary means who will not buy strawberries in midwinter is economical; the rich miser who will not buy a nutritious steak or chop, when he is weak and needs it, is stingy.

"Mother," said Harry Harmon, after his first day's work, "I'm working for the stingiest man in town. Instead of sweeping the floor right into the street, he makes me pick out every bit of paper and string, which he intends to sell."

"Did you ever!" exclaimed Mrs. Harmon.

"Harry," said Mr. Harmon, looking up from his paper, "is the United States Government stingy?"

"I should say not!"

"Yet government employees are expected to account for every penny stamp, ounce of old iron, scrap of leather—indeed, every bit of waste paper and piece of string. That is not stinginess; it is economy."

There is such a thing as mistaken economy. Some things we can hire done more cheaply than we can do them ourselves. It would not be economical for our young doctor to saw his own wood and take care of his horse if these interfered with his duty to his patients, any more than it would be for the wood-sawyer to prescribe his own medicines to save the doctor's fee.

"Do you know," said a prosperous lawyer to his fellow-traveller on the suburban train, "I believe I'll re-shingle my barn during the court vacation. I might just as well as not save the money."

"H'm!" said his friend, dubiously. "I hope you will save money, but I doubt if that is an economical way to do it."

The lawyer did not see the force of this remark until he slid off the roof and broke his arm. Then he counted up his pain, the doctor's bill and the expense of shingling, which had to be done anyhow, and sent word to his friend that if he "saved much more money that way, he would be ruined."

This reminds one of the literary gentleman who undertook to paint the interior of his house.

"My dear," he said to his wife, "the painter is extortionate enough to ask thirty-two dollars for the job. Now I can buy the paint, oil, turpentine and brushes for fourteen dollars, and save eighteen dollars. You know what Franklin said about a penny earned?"

His wife knew, but being a wise little woman, said nothing for a week, and then she laid this account before his eyes:

Paint, brushes, etc.	$14.00
1 Pair trousers ruined	8.00
1 Moquette carpet, daubed with paint and virtually ruined	30.00
1 Mirror broken	3.00
Total	$55.00

"Did Franklin say anything about the cobbler sticking to his last?"

SANG THE BABY TO SLEEP.

A correspondent of the *Merchant Traveller* was lately on the road with a fellow "drummer," when a baby began crying at a violent rate. Every one in the car was disturbed, and conversation became impossible. The baby's mother, meantime, was doing all in her power to quiet it, but without success. Much as the other passengers may have pitied her, not one of them came to her assistance.

At last Walsh said to me, "I'm going to help that poor woman out. She looks sick and tired."

Without more ado he walked over to the woman, and asked leave to take the child. The request was so kindly made that the mother's confidence was gained at once, and with a little urging she put the crying child into Walsh's arms.

The passengers stared, but Walsh had been too long on the road to mind anything so harmless as that; besides, he was a father himself.

He handled the baby like a veteran, and sang what I suppose was the only tune he ever knew, a very pretty melody, by the way:

"By, baby, day is over,
Bees are drowsing in the clover,
By, baby, by;
Now the sun to earth is sinking,
While the cow-bells tinkle, tinkle,
By, baby, by."

He sang the verse over and over till the words were printed upon my brain never to be erased. It was not long before the baby began to lower its tone, and then, except for an occasional sob, it soon became quiet. Then suddenly a gentle murmur of voices was heard from the farther end of the car, humming the same words to the same tune, but in subdued and beautiful harmony.

The singers were members of a college glee club on their way to Chicago. They had quietly learned the words and the tune, and now joined in the effort to keep the baby quiet. A more surprised man than Walsh you never saw, but he soon got his "second wind," as the saying is.

"That's beautiful, boys," he said; "keep it up. I'll do the shooing while you do the singing."

The bargain was struck and faithfully carried out, and the tired mother and the disturbed passengers all had a peaceful ride, thanks to the thoughtful kindness of a dry-goods drummer.

TOO EAGER.

The Companion recently printed a story about a woman who had no doubt that she could paint pictures if a certain famous artist would only "tell her how he did it." The Boston *Courier* has a similar anecdote, and the two, if we are to believe them, seem to indicate that the old saying, "Art is long," is no longer universally believed, even for "substance of doctrine."

A well-known vocal teacher of Boston, whose reputation brings him pupils from all over the country, relates that there once came to him a lady who announced herself as a music teacher from a Western city, and declared her intention of taking a course of lessons. She asked his terms, and pronounced them satisfactory, and then went on to talk about the time of lessons.

"You see," she explained, "I have only a limited time in Boston, and I must manage so as to get the whole twenty lessons into that."

"How long are you to be here?" the other asked.

"Three weeks," she replied.

"Twenty lessons in three weeks!" he exclaimed, aghast. "How could that be done?"

"Oh," she responded easily, "I could take two lessons some days."

"Yes," the teacher answered, "or you might take the whole twenty lessons one after the other all at once. That would only take about ten hours."

The face of the lady brightened.

"Would you really be willing to give them to me that way?" she asked. "Then I could get home inside of ten days, and get my advertisement as your pupil printed before the end of vacation." And the amusing part of the story is, that the woman could not be made to see the absurdity of her suggestion.

HUMORS OF CHINATOWN.

"Chinatown as a spectacle is disappointing," says Mr. Rüs in his "Studies Among the Tenements of New York;" but he found therein some things to tickle his sense of humor, and other things at which he laughed that he might not weep. One evening, while going through Mott Street,—the Chinese quarter,—he heard a woman shrieking in a cellar. Descending with his companion, a policeman, he discovered a Chinaman beating his white "wife" with a broom-handle.

"She velly bad!" shouted the Chinaman, as the two Americans, prejudiced against wife-beating, caught hold of his arms, and released the woman.

"S'pose your wifee bad, you no lickee her?" he asked, turning fiercely upon Mr. Rüs.

"No, I wouldn't; I'd never think of striking a woman," answered the American.

The amazed Chinaman eyed him in silence for a moment, and then contemptuously answered:

"Then, I guess, she lickee you."

Going into a Joss-house, he discovered among the Chinese scrawls on the walls the inscription, in English letters, "In God We Trust." It had been copied from the trade dollar, and the priest explained that the inscription was a delicate compliment to the "Melican Joss," the almighty dollar.

On his own shores John Chinaman may be a thousand years behind the age, but here he has been so influenced by the "Melican Joss" that he is abreast of the age in his scheming to "make it pay." He turns everything, from "Joss" down, into cash, or that which cash buys.

FADING.

In a small town of Northern Vermont the inhabitants are noted for their early marriages. An unmarried young woman who has passed her twenty-fifth birthday is universally regarded as an "old maid," and a young man who has reached the same age in an unwedded state is pronounced a confirmed bachelor, and the young people themselves appear to accept the current opinion.

One handsome young fellow, twenty-six years old, was a great trial to his mother, a bustling, energetic farmer's wife. As she lamented to a summer boarder, "it did seem as if Hiram was possessed to stay single," no matter what she could say.

"An' 'taint likely," she would add, fretfully, "that any girl will be takin' up with him after a year or two, when he's settled down an' beginnin' to look old!"

Hiram himself was not given to sentiment, and furthermore was quite unconscious of his own attractions. He showed the summer boarder some dreadful photographs of himself, which had been taken the previous winter to please his mother, and remarked, gravely:

"Mother was set on havin' 'em, an' I only waited to see if I wa'n't likely to get any better-lookin'. But come last winter I see I was beginnin' to fade, so I had 'em took right away!"

The contrast between the speaker's youthful appearance and his words was almost too much for his hearer.

PUZZLED FRENCHMAN.

Inappropriate words, says an exchange, may convey the meaning unmistakably, without being in accordance with the English idiom. A Frenchman, while looking at a number of vessels, exclaimed, "See what a flock of ships!" He was told that a flock of ships was called a fleet, but that a fleet of sheep was called a flock.

To assist him in mastering the intricacies of the English language, he was told that a flock of girls was called a bevy, that a bevy of wolves is called a pack, but that a pack of cards is never called a bevy, though a pack of thieves is called a gang, and a gang of angels is called a host, while a host of porpoises is termed a shoal.

He was told that a host of oxen is termed a herd, and a herd of children is called a troop, and a troop of partridges is termed a covey, and a covey of beauties is called a galaxy, and a galaxy of ruffians is called a horde, and a horde of rubbish is called a heap, and a heap of bullocks is called a drove, and a drove of blackguards is called a mob, and a mob of whales is called a school, and a school of worshippers is called a congregation, and a congregation of engineers is called a corps, and a corps of robbers is called a band, and a band of locusts is called a crowd, and a crowd of gentlefolks is called the *élite*.

The last word being French, the scholar understood it and asked no more.

For the Companion.

THE CHILDREN'S RICHES.

Ralph has a castle, gloomy and grand,
Battled, and moated, and gray,
And over the drawbridge a belted knight
Is galloping hard away.

Beth has a playhouse with lovely dolls,
And sets for dinner and tea.
How strange! its roof is the castle's moat,
And the castle itself, a tree.

And Ernest, our artist, thoughtful and wise—
What wealth is in his stronghold!
Sees a rocky pasture where flocks of sheep
Are hurrying to their fold.

Maude has but a gypsy within her tent,
With turban and cloak so gay,
But the old wife tells her a fortune rare,
That our darling shall have some day.

O wondrous riches! O happy hearts!
A marvel I now declare,
For castle and gypsy and sheep all lie
On an area one foot square.

Alas for the castle, gloomy and grand!
Alas for the gypsy gay!
For the sun shone bright on the frosted pane,
And melted them all away.

KATE LAWRENCE.

For the Companion.

UNCLE TROTT'S JOURNEY TO THE "SETTLEMENT."

"Uncle Trott, did you ever see a wolf?"

Little Gib was busily putting together the "sliced animals," a large box of which Aunt Lena had hung for him on the Christmas-tree.

"Wha-wha-what's that you're chattering about?" said Uncle Trott, sleepily pulling off the big red handkerchief from his head.

"Why, did you ever see a wolf, Uncle Trott—like this, you know?" said Gib, exhibiting his specimen.

Uncle Trott pushed his spectacles, which, in his nap, had slid down to the tip of his nose, up to his eyes again. Then he laughed till his wig fell over one ear and his cane clattered down on the brick hearth.

"Did I ever see a wolf like this?" echoed Uncle Trott. "Why, no, Gib. A wolf don't have a horse's tail, nor a horn on the end of his nose."

"But did you ever see a really wolf, Uncle Trott?" persisted Gib.

"Well, I *thought* I came pretty near it once," laughed Uncle Trott.

"Oh, tell me about it, please do, Uncle Trott!"

"The winter I was ten years old my father went logging away up on Wild River. We lived in the woods, and there was only one neighbor—Mr. Lovejoy, living two miles off—between us and the 'settlement,' five miles away.

"Along toward the last of February we got out of provisions. We had eked and eked, expecting father home every day, till now there was nothing in the house but some unground wheat. This mother used to boil into mush, and with the milk from our cow we managed. But one morning mother started me to the settlement for a little pork and meal. I was to call on my way home at Mr. Lovejoy's for a goose—her name was Nancy—that my mother had paid for by spinning flax.

"With my new '*buskins*' strapped on tight, and my homespun coat well pinned up with buckthorns, I started off in high spirits. I should have done well enough if I hadn't stopped so long at Mr. Lovejoy's. Jim Lovejoy was about my age. He was 'breaking' his yoke of calves, and it was long after sundown before I slung the heavy old goose, pork and meal over my shoulder and started.

"I hadn't got far on my way when I heard a queer noise in the woods behind me. It frightened me dreadfully, for I thought it *must* be a wolf and I would have to run back to Mr. Lovejoy's, but *it* was between me and his place, so I just put those new buskins into a run for home.

"Oh, how I did run! And it seemed, too, that I didn't get over the ground a mite! But *my wolf* skulked on, too. 'Twas real dark now, and only the silver edge of a new moon hung low over the treetops.

"I had got about half-way home when I thought of the pork, and threw it off my back as I ran, shouting. He stopped to sniff it over a minute, and I got on a good piece—to the great pine-tree on the edge of father's lot. Then I heard him patting in the woods off at one side. Off went the little bag of meal. He didn't sniff at that. Then I knew that he was after the goose. In my terror I just let go her great red feet, and she dropped in the path behind me. I heard a great '*quarking*' as I leaped out into the clearing, and saw mother, who had heard my shouts, running toward me waving a firebrand.

"Mother had no mind to lose her goose that had cost her so much hard labor. Waving her brand she ran on into the woods, and came upon—an old red fox trying to shoulder Nancy and run off with her! I suppose he had got dreadfully hungry, and the delicious smell of the goose had drawn him on to follow me, thinking—if foxes do think—that he *might* get a taste.

"Poor Nancy was quite dead, and mother gave me a great scolding, first for loitering so long at Mr. Lovejoy's, then for being such a coward as to drop the goose for nothing but a crafty old fox."

For the Companion.

BETH'S FIRST DAY AT SCHOOL.

In she ran a little after noon, eager to tell mamma all about it.

"I should think I wouldn't ever have to learn another single thing," she cried, all out of breath, "for I learned so much to-day! I like my teacher *pretty* well; she isn't *very* cross, but she isn't near so nice as you are, mamma.

"I sat next to Flossy, which is a real comfort, 'cause we live next door to each other, and are pretty good bosom friends, and I saw a lot of little girls and boys I didn't know at all; and whenever I looked at them, I felt a funny feeling in my throat, and I kind of wanted to come home, and see if you were lonesome without me.

"So I reached across and squeezed Flossy's hand, and I told her I was glad that she lived near me, even if she did make me mad sometimes. Then the teacher came by, and said, 'Don't whisper, dear,' and that's all I didn't like her for.

"By and by we were all hot and tired, and I was thinking how nice it would be if you could cuddle and rock me in your lap awhile. And the teacher said, 'Now let every one of you put your heads down on your desks and shut your eyes tight, till I tell you to open them.' So we did, and pretty soon she clapped her hands and said, 'Wake up, little folks,' and she had drawn a picture on the blackboard, of a dog with a stovepipe hat on, sitting on a chair, with a curly tail!

"I'm dreadful hungry though, and I guess I won't go any more, if you don't mind, 'cause it's so prickly to sit still."

ONE evening a hand-lamp stood on the parlor table beside the big one, and both were lighted. Pretty soon Edna's sharp ears caught a funny sound. "O-oh!" she cried, "dust hear the mamma-lamp singing to its baby!"

Enigmas, Charades, Puzzles, etc.

1.

LETTER ENIGMA.

The words in italics contain the letters forming the answer, which is the name of an eminent American statesman, who died on March 11, 1874.

In *Congress*, where the laws are made;
In *Washington*, in which we've strayed;
In *statesmen*, who have speeches great;
In *Representative* of state;
In *politicians*, zealous set;
In *legislatures* that have met;
In *speeches*, that are full of life;
In *politics*, that breed a strife:
Republicans have use of me;
With *Democrats* I'm sure to be;
In *Prohibition* I am placed;
Greenbackers I have often graced;
From Knights of *Labor* not erased.

F. S. F.

2.

A VARIETY PUZZLE.

Vowels are to take the place of crosses in the following incomplete sentences, which are proverbs. When these have been found, select one word from each sentence and write them down, one underneath the other, and the central letters will spell the name of a popular writer of juvenile stories who died on March 9, 1825.

1. Txxrrxshxmxntxfxrgxvxdxvxnx.
2. Thxfxrstblxwmxkxsthxfrxy.
3. Mxrxhxstxlxssspxxd.
4. Xnxblxlxfxkxxpsxffwrxnklxs.
5. Xmxrcxfxlmxnxsmxrcxfxltxhxsbxxst.
6. Xdrxwnxngmxnwxllcxtchxtxstrxw.
7. Lxvxlxkxttxnsmxkxsxbxrxldcxts.
8. Yxxcxnnxtcxtchxldbxrdswxthchxff.
9. Trxthlxxsxnxwxll.
10. Xgxthxnksxllyxxthfxllx.
11. Lxxngrxdxsxndxbtsbxck.

O. D. V.

3.

CHARADE.

My *first* is a personal pronoun.
My *second* is a number.
My *third* is the lower part of a window.
My *whole* is any tool of a trade.

A. M. P.

4.

CONNECTED HALF-SQUARES.

I.

1. Suffering.
2. Performers.
3. Part of a priest's vestment.
4. Alone.
5. Rage.
6. A bone (surgery).
7. A letter from Spain.

II.

1. One of the days of the week.
2. A confederation.
3. A river in Africa.
4. A beautiful, fleet animal.
5. An article much used.
6. A letter from Italy.

The first words connected will give one of the holy days in Lent.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

ANOTHER CONSUMPTION CURE.

Doctor Koch's treatment for the cure of consumption is exciting the deepest interest throughout the civilized world, and is already being tried in the United States with hopeful results. It will be remembered that Doctor Koch, though a man of known scientific caution, is confident that, in its earlier stage, the disease can be cured by his method.

Meanwhile, and for several years, Doctor Roussel, of Paris, has been experimenting with another mode of treatment. Doctor Koch seeks to kill the microbes by destroying the material that feeds them. Doctor Roussel aims to kill the microbes directly. Both employ hypodermic injections. Koch uses a fluid peculiarly compounded. Roussel uses a well-known antiseptic eucalyptol, mixed with sterilized olive-oil.

The eucalyptol is carried everywhere with the blood, reaching every tissue, and is finally eliminated by the lungs, kidneys and sweat-glands. It is believed by Doctor Roussel to be fatal to the microbe of consumption. The oil nourishes the system.

Doctor Roussel regards the usual consumptive symptoms—suppuration, expectoration, high temperature and night sweats—as nature's efforts to get rid of the microbes, and holds that the remedy should not aim to check these symptoms, but to attack the microbes themselves. At the same time he does not lose sight of the fact that attention should be paid to general hygiene, ventilation, sunlight and sanitary clothing.

The more fully to test the efficacy of his treatment, he made no changes in the surroundings of his patients, or in their mode of life.

His method requires the injections to be continued several months, to make sure that the eucalyptol pervades every tissue of the body. One of the earliest patients treated was sent to him by the eminent Doctor Fauvel.

The patient's right lung was affected, and the expectorations contained numerous microbes of consumption. In one year the microbes had all disappeared, the man's weight had increased, and he was able to return to work. He has continued well for six years. Many physicians have examined the case.

In 1888 Doctor Roussel brought eighteen consumptives before the Society of Practical Medicine. A year later fifteen of the same persons were brought before the society again, for reëxamination. All appeared to be cured or greatly improved. In thirty other cases Doctor Roussel had similar examinations made by eminent experts, with similar results.

WHAT COLORS TELL.

When one lights a common sulphur match in the dark it is worth while to notice what happens. First, its phosphorus gives out faint yellow rays, and almost at the same time the sulphur begins to burn with bluish beams.

As yet the flame yields little light. In a moment or two the wood of the match takes fire, and then a stream of clear white light pours forth. Each of the materials of the match, its phosphorus, sulphur and wood, has shone in burning with a color of its own.

In a street lighted by electricity and gas, the eye detects at once the difference between the white rays of the one, and the yellow beams of the other. If nitrate of strontia is set on fire we have a splendid red flame. Filings of copper burn with a glow of greenish blue, and a fine, pure blue is had when filings of zinc are ignited. These and other such substances furnish the maker of fireworks with his materials.

Rockets, roman candles and bombs all derive their beauty from the special tints which attend the combustion of their ingredients. And any one who has once seen the colors peculiar to common salt, iron or antimony, as they trace themselves on the evening sky, will always know what is aflame when he sees those colors again.

Sir John Herschel was the first to understand that colors of this kind tell a wonderful story. He well knew how the stars varied in tint, that Aldebaran was ruddy, Arcturus yellow, and Sirius, the most glorious of all, white. Might not the colors of a body aflame, whether on earth or in the sky, really be telling us of what that body was composed?

His suggestion was taken up, and its fruit is that marvel of ingenuity, the spectroscope. One of its principal parts is a prism employed to break up the beam from flame or star into its rays of various hues. These hues, which are divided by many dark lines, make known to us that the sun and stars are built of such materials as compose our own globe.

Yet more, they tell us what kind of atmosphere surrounds them; and most astonishing of all, give us the rate at which a remote star is moving toward or from the tiny orb we inhabit.

TO GIVE AWAY.

A boy of five or six years, according to a story in the Chicago *Herald*, was made happy by the arrival of a baby sister. He had been the only child in the family, and being a good and obedient boy, had been humored till he was perhaps in some danger of being spoiled. Before the little new sister was many weeks old, however, Master Fred began to feel that his own position was sadly altered.

The stranger had supplanted him. Father, mother and servants were all the time talking about the baby. There was no mistake; Fred was no longer king.

The boy began to be unhappy, and just then he remembered a placard which his father had put up at a conspicuous point on the premises some months before,—"Ashes to give away. Inquire within." Fred had taken great interest in this notice, and had inquired minutely into its meaning. He remembered now that very soon afterward a man called and carted away the ashes.

He had been to the kindergarten, and could spell and print after a fashion. So, with such helps and hints as he was able to get slyly from the servants, he managed to concoct the following sign, which his astonished father one day found posted in a sightly position, as he came home to dinner:

"A BaBy tO give awaY.
INquire oF FrED."

AFTER THE APPLES.

A gentleman who some years ago had occasion to take a long journey through the Caucasus, was accompanied by a servant and guide, who told him many stories of the country—stories of danger and peril in that bear-frequented forest land. Once, Stepan, the guide, and a friend of his had observed an apple-tree well laden with fruit, some seven or eight versts from their village in the forest. It stood unclaimed of man, almost the only relic of some once prosperous Tscherkess village. Stepan and his friend arranged to meet at the tree one morning early, and share the fruit.

When Stepan came near the tree, he saw some one already engaged in throwing the apples down. Thinking his friend was trying to steal a march on him, the irate Stepan heaped all manner of abuse on him, and at last, getting no answer, fairly yelled with rage, and began to throw things into the tree.

Then the shower of apples ceased, and with a gruff snort, a huge old bear came tumbling out of the tree, almost on top of the terrified villager. As usual in such cases, Bruin was quite as much frightened as the man, and shambled off as quickly as possible, leaving the apples to Stepan and his friend.

UNTIMELY INTERRUPTION.

Loud talking in public places is vulgar, especially on the part of women, and more especially when the matters talked about are of a private and personal nature.

The Kansas City *Star* reports that a very pretty young lady was lately conversing with a young gentleman in a street-car, and pitched her voice so high that none of the passengers could help hearing every word.

"This is my birthday," she said. Every one was interested, the speaker's escort in particular.

"Is that so?" said he.

"Guess how old."

"I can't."

"Shall I have to tell you? Well, it's my —"

"Twenty-fourth!" bawled the conductor, as he opened the door. The passengers all knew that it could not be true, but the young lady was annoyed, and perhaps angry. At all events, her fellow-travellers heard nothing more from her.

STRAIGHT LINES.

A commercial traveller entered the office of a hotel, as reported by one of our exchanges, and picking up a pen, proceeded to make several perpendicular lines upon the register.

When he had made half a dozen, more or less, he threw down the pen, with some exclamation about its being unfit to write with. Then he took up another, and began making more straight marks, like capital I's with the shoulders cut off.

By this time the clerk was angry, and informed the "drummer" that the register was intended for signatures, and must not be defaced in that manner.

"Oh, don't get mad about it," said the man with the pen.

He made a few horizontal dashes, and giving the register a twirl, showed the angry clerk that he had only been writing his name, which was H. H. HILL.

NOT AFRAID.

Charlie Wall's father had gone out, just at dusk of a winter afternoon, to do the nightly chores. In due time Mrs. Wall asked Charlie to run to the barn, which was at some distance, and tell his father that supper was ready.

The boy opened the door, but as he saw how dark it was, he started back. "I don't want to go, mamma'" he said. "Let Katie go!"

Katie, who was nearly two years older than her brother, at once cried out:

"Oh, Charlie's afraid of the dark! Charlie's afraid of the dark!"

"No, I aint afraid of the dark, either," said the little fellow, stoutly, "but if I get out into it, I'm afraid I shall be!"

We have sold ten thousand pairs of the $1.87 Common Sense Ladies' Boot, advertised in Feb. 19th issue of THE YOUTH'S COMPANION. Mooar Bros., 1397 Tremont Street, Boston. [*Adv.*

CENTURY-BRACE
TRADE MARK
is the **Best** because **Always Elastic.** Ask your dealer, and if he does not keep them, send to us and we will tell you **Why** the Century Brace is the best Suspender.
Send 50c. for plain; $1.00 for silk fig'd pair, post-paid.
CHESTER SUSPENDER CO., Roxbury, Mass.

Dress Goods.
The following goods were made specially to our order for Spring and Early Summer Wear, and are of unusual value:
Plain Serge Homespun, 52 inches wide, $1.00 per yard; Flecked, Checked and Plaid Homespun, 52 inches wide, $1.00 per yard; Mixed and Checked Boucle Homespun, same width, $1.25 per yard.
Samples sent on request.
James McCreery & Co.,
Broadway and 11th Street,
New York.

10 cts. Per Yard
For a beautiful wool finish, thin dress fabric made by the famous MERRIMACK mills, known as
Llama Cloth.
In exquisite colorings and patterns, also black grounds with white figures. The width is 30 inches, and 10 yards is enough for a dress pattern. Postage 20c. extra. An entire dress costs but $1.20. Send for samples of one of the best thin wool finish dress fabrics ever sold by
SHEPARD, NORWELL & CO.,
BOSTON, MASS.

Awarded the medal for superior quality of material and proficiency in workmanship over all other shoe exhibits, by the Massachusetts Charitable Mechanics' Association, Boston, 1890.

For GENTLEMEN.
$5.00 Genuine Hand-Sewed.
$4.00 Hand-Sewed Welt Shoe.
$3.50 Police and Farmer.
$2.50 Extra Value Calf Shoe.
$2.25 Working-man's Shoe.
$2.00 Goodwear Shoe.

For LADIES.
$3.00 Hand-Sewed.
$2.50 Best Dongola.
$2.00 Extra Value.
$1.75 For MISSES.
For BOYS & YOUTHS.
$2 & $1.75
SCHOOL SHOES.

W. L. DOUGLAS $3.00 SHOE.
Best in the World. **Sales, 1890, 250,077 pairs.**

W. L. Douglas $3 Shoe for gentlemen is now beginning the eighth year of its prosperity, gained by merit alone. It is worn in every State and Territory, as well as in many foreign countries. When once tried, no other shoe will ever give the same satisfaction. Thousands have shown their appreciation of its worth by unsolicited testimonials. None have found cause to complain. This shoe is offered on its worth, and as such is commended to those who have never worn it, with the assurance that it will be found perfectly satisfactory in style, wear and fit. To present wearers:—Your frequent kind words to us fully express your opinion.

Every Pair Warranted.

The full lines of W. L. Douglas shoes, and how to get them, were fully described on page 56, January 22d number of THE YOUTH'S COMPANION, to which your attention is directed. As there stated, every pair is worth the price asked, and all imperfections caused through fault in manufacturing are promptly made good upon notification. Be sure that you read carefully the caution, that you may not be deceived by other makes represented to be just as good. Ask your shoe-dealer to write us for samples and terms.

This cut shows W. L. Douglas $3 Congress Shoe. They are made also in Lace and Button and all styles of toe.

TO RETAIL SHOE-DEALERS, AND GENERAL STORE PROPRIETORS.

We wish to call your attention to the desirability of being locally connected with the W. L. Douglas $3 Shoe. The demand for them is constantly increasing, and mail orders from consumers for single pairs make it necessary for us to establish agencies at once in unoccupied territory, as we prefer to do, instead of supplying direct from factory, free by mail to points where we have no local agent.
The increasing business of our agents is, no doubt, due to being advertised in connection with our specialties, and we claim and know that many concerns, on beginning business, have obtained immediate notoriety by taking the agency and pushing the sales of the W. L. Douglas $3 Shoe.
We offer to reputable shoe-dealers and general merchants who will push W. L. Douglas Shoes, an opportunity to secure territory, and we will agree to protect all agents who will show sufficient interest in doing so. Illustrated wholesale Catalogue sent on application only to shoe-dealers and general merchants who mean business.
W. L. DOUGLAS, Brockton, Mass.

THROWN ON HER OWN RESOURCES.

What Can a Girl Do?

Second Paper. — By Amelia E. Barr.

Thrown upon her own resources, what shall a woman do for herself? If her feet have been firmly set upon the rock of some useful knowledge, if she has had special training for some specified work, if she is rid of the idea that her *tact* will do instead of *skill*, then she has taken hostages from fortune, and fears not the evil day, if it comes. Then she is a woman whom sorrow cannot crush, nor prosperity weaken; for she understands the cunning in her ten fingers; or knows that her brains are good for bread to eat and raiment to put on.

Then she can dare to be that for which God made her; and she can traffic freely, for His honor and her own profit with the portion of skill or intellect allotted her.

But if her education has been so good that it is good-for-nothing, if she can only "play pieces" and "make pictures," if she does not *know* what she *does*, then her attainments are like the flowers stuck into a child's garden without root.

Nothing that she has can be turned into gold by the touch of adversity; and she herself is full of uncertainty and fear, vacillating and weak, with the trepidation of a captivity, mental and social, from which she cannot escape.

How shall such women spring out of their own shadow? How shall they realize that portion of their life which is as yet an unclaimed dividend? How shall they make their wishes and their fate agree, and bring their external existence into harmony with their inner life and their actual physical necessities?

These are grave questions; and the more so because they must depend in some measure upon individuality and environment.

Taste the Best Guide.

But, thrown suddenly upon her own resources, a woman may remember, first, that taste is ever a true touchstone; and that what she likes is significant of what she is, and of what she can do.

Nor is the word "unfeminine" always to be taken as a bar to certain vocations. No one has the right to decide for others what is, or what is not, a proper employment; for the proper employment of all human beings is the largest and highest which they are able to compass and fulfil.

From every field of labor there rises a ladder whose top reaches the highest eminence; and to fashion a horseshoe out of a piece of brute iron is as honorable a duty, if well done, as to write a book, or to paint a picture.

The field of woman's work is wide, and its borders are constantly enlarging; so that a woman thrown on her own resources cannot possibly miss employment if she estimates her own capacities justly, and honestly admits her limitations.

The trouble is, few girls, and even few women, are willing to be so far candid with themselves. They set out on a wrong road to success, and consequently never reach it.

The tendency with all is to seek professional work, because they have an idea that it is more respectable than other work. Many turn instinctively to literature. In one sense this instinct is not at fault, for here the race is fair—if the female pen is fleetest it wins.

But writing does not come by nature. It is an art to be seriously and sedulously pursued. That condition of mental excitement called "inspiration" is of small importance as a bread-winner; it is the exercise of reason, reflection, and study that tells. It is the habit of constantly acquiring information, as just "so much stock in trade." Girls who rely on anything less solid, will find literature a broken reed to lean upon.

This is true also of its asides. To be index-makers—a profitable employment—one must have a clear head and very great patience. To be an amanuensis, one requires a good education, and such a sympathetic mind as will enable one to enter into and follow the author's thought. To be a proof-reader demands a general high culture, and an intimate acquaintance with literature, ancient and modern.

The Field of Art.

In music and art "a fair field and no favor" has also been granted to women; but in their highest branches, public opinion is inexorable, and pitiless to mediocrity. Success is absolutely dependent upon natural abilities, highly and thoroughly cultivated.

Not a few women make good livings by designing costumes, furniture, or wall papers, but the designer is a creator, and this faculty has always been confined to a small number, both of men and women. Before choosing designing as a means of livelihood, girls must reflect that the ability to draw well by no means proves the ability to design.

Drawing is only the tool; the design is the thought; and though schools may furnish natural designers with tools, they cannot make designers.

If, therefore, a girl has not this "faculty divine," years of study will never make her more than a copyist.

Medicine, as a profession depending largely upon insight into individual peculiarities, seems to be specially the office of women. An illustrious physician says, "There are no diseases, there are diseased people;" and the remark explains why women who read character instinctively ought to be admirable physicians.

If use and wont confer any right, then women have an inherited one, wide as the world, and coeval with history, to the practice of medicine.

They are the recognized natural physicians of the household. Who ever dreams of asking his grandfather or his uncle what he shall do for his cold, if there are women in the house? Who ever goes to the men with a cut finger?

A girl who has a taste for the study of medicine has a right to resume the lapsed vocation of her sex; for it is a natural one, and can be barred neither by lapse of time nor by cultivated prejudice.

In some respects the legal profession is preëminently suitable for women. Most lawyers are rather mechanics-at-law than attorneys or scholars-at-law; and in the mechanical part, any women of ordinary intelligence could be as good conveyancers, could follow precedents as carefully, copy forms as neatly, and write out wills, deeds, mortgages, and other documents.

Special pleading is a natural gift of women, and surely their presence in court would add dignity and courtesy to the manners of both bench and bar.

Teachers must be born teachers, for the power to impart knowledge is a free gift of nature. Those who accept the office just for a livelihood degrade both it and themselves; the duties are reluctantly undertaken, the children suffer in point of intelligence, and the teacher suffers morally. For all these professions there must be a conscious true vocation; that is, "a call"—a call so clear and sure that it is stronger than the obstacles that are opposed to it.

Manual Employment.

It is very certain that society restricts the employments of women, where neither physical nor mental restriction is laid. I knew a woman who was a superior saddler, another who learned her husband's trade, and was a clever tinsmith.

Tailoring, the cutting and setting of gems, the chasing of precious metals, printing, engraving, and many other semi-mechanical arts, are the natural work of women.

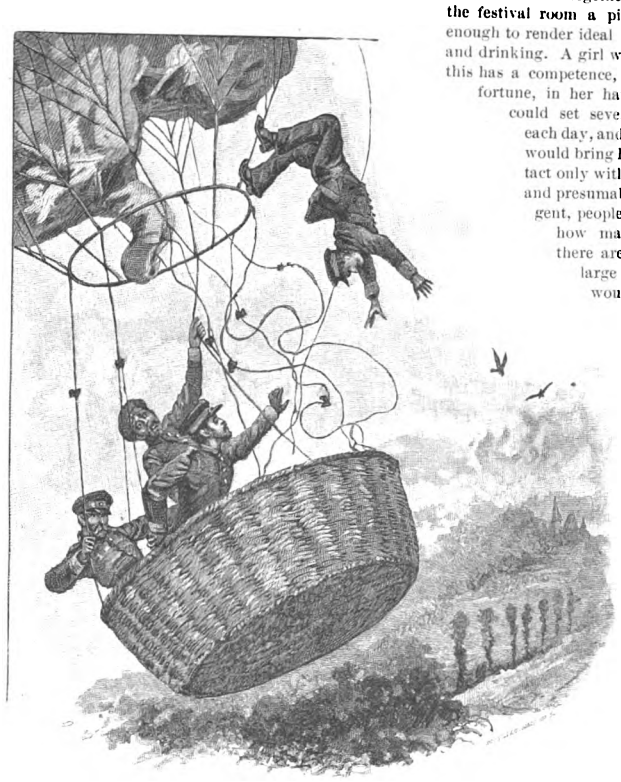
In France all vocations are open to women; and experience shows that when men and women are left thus free, one-third of the women choose men's work, and one-third of the men choose women's.

Good! "The tools to those who can handle them!" This is the latest social evangel.

Now I will magnify the woman's work generally put lowest of all—domestic service. A girl without special creative or mechanical aptitudes will possibly fail with all her study and diligence. But for the girl who understands the mysteries of soups and jellies, who can invent delicious desserts and confections, who can cook game to a turn, who can make raised pastry for game pies, and braise and pot meats, there is no such word as failure.

Expert Cooking.

The profession of an artistic cook is no despicable one; and it is yet very far from being overcrowded. Expert cooks receive salaries which the majority of professional men never reach; and I am amazed that more women do not study, in a scientific manner, the art which made Soyer and Blot not only rich themselves, but the benefactors of their kind.



A certain proficient in this science at the beginning of each season has nearly every hour employed. Keeping her own home as a covert, she goes to one house where a great dinner is to be given, and takes charge of the sweetmeats or soups; to another to make the pastry; to a third to make fine force-meats and truss the game.

She is an important person in every house that employs a portion of her time; she is respected by its inmates, and generously and ungrudgingly paid.

Akin to this vocation there is that of table-setter. If a girl has taste, she would soon become known to wealthy entertainers as an adept in the setting and ornamentation of the dinner-table and the dining-room.

It would be her duty to see that the damask, silver, crystal, flowers, bric-a-brac, all served together to make the festival room a picture fine enough to render ideal the eating and drinking. A girl who can do this has a competence, perhaps a fortune, in her hands. She could set several tables each day, and her work would bring her in contact only with wealthy, and presumably intelligent, people. Again, how many ladies there are in every large city who would be glad to delegate during the summer months the cleaning and refurnishing of their homes to a woman who could prove her ability to direct the subordinates under her; to attend to painters, gilders, carpet-layers, to arrange pictures and artistic furniture, in short, to restore to freshness and beauty the home faded with a winter's receptions.

Of course such a post would demand not only trained skill, but a financial guarantee. But such demands imply large remuneration and honorable trust.

A Tragic Ending.

Is it "Respectable?"

If there lingers in any girl's mind a poor, paltry thought as to the respectability of such work, let her remember the multitude of well-brought-up women, forced by stress of fortune to go from house to house and from office to office soliciting orders.

Surely this domestic service, with the peace, privacy and seclusion in which it may be practised, will appeal to every fine instinct as infinitely preferable.

Domestic service will take its proper position when ambitious and intelligent girls prepare for it in a high and accountable spirit; for it is hard to see why it is not as honorable to cook the food as to grow it, or to kill it, or to sell it; or why sweeping a carpet is a lower office than making one.

A good girl draws around her an invisible circle which the innate propriety of her nature never allows her to overstep.

The nineteenth century has indeed been a stern mother to women, but it has also been a kindly and honest one. It has taught them to be ashamed neither of being poor, nor of being compelled to work.

Then let every girl and every woman thrown upon her own resources follow out to perfection the bent of her nature; it is the only line on which she may be sure that perseverance will bring success.

If she does so, whether it be in artistic, literary, mechanical, or domestic service, she will stand erect with conscious power, asking no help nor pity, feeling gladly that it is God's decree that each shall help herself.

For the Companion.

UP AND DOWN IN A BALLOON.

I have twice undertaken a balloon ascension, and each time the earth has received me rather roughly on my return, causing in me a decided disinclination to any further aëronautic experiences.

No doubt my experience has prejudiced me, but I cannot regard as a foregone conclusion the easy descent of which we often read, in which the veteran balloonist drops safely and gracefully to the ground, packs his balloon in his satchel and takes the next train home.

In 1870 the Prussians had encompassed the great French fortress of Metz. The siege threatened to be long and tedious, as only starvation could reduce that impregnable stronghold. The Prussian War Department occasionally ordered a balloon ascension to ascertain what the beleaguered army was doing, and to gain some knowledge of the condition of the city.

The first two balloon trips were successful and uneventful, but the third trip, in which I took part, was a melancholy and most tragical failure.

Why the Ascent was made.

One day some suspicious movements of the besieged garrison created a demand for more information, and a balloon ascension was ordered. Two artillery captains and myself were ordered to make the ascent, under the direction of Major von Roeder. This gentleman was a staff officer and an experienced aëronaut. The rest of us were chosen for our knowledge of Metz and the surrounding country, or for our ability to speak French.

The Prussian War Department may justly claim that it has better maps and a more detailed knowledge of all European countries than the people of those countries themselves have. Certainly the Prussian officers knew more about the topography of France in 1870 than did the French officers. The maps furnished us on the march to Paris showed every path across a farm, every bridge across a stream—in fact, such details as were practically known only to the people who lived in each locality.

Our balloon was about thirty-five feet high; to it was attached a strong wicker-work car, which was provided with a seat running around the sides. Under the seat were four suits of French peasant clothing, a Prussian flag, a French flag, and a white flag of truce. We carried, besides, our telescopes and other instruments, eight hundred pounds of sand ballast put up in ten-pound bags, a large grappling anchor and a gallon can of sulphuric acid.

The purpose of the acid was to destroy the clothing and French flag if we should chance to fall into the hands of the enemy. The French clothing might be useful if we should descend in the enemy's country; but if we were to fall into his hands, it would be best to surrender as Prussian officers. To be caught with the French clothing would mean death as spies.

It was not a very good morning for ballooning, as the sky was partially covered by rain-clouds; but we went up at about ten o'clock, hoping that it would clear.

Reaching an altitude of four thousand feet, a current of air carried us rapidly westward and toward the heart of Metz. At that height a hundred sharpshooters would have put their bullets through our balloon as soon as we were within the French lines, and we should not have returned to tell the tale. So we threw out ballast, and shot up into a low-lying stratum of cloud.

It was impossible to make observations here, but we were safe from bullets. There was nothing to do but drift around until the sky cleared, or else try to return.

We decided to drift, but as the breeze had now carried us a considerable distance, it was necessary to get our bearings. Von Roeder pulled the valve cord, and we soon felt a downward motion. Sinking below the clouds, we found ourselves about six miles east of Metz.

An Attack.

At a height of twenty-five hundred feet, an air current took us to the southwest, and we were congratulating ourselves that we would yet make some good observations, when *zip!* a bullet went close by our heads. Von Roeder shut the valve and ordered all hands to throw out sand.

We had not thrown out more than three sand-bags when we heard the sound of another bullet, and at the same instant a ripping, popping sound which made us aware that the balloon had been struck!

Out rushed the gas on both sides, with a wild, hissing shriek, and we fell about a thousand feet in a minute, scrambling over one another in a frantic effort to throw out our ballast.

Everything went by the board—sand, clothing, instruments and the acid. Then we began to descend more gradually and more steadily. The car had lurched from side to side with our hasty movements. Von Roeder had in the meantime hung out our flag of truce.

No more bullets came near us; we looked in vain for signs of the enemy. We supposed, and

Digitized by Google

were no doubt right in supposing, that our assailants were franc-tireurs, as the French guerrillas were called. These irregulars were shot on sight by our men, for in a hostile country the Prussian army recognizes only the uniformed soldier as a legitimate combatant, and extends to him only the martial courtesy of quarter. Any other person carrying a rifle or other deadly weapon is shot.

But we had then no time to discuss the matter. We threw overboard our coats and boots in a vain attempt to ease the descent; but in a few seconds we could do no more than cling to the ropes and await the inevitable crash.

Without ballast the car was too light to balance the balloon, which was rapidly collapsing. The breeze was not strong, but it made the great silken bag assume all sorts of shapes; it flapped and bulged like a loose sail in a gale.

It was then that the brave Von Roeder climbed up to the hole made by the bullet, probably in an attempt to tie together the sides of the aperture. Whether the fiercely rushing gas overpowered him, or whether the violent lurching and jerking of the ropes broke his hold, we never knew. He gave a loud cry and fell to the earth.

We saw his body strike among the trees about five hundred feet below us, toward which we were rapidly falling. We expected every moment to be thrown out ourselves.

The car swayed and swung from side to side. We were jammed and bruised, thrown off our feet and then jerked up again; and once the great bag covered us, and we gasped for breath.

We threw over the anchor in some way, though there was no need of our doing so. About three hundred feet of rope were attached to it, and it caught in a tree. The balloon was going very fast, and a jerk followed which skinned my hands as the ropes were torn from my grasp.

We were all three thrown to the bottom of the car and half-stunned. One of my companions staggered to his feet, and tore a hole about two feet long in the balloon.

Trees seemed to sprout up around us. The car struck a limb with a heavy thud, and then turned over. The officer who tore the hole was thrown out head-foremost, and fell thirty or more feet to the ground. His neck was broken.

I should have followed him if my other comrade had not seized my legs, and held me until I had time to secure a rope.

In a few minutes we were once more on *terra firma*, sick, bruised, cut and bleeding, but with no broken bones. We had just discovered that our comrade was dead, when a squadron of Prussian lancers came up, with the body of poor Von Roeder wrapped in a military cloak. They had not heard the shooting, but, seeing the balloon rapidly falling, had hastened to meet us, expecting to capture some French spies.

We got the balloon out of the tree, and with the help of the troop of lancers, we took it and the dead bodies of our comrades back to our camp.

ZU BEFEHL.

For the Companion.

A WINTER HARVEST.

The traveller who, on a pleasant midsummer day, ascends the Kennebec River in Maine for the first time, is likely to be much interested in the signs, which appear as soon as his boat has passed from salt water into fresh, of a great industry which evidently surpasses all others in importance thereabout.

Along the lovely sloping banks of the great river there are farms, with orchards, cultivated fields and woods. Towns and villages with manufacturing establishments and signs of ordinary traffic are passed. But all the usual industries along a great navigable river flowing through an agricultural country are overshadowed here by another and special occupation, which illustrates the positive value that very cold weather may have to the inhabitants along such a river.

The Harvest in Progress.

At frequent intervals upon the Kennebec, now nestling among trees on the very bank, now looming on the tops of bluffs, are seen great wooden structures. Some of these have wide-spreading gambrel or curb roofs, and, in the natural gray color of the wood or in slate-colored paint, are picturesque and imposing objects in the landscape.

Others are simply vast barracks of rough planks and boards, unpleasant and disfiguring to the shores of the broad river.

All of these are ice-houses, and they are the depositaries of the great ice-harvest of the Kennebec.

In midsummer, scarcely less than in the latter half of winter, these great houses are a scene of activity. Schooners are brought to their very doors by tugs, and there are seen lading with great blocks of clear, blackish-green ice. Vessels in tow are continually putting off down the stream.

From each of the ice-houses a long and slightly inclined plane leads down to the light wooden wharf where the vessel lies; and down this smooth incline a continuous line of blocks of ice, urged on by men and boys with picks, is descending.

This business of speeding the glistening blocks of ice down a run-way, on a bright day in summer, is one that is particularly attractive to boys—for a while.

You may see these boys, as they start out, running up and down the foot-way, sending a loitering ice-block spinning with their spear, starting a whole long train of other blocks bounding behind it, and shouting with glee. It is evident that the work is pure fun.

Somewhat later in the day you may see the same boys guiding their blocks of ice down the run-way in a very dispirited manner. The springiness had gone out of the boys' legs, the elasticity out of the ice-blocks, and the fun out of the whole proceeding. That is the difference between the way things go when one is tired and when one is fresh.

The Kennebec River is a great centre of the ice-cutting business because, joined with a snug winter climate which makes ice a tolerably sure crop, it has a great stretch of navigable fresh water. Clear ice may be cut here over the very spot where ocean vessels may moor the next summer and load it, to be taken directly to the cities on the coast farther south.

Perhaps the business of harvesting ice on a great Maine river comes nearer to the fabled plucking of apples of gold from the trees in the garden of the Hesperides than anything else in modern practical industry.

The ice, to begin with, is Nature's gift to everybody. There is no property in it—no ownership of it by any one—until it has been marked out to cut; and any one may do that, and possess the ice, if he is able to cut it afterward.

But this free gift of Nature brings to the inhabitants of the Kennebec River, along the twenty-five miles from Augusta, where there is a dam, down below the foot of Swan Island, where the water begins to be brackish, a yearly income of from one to four millions of dollars, according to the price for which they sell their crop of a million to a million and a half tons of ice.

To the Kennebecker, therefore, the winter is the real harvest time. That is the season when fortunes are most readily acquired by the enterprising, and employment most easily found by those who need it.

Ice-cutting is made a science here, and has, through the magnitude of the business, developed a new principle in law.

As the people have free right of way on the water in summer, so they have, in theory, free right of way on the ice in winter; but when, on one occasion, a man drove his team through a cutting on the river, and demanded large damages of the ice company because he had right of way there, it was found that another principle intervened.

The Supreme Court of Maine held, in effect, that the business of cutting ice created an interest in the ice, on the part of the people, superior to the interest which they had in the ice as a roadway.

As matters stand, therefore, the person who drives on the ice must look out for himself. The ownership of the ice is common to every one until some one begins to cut it; and then, since it would be of use to no one unless some one *did* cut it, it is private property.

An ice-claim must be marked out anew each year, and "preëmpted" over again as often as the ice melts away.

On the Kennebec, as soon as the ice is strong enough to bear a man, the claim is staked out by setting bushes or stakes in the ice—or often, where it is very systematically done, by setting in joists with boards nailed across them.

The construction of an ice-house on the bank carries with it, in practice, the right to cut the ice on the river in front of it; and as the ice could not be secured without an ice-house in which to store it, only those who are able to get a foothold on the land can gather the ice-harvest, theoretically free to all.

There is nothing to do, after the claim is marked out, until the ice has become thick enough to carry a horse, so that the snow may be scraped off as fast as it falls. Ice will not "make" rapidly under snow, and will not attain its full thickness. The ice-man's most anxious time, indeed, is when there is danger of a snow-fall on the ice before it is strong enough to bear horses to scrape it.

If the snow steals a march on the scrapers in this way, it is often necessary to get rid of it by a very laborious and expensive process. A hole is cut through the ice, and the snow saturated with water. When this freezes the ice will bear a horse; but the worthless snow-ice or "sap-ice" thus formed must be planed off, also by horse-power, with a planer made for the purpose.

The scraping and planing is called "cultivating" the ice, and it is generally a very expensive sort of cultivation. A single night may cause the ice-men an expense of five or six thousand dollars in the cost of the removal of a heavy snow-fall.

The ice-man's crop is nearly ripe when clear ice has formed to a thickness of twelve inches, and then the preparations are made for the harvest.

From the point on the shore where the elevator leading to the ice-house reaches the brink, a canal from five to twenty feet wide, according to the magnitude of the business, is opened out into the river, through which the blocks of ice are presently to be floated to the house.

Here, then, is an open channel, cut clear of ice well out into the river; and it must be kept clear as long as the ice-harvest continues, no matter how many degrees below zero the mercury may fall.

In the day, the constant moving of ice-blocks through the water suffices to keep the channel open. At night, in freezing weather, the necessity gives rise to one of the coldest and most lonesome occupations that one can imagine.

Armed with a great triangle of heavy pieces of wood, which he drags through the water, a man marches up and down the channel all night long, crushing and scattering the thin sheets of ice with his triangle as fast as they form. The workman to whom this cheerless task falls must be heartily glad that the gray wolves no longer make the frozen Kennebec a thoroughfare.

With the opening of the canal comes an interesting result, at once. The thickness of the ice is increased by the exposure of the water and the cooling of its surface. The cold is let into the river, as it were, both below and above the cut.

By the time all this has been done, the middle of January has generally been reached. The date varies, of course, with the season.

The ice has now a thickness of from twelve to eighteen inches. Sometimes it is even thicker than that; but a thickness of more than eighteen inches is a disadvantage, because it renders the blocks of ice hard to "bar off" from the field.

Now the field is carefully marked off, with a sort of grooving machine drawn by a horse, into regular parallelograms, which are generally twenty-two by thirty inches square—the size which the individual blocks of ice are to have.

The ice-field, unlike other fields, is cultivated before it is plowed. It is only now, when the marker has grooved the ice across and across, that the ice-plow is brought—or rather that several ice-plows are brought, for several go over the same ground in succession.

A plow which cuts to a depth of six inches first follows the marker's grooves. Then comes another, which cuts two inches deeper, and then another, cutting still deeper, and so on until the trenches have been carried so deep that the blocks of ice may be barred off or loosened from the field.

Beginning at the outermost end of the canal, and working out at right angles with it as far as the field has been marked, the workmen break off, with a heavy wedge-shaped instrument called a bursting bar, sheets or sections of blocks of ice, making a new channel running off from the original canal.

Through this channel the sheets of ice are forced, by means of hooks, to the main canal, and thence to the foot of the elevator which runs to the ice-house.

At this point a narrow bridge of planks is thrown across the canal, upon which is posted a man armed with an iron bar. Standing with his face toward the shore, this man separates the sheets of ice into single blocks, with quick blows of his bar, as they float beneath him.

With a quick push, too, this man thrusts each block over revolving chains upon the elevator. These chains are provided with "lags" or straight bars of wood; and the block is drawn up the inclined plane into the ice-house by the continual movement of the elevator.

There is here an ingenious but very simple arrangement by means of which the blocks of ice are left at the proper place. At the level of the floor of the ice-house is a "pocket" or open space in the floor of the elevator, through which the ice passes. When it is desired to carry the cakes higher, the pocket or hole is closed with boards; and the ice intelligently keeps on to the next pocket above.

The ice is allowed to form again freely where it has been cut, and occasionally a second crop is taken out; though second-crop ice is not accounted as good as the first-crop.

In the house, the blocks of ice are placed close together on their sides, and left three or four inches apart at the ends, so that they will not freeze together with the melting and freezing to come.

The crop is harvested now; and if the ice-man has had a fairly fortunate season, he has garnered at least a thousand tons to the acre. Not unfrequently the crop reaches thirteen hundred tons to the acre.

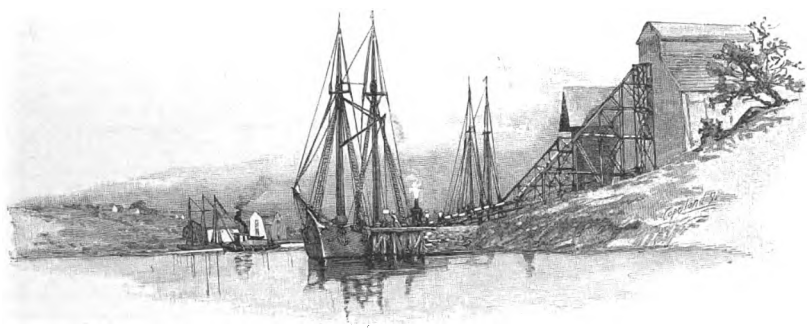
In ordinary seasons the Kennebecker obtains about a dollar a ton for his crop, on the vessel, and makes a large profit upon it at that rate; in exceptionally favorable seasons, when there is a scarcity elsewhere, he sometimes sells his ice for four times as much.

The river is at its busiest in February, but the opening of navigation brings another busy season.

All summer long schooners and barges, under tow, ply up and down, lading at the ice-wharves. The blocks of ice are sent down the run-way to the vessel's side, and there lowered into her hold.

Machinery is used here, too, as far as possible.

A lowering winch is placed at the hatchway of the vessel, and the ice is lowered by the aid of ropes and pulleys.



The workers in the ice-harvest are frequently farmers and their sons from the country lying back from the river. Often the ice-workers are engaged in the sawmills in the summer season.

A man who is industriously disposed may manage to work pretty hard the year round, on the Kennebec. So may a horse, for that matter, for the same animal that pulls the scraper and the ice-plow pulls the land-plow, the harrow and the mowing-machine later on. But continuous industry seems to be congenial, both to men and to animals, in the stimulating climate of Maine.

Thus a crop which costs nothing for seed, nothing for the ground to raise it upon and nothing to fertilize, but a good deal to cultivate and still more to harvest, becomes a source of wealth to many, and of profitable employment to many more.

Cold weather in Boston, New York or Chicago raises the poor rates and often makes public relief necessary; on the Kennebec a still intenser cold has practically abolished public relief, and turned into a blessing what else might well be regarded as an evil.

J. E. CHAMBERLIN.

Lading the Ice-Schooner.

For the Companion.

RUNAWAY BOYS.

Second Paper.

By the Chief Inspector of the N. Y. Police.

Having already referred in a general way to the evil effects that usually fall to the lot of the boy who is so foolish and headstrong as to run away from home and try his fortunes in the great city, I will cite a few cases of the many with which the records of our police department abound. All teach the same lesson.

In January, a year or two ago, a boy eleven years old left his home in Albany and came to this city, as he afterwards said, to "see the sights." As day after day passed and he did not return, his parents, greatly worried, made inquiries for him in many directions. The police of this city were asked to join in the search.

The boy had been absent about three weeks, when one day an officer who was patrolling a post in the neighborhood of the docks came upon a boy who staggered as he walked. The officer's first impression was that the boy was intoxicated; but upon making a closer examination and questioning him, it turned out that he was not intoxicated, but weak from lack of food and from exposure in the wintry weather.

The policeman took him to headquarters, and gave him a good meal. Afterward it was discovered that he was the boy from Albany whose disappearance had caused so much concern.

His parents were promptly communicated with, and he was very glad indeed to go home with his father, who came after him without delay.

A few months after this occurred, our police were requested to look for two boys, one fifteen years old, the other thirteen, who had run away from their homes in a New England city. They had good homes and kind parents, but they had tired of going to school.

The idea of wonderful adventures had been put into their heads by the books they had been allowed to read, and they determined to see life for themselves in a larger city than the one where they had been brought up.

They wandered about New York for five days, but found life here a sterner reality than they had supposed. The little money they had was soon spent, and at the end of the five days they were glad to give themselves up to the police, and tearfully asked to be sent back to their homes.

One day last summer a policeman attached to one of the down-town precincts saw a boy, evidently a stranger in the city, sitting on the porch of a house, and soon found that he was exhausted from hunger and partially overcome by the heat. The boy was only eleven years of age.

He had come here alone from a town in Massachusetts, first because he wished to see what the great city was like, and also because he had an uncle here, and expected to be hospitably received. He had the address of his uncle, but as he was totally unfamiliar with the city, he could not easily find the house.

When at last, after much wandering, he did succeed in getting to the street and number to which he had been so often directed, he was worse off than if he had not found them. The hope of finding his uncle had been the one thing that cheered him during his journeyings through the labyrinth of streets.

But now his uncle refused to aid or harbor him. Giving him a little bread and butter wrapped in a paper, he turned the boy adrift upon the cheerless streets. Under our law the uncle was arrested for his inhuman conduct, but he was discharged in court on his promise to see that the boy was taken back to his parents.

Digitized by Google

It often happens that the telegraph outruns the runaways, and that they are taken in custody before they reach New York. In such cases prompt notice has been given to the police of the place from which they started, and it may happen that good ground exists for the belief that they had started for New York. In one recent instance, a boy who had set out for the West with twenty-seven dollars was found on a Fall River steamer, in accordance with a telegraphic request from the police authorities of Boston.

It is not as easy as it once was for a boy to escape pursuit. The telegraph is everywhere, and in all large towns the police keep very good watch of all sorts of wandering and homeless people.

The causes which lead boys to leave their homes are almost numberless. I recollect two who left a manufacturing city in one of the Eastern States, where they were employed in a cotton factory, and came to New York in the hope of finding pleasanter and more profitable employment.

They very soon got enough of it. Their common purse, never overflowing, was soon exhausted, and a few days of profitless wandering about the streets of New York was enough to convince them that those who were older and wiser than they knew what was best for them better than they did themselves.

After the ambition to go West and fight Indians, perhaps the desire to go upon the stage is the strongest motive animating boys who take a plunge into the wide world for themselves. More girls than boys are "stage-struck," but the girls do not run away as the boys do—at least not when they are so young as most of the runaways of the other sex.

Theatrical performances, indeed, cause almost as much mischief among the young as bad books. Parents too often foolishly allow young boys to see plays which inflame their imagination, and put false notions of life and the world into their heads.

Not long ago a boy not more than thirteen years old was found about two o'clock in the morning in West Street, down near the North River. A policeman arrested him, and it was discovered that he had come from Philadelphia to "go on the stage." He said he was in search of his cousin, who was an actor.

The cousin was not found: I presume he was out of the city with some travelling company. A Philadelphia detective soon arrived in search of a missing boy, and the would-be actor was returned, not unwillingly, to his parents.

I should like to mention one case of a boy who ran away from New York, and as he has thus far come to no good end, his experience teaches a lesson of value. After a great deal of persuasion the boy in question induced his father to take him out of school and procure for him a place as a district messenger. He worked diligently for some time, and seemed destined to succeed and to rise to something higher.

One day, however, he was sent to a bank to get a check cashed. The possession of a considerable amount of money was too great a temptation for him. He kept the money and set out for Baltimore.

His purpose seems to have been to go upon the stage, for he purchased wigs, cosmetics, and dancing-shoes, and applied at some of the theatres for employment. He was laughed at, and, getting no encouragement in Baltimore, he drifted to Richmond, Virginia. By this time his money was gone, and he was picked up by the police of that city in a destitute and starving condition.

He was suspected of the theft committed in New York, and was brought back a prisoner and identified. On account of his youth, however, and because it was his first offence, he was not punished, but was discharged with a reprimand by the magistrate before whom he was arraigned.

It seemed that his experience must have been enough to convince him that the way of the transgressor is hard; but it did not do so. In a short time he ran away again, and when last heard of he had been arrested in Chicago as a vagrant.

Probably he will continue to lead a life of crime—all because he did not have enough integrity and strength of character to withstand the first strong temptation that came in his way. It is the first step in the ways of evil that often proves fatal.

No doubt the experience gained in running away from home is often salutary. The glamour and glitter that are imagined to surround life in a big city are speedily seen to have no existence save in the fancy, and the difficulties in the way of a strange lad in a strange place who is seeking a situation, even of the humblest kind,—difficulties which amount, practically, to an insurmountable obstacle,—are soon deeply impressed upon the mind. Fortunately, before the matter has gone much further, in most cases a successful search is made for the missing one and he eagerly seeks his father's door again.

But this experience is not one that rational parents would choose for their growing boys. The stern realities of life will come all soon enough in the natural course of things.

As I have already more than intimated, many years of experience in police work convince me that scarcely anything worse could happen to a boy reared in the country or in a small town than to be thrown upon his own resources in a busy and bustling city like New York. The chances are all against his earning a livelihood, even in a humble way, and all in favor of his falling into bad company and leading a worthless, if not a positively wicked, life.

The alluring pictures of city life which are drawn in certain books and papers that are widely circulated have no corresponding reality; and once more I would caution parents to use the utmost care in the selection of their children's reading matter. There is one avenue of discontent that can easily be closed up, or, rather, never opened.

Moreover, the hard and bitter experiences of boys who have attempted to seek their fortunes in the great city, and the gladness with which they welcome an opportunity to get back within the shadow of the roof-tree from which they had lately fled, teach thoroughly the lesson that "To stay at home is best."

THOMAS BYRNES.

To break up a cold or a chill no remedy excels "*Brown's Household Panacea*." 25 cents a bottle. [*Adv.*

For the teeth use "Brown's Camphorated Saponaceous Dentifrice." This preparation gives the best results obtainable. Soap destroys the animal and vegetable parasites on the teeth, and camphor hardens the gums. Price, 25 cents a bottle. Sold by druggists. [*Adv.*

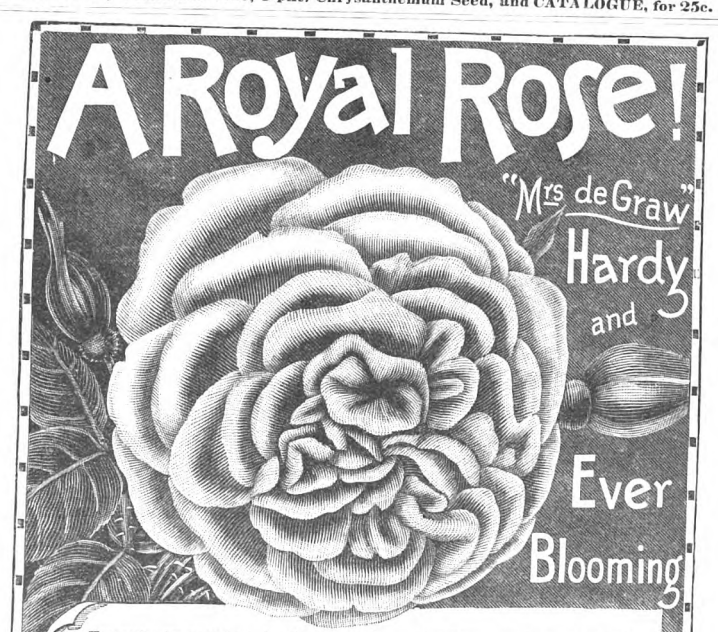
THE TRUE MANETTIA VINE

We were the **first to import this magnificent plant from Monsieur Lemoine, of France.** There is not another plant like it. It actually begins to bloom when only 3 inches high, and remains covered with flowers the whole year. A window with a couple of the vines trained around it is a grand sight, and in the garden it makes a perfect show. No other vine can equal it in splendor. The flowers, which are large, combine the most **brilliant colors—intense scarlet, tipped with golden yellow.** So substantial and waxy-like are they that they remain fresh for weeks, and being produced by the hundreds, the plant is always a glowing picture. It is useful for vases and hanging baskets, and can even be grown as a little bush, if closely cut back. It **lives** and **blooms for years,** and will prove a source of the greatest delight to all lovers of flowers. Where can another such acquisition be obtained? Being the **original importers,** we can warrant our plants to be the **TRUE FREE-BLOOMING SORT,** and these we offer are **actually budded or blooming now.** We send **One Strong Plant** by mail, post-paid, for **25 cents,** and to every one who mentions this paper we send in addition, **free, one large packet** of our **far-famed Chrysanthemum Seed,** (plants raised from our seed have sold for $100). Also our complete **catalogue** of **choice Plants, Seeds, and Bulbs,** full of interesting information. **Ready now.**



V. H. HALLOCK & SON, QUEENS, NEW YORK.

REMEMBER, 1 Manettia Vine, 1 pkt. Chrysanthemum Seed, and CATALOGUE, for 25c.

A Royal Rose!

"Mrs. deGraw"

Hardy and Ever Blooming

Everybody wants a *hardy*, ever-blooming Rose, and we now offer the grandest of this class. From early summer until frost it can be depended on to produce flowers of large size and exquisite fragrance in lavish abundance. In color, it is a rich, glossy pink. It is such a strong grower that it is almost impregnable against attacks of insects. For gardens or cemetery plots it has no equal.

Price, 25 cents each; five for $1.00; twelve for $2.00.

With every order for a single plant or more, will be sent, gratis, our superb catalogue of "Everything for the Garden" for 1891 (the price alone of which is 25 cents), together with our new "*Essay on Garden Culture of the Rose*," on condition that you will say in what paper you saw this advertisement.

PETER HENDERSON & CO. 35 & 37 CORTLANDT ST. NEW YORK

AYER'S Sarsaparilla

has cured others and will cure you. It will cure you of INDIGESTION; it will cure you of LIVER and KIDNEY COMPLAINT; it will cure you of any disease originating in impure blood.

AYER'S Sarsaparilla

is the best medicine to take during the months of **March, April, May.** It is pleasant to the taste, powerful in its action, and never fails to produce the desired effect. It relieves that tired feeling, restores the vigor of health to every tissue and fibre of the body, and makes the weak strong. It quickens the appetite, aids digestion, and is the best—**The Superior Medicine**—for all diseases and ailments peculiar to **Spring.** If you have determined to take **AYER'S** Sarsaparilla, don't be induced to believe that anything else is just as good. Remember that **AYER'S** Sarsaparilla is the only medicine of which it is said, **Has cured others, will cure you.**

BAD COMPLEXIONS, WITH PIMPLY, blotchy, oily skin, Red, Rough Hands, with chaps, painful finger ends and shapeless nails, and simple Baby Humors prevented and cured by CUTICURA SOAP. A marvellous beautifier of world-wide celebrity, it is simply incomparable as a Skin Purifying Soap, unequalled for the Toilet and without a rival for the Nursery. Absolutely pure, delicately medicated, exquisitely perfumed, CUTICURA SOAP produces the whitest, clearest skin and softest hands, and prevents inflammation and clogging of the pores, the cause of pimples, blackheads, and most complexional disfigurations, while it admits of no comparison with the best of other skin soaps, and rivals in delicacy the most noted and expensive of toilet and nursery soaps. Sale greater than the combined sales of all other skin soaps.

Sold throughout the world. Price, 25c.

Send for "How to Cure Skin and Blood Diseases."

Address POTTER DRUG AND CHEMICAL CORPORATION, Proprietors, Boston, Mass.

Aching sides and back, weak kidneys, and rheumatism relieved in one minute by the celebrated CUTICURA ANTI-PAIN PLASTER. 25 cents.

DONALD KENNEDY

Of Roxbury, Mass., says:

My Medical Discovery seldom takes hold of two people alike! Why? Because no two people have the same weak spot. Beginning at the stomach, it goes searching through the body for any hidden humor. Nine times out of ten, inward humor makes the weak spot. Perhaps it's only a little sediment left on a nerve or in a gland; the Medical Discovery slides it right along, and you find quick happiness from the first bottle. Perhaps it's a big sediment or open sore, well settled somewhere, ready to fight. The Medical Discovery begins the fight, and you think it pretty hard, but soon you thank me for making something that has reached your weak spot. Write me if you want to know more about it.

NO TREES Founded 1853; oldest, largest. 1,000 acres; Last and best like **whole root** trees; see "Fruits and Fruit Trees," a new thing under the sun. At least we tried to get out of the rut. Others say we succeeded. *Am. Garden* says: Novel and *useful*. Discusses methods, stocks, whole roots, piece roots, commercial orchards, to the point. *Farmers' Call*. Chuck full of just the information one wants. *Am. Agr.* Of *special* interest. *Farm Journal* Very instructive. *Orange Judd Farmer:* Ably written. Affords trustworthy information for every one growing fruit of any kind. *Tex. Hort.:* The author is a hard hitter. *Farm and Home:* We commend it to all. *Rural World*. Most valuable. *Prairie Farmer* Deserves careful study. Geo. A. Sweet, Pres't Am. Ass'n Nurserymen. No one is doing more for our true interests than Stark Bros. *Cal. Fruit Grower:* Surprising low prices. Trees (whole root and piece root), Roses, root grafts *everything*. No larger stock in U. S. No better. No cheaper. **STARK BROS., Louisiana, Mo.**

ERI'S BURGLARS.

Farmer Eri Stebbins, fast asleep after his hard day's work in the field, was suddenly roused to semi-consciousness by a loud crash. Just what or where the noise was did not appear and, after a little vain listening for further disturbance, the tired farmer sank again into slumber. A moment later he was once more roused—this time most thoroughly so—by his wife's voice, whispering hoarsely in his ear: "Eri! Eri! wake up! there's somebody down suller trampin' 'round! Don't you hear 'um?"

Eri did hear some one moving somewhere in the lower part of the house, and he instantly slid out of bed ready to do battle. "Somebody in his cellar! He'd show 'em a thing or two worth remembering." With these warlike thoughts flashing through his mind, the farmer slipped on his trousers and stole softly downstairs to the kitchen.

The noise in the cellar sounded very loud now, but not at all like tramping; rather it was a combination of scuffling and scratching with a queer slopping sound, as of some one paddling in water.

Eri was taking down his loaded gun from its hooks on the wall just as another crash resounded through the house. This time the sound was unmistakable; a pan of milk had been knocked from the table to the stone floor. The angry farmer cocked his gun, hurried to the cellar door, threw it open and then—stopped short.

The bright moonlight streaming in at the outside door of the cellar showed five or six half-grown pigs making a feast of the milk which was streaming over the floor.

Eri at once understood the situation. The pigs, which were pastured in the orchard about the house, had found their way to the outer door, pushed it open, and entered the cellar. The only thing to do was to drive them out.

So, putting his gun back on the hooks, Eri started to eject the intruders.

Now if any one terrestrial quadruped is harder to drive than all others, that quadruped is a pig. However, as the farmer was experienced in pig-driving and thoroughly in earnest, he soon got rid of all except one brute that steadfastly refused to go. He would charge full towards the open door, but when within a few feet of it would suddenly dart aside and rush back to the farthest corner of the cellar. When routed from this lurking-place, he would repeat his former manœuvre with just enough variation to render impossible any attempt to stop him.

After three or four such experiences Eri began to get excited. He would have beaten the pig, but he had no weapon of any sort. At last, however, he got near the brute and, raising his foot, kicked him heavily in the rear. Alas for Eri! he had quite forgotten that he was barefooted.

As a result he nearly broke all the toes of his right foot. The kick, moreover, frightened the poor pig so badly that he suddenly made a bolt up the stairs toward the kitchen.

Now it happened that Dame Stebbins, armed with an old boot and carrying a tallow candle, was just coming to her husband's assistance. There was a fine combination of screams, squeaks and grunts, followed by several heavy bumps as the woman and pig rolled together down the stairs and into the puddle of milk below.

At this ludicrous sight Eri burst into laughter, whereupon his indignant spouse soundly berated him for his hardness of heart, declaring that he would laugh if she were to break her neck.

While the farmer was pacifying his angry wife, prudent piggy slipped quietly out of the door and made good his escape.

GREATLY NEEDED.

An Englishwoman, who passed her girlhood in Paris, relates a touching incident of the loyalty of an old lady who taught her French history. The old lady's one book was a History of France, which she read and reread, sometimes, her pupils averred, turning over two or three pages at a time without finding the accident at all confusing. Whatever the value of the theories which she deduced from her historical studies, her patriotism was of the finest quality.

During the siege of Paris I often thought of our poor old lady, alone with her poodle in the midst of the terror and desolation of the city. By the assistance of the Baroness Mayer de Rothschild I was able to send letters to her, and a draft on the bank of Paris, with which, as I hoped, she would be able to obtain the necessaries of which she must be in cruel need.

Dear old madame did not look in the least surprised to see me, when, after the siege was raised and I had returned to Paris, I walked into her little room. After considerable conversation about recent events, I said, "And now I want to ask you, madame, did you receive the money from Messrs. Rothschild's bank?"

"I thank you, my dear child, I received it—I was about to mention the subject—I knew you would not forget your old friend.

"I needed the money very much," added madame, solemnly. "You will be gratified, I know, to learn the use to which I put it. They had come round to every house in the street only that morning. Madame Martin was with me." Here madame took a pinch of snuff very seriously. "She go to the banker's for me, and she took the money at once and inscribe my name on the list."

"The list!" said I, much bewildered.

"I subscribe it," said madame, "to the cannon which was presented by our *quartier* to the city of Paris."

"What, all of it?" said I.

"Yes, all of it," said she. "Do you suppose that I should have kept any of it back?"

HELD BY ETIQUETTE.

A good story is related by the Washington *Anthropologist*. It seems that at official and diplomatic dinners there is sometimes difficulty in determining whose duty it is to rise and break up the entertainment.

When Dom Pedro, then Emperor of Brazil, was entertained at the White House he had been told by a confused senator that it would be expected that he, the Emperor, should be the last of the guests to depart.

The President's wife, however, informed her other guests that they would be expected to follow, not precede, the royal party in leaving the house.

The result was that no one dared to go for fear of a breach of etiquette. But at three o'clock in the morning a tired woman pretended illness, and the dead-lock was broken.

Great is etiquette, but common sense is, sometimes, allowable.

PROFITS IN POULTRY.
256 PAGES. 100 ILLUSTRATIONS. 10,000 SOLD.

CONTENTS.—Poultry Raising, General Poultry Houses, Special Purpose Poultry Houses, Poultry House Conveniences, Natural Incubation, Care of Chickens, Coops, Artificial Incubation, Preparing or Market, Caponizing, Poultry Keeping as a Business, Hints about Management, Popular Breeds, Diseases of Poultry, Parasites Upon Poultry, Raising Turkeys, Raising Geese, Raising Ducks, Ornamental Poultry, Theory and Practice.
It is a most **profusely illustrated volume** of **everything** pertaining to the **successful raising of poultry**—equally valuable to the **amateur fancier,** the **professional breeder** or the **farmer.** A **thoroughly practical** work—embodying the **experiences** and **practices** of the most **prominent** and **successful poultry raisers**—which has at once become the **recognized authority.** Though published but a short time, **ten editions** have been **exhausted,** and we are now printing the eleventh, so great is the **popularity** and **demand** for this **elegant volume,** which **far surpasses any poultry work hitherto issued,** both in **matter and illustrations** and **low price.**
The teachings of the work are not of a local character, but are **adapted for all localities and climates.** To the novice, as well as to the most experienced poultrymen, it is of **inestimable value,** whatever the objects may be, the production of eggs, broilers, table or market fowls. The chapter on **artificial incubation alone is worth many times the price of the book** to any one engaged in poultry raising as a business. **Neatly bound in flexible cloth cover.**

THE HEYGOOD TEA SERVICE.

IN FIVE CHAPTERS.—CHAPTER III.

The Trouble it Made.

Sally Holmes had promised to stay with her two old cousins until Fred's return; but on the morning after his departure she said that she must go home, her father lived not more than a mile distant, "just to see a little after paps, and get some clothes."

In accordance with the pleasing fiction that she was her father's housekeeper—for Sally's mother had been dead some years—the young lady spent a supply of indigestible cake, which, as old Mom Chloe said, could have been better done "bedout Miss Sally's beniknance."

The sun was setting when she returned to the Webber-edge homestead, and Martha was at the gate, waiting for her. The old woman's face expressed concern.

"Anything the matter?" said Sally, as she sprang from her horse.

Martha shook her head ingratiously, "Miss D'rina mighty quare, chile. I 'clare I dunno what ter mek o' Miss D'rina. She jus' been a-goin' 'bout de house a-moanin' an' a-sighin', so 'a I dunno which is de morest worrisome to her, Mars Fred or dat silver."

"What do you know about the silver?" demanded Sally, sharply.

"Law, chile, is I dat fool-ish, you reckin, now? Ain' yo' cousin had me a-clearin' of hit all last Chooesby, whiles you an' Mars Fred an' Mars Arnold was a-carcenin 'roun' de grarden arter dat ball? An' ain' I obsarved de blankness in de cabinet?

"Miss D'rina is altered de placin' o' what's left mighty pretic'lar, but dat tea service o' my ole gret-miss tuk up too much space fur her keep hitse'f a secret; an' mo'over, Miss D'rina done tole me all about hit, fur de easin' o' her mind.

"Hit's all along o' Calamus bein' sich a fool. He had her go find dat ole blaster of a pistol what Mars Fred forgot, an' he hawse-blanket in de markit-wagin; an' jes' 'cause de Colonel didn' happen ter be nowhares handy, Calamus he totes hit ter Miss D'rina; an' Miss D'rina she ain' had no peace o' mind sence.

"She talk how Mars Fred ain' got no perfec-tion, an' he's so forgitful he ain' no better'n a baby, an' she dunno hakkom she let him tek sich a risk. So, bombye, fur her comfort, she done sot dat ole Calamus onto a mule, an' sont him 'cross de river ter fetch Miss Polly Piper."

"That giddy young thing!" shrieked Sally, clapping her hands. "Hurrah!"

"Now, sis' you 'shame o' you'se'f, chile? Now sis' you?" remonstrated Martha, shaking with laughter. "Yo' cousin Polly Piper air fifty years of age, if she air a day, an' you ter go mek me laugh datter way 'bout Miss Polly?"

"I don't care!" cried Sally, hotly. "She is as ready for a lark as ever I was. What can my Cousin Dorcas want of her, when she has me?"

"Oh, you is de wisdom o' Solomon 'long o' Miss Polly, honey; I ain' denyin' hit; but yo' cousin, Miss D'rina, she knowed what she was a-countin' up the turkeys, an' that's how hit happened!" concluded Martha, with a whimper.

"What happened?" cried Sally. "I do wish you would talk sensibly."

"I sin' de one ter blame, I tell you now, Miss Sally," protested Martha. "They was done clean gone, beb' ever I knowed a word. I never knowed nothin', ontel Calamus come back from de deeper, lookin' lak he'd been stealin'; an' I tell you, honey, ev'y hyar on my head rin up when I diskivered, jest a little piece ago, how dem steam-cyars had done whisked off wid Miss D'rina, an' sich a rickety perfection as she's lack-witty Miss Polly."

"My Cousin Dorcas gone!" Sally gasped. "It will kill her!"

"So I do fear, Miss Sally, honey. An' she ain' been ontelden dis gate sence she was young an' bloomin'."

"Does the Colonel know? Oh, what a he going to do?"

"He doan' know hit, honey. He's a-settin' by de dinin'-room fish, an' I ain' got de bumption ter tell him. I ain' had de sperrit fur nothin' 'bout her set up an' hurt my 'pinion at Calamus; an' all de comfort he kin gimme is jes' ter say 'awsmosal, 'Dasso, dasso.' I'm dat thankful you is come, honey, fur you kin tell the Colonel."

"Yes, I'll tell him," said Sally, as she took the red carpet-bag that hung at her saddle-bow, and turned toward the house. "We must follow her!"

"So I do think, Miss Sally, honey," whimpered Martha. "I'd go this minute, myse'f, if I knowed how. An' as for Miss Polly Piper—sho'ly her kind was made ter stay at home."

Sally began to laugh, and ended by crying, and it was some moments before she could compose herself sufficiently to go in and break the news to the Colonel.

She found the old gentleman warming his hands over the blaze in the deep fireplace.

"Where's Dorina?" he asked, without looking up.

Sally put her arms around his neck. "Let us go find her," she whispered, tremulously.

"I forgot; Polly Piper is with her," said the Colonel, yawning slightly.

"Yes; Cousin Polly is with her."

"She's a good woman," commented the Colonel; "Polly Piper—but she never has—given any evidence of—judgment."

"No," said Sally, desperately; "and Cousin Dorina has been making herself very miserable about Fred."

"She would send him," said the Colonel. "Oh, he'll get on. You haven't had any news—any bad news, Sally?" he asked, piteously.

"Oh no! no!" answered Sally; and then she burst out, "O Cousin Frederick, we must go and find Cousin Dorina! She has followed after Fred—with Cousin Polly Piper—on the train—this afternoon."

"What!" exclaimed the Colonel, starting up in a fright. "It isn't possible! Don't cry, Sally. Yes, yes; we must go! Think of it! She is in her seventy-fifth year, and she hasn't set foot on—side those gates since she was twenty-three! It's all on account of that miserable silver, Sally. She wouldn't fret about Fred if he wasn't escorting treasures."

The Colonel rose and walked nervously about the room.

"Five people," he went on, "rushing madly across two States of the Union, all because a girl in Alabama had to go and be named Dorina Heygood! Martha, I say! Calamus! Everybody come here! We must start right away! Saddle the two-horse buggy, and get me some clothes to eat. O Sally, my dear," he groaned, with his hands at his head, "I don't know what I am saying."

"Then don't say anything; leave it all to me," Sally counselled, with prompt decision. "I'll send for Arnold to come and sleep here—"

"But what will your father say to your running off in this sudden way?"

"Oh, we can send him word all about it, and he will know that you can't do without me at this time."

Sally sent for her brother, ordered the horses put to the buggy, and lade Martha hurry up a supper while she herself flew to the garret for a valise, into which she packed a few clothes for herself and the Colonel.

"Is dat all de baggage you gwan tek?" demanded Martha, scornfully.

"How can I take more than I have with me?" retorted Sally. "This is no time to be concerned about finery. Besides, I am sure the kin over in Alabama will fit us out for the wedding."

"Well, I danno what de Witheredges is a-comin' to," grumbled Martha. "But you is allers bons' to have yo' own way, Miss Sally. Gwan tek dat ole red cyarpit-sack, too, ez I live!" she called after them.

"Yes, I am!" Sally answered, defiantly.

"Hit's powerful bodgy," said Martha, disapprovingly; and Sally punched it with her foot, and turned the other side toward her, and finally thrust it behind her, as she sat down to table.

In less than an hour the Colonel and Sally were off for town. The Colonel, who would never have allowed either of the boys a word of suggestion as to the course he should pursue, meekly submitted to the guidance of Sally, and ever afterward proudly boasted of her pluck and energy.

Certainly Sally seemed endowed with a special genius for the occasion. There was, as she had known, no south-bound train until the next morning, but by dint of liberal and judicious telegraphing she learned that the dear "fugitives" were pursuing their journey in safety and comfort. She also discovered that, owing to some mismanagement of Miss Polly Piper, the two ladies had taken a wrong train, and would be detained in Atlanta.

In Atlanta, indeed, the Colonel and Sally found Miss Dorina and Miss Polly Piper.

It was Miss Polly who met them in the parlor of the hotel, beaming with smiles. She was a little, plump, simple-hearted woman of fifty or thereabouts, pretty still and very dressy, and as pleased as a child at this unexpected outing.

"So romantic, cousins!" she said, rubbing her small, fair hands that glittered with rings. "We had barely money enough between us for the cost of the journey, I do assure you, and we had not counted on the expenses of this detention. But fortunately, I had put on all my best jewelry."

"To be robbed on the way?" said the Colonel, somewhat stuffy. "How is my sister?"

"Fee-darfully well!" Miss Polly assured him. "She was quite agitated when we came through the old homestead gates, dear heart, but she had no thought of turning back—not she! And after we were well on the way she became deeply interested in the scenery, and remarked frequently that this is a beautiful world we inhabit, with its hills and valleys and purling streams—"

The Colonel sank down in the nearest chair, and sighed and twiddled his thumbs. It was superfluous to remonstrate with Miss Polly Piper.

That was the night Fred the Younger was taking his memorable drive with Tom Meyrick.

Mr. Lewis Heygood, the same night, was taking his comfortless slumber on the sofa in the parlor of the Baybridge Hotel. It was considerably past three o'clock in the morning when he felt himself shaken and heard himself called.

"The gemman have arrived, sah," said the black boy who had been sent to wake him.

Something ominous in the tone of his voice attracted Mr. Heygood's instant attention.

"All right?" he inquired, anxiously.

"Have been trouble of some kind on the road, sah, but 'comlin' me 'pears the gemman carries, he air the same what you expects. We wouldn' call you ontel we made sure."

Mr. Heygood hastened into the office, where he found a fair-haired young man stretched upon the lounge, insensible, and bound hand and foot. The hotel clerk and a sallow-faced youth of sixteen or seventeen were gazing at him with grave interest.

"We can't get him to swallow a drop, sir," said the hotel clerk, who held a bottle and a spoon. "Looks bad, don't it? But we sent at once for Doctor Smith, and I reckon he'll come as quick as he can."

"What does this mean?" Mr. Heygood asked, turning from the clerk to the sallow-faced youth. "Did you drive, Fergus? Where, then, is Merrick?"

"I drove from the ferry, sir. Meyrick, he's over to our house, pretty badly cut in the neck, and too faint with the scare and the bleeding to drive, so he got me to bring the gentleman."

"Why can't you explain what has happened?" demanded Mr. Heygood, impatiently.

"You I don't rightly know," answered the boy, rubbing his thin jaws with a perplexed air.

"We can't get him to swallow a drop."

Digitized by Google

"We was lookin' to hear Meyrick's horn down to the ferry, when we heard somebody shouting for help, and me and my father and my brother Joe, and even my mother herself, we follered the cry ontel we come up with Meyrick and this one to the far corner of the old field.

"This one was knocked plumb senseless, and Meyrick he was that faint and a-bleedin', and father he said—an' mother she said so, too, when she saw him—that he mustn't talk mo'n was needful.

"Father an' me holp to get 'em both back into the wagon, and drove on to the ferry, where Meyrick got out; and my brother Joe, he was sont 'cross lots for old Major Banks, the horse-doctor, to see Meyrick—Meyrick don't have any other sort. And they all agreed I'd best get this one up to town to his friends 'thout loss o' time. So I aint heard any clear account of what has happened up there on the road."

"What is he tied up in that way for?" Mr. Heygood demanded, indignantly.

"Meyrick said he must be."

Mr. Heygood took out his knife and cut the cords from his young kinsman's wrists and ankles. He then despatched a messenger with a note to prepare his wife for the arrival of their helpless guest, while a litter was being made ready for Fred's conveyance.

Just as they were lifting him upon it, Fred recovered consciousness.

"Villain and coward!" he muttered, struggling. He was very much excited, though greatly relieved to find himself surrounded by friendly faces.

"My trunk!" he cried. "Secure my trunk! The villains will make away with it; it is full of valuables!"

"See here," said Mr. Heygood to Fred, "I'm your Cousin Lewis, you know. You are safe in Baybridge, and your trunk is all right. See it over there in the corner? Now you must obey orders and keep quiet. You've had a pretty serious affair, but you are now in good hands, and so is your trunk."

"Have they arrested that villain Meyrick? Don't let him get away!" said Fred.

"Arrested Meyrick? Well, that's a good 'un!" exclaimed the sallow youth, with scornful laughter. "Meyrick a villain! He's the best fellow in the county."

"I tell you, sir, he's a villain!" Fred insisted, turning to Mr. Heygood. "A villain and a highwayman!"

"Well, now, we'll discuss that question later, my boy," interposed Mr. Heygood. "What you want just now is quiet and rest. Meyrick is in safe-keeping, so you make your mind easy."

Fred, being very weary and sore from his journey and the excitement of his recent struggle and that stunning blow on the head, was glad to follow this advice.

ELIZABETH W. BELLAMY.

(To be continued.)

For the Companion.

AFTER MANY DAYS.

Mrs. Whitney walked more slowly as she neared the butcher's shop. It stood just on the edge of the drowsy New England village, on the road leading to the shirt factory in the valley.

Mrs. Whitney, who was one of the "finishers," had carried her week's work to the factory, and had her wages in her pocket. She had sewed until after midnight all the week, that she might be able to buy a larger piece of meat than usual this Saturday. Yet, after all, there was so little money in her pocket!

She stopped, inspecting the juicy joints which hung on Mr. Radd's hooks. How strong and cheerful the rich people must feel who could eat such meat as that every day!

Then she went inside to the counter where the small pieces lay. She always took a bit home once or twice a week for her husband, who was an invalid; but to-day she was sorely tempted to buy a larger portion, and eat some herself. She felt so weak as she walked, and the thought of the cold bread at home almost nauseated her.

"Here's a nice bit of steak for Mr. Whitney," said Jabez Radd. "Or—here's a bigger one," the keen-eyed butcher said, catching her wistful look. "You're looking fagged out, Jane. A solid meat meal will strengthen you. I shall let you have that piece cheap."

She turned it over, weighing it anxiously in her fingers.

"Now that Whitney isn't able to work, it won't do to let yourself run down," said the wily Jabez.

That decided the question. "I'll take it," she said, laying down the money. She knew that Whitney would never be able to work again, and that she must alone support him and their child. She could not afford to break down.

It was not a proof of greediness or coarseness that Mrs. Whitney stole into the cellar once or twice to look at the tender, juicy bit of steak, with its rim of yellow fat. She was faint with hunger, and she felt that she had fairly earned this delicious meal. She spread the tea-table carefully, put on two little pats of butter and a loaf of bread, set the tea to draw, and then laid the precious meat in the pan.

"Ha! That smells good!" cried her husband from the chamber. "A whiff is almost a meal!" He rocked the cradle more vigorously, and in a few minutes came out.

Zack Whitney, as everybody knew, was "in a decline," but he was as ready as ever to joke and laugh. "Baby's asleep," he said. "I'll just run to the blacksmith's shop while the supper's cooking, and hear the end of Joe's cow story."

"Don't stay but a moment, or it may be cooked too much," said Jane, anxiously bending over the meat. It seemed such tender beef! If baby was only old enough to eat a bit! Now just a suspicion of pepper; no salt—that would harden it.

As she shook the box, a shuffling sound at the door made her look up hastily.

A boy of about sixteen stood on the step. His clothes were worn and rusty, and his feet were bare. Something in the pale, sunken features startled Mrs. Whitney.

"You look faint and hungry," she said, coming quickly toward him.

He tried to laugh. "I guess I never was so hungry before," he said. "I have walked twenty miles since morning."

"Why have you had nothing to eat?"

She pushed a chair toward him, seeing that he trembled as he leaned against the door.

"I sold my shoes yesterday for my dinner. I had nothing to sell to-day, and I couldn't bring myself to beg—till now."

Again he laughed, but the laugh choked in his throat, and the tears came to his eyes. "I didn't mean to beg now, but you looked so kind, and—the meat smelled so good!"

"It *is* good meat."

Mrs. Whitney turned it in the pan. It was such a little piece, after all, hardly enough for one, certainly not enough for three.

"Who are you? Tell me who you are," she said, with sudden crossness.

He did not answer.

She looked at him. "Why don't you speak? Perhaps you've no good to tell of yourself."

"I have no harm!" He staggered to his feet indignantly. "I'll tell you the whole truth. My name is John Dall. I was discharged from the House of Refuge two days ago. You needn't look scared. I'm no thief! I was put in there for stealing a horse and buggy. I was with the boys who had it, but I didn't know they had stolen it. I thought it was Ben Pratt's father's buggy. I couldn't prove that at the trial, and I can't prove it now; but it's true. I'm telling you the truth as I'd do it to my own mother."

His honest blue eyes looked straight into hers as he spoke.

"I believe you," she said, after a moment's silence. "But why don't you go home?"

"My father has died since I went in there, and I have no other folks. The people in the village wouldn't be very friendly to me. I wasn t a good boy, ma'am—I ran with a bad lot. But I want to go somewhere and start fresh. I'm going to make for the West, where nobody knows me."

Jane Whitney looked at him keenly. Doubt, suspicion, belief and pity chased each other through her face. But his eyes were honest, and she trusted him.

"Sit down, John," she said, heartily. "The first thing for you to do is to eat your supper."

She poured him out a cup of tea, gave him some bread and butter, and then, with a steady hand, cut the meat in two, and gave him half. "The rest is for my husband," she explained.

John ate like a famished boy. When he had finished, he rose and took up his hat. "Some day," he said, gravely, "I'll pay you for this meal."

Mrs. Whitney laughed, but her lips trembled. She felt a strange tenderness for this poor human soul, struggling to escape from the pit of ruin.

"What are you going to do now, my boy?" she said, as he went to the door.

"I will get a job on the farms or boats, and so work my way West."

"Wait one moment." She had but little to give; a pair of old shoes, and a well-patched coat of Zack's.

"I wish it was more," she said, as she put them into his arms. "Here is a book that I've had since I was a child. Read a little in it every day." It was a little pocket Testament. "Good-by, and may God bless you and keep you, so that you will become a good man."

John went to the gate, and then, turning, came hastily back.

"I say! I'm going to do my best, ma'am! You'll hear from me some day," he broke out, wringing her hand, and, waving his ragged hat, was gone.

"Why!" exclaimed Zack, when he sat down to supper, "I thought this was a bigger piece of meat, Jane?"

"I cut off my share," she said, dipping her bread in her tea.

"You might have waited for me. I hope you enjoyed it!" said Zack, irritably.

"More than any meat I ever ate," his wife answered, smiling.

Fifteen years passed. Mrs. Whitney, left a widow, struggled bravely to support and educate her boy. But the village, which was out of the reach of any railway, grew lonelier and poorer with every year. Her house was mortgaged heavily, and was sold at last; and Jane found herself homeless and penniless.

She took service with a neighboring farmer for herself and little Zack. The work was hard for both, and the pay poor. She was now almost an old woman, and the failure of her hopes for her boy had broken down both her strength and courage.

One day, as she came in from milking with Zack, she saw a man leaning on the stile waiting for her. He was roughly dressed and looked like a farmer, but one whose life was fuller and broader than that of the farmers around her. Plenty and generosity spoke in his laughing eye and big breezy voice.

"Mrs. Whitney?" he said, taking off his hat. "And little Zack?"

Jane set down her pails. "I don't think I remember you, sir," she said, stiffly.

"No, I am a stranger in this part of the country. I came from Missouri. I'll tell you my business in five minutes, Mrs. Whitney. My wife wants to come every summer to the sea-coast; it's a custom with us Westerners. She wants to come to a pleasant house kept by an honest, good woman. I said to her, 'I can manage that for you!'"

He twisted his hat, laughed, grew red, became incoherent. Mrs. Whitney stared in amazement.

"I don't understand you, sir," she said.

"No, of course not. I explain myself badly. But this is what I did. When your place was sold the other day I bought it in your name. It's settled on you, ma'am. It's yours, land, house, furniture and all. Now I want you to go and occupy it, and take me and my wife to board. What we pay you every summer will enable you to send this boy to school, and to live comfortably through the year. That's all of it."

"All! What do you mean? Who are you?" exclaimed Jane, beginning to cry. "Why should you do this for me?"

"Why!" shouted the stranger. "Why? Because you saved my life, ma'am! You were a mother to me at the turning-point of my life. I would have gone to ruin if you had not believed my story. You took the food from your own mouth to give me. You cared for me, you blessed woman, and gave me hope and courage. All I am and have, I owe to you, under God. Don't you remember John Dall?"

He drew out an old book, and gave it to her. "There is your own name in it. You cast your bread upon the waters that day, and if God gives me strength it shall come to you again a hundred fold!"

And he fulfilled his promise.

Mrs. Whitney feeds the Hungry.

For the Companion.

OUR TRAMP.

Coming home from school one day on my bicycle, I overtook Tramp. I do not suppose I should have noticed him if I hadn't come very near running him down.

"Well, that's strange!" I said. "A big dog like you ought to be able to get out of the way. You've actually made me get off my bicycle!"

Then I looked at him more carefully, and saw that he was dusty and lame, and so thin that he was probably too weak with hunger to move quickly.

"Well, you are a forlorn-looking wretch, I must say," I said to him, and then I patted him on the head. He looked up in my face with such a pitiful look that it almost seemed as if he had tears in his eyes.

"Come on, old fellow!" I said, encouragingly. "I'll take you with me. Mother would never forgive me if I left such a starveling as you on the road. Come on!"

I mounted my bicycle, after giving him another pat, and whistled to him to follow.

But it was plain enough there was not much come or go left in him. I had to get off my bicycle and help the dog on his way, and if it had not been for the brook, where I stopped and gave him some water, and if I had not made him lie down a few minutes, and fed him with a couple of sandwiches I had left in my lunch-bag, I do not think I should ever have got him home.

After the little lunch and rest, we started homeward. Just as I got inside the driveway father overtook me, riding home from the mills on black Sally.

He reined up long enough to say, "Where did that fine specimen come from? Another stray, I suppose."

Father is always talking about mother's "strays," and pretending to grumble; but he never drives one off, and I'm sure he doesn't really care, for he thinks everything mamma does is just right.

Well, I got Tramp into the stable, made him up a bed in a corner of the carriage-house, and carried out some soup and some bread. He could not eat much, but he looked up in my face and licked my hand as if he wanted to thank me.

I rubbed some oil on his lame leg and left him. He did not stir from that bed for three days.

We all grew very much attached to him. Father had a large dog-house built for him, shingled and painted, like any house, and I put a flagpole on it. Mother never felt afraid of burglars after Tramp came, and she let him go in and out of the house as much as he liked.

I was on my way home from school one day when I saw, going down a side street, a dog that looked just like Tramp, following a ragged, dirty-looking boy about my size. I had a peculiar whistle with which I called Tramp. I whistled, and sure enough, it was Tramp, for he turned and came toward me.

Then the boy turned and whistled, and called out, "Jack!" Tramp went back a little way. Then he stopped and looked at me.

Tramp often came to meet me when it was time for school to be out, so I was not surprised at seeing him, but what did surprise me was that he was following the boy.

I got within speaking distance of the boy then, and called out, "What are you doing with my dog?"

"He aint your dog; he's mine! He's my Jack!"

"He isn't! He's my Tramp! I'll leave it to any of the boys in the village."

The boy looked at me sullenly, as if he did not know what to say. By this time I had got up close to him, and I saw that, though he was very poor and miserable, he had not a bad face. He looked like one of mother's strays, unhappy and neglected.

While I was looking at him, he seemed to be making up his mind what to do, and at last he spoke:

"If the dog knows his name and follers me, you might tell by that whether he's mine or not."

Then he called, "Jack!" and started off.

The dog started after him. Then I whistled and called, "Tramp," and he stood still again and looked first one way, then the other, and then he sat right down in the street and whined piteously.

"Look here!" I called to the boy. "Come back and let's talk it over. Did he run away from you before I picked him up, or did somebody steal him? I suppose he must have been yours once, or he wouldn't run after you now, for he doesn't take to strangers easily, like that."

"No; Jack never took to strangers," the boy said, slowly, and then he said nothing more.

"Well, what are you going to do about it?" I asked, impatiently, with my hand on Tramp's

Digitized by Google

head. "I've had him more than a year, and father has grown fond of him, and built a splendid dog-house on purpose for him, and mother and Patrick and all of us—why, I don't know what we would do now without Tramp!"

I broke off suddenly, for a sob came up in my throat, and I did not want to act like a baby.

The boy looked at me curiously.

"You've got your father an' mother an' a home an' lots of friends, I suppose, an' as for me, I aint got nothin'—nothin' but Jack. Him an' me, we've been just like brothers. We always stuck together through everything, till they took me away from him. Many's the night I laid awake an' cried for him. I thought he'd be dead; I never expected to find him, but I'm awful glad."

He patted Tramp with both hands, and laid his cheek down on the dog's big head with such a loving expression that it changed his whole face.

"He's gay, Jack is!" he said, admiringly. "I've never seen him fat, like that. I didn't know him at first; he knew me! He's remembered me ever since I've been gone—more'n a year."

I saw a tear drop down on the dog's head, and the boy drew his coat-sleeve across his face.

"That's an awful handsome collar he's got on. I always wanted to get him one, but I couldn't get anythin' but a strip of old leather I picked up and tied together with a string. Did you say he had a house—a real sure enough dog-house?"

"Yes," I answered, rather crossly, I'm afraid, "and I guess he'll miss it some if you take him away. Have you got a good home for him?"

The boy flushed so red that I wished I had not asked him that question.

He muttered low, as if he did not more than half mean that I should hear, "I aint got any home for myself, let alone him."

"Then why do you want to take him away from me, when he's so comfortable and happy?" I urged. "If you care so much about him, I shouldn't think you'd want him to be roaming about half-starved."

I was sorry again as soon as I spoke, but I wanted Tramp so much.

The boy seemed to be trying hard to keep from crying, and when he spoke he turned away his head.

"All right!" he said, slowly. "You keep him. I didn't think he'd be alive, but I was just lookin' round for him, anyway, before I settled down to anything, and if he wasn't in good hands I'd take him. But I won't take him from such a good home! I'll go 'long the road again. You hold on to his collar, and if I don't call, nor whistle, he'll understand. He's bright—Jack is."

He started to go, but he turned back again with a look of misery on his face.

The tears were streaming down his cheeks, and when he tried to move his lips to say good-by to the dog, he could not speak at all.

I could not stand that. I was beginning to cry, too, and I called out:

"Look here now! What's the use of going off that way? You can't be in a great hurry. You come home with me and see the dog-house, and see my mother. Perhaps—I wouldn't wonder—if father or mother could get you some place around here, and then we can take turns having Tramp!"

The boy stopped, and looked at me as if he thought I was joking.

"You don't really mean it?" he said.

"Of course I mean it."

"I guess your mother won't like it if you take such a lookin' chap as me home with you."

"Like it! My mother! You don't know her. You're the very kind she likes to get hold of. She won't like it if I don't bring you home when she hears about you and—Jack!"

I called the dog Jack to please him.

He looked at his hands and his clothes, and said, "I washed my face and hands in a brook this morning, but I'm 'fraid I aint very clean."

"Come on!" I said, "you can wash up at our house."

We started along, and Tramp jumped and ran about from one to the other as if he understood all about it, and was crazy with joy.

On the way I got out of the boy that his name was Henry Marvin; that he had been tramping about the country for two months, getting odd jobs, and sleeping in barns and out under trees, and always searching for Jack. But I could not find out where he had been staying before. He did not even tell me he had had neither breakfast nor dinner—nothing to eat all day.

I found out afterward that he told mother everything about himself before he had been with her half an hour. I knew he would. Every one does.

Father and mother were on the veranda and saw us coming, and as we went up to the house, I heard father say, "Bob's picked up another stray!" and mother hushed him up quickly.

Mother asked Henry to sit down, and father and I went off and left them together. Pretty soon mother called father, and he went back and had a little talk with the boy, while mother went in the house and brought out a bowl of bread and milk. As soon as he had eaten that, father went around to the stable with him, and mother called me.

"Robert, my dear boy," she said, "I'm very glad you brought home that poor unfortunate, for he was in great need of friends. Your father is going to let him have that chamber in the stable that Patrick used to have before he was married. I will give him a suit of your last summer's clothes. In a few days he can have work in the mill, for one of the men is going to leave."

I knew that mother would find some way to help. She always does.

When Henry had been with us about a year, and was doing splendidly, a good-for-nothing fellow came around the village and told some of the boys that we had a "jail-bird" at our house. As soon as I found him out, I am afraid I called him some hard names, I was so angry.

Then mother, after she had talked to me about losing my temper, said that since this slanderer had told such an exaggerated story it would be better to have the truth known. Henry had been taken up and put in a Reform School for vagrancy—not for stealing, for he was always honest, even when he was almost starved. But the poor boy had no parents or home—his father and mother both died of a fever when he was about seven years old—so it's no wonder he became a vagrant.

When they took him away to the Reform School he cried, and begged them to let him take his dog with him, but they laughed at him. He worried about Jack night and day, and when he left the school began searching for him in all their old haunts. He had just given up hope of finding him when they met in our village.

Henry says now he never was so happy in all his life as he was the moment he recognized his old companion that he had given up for lost.

Henry has been with us three years, and father says he never saw a boy improve so fast as he has. He lives with us, and we are all very fond of him. I like him as if he were my own brother. He's a thoroughly good fellow.

Our Tramp is getting rather fat and lazy, but he is just as good as ever. He likes to stay in the house better than he used to, and I left him just now in mamma's little sitting-room. He was keeping Sprite company, as she sat there in a big easy-chair; and they looked very sociable and happy together.

ANNA HARRIS SMITH.

AFAR.

Afar, I worship all that is divine;
Is there not glory on that far-off sea—
A land of promise veiled in mystery
Beyond it and the dim horizon's line?

For the Companion.

STRANGE COMPANIONS IN A STORM.

I happened to be in New York during what was called the great blizzard—the heavy snowstorm of March, 1888, which shut in the city from the outer world. I found it tame indeed compared with the ordinary storm that I saw during the years that I lived in Newfoundland. These storms come with any wind, and they break with the suddenness and fury of a wild beast freed from its cage.

One promising winter morning I set out with my two dogs—a pair of large Newfoundlands—on an otter-hunt. A few minutes' walk from the coast, in the region where I lived, takes one into an unbroken wilderness of treeless marshes, dotted with ponds and threaded by innumerable little brooks.

Here and there a great gulch is cut sheer through the highlands and down to the level of the sea. A brook wanders through the gorge, and scrubby bushes sometimes cling to the sides. Here the otter screens himself from the storm.

A tramp of five or six miles on snow-shoes brought me to the otter ground. I found fresh "bores" in the snow, or rather my dogs found them for me. One large otter fell to my gun as he bobbed about in a "wind-in hole" of the frozen stream.

Slinging my trophy upon my gun, I started home.

My way lay over the snow-covered marshes, and before I had gone far a blinding storm of snow came hissing out of the east. As long as I could see a fair distance in front I could keep my way, but the dry snow soon began to drift and puff into my face, nearly smothering me.

It was not long before I knew that I was astray. I halted, and immediately the dogs saw my dilemma, and started ahead to show me the way. The instinct of these dogs is unerring in the thickest storm that ever blew.

But I did not wish to follow the dogs. I wanted shelter, and without it I must surely perish.

Almost the only growth along these barren stretches is a stunted or creeping fir. This tree grows crookedly to a height of three, four and five feet, and then pushes long creepers in every direction, forming close mats that hardly permit snow to enter, and affording shelter underneath.

With good fortune I happened to see one of these "tucks" or groves, though it was covered with snow, and rose but a few feet above the general level. I whistled to the dogs. They came to me as if unwilling, but when they saw me approach the ground firs, they bounded and barked for joy.

With my hand before my mouth to enable me to breathe, I peered around the edge of the tangle, seeking an opening. The dogs saved me a long quest; they bounded down through a small opening, returning immediately and barking triumphantly. I speedily followed, forcing myself through the thick branches outside, and then crawling along after the dogs.

What an inviting, cozy place I found it! Not a snowflake was to be seen on the long, dry, green moss underneath the branches. Not a ray of light shone through the roof of thick, flat branches above; scarcely a sound of the gale that was shrieking and howling six feet above my head penetrated to my ears.

The accumulated snow of the winter had gathered on the thick branches outside, and I felt sure that, even were the storm followed by a fierce thaw, as often happens, not a rain-drop would come to me here.

I crawled well in toward the middle of the "tuck," and stopped where the dogs lay down. On every side of me were crooked, awkward boles, running hither and thither, in every shape, but the branches were all above.

I took the otter off my gun, felt in my pocket and found that I had matches, looked to my gun to see that it was all right, and then lay back in the moss, resting against a crooked bole. There was very little light here, and that came from two or three small openings at the edge of the "tuck," and there was not a breath of wind. Nor was it very cold, although the temperature must have been below zero without.

There was an abundance of fuel—boles of small trees and moss. As for food, neither myself nor the dogs could suffer so long as the otter remained, and given salt and pepper, I knew nothing more delicious than an otter steak.

I have never felt more contented and cozy than I did here in the midst of this wilderness, in the awful storm and quite unaware where I was.

I took a short nap, and then arose and crawled out as I had come in, to see if the hurricane was abating; but it was far worse than before, and the prospect was that it would rage all day and all night. Of course, the kind-hearted fisher-folk would be alarmed at my absence, but they knew I had some resource, and so long as the dogs did not return they might hope that I had not perished.

I now began to prepare for a stay. I first gathered four or five armfuls of moss for a bed, and a pile besides with which I might cover myself in the night, or make a blaze whenever necessary. Then I gathered a heap of decaying boles, and selected a safe place in which to kindle a fire.

This done, I took my knife, which was quite keen, and carefully removed the skin off the otter. This is not an easy task, as any carelessness takes some of the value from the skin. Then I opened the carcass, giving parts of the flesh to the dogs, which by this time had grown hungry.

At last I kindled a fire, and the ruddy blaze brightened the gloom of my weird abode. I roasted a good cut of the flesh, and although I had no salt it was by no means unpalatable. After eating I went to the entrance of my den, and satisfied my thirst with snow. The dogs followed my example, eating the compact snowballs that I made for them. When they had finished they lay down close to me, one upon each side.

By and by I built a good fire, putting upon it several soggy sticks, so that it would not burn away too fast, and then burrowed into the great heap of moss to sleep. My gun was close at my left hand, and both barrels were charged with heavy-shotted cartridges. My cartridge belt was also at hand, and the fire was two feet or more distant from my heels.

I speedily forgot my situation in sleep.

I had been asleep several hours—I think it was near midnight—when the deep growling of the dogs awakened me. Then there were furious barkings and strange yells, and I sat up, seizing my gun.

The fire had burnt quite low, and the light it shed was dull. On the boles near me it was the color of blood. The dogs were some distance away, and from the yelping, barking and growling, I knew they were in an encounter with wild animals.

I called, and both dogs came back, but they faced toward the place of confusion. There was blood on Nero's side and on Jack's jaws.

I strained my eyes in the same direction as the dogs, and to my horror saw two pairs of gleaming balls looking directly toward me.

I threw some moss upon the fire and flung myself down close beside it, raising my gun. In a few seconds it was bright enough for me to be able to see along the barrel, and take aim at the greenish-yellow eyeballs of the nearest brute. He was moving along furtively, and making a detour as if to avoid the dogs.

The faithful animals immediately sprang toward him, but as I was sure that my aim was good, I called them back. Then I pulled the trigger, the sights being in line with a point between the eyes of the unknown beast.

The report of my gun rang out. There was a frightful cry, a series of yelping sounds, and then my dogs sprang upon the unknown thing.

In a few seconds its cries and moans were stilled, and the dogs came off. It was evidently dead. But there was another remaining; and it, nothing daunted by the fate of its companion or the barking of the dogs, made toward me. Its body was clear in the glow of the burning moss when I aimed just behind the fore-shoulder and fired.

It did not fall at the shot, but darted straight toward me. I had slipped another cartridge into the first barrel, and so was ready, and only that, for when I got my aim the beast was within a few feet.

So much the better. I fired right between its frightful eyes, and the creature bounded and fell straight into the fire. With a convulsive movement, it rose and tumbled over upon the moss, dead.

I again loaded both barrels, called the dogs to my side, threw more moss upon the fire, and carefully crept out to see what I had slain. It was an enormous wolf, and the one I first shot was very little smaller. This one I examined by the light of a moss torch, and found it also dead. It had been shot in the head, and the dogs had finished it.

I then went back to the fire, the dogs at my heels. I found that Nero was frightfully scratched and cut on the side and head, but Jack had come off without a mark. Courageous and strong as the dogs were, they had no chance against the cruel fangs and punishing mouths of the wolves.

I plastered poor Nero's wounds as well as I could by tearing a strip off my linen, and putting some fir balsam upon it. Then I replenished the fire, and began to keep watch. I was afraid there would presently be more wolves in the "tuck," for when wolves hunt in Newfoundland, as elsewhere, they usually go in packs.

As I thought the matter over, it seemed clear to me that the wolves could not have been long in the shelter, but had just come in out of the storm, which I found was raging as furiously as ever.

Hour after hour I sat and watched, and again fell asleep. When I awoke my fire was low, and the daylight straggled in through the two or three little openings in the edge of the cluster. To my great joy I found that the storm had ceased.

I and the dogs had breakfast. Then, slinging the otter-skin across my gun, I started home. I returned the following day with a fisherman, and got the two wolf-skins.

EDMUND COLLINS.

Wolves at Close Quarters.

For the Companion.

TUMBLE-BUGS.

Two tiny negro acrobats, performing daring feats on a great brown ball, caused me to pause, one July morning in my walk through a green lane in the Berkshire Hills. Although the little tumblers were evidently having a private rehearsal and gave me no invitation to tarry, they were doing so well that I ventured to take a seat on the grass and watch their manœuvres.

They were acrobats, certainly, and as black as any African ever born; but I must explain that they had six legs instead of two, and could not talk.

In short, they were "Tumble-Bugs," belonging to a very aristocratic family, which can trace its pedigree away back to the time of Pharaoh, or, it may be, even to the creation of the world.

As I sat watching them, it soon became evident that they were not playing, but had hard, serious work in hand. One kept his place behind the ball, standing on his head and kicking against it vigorously with his hind-legs. The other was in front, and by continually scrambling up the ball and pulling, she helped materially in moving it forward.

They were plainly in a great hurry. They could hardly have shown more haste if they had set themselves a certain distance to traverse in a certain time, and had half the distance still to travel in only one-quarter of the time.

To these tiny workers a rise of a few feet in the ground was as a mountain, and a fallen twig as a prostrate oak. But on they struggled, showing excellent judgment in going around obstacles too large to roll their ball over, and never losing their general direction, no matter how many turns they were obliged to make to avoid stones, twigs or heavy grass.

Once, as they were going down an unusually steep decline, they lost control of the ball, and Mrs. Tumble-Bug, in front, scrambling hard to keep her place, was carried over a miniature precipice, while Mr. Tumble-Bug, behind, much to his astonishment, was left kicking at the sky in a very undignified way.

The female soon recovered herself, and waited for her companion; but as he failed to appear promptly, she resumed her place on the ball, and succeeded in pulling it slowly onward.

Meanwhile the male, having lost both his mate and the ball, was seriously alarmed. He ran hither and thither in his search, but to no purpose. Five, ten minutes elapsed, and still he remained lost and bewildered. I was just thinking that I must lend a hand, when chance, instinct or intelligence put him on the right track, and soon led him to the right spot.

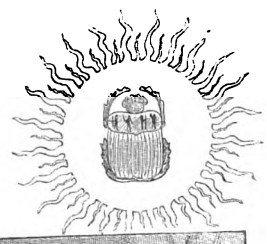
He did not stop to greet his wife or to hear particulars of the accident, but at once resumed his place and his kicking.

If they were prodded gently with a stick, or otherwise actually obstructed in their work, they ran rapidly away to a distance of a few inches from their ball, and worked their bodies so closely to the earth in among the roots of the grass, that they were almost invisible.

They took good care, however, to hide themselves within easy reach of the ball; and as soon as they had reason to suppose that their enemy had withdrawn, they reappeared and eagerly resumed their work.

But what purpose had the little couple? What was the meaning of this tussle with the great brown ball? Simply this: The pair, whom I may introduce without further ado as Mr. and Mrs. *Canthon læris*, of Green Lane, Pilgrim Hill, Great Barrington, Mass., belong to the family of beetles known as *Scarabæidæ*, which deposit their eggs in lumps of enriched soil.

At first the little mass, containing a single egg, is soft and irregular in shape; but by being rolled



Digitized by Google

about, it accumulates earth and grows both hard and round. Then a hole, about a foot deep, is made in the earth, and into this the ball is rolled, covered up, and there remains until the egg develops into a larva or grub.

Awakening to life, the larva subsists upon the rich substance in which it is embedded. It is transformed into a pupa within the ball, and the next season emerges as an imago or perfect beetle.

Plainly, then, our two little friends were intent on depositing their precious ball, with its still more precious egg, in the hole which they had made.

I watched them three-quarters of an hour; and during that time they had moved the ball a distance of ten or twelve

feet. From this estimate may be subtracted ten minutes for delay caused by the accident; and of course, some time was lost in going around small obstacles.

As I have before hinted, these beetles are of distinguished descent. If you look sharply among the treasures of the Egyptian collection in the Louvre, at Paris, or in any similar large collection in this country, you will find beetles cut in stone similar to the one which I have drawn above. In the British Museum, in London, is a very large and famous one.

These all represent the sacred beetle of the Egyptians, or as learned men call it, the *Scarabæus sacer* or *Ateuchus sacer*. This insect was held in such veneration by the Egyptians that it was often embalmed with the dead, and is now found, where it was placed, on the breasts of mummies.

These *Scarabæidæ* were thought to be symbolical of various things, but especially of the sun, which the Egyptians worshipped as the god Ra. They held the notion that these beetles rolled their ball from sunrise to sunset, and this accorded with their ideas of the sun's daily movement.

They also found the beetle a symbol of the sun, because the projections about the head were like the sun's rays, and because the six legs had in all thirty joints, the number of times the sun rose each month. The sacred beetle was often cut in precious stones and mounted in rings, which were worn as charms.

A distinguished English scholar and Egyptologist wears such a ring—not, however, on account of a belief in its power for good or evil, but because it is really ornamental and interesting.

This beetle is, too, occasionally mounted upon a pin and worn as an ornament to the neck-scarf by gentlemen who do not mind a certain eccentricity of decoration.

The Egyptians represented the elytra, or hard coverings for the true wings, as striated, or having ridges. This peculiarity is not found on similar beetles nowadays, although it is possible that some species were so marked in ages past.

I watched the manœuvres of the beetles for some time, and then, as they still had not reached the end of their journey, I put them in my handkerchief and took them home.

In order to test their intelligence, I placed them and their ball in a shallow pan, the bottom of which I covered with grass. They would have nothing to do here with the ball, but directed all their efforts to escape by scrambling over the sides of the pan.

Evidently they reasoned—if they can be said to reason at all—that they had no hole into which to roll the ball; that they were in the camp of the enemy, and that their only business now was escape.

In order to gain an idea of the strength of these gymnasts as compared with men, I weighed first the ball, and then one of the beetles, and found that the ball was eight times as heavy as the beetle.

We have seen that one of the beetles was able to roll the ball without assistance from the other, and that, too, up tiny hills and over what, to so small a creature, was very rough ground. These circumstances would, of course, materially increase the ratio of disadvantage to the insects.

A barrel of flour weighs one hundred and ninety-six pounds, and the strong grocer, who weighs one hundred and seventy pounds, has to exert a good part of his strength to roll the barrel up an inclined plane into his wagon.

Still he is pushing a weight only a little heavier than himself. Even if we put aside all minor considerations which would count in favor of the beetle, we see that this little friend of ours is relatively at least eight times as strong as a man.

If you look closely at both the sacred beetle and the "tumble-bugs," you will see that the second joints of the hind-legs are curved, and the end joints are barbed in order to aid the beetle in grasping and pushing the ball. The head is spade-like, and is used as a shovel in digging.

I put my little beetles to sleep with ether, and now I have them mounted just as I first found them—Mrs. Tumble-Bug pulling and balancing in fine style, and her gallant husband kicking away at the big brown ball with might and main.

These insects are by no means rare. Any one who is given to gathering flowers, or watching the grass, or hunting for four-leaved clover, or playing "stick-knife," is pretty sure to come upon them at their work, at least once or twice in a summer.

Nor are they limited in their range. They may be found in the West as well as in the East.

It is very amusing to watch them; and one gets, in following them, plenty of sunshine, for their natural liking is for sunny pastures and grassy, rather than shady, lanes.

WALTER GEROULD.

BLESSEDNESS.

In the nine heavens are eight paradises:
Where is the ninth one? In the human breast.
Only the blessed dwell in the paradises,
But blessedness dwells in the human breast.
—*From the Arabic.*

THE HAWAIIAN ISLANDS.

In recent years, Hawaii has become a subject of special and increasing interest to both Europeans and Americans. It has been felt to be important, by Englishmen, Germans and Americans, to obtain a controlling influence over, if not actual possession of, the government of the island realm.

The recent death of Kalakaua, the King who has reigned over the islands for nearly seventeen years, and the accession to the throne of his sister, Liliuokalani, has notably increased the interest felt in the kingdom by foreign nations, and has made yet more prominent the problem of its future destiny.

The natives of Hawaii, a gentle, cheerful, indolent, pleasure-loving race, have steadily dwindled in numbers for a long period; so that the present population, from having been two hundred thousand rather more than a century ago, has sunk to probably somewhat less than forty thousand.

The foreign population of the islands, on the other hand, has as steadily increased as the natives have diminished. It is stated that of the foreigners, there are resident in Hawaii twenty thousand Chinese, nine thousand Japanese, three thousand Americans, and thirteen or fourteen thousand Europeans, including Portuguese, English, German, French and Spanish.

The important fact about Hawaii is that the foreigners not only control its business interests, but take an important part in the governing of the islands. Englishmen, Americans and Italians have held high offices under the King; and about four years ago the foreigners achieved a successful revolution, by which the King was shorn of a large share of the royal power which he and his predecessors had exercised.

The new sovereign, Queen Liliuokalani, is described by one very familiar with Hawaiian affairs, as "a bright, clever, brilliant woman, possessing the finest judgment and tact, who will make an admirable ruler."

But she is credited with leaning rather toward the English than toward the Americans; and it seems certain that, with several great powers likely to contend for the controlling influence over Hawaii, her reign is not destined to be a very quiet one.

The importance of Hawaii is both a military and a commercial one. The situation of the islands in the midst of the Pacific, makes them valuable as a naval as well as a commercial station, and therefore they are coveted by maritime powers like England and Germany.

Their resources, moreover, have notably increased in recent years. Formerly the chief business of Hawaii consisted in the whaling industry. But with the decline of whaling, the natural fertility and favorable climate of the islands have prompted the cultivation of sugar, coffee and rice; and a considerable trade has grown up between Hawaii and the nearest Asiatic and American coasts.

The United States has already a reciprocity treaty with Hawaii, by the terms of which certain articles, produced from the soil or manufactures of each, are exchanged between them free of duty.

But, in view of the encroachments of European powers, especially of England and Germany, upon the various groups of islands scattered over the Pacific, and their annexation of many of these groups to their own dominions, American statesmen will doubtless gravely consider whether the ties between Hawaii and this country shall not be more closely drawn, and whether their possession, by any European power, shall not, at least, be prevented.

AMONG THE SIERRAS.

The grand old mountains gleam and shine
With everlasting snow;
Beneath and through the dark still pine,
The breezes come and go.

God's words are in each whispering breeze
That cools the brow of Time,
And every form that nature wears
Speaks of His love divine.

—*Edward G. Allason.*

THE SILVER QUESTION.

One of the most discussed and important questions upon which Congress failed to take action during its late session was the "free coinage" of silver.

We may remind our readers of a few facts relating to the silver coinage laws. The silver dollar was a standard coin from the beginning of the government until 1873, when it was dropped from the list; but in all that time, eighty years, only eight million silver dollars had been coined.

An agitation for the restoration of the silver dollar to the coinage was begun in 1876, and resulted in the passage, in February, 1878, over the veto of President Hayes, of an act providing for the coinage of from two million to four million dollars' worth of silver a month.

Under this act there have been coined during the last thirteen years about three hundred and ninety million silver dollars.

Last year a change was made in the law. The government no longer spends a certain amount of money, monthly, for silver bullion, and sends it to the mint; but it is required to buy four and one-half million ounces of silver each month, and to issue silver certificates to the amount paid for such purchases. Inasmuch as the silver bought thus far has cost rather more than a dollar an ounce, the law of 1890 has led to an increase of the currency not much less than five million dollars a month.

The law referred to was not passed without much opposition from those who favored "free coinage." Any person may take gold to the mint and receive its full weight in gold coin. The advocates of free coinage of silver demanded that the privilege should be given to the holders of silver bullion to receive the full weight of that metal in silver dollars.

Much of the time of the recent session of Congress was taken up with this question. After a long debate, the Senate passed a bill granting the privilege of the free coinage of silver, as it had done at the previous session. The Committee of the House of Representatives, to which the bill was referred, gave many hearings on the subject, and made its report, which was against free coinage, so late in the session that the measure was not brought to a vote. Consequently no change was made in the law.

But the question is still a live issue, and is likely to enter into political discussion very greatly during the present year. Possibly it will have a large, if not a determining, influence upon the presidential election of 1892.

The advocates of free coinage say truly that what they ask is but a restoration of the original law which prevailed for eighty years. They also assert, but this is denied by the opponents of their measure, that the reason silver has declined in value, as compared with gold, is that the laws discriminate against it.

The free coinage men declare that it is unconstitutional to make a difference in the laws in favor of gold and against silver. They hold that the country needs more currency, and that this is the way to supply it. They also maintain that a silver dollar is for all purposes and in all senses as good as a gold dollar; that silver is really more stable in value than gold, and that the apparent low price of silver is actually only a high price of gold.

On the other hand, it is urged that the present laws give a sufficient increase of currency for the needs of commerce; that they provide for an absorption of the whole product of the American mines; that at present the profit,—the difference between the market and the coining value of silver,—goes to the government, whereas under free coinage it would be given to the miners; and that the experiment of free coinage, while there is so large a difference as now exists between the market value of gold in a gold dollar and of silver in a silver dollar, would certainly derange the currency, and establish a premium on gold.

The silver question is a very great one. We have but outlined a few of the arguments used by the partisans on one side and the other. It is a question in political economy, but party politics and supposed "sectional" interests are involved, that is, most of the men from one part of the country think their interests are on one side, while most of those in another region drift naturally to the other side.

It is a question well worthy the study of every man and boy in the land, and those who will profit most by studying it are those who divest themselves of all party and sectional prejudice before they begin the study.

IMITATION IS WEAKNESS.

An old man died lately who had held an important position in the post-office of one of our largest cities for more than thirty years. He was appointed "before the war." One administration succeeded another, and one person after another was postmaster, but this man remained undisturbed. When the reason was asked, the postmaster answered:

"There were two: First, his work was thoroughly done. Second, he lived his own life—imitated nobody, flattered nobody. He never looked at other men as belonging to this or that party, or as being above or below him in rank. They were to him only men, true or untrue. He did his own work, and turned the same face to a shoeblack and a governor."

"The man," says the terse Spanish proverb, "who imitates cuts his own throat."

Certainly the nation that imitates another commits an intellectual suicide. Germany, for more than a century, used French books, wrote French ideas in the French tongue. It was when Goethe and Schiller expressed German life in its own language that German literature sprang into new life. The same lesson has been taught in the history of Russian and of our own literature.

Self-assertion and vulgar boasting are not to be confounded with true self-reliance. Nothing can be more weak and contemptible than the imitative attitude which many young people hold on entering the world. They are ready to dress, talk, think, even worship God, after the fashion set by some man or woman whom circumstances have elevated above them socially, but who may possibly be their inferiors in sense, taste and right feeling.

"There must be a bell-wether in every flock," says Sir Walter. The position of the bell-wether is undoubtedly the most agreeable and honorable. Why, then, voluntarily sentence yourself to be one of the despised flock that run forever at his heels?

MOTHER.

When the Japanese princes were in Philadelphia, at the time of the Centennial Exhibition, an American gentleman, addressing the son of a high officer of the Japanese Empire, asked him, "What do you think of your mother?"

"You are the first person in America who has asked that question," said the Japanese, as his eyes filled with tears and his voice manifested his emotion; "why do you ask it?"

"Because," said the other, "the reply to such a question throws a strong light on the domestic life and family ties of a people, as well as on the personal character of its individual citizens, and on the morals and customs and government of the nation."

"Well," said the Japanese, "I will tell you. Since I left home, my mother has, every week, regularly written me a long letter, telling about everything in the family and at home; and every week, in the same way, I have written to her, telling her of all my movements, and of what I see and hear and do.

"If it were not for these letters, I should long ago have been so homesick as to have gone back to see her and be with her. She is always on my heart." And his earnest and tender tones confirmed and impressed what he said.

When he was further asked if such was the general feeling of children to their parents among his acquaintance, and in the empire, he replied, that so far as his observation extended, among the better classes, it was.

"What do you think of your mother?" is a question that shows what is the character and influence of the mother herself; what the love and training she has given to her children; what the respect and honor of children to their parents; what the position of woman in the family and in society; and what the preparation of a rising generation to be good men and women, good citizens and supporters of all that is good in the society, government and institutions of a country.

UNFEELING.

Aaron Burr was, by nature and training, a man of extraordinary self-control. He allowed no circumstance to throw him off his balance. An anecdote told by Rufus Choate to the late Richard H. Dana, recorded in Mr. Dana's "Diary," illustrates the moral callousness which aided Burr so greatly in controlling himself.

Several years after the death of Hamilton—killed by Burr in a duel—Burr visited Boston, and Mr. Devereux, of Salem, paid him some attentions. The visitor was taken to the Boston Athenæum, where, while the two men were walking through the gallery of sculpture, Mr. Devereux happened to catch sight of a bust of Hamilton.

The thought flashed across his mind, that Burr might not care to be confronted with the sight of the features of the man he had slain. But no! Burr was undisturbed. He also espied the bust, and although Mr. Devereux had instinctively

Digitized by Google

turned away, he walked up to it and said in a loud tone: "Ah! Here is Hamilton!"

Then, passing his fingers along certain lines of the face, he added, "There was the poetry!"

Hamilton's contemporaries gave him credit for possessing a poetic mind, though his writings betray no trace of poetry, but on the contrary, are as intellectual as Euclid.

LADY PALMERSTON.

The spirit, if not the letter of the adage, "A man must ask his wife's leave to be rich," was illustrated in the career of Lord Palmerston. He owed much of his success as a political leader in the House of Commons to Lady Palmerston, whose popularity and hospitality made her an efficient helpmate.

Her dinners and receptions, where her tact and courtesy showed her a perfect hostess, not only kept her husband's supporters together, but confirmed the wavering, and won over opponents.

A writer in *Blackwood's Magazine* tells an amusing story, illustrative of Lord Palmerston's manners and of Lady Palmerston's tact in avoiding a scene by entering the room at the suitable moment, and in her charming manner insisting on the discontented one accepting her hospitality.

An old diplomatist was recalled from an important but distant legation, and appointed to an inferior post in Europe. On the day of his arrival in London, he called on his friend, the writer, in a state of indignation that he had never been consulted about the change.

"I shall go at once to Lord Palmerston, and let him know in unmeasured terms what I think of his abominable conduct; afterwards I will return and tell you the result."

He did return, and his friend said, "I hope you did not mince the matter with the minister."

"Plague on the fellow! I never could say a word," answered the diplomatist. "I sent in my card, and was kept in the dining-room—while he was, of course, arranging the scene; for no sooner was I shown into his study, than, before I could utter a word, he rushed up and seized me by both hands.

"'My dear, dear friend,' he said, 'I rejoice we have you back amongst us; you exchange barbaric life for civilization; all your friends are so glad to welcome you.'

"'My lord, I am surprised,' I struggled to say.

"'Not a word, not a word! here is Lady Palmerston. My dear, welcome your old friend home; he is one of us again. He will dine with us to-day—won't you? We must keep you, now we have got you back. I am off to a Cabinet. Lady Palmerston, get our friend to tell you some of those anecdotes which used to delight us. I leave him in your care. Good-by—*au revoir*, at eight o'clock.'

"And so he rushed out. I am engaged to dine, and have lost my chance."

RAILWAY ASSOCIATIONS.

The railroad question, so far as the railroad companies themselves are concerned, is this: How to get enough business at paying rates to earn a dividend?

State and national laws, restricting companies in their power to make passenger and freight rates, and requiring those rates to be uniform, place one of two companies serving the same points at a disadvantage. This brings them into direct competition with each other, and one of the companies gets all the business. Then comes a "railroad war," in which each company tries to obtain traffic by making lower rates than the other.

Formerly such a war would have ended at last in the formation of a "pool." All the earnings between competing points would be lumped, and then divided in a fixed proportion; but the law now forbids pooling.

For some time after the Inter-State Commerce law was passed there was chaos and confusion in the relations of railroads to each other. Then, two years ago, the presidents of railroads west of Chicago having agreed upon a plan that was to put a stop to rate-cutting,—this plan was called "the gentlemen's agreement,"—the Inter-State Commerce Railway Association was formed to carry out the plan.

Two years' experience proves that even railroad presidents cannot prevent their subordinates from cutting rates.

At the beginning of the present year a new league, known as the Western Traffic Association, was formed by the same companies, to fix competitive rates and to punish disobedient railway officers.

But the problem still remains the same as before: How to enable a road which is at a disadvantage with its rival to obtain its fair share of business without transgressing the law, and how to prevent the road which cannot obtain business otherwise from seeking traffic by cutting rates.

EARNING A FEE.

At a Western railway station a new porter had been engaged. One of his numerous duties was to announce the readiness of the trains. But, called hither and thither on various errands, this part of his work was sometimes neglected.

One day a New York gentleman was intending to leave the town to go to St. Antoine. Having been assured that he would be called in time, the gentleman sat quietly reading his newspaper in the waiting-room of the station, until at length the porter put his head in at the door, and shouted:

"All them 's is goin' to St. Antoine, the train 's just gone."

This was indeed true. The train was vanishing in the distance.

"Why didn't you call me before the train started?" demanded the gentleman, not very good-naturedly.

"Faith," the porter answered, scratching his head in perplexity, "I did think of it; but I had to put yer honor's trunk aboard, an' I thought that that 'ld please yer honor more 'n bein' told to get aboard yerself, when yer could do it widout assistance."

To find that his trunk had gone did not increase the traveller's good-nature, but there was so evidently nothing to be done that he turned away in silence. The porter stopped him, and said with a suggestive grin:

"Besides, yer honor's goin' to give me somethin' for puttin' his trunk aboard, an' he wouldn't have given me anything for calling him."

WEDDINGS.

Ministers have amusing experiences in marrying people. Many couples are so nervous that they hardly know how to behave, and in their efforts to appear self-possessed, say and do funny things. A clergyman in Connecticut occasionally lets fall an anecdote of his early "marrying days."

At one time a man and woman came to his house to be married. As they were waiting in the parlor for the minister's appearance, the man, without saying a word, got up and left the house.

When the minister came in, there was no bridegroom. They waited, and the would-be bride began to grow uneasy, though she tried to appear unconcerned. At length some one said to her:

"He must have left you."

"Oh, well then," was the reply, with a toss of her head, "it will save me a deal of trouble," but her voice faltered, and tears began to flow.

A half-hour later the missing man returned, wearing a new hat and bringing a ring, which he had gone out to purchase. Tears then gave way to smiles, and the wedding went on.

On another occasion the minister asked the groom what form of service he would prefer should be used.

"What?" was the curt response.

The minister repeated the question.

Then, with a glance at his bride, the man replied, "Both together, and for life."

The marriage fee often reveals odd traits of character. Once the bridegroom presented to this clergyman a bit of paper on which was written, "A wife is a crown to her husband. If she turns out to be a good one in ten years, I'll give you twenty dollars."

The minister pocketed the paper, thinking that the woman would "turn out to be a good one," and that the man would never remember the promise.

But time brought a surprise. Before seven years had passed the clergyman received a gold double eagle, and a note, saying:

"She is good clear through. There is no need of waiting any longer. I ought to have paid you on the spot."

A HOMER ENTHUSIAST.

Doctor Schliemann, the great archæologist, is said to have determined to discover Troy when he was a mere boy. His youthful enthusiasm for Homer developed into a degree of love and admiration which has probably never been surpassed by any student of the "Iliad" and the "Odyssey." The doctor's classic taste showed itself in various curious ways.

He resolved, so it is said, to marry a lady who understood and appreciated the great poet. It is reported of him that he visited the best Greek school in order to look for such a lady, and having heard a Greek girl, Sophie Kastromeno, recite many passages from Homer, with "good accent and discretion," he offered her his heart and hand.

Whether or not this is true, it is certain that Mrs. Schliemann is a person of exceptional scholarship, and has a perfect knowledge of Greek.

Doctor Schliemann changed his wife's name of Sophie to a more Homeric-sounding one, and named his children Andromache and Agamemnon. He bestowed on his servants names taken from the "Iliad" or the "Odyssey." He once startled the passengers on board a steamer by asking the waiter who stood behind his chair what was his Christian name. Being informed that it was Jean, he exclaimed, "No, not Jean; Ulysses!"

On that same voyage he persisted in reciting Homer to his wife. She, being a bad sailor, tried to persuade him that there was a season even for Homer; but in vain. The exhilarating effect of the sea still inspired him to declaim impassioned passages from Homer. In her despair, Mrs. Schliemann found it in her heart to wish that her husband might have one touch of sea-sickness. At last there came a day when it was unusually rough, and he was obliged to lie down and be silent. From that time forth he never declaimed Homer except on terra firma, where his wife's enthusiasm could equal his own.

TO DETECT ERASURES.

The task of the expert who endeavors to detect forgeries and fraudulent alterations of writing is difficult. It is likely to be simplified by the application of discoveries recently made by M. Bruylants. This scientist's conclusions are stated in the *Revue Scientifique*.

When a satin-finished paper is partially moistened, dried, and then exposed to iodine vapor, the part which was moistened takes a violet tint, and the rest becomes yellow or brown. If drops of water are allowed to fall on a smooth-finished paper, and to dry, and then the paper is dipped in water, dried, and exposed to iodine vapor, the places where the first drops fell can be distinguished.

If a paper on which erasures have been made is exposed to iodine vapor, the roughened surface takes a different tint from that portion which has not been tampered with.

If the erasure has been lightly made, only the ink or pencil-lead being rubbed away, and the mark left in the fibre of the paper, iodine vapor causes the writing to reappear. This is because wherever the paper has been roughened, more iodine is absorbed than by a smooth surface. This test is effective within three months after the making of the alteration.

The discovery of the action of iodine on partially moistened paper led to M. Bruylants's discovery of its action on a partially roughened surface, and to his invention of a system of "invisible" writing by using a glass point dipped in water, this tracery becoming visible when exposed to iodine vapor.

PRECISE DIRECTIONS.

Boston boys are no worse, and perhaps no better, than boys who have had the misfortune to be born elsewhere, but newspaper men must have their joke.

"Say, bub," said a stranger to a seven-year-old Boston boy, "where's Boylston Street?" and the youthful Athenian replied:

"While your mode of address, sir, seems to me to savor of undue, not to say unwarrantable, familiarity, you shall have the information you seek. You will perchance descry, some distance up the street, an imposing structure of commingled Renaissance and early Venetian architecture. The street for which you inquire is immediately contiguous."—*Boston Courier*.

Throat Troubles commence with a Cough, Cold, or Sore Throat. "*Brown's Bronchial Troches*" give immediate relief. Sold only in boxes. 25 cents. [*Adv.*

Burnett's Cocoaine has earned a just reputation for promoting the growth and preserving the beauty of the human hair. Instead of possessing the heating and rancid qualities of all animal preparations, such as bear's grease, etc., it is a cooling vegetable oil, extremely agreeable and cleanly. [*Adv.*

Lovers of the Beautiful

Will be pleased to learn that a collection of twenty of the finest scenic views in Wisconsin and Minnesota may be obtained, free of postage, by the sending of an address and fifty cents (in postage, or otherwise) to Geo. H. Heafford, General Passenger Agent, Chicago, Ill. P. S. As the supply is limited, early application should be made.

DANDY SAFETY.
BEST WHEEL ON THE MARKET.

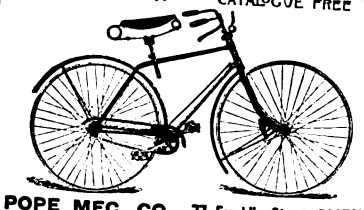
School Boys!
School Girls!

This Certificate
entitles the holder to a
SHARE
in the patriotic influences
of the
SCHOOL FLAG.

Do you wish to raise a Flag over your Schoolhouse? We can help your School to raise the money for its purchase.

In the first place talk the matter over with your **parents**, your **teacher** and **school-mates**. Then write to us and tell us of your decision, and ask us to send you 100 School Flag Certificates. Ask your **teacher** to sign the order for the Certificates.



On receipt of your order we will send you **free** 100 Certificates. Each pupil can easily dispose of one or more of these Certificates to interested friends and neighbors at 10 cts. each.

Follow this plan, and any school can raise **$10.00** for a beautiful Flag **sixteen** feet long in a day's notice. For a smaller school-house, a 6 x 9 Flag, costing **$5.00**, is sufficiently large. If you wish to raise more than $10.00 we will send 200 Certificates.

Get your Flag, and thus be ready for the National Columbus Public School Celebration, to be held Oct. 12, 1892.

DONALD KENNEDY
Of Roxbury, Mass., says:

My Medical Discovery seldom takes hold of two people alike! Why? Because **no two people have the same weak spot.** Beginning at the stomach, it goes searching through the body for any hidden humor. Nine times out of ten, **inward humor** makes the weak spot. Perhaps it's only a little sediment left on a nerve or in a gland; the Medical Discovery slides it right along, and you find quick happiness from the first bottle. Perhaps it's a big sediment or open sore, well settled somewhere, ready to fight. The Medical Discovery begins the fight, and you think it pretty hard, but soon you thank me for making something that has reached your weak spot. Write me if you want to know more about it.

For Epicures.

"Delicate and Piquant" best expresses our Soup Puree of Game which needs but a sprinkling of croutons to make it perfect. It is a new soup; your grocer may not have it, but will get it for you if you insist.

It is ready for use, needs but warming, and has one point only in common with our 17 other varieties, the care with which it is prepared.

Green Turtle, Terrapin, Chicken, Consommé, Purée of Game, Mulligatawny, Mock Turtle, Ox-Tail, Tomato, Chicken Gumbo, French Bouillon, Julienne, Pea, Printanier, Mutton Broth, Vegetable, Beef, Pearl Tapioca.

First-class grocers keep them.
A sample can sent on receipt of the price of postage, 14 cents.
Packed in quart, pint and ½ pt. cans, and in 1½ pint glass jars.

The Franco-American Food Co.,
West Broadway, and Franklin St., New York City.

SUGGESTIONS

YOUTH IN HISTORY.

For what is Joan of Arc remembered?
What was the Children's Crusade?
What part did boys and girls take in the Civil War?
What youthful Kings and Queens can you name?
What baby was born a King?
What youthful poets, painters, musicians and inventors have there been?

For the Companion.

THE DEATHLESS HEART.

The flames ran riot o'er roof and wall
And wrapped the house in a lurid pall.

Through the glare and smoke, through the din and heat,
All eyes upturned in the crowded street

Were filled with pity and yearning fear
For the children thought to be dying there!

Just at that moment of speechless dread
At an upper window the curly head

Of a girl of twelve in the red light shone,
Her arms in the tenderest fashion thrown

Round her weeping brother of five years old,
And her dark locks blent with his locks of gold!

The people urged her to leap in vain
While the sparks came down like a fiery rain,

And the boy was dropped 'mid the widening glow
To the haven of outstretched arms below!

The girl rushed back through the eddying smoke
And never a word to the watchers spoke,

But swiftly again to the window came
A babe in her arms, and her dress aflame!

She wrapped the baby in blankets tight
And leaped at once with her burden light

To the eager hands that were opened wide
Fronting the crest of the crimson tide!

The infant, happy and safe at last,
Was quite unharmed by the peril past,

But the sister who saved her, though breathing still,
Was beyond the reach of all mortal skill!

The fire had fed on her cheeks so fair,
Nor left the ghost of a dimple there.

No trace remained of her eyes so bright,—
Those marvellous wells of truth and light,

And her hair, where the sunbeams loved to stray,
Like sudden darkness had passed away!

The doctor told her, in gentlest tone,
She must go through the Valley of Death alone,

For his healing art and his wish were vain
To bring her back to the world again!

"Oh! thank you, doctor, but don't mind me,
I know you, sir, though I cannot see.

"I've saved our Robbie and baby too,—
'Twas almost more than I hoped to do,—

"But now I'm tired and feel some pain,
And I hear a voice like the far-off rain,

"Or is it—because I know He's near—
Oh! tell me, sir, is it Christ I hear?

"Our Saviour will take me to His kind breast
'Where the weary cease'—you know the rest."

With the words unfinished, but smiling said,
The girl sank back on the pillow—dead!

When her body was wrapped in its winding-sheet
'Twas found that the terrible smoke and heat

Had raged and revelled in every part,
But had left unscathed the stainless heart.

The watchers whispered below their breath:
"What a wonderful token of life in death!"

And a poet, standing in silence near,
Spoke out in a tremulous voice yet clear:

"The flame in reverence dared not touch
The loyal heart that had done so much.

"For more than all triumphs of earthly art
Is one grand deed of a deathless heart."

WILLIAM H. HAYNE.

For the Companion.

KINDNESS TO ANIMALS.

A touching story was told of Tamberlik, the tenor singer. Passing through Madrid one bright spring morning, he visited the bird market, and bought every bird in it. He ordered the cages to be carried into the Plaza, and opened. The sunny air was filled with a fluttering host, and from hundreds of tiny throats burst songs of delight. Tamberlik looked after them with tears of pleasure in his eyes, crying, "Go, and be free, my brothers!"

A similar story is told of a kindly old Virginian, who used to celebrate the Fourth of July by buying up all the caged squirrels, rabbits and birds in the neighborhood, and then setting them free, that they, too, might rejoice in the day of Independence. The creatures to whom he gave happiness are long since dead, but the children who saw his kindly act have carried its influence through their lives.

It is one proof of the power of Christianity upon modern life that animals receive more humane treatment at our hands than formerly.

Queen Elizabeth with her maids of honor delighted to see a bear torn to pieces by dogs, but if an American maltreats a horse or cat he can be heavily punished for it.

No moral precepts, no religious training will give to children the spirit and mind of Jesus, in a family where the horse or dog is cruelly treated.

"How much of mind my spaniel hath I know not," says Von Ruppe; "how much of soul no man hath ever discerned. But this I know, that he is God's creature, one of His family—a far-off cousin of my own. Shall I be cruel to him?"

The horse or dog or bird which belongs to us, is given to us, like every other fact in our lives, to test our natures—whether they are noble or mean. These creatures demand especial justice and tenderness from us, as do the absent or the dead, because they are dumb; they cannot protest against injustice or demand their rights.

But when their silent, pathetic faces testify to our neglect and cruelty, there is a Judge Who hears and gives sentence between them and us.

PROUD OF HIS WORK.

Dr. B. W. Richardson, of London, in an address to workingmen at the Congress of the Sanitary Institute of Great Britain, declared that "Work, manual work—and that, too, of a resolute kind—is absolutely necessary for every man." He spoke also of the importance of doing one's work, not merely to get it done, but with a feeling of pride in doing it well. In this connection, he said:

I was invited, not many years ago, to lecture at St. Andrew's University, and to listen in the evening to a lecture by another man, like myself, an outsider. I was not personally acquainted with this other man, but I knew that he filled an important judicial office in Scotland, and was considered one of the most able and learned, as well as one of the wittiest, men in that country.

He chose for his subject "Self-Culture," and for an hour held us in a perfect dream of pleasure. For my own part, I could not realize that the hour had fled.

The lecture ended at seven o'clock, and at eight I found myself seated at dinner by the side of the lecturer, at the house of one of the university professors. In the course of the dinner I made some reference to the hall in which the exercises of the day had been held—how good it was for sound, and what a fine structure to look upon.

"And did you like the way in which the stones were laid inside?" asked my new friend.

"Immensely," I replied. "The man who laid those stones was an artist who must have thought that his work would live through the ages."

"Well, that is pleasant to hear," he said, "for the walls are my ain doing." He had the Scotch accent when he was in earnest.

"Fortunate man," I replied, "to have the means to build so fine a place," for I thought, naturally enough, that, being a rich man, he had built this hall at his own expense, and presented it to the university.

"Fortunate, truly," he answered, "but not in that sense. What I mean is, that I laid every one of those stones with my ain hand. I was a working mason, and the builder of the hall gave me the job of laying the inside stone-work; and I never had any job in my life in which I took so much pride and so much pleasure."

That workman still lives, and is one of the heads of the university. While he was working with his hands, he was working also with his brain. He took his degree, went to the bar, and now he is a man honored throughout the country.

But I refer to him here only as the mason at his work, proud of his labor. That man had the idea of the paradise. It sweetened his work; it made it great. We applauded his brilliant lecture; but those silent, beautiful stones before him, which echoed our applause, must, I think, have been to him one cheer more, and a big one.

THE SUN AS AN ARTIST.

In a summer holiday every one's face and hands are more or less tanned by the sun. And the same artist is all the time active among the tenants of the orchard and the garden. A snow-apple, ripening on its stem in October, shows this plainly. The sunward side takes on a vivid scarlet, while the treeward half remains a pale pink. Sometimes a leaf, blown down in a storm, will lodge near an apple stalk. Cemented with a little moistened dust, it clings to the fruit long enough to leave the record of its stay in an outline of its crumpled form.

Where the leaf came between the apple and the sun, the coloring touch of the solar beam was securely kept off.

Young people in France and Germany imitate this stray work of the leaf with very pretty effect. An anchor, a heart, a shield or an initial is cut in paper and gummed to a ripening peach, apple or pear. The fruit is plucked in due season, and when the bit of paper is removed its outline is disclosed in hues much fainter than those of the surrounding rind.

And the sun can destroy color as well as bestow it, as many a wearer of a once gaily-tinted coat or dress can testify. Are not a thousand parlors kept dark and unwholesome lest carpets and curtains shall lose their beauty?

When we come to observe the matter, there is a wide variety in the pace at which the sun can give a color or change it. A winter apple may be a month in reaching its ruddiness; a peach may ask only a week wherein to flush into its mantle of maturity. But the most nimble work of the solar ray in its decoration of fruit and flower is not to be compared with what it accomplishes in other departments. When its power was brought to bear upon some familiar chemicals, it was found that its action was reduced from days to seconds.

Upon this discovery turn all the wonders of photography. At first silver nitrate or lunar caustic, as it was commonly called, was used in the camera. From time to time other substances of greater and greater sensitiveness to light have been produced, every one of them successively giving the solar beam a wider play and more astonishing power.

To-day, with the exposure of a photographic plate for only the one hundred and twentieth part of a second, not only are the beatings of an insect's wings caught in the camera, but also the path of a cannon-ball, the skyward flight of exploded rock, and the sinuous glint of lightning.

EXCITING TRAVEL.

A journey from Calcutta to Jumalpore, described in *London Society* by an English lady, seems to have been uncomfortably full of adventure and variety. It was before the days of railways in India, and she and her friend were carried by natives in palanquins. They were asleep, when suddenly down went the palanquins on the ground, and with shrieks of "*Saar! saar!*" (tiger) the natives disappeared.

Our first instinct was to lock the outside door of our fragile fortress. Round the palanquin the creature kept stalking, switching his heavy tail against the doors. Then he seemed to spring and fall heavily on the roof.

Who could describe our awful terror? What if the natives did not return! We had no fire-arms and little food. We dared not open the aperture an inch for fresh air.

The time wore on. Dawn came. With the first glimmer of day hoarse, unearthly yells resounded close by, and believing that all the wild beasts of the jungle were upon us, we gave ourselves up for dead women.

A trampling as of a million feet, a crowding and scuffling; then the light grew red, as with a fearful jerk our palanquins were pulled asunder, and torches revealed the natives, who had returned at last with a score of villagers. They brandished huge sticks, and informed us by gestures that the tiger had bolted, and that we were safe.

At the bank of a river most of our natives disappeared again. After a long half-hour they returned, with several of the villagers carrying large, wide-mouthed earthen "gurras," or pots. With a good deal of gesticulation, we were made to comprehend that there was only one mode of crossing the river. Frightened and nervous, we each stepped into an earthen pot. Then we were lifted by two natives and launched on the water.

My friend was in front of me, and I felt decidedly uncomfortable as I saw her frail and certainly original bark pushed violently by a native who swam behind. Eventually we reached the opposite shore, cramped, limp, dizzy, and thankful to collapse on a heap of stones, while the palanquins, with each of their feet encased in smaller pots, made their voyage toward us.

We had had enough of excitement and novelty, and were glad at sunset to find ourselves at Jumalpore.

For the Companion.

THE COSTLIEST GIFT.

I give you a day of my life—
Treasure no gold could buy—
For peasant and peer are at one
When the time comes to die;
And all that the monarch has,
His koh-i-noor or his crown,
He would give for one more day
Ere he lay his sweet life down.

They are winged, like the viewless wind—
These days that come and go—
And we count them, and think of the end,
But the end we cannot know;
The whole world darkens with pain
When a sunset fades in the west—
. . . I give you a day of my life,
My utterniost gift and my best.

LOUISE CHANDLER MOULTON.

TO GAIN TIME.

Some persons have what are called resources. They know what to do in an emergency. As the common saying is, They have more than one string to their bow. What cannot be done in one way, they know how to do in another way. Such a person was a servant-girl, of whom a Kansas woman recently told a story to a reporter for the Philadelphia *Press*. To borrow a political phrase, she was a master-hand at filibustering.

When my husband was a candidate for the State Senate we lived on a farm two miles from our nearest neighbor, and four miles from town. One day, just as we were sitting down to dinner, a wagon drove up containing four of my husband's influential political friends. They had come to dine with us.

At that moment my Irish maid informed me, to my horror, that there was barely bread enough for our own dinner, and no flour in the house. It was a distressing predicament—four able-bodied men, and bread enough for only two of them! Only a woman with her husband's interests at stake can appreciate my feelings.

I called my oldest son out of the room, put him on a horse, with a bag over his arm, and told him to ride at a gallop to Mrs. B——'s, our nearest neighbor, and borrow all the bread she had, explaining my situation.

As Bob rode away, the servant, Mattie, said, "Sure, mum, the bread will all be gone before the lad reaches the B——'s. But jist leave it to me, mum," she added, with a grin. "Don't worry about it. We'll have it in time."

I went back to the dining-room, and my heart dropped as I saw that only two or three slices of bread were left on the plate, though there was an abundance of meat and vegetables. Suddenly Mattie's head was stuck in the door, and in a voice of consternation, with terror written on her face, she fairly yelled, "Plaze, mum, the sthable's on fire!"

In an instant the dining-room was deserted. Our guests sprang to their feet, and headed by my husband, rushed from the room. Sure enough, bluish smoke was pouring out of the stable door and through the cracks in the boards.

There was a frantic rush for water-buckets and the well, and a long chase out to the barn; but somehow Mattie was there first, with a bucket of water, and had the fire nearly extinguished before the others arrived. It took fifteen minutes to restore order, and by that time Bob had arrived with the bread.

Mattie had started the fire in an old vinegar barrel with some straw. It was a risky piece of business, I thought, until the sharp-witted girl told me that she had dampened the straw so that it would make a heavy smoke, and afterward had covered the barrel with pieces of loose boards thoroughly dampened.

The bread was in season, as Mattie had promised it should be, and my husband was elected.

UNCLE LIJE'S FIRST RIDE.

After half an hour's run through monotonous swamp land, with its labyrinthine growth of cane and cypress, the railroad train pulled into a town in one of the cotton belt counties of Mississippi. Among the few new passengers who got on at the station was a negro Methodist preacher, of the "befo' de wah" school. He had a guileless look on his face, and an excitement of manner that showed that he was indulging in a new experience. His face was made more marked by a wart on the end of his nose. As we left the station and the motley congregation of the old negro's church, who were down to see "Uncle" Lije off, the old man leaned far out the car window, and waved a bandanna 'kerchief to them until their dusky faces and the clouds of dust had passed from sight. He then drew down his window, with the assistance of the brakeman, and sank back uneasily on the cushioned seat.

"I thought you wouldn't ride on the cars, Uncle Lije," was the conductor's greeting, as he punched the old man's ticket and stuck a green slip in a bell-crown beaver hat old enough to have a history.

"Well, boss, I did t'ink I never'd git on the kyars," laying his hat on the seat, and scratching his head, as negroes will do when spoken to, "but Bill Simpson, an elder 'n dat pesky Baptis' church, went to Yazoo City week afore lars, and ebber sence he dun got back he's bin er gallyantin' roun' a-sayin' as how I was afeard to go on the kyars. So I up and sez to him, sez I, 'I haint a-skeared ob no train.' Bill he 'lowed 'f I'd go to Natchez he 'ud pay my fare, and here I iz, boss. Do I look skeart?"

"Oh, you are all right, old man," laughed the conductor, as he passed on and sat down beside a school-girl on her way home to spend the holidays.

They commenced talking about the old negro, and so loud that I could not help overhearing their conversation.

"This is his first ride on the train," said the conductor, as he proceeded to make himself agreeable to the bright-eyed miss. "That old negro belonged to one of the best-known generals in the Confederate army, and fought for the Confederacy throughout the Civil War.

"He was a faithful old soul, and courageous. Once, when some Union soldiers were breaking down the stable door to take the horses of a Confederate colonel's widow, old Lije crept off a hundred yards or so from the foragers, and sent a rifle-ball into a can of powder they had in their wagon. The explosion killed four soldiers and one of their horses. After that Uncle Lije was lionized by the boys in gray so much that ——"

Just then the whistle sounded half a dozen short, sharp alarms. Uncle Lije started up, absolutely crazy with terror, and literally jammed his bald pate through the window glass. It stuck there, and I seized the old man firmly by the shoulders, cautioning him, if he moved, his throat would be cut by the jagged edges of the glass. The train came to a standstill because of some obstruction on the road, and then we carefully broke the rest of the glass from around his head, and got him back into the car. The old patriarch was so badly cut we had to bandage his head with handkerchiefs. The wart on his nose was actually shaven smoothly off.

Fifteen miles further south we met the northbound passenger train, and old Lije was sent back to his friends. The man capable of heroic action for the cause of his master could not drop into the ways of this decade. He had lived beyond his time.

F. D. C.

INFORMAL WEDDING.

A remarkable tale of an "informal" wedding is related by a clergyman who was for some time settled in a small town in Western New York. The father of the bride invited the minister to spend the evening at his house and, incidentally, to marry his daughter. He asked at what time the ceremony was to be performed, but was told that it was not yet decided; the whole thing was to be very informal, and the minister had better plan to spend the evening, as they had arranged to have a "grand good time."

I presented myself at his house, therefore, early in the evening, and found a large company assembled. The young people were playing games in one room, while their elders chatted socially in another.

As the evening wore on, music had its part in the festivity. The bride elect "performed" on the melodeon, while the future partner of her joys exerted his energies upon the flute.

Ten o'clock came, and when the host genially invited every one out to a "spread in the dining-room," I began to think that possibly they had changed their minds, and the wedding was not to take place, after all. But as I stood rather irresolutely, wondering what was expected of me, the host took me by the arm and led the way into the dining-room. He placed me at the head of the long table, while the bride and groom were seated at my right and left.

All hands were busy with the good things with which the table was heaped, when the host, who had been hovering about the company instead of sitting down, whispered in my ear, "I guess this is as good a time as any."

Then he added, aloud: "Stand up, Mary and John!" And surely they did stand up, and I performed the ceremony, with one of the "contracting parties" on one side of the table, and one on the other, their hands being joined over a dish of excellent baked Indian pudding, which had the place of honor before me.

As soon as I had pronounced the pair husband and wife, the groom left his seat, and going around to his bride's side of the table, gave her a hearty kiss, after which he returned to his own seat, and renewed his attack upon the supper.

I have had queer experiences at other weddings, but never one where I felt the absurdity so keenly as on this truly "informal" occasion.

TOO MUCH KNOWLEDGE.

The foreman of a room in one of the largest manufacturing establishments in the country told a friend recently the circumstances of his first going to work there, and the brief story contains a moral which it would be well for many a lad starting out in life to lay to heart. He was sent to the foreman of the factory by a friend who was anxious to get him into the employ of the company, and the following conversation took place:

"Well," the foreman said, "I understand you want to come here to work. What do you know about machines?"

"Nothing," the other answered.

"Nothing!" echoed the foreman, in surprise. "You do not mean to say that you never saw a machine, I suppose?"

"I literally never saw a machine work in my life," was the reply, "except a locomotive."

"Where do you come from?"

"Cape Cod."

"Hum!" the foreman remarked, studying the face before him. "I came from the Cape myself. Do you suppose that there is anything in our business that you will not know all about in six months, if you come here to work?"

The Cape Cod man was puzzled how to answer, and contented himself with saying that he was sure he could not tell.

"The truth is," the foreman explained, "we can get plenty of men, but by the time they have been here six months or a year, they know so much that we have to send them away. They know a vast deal more than we men who have been here twenty years, and they are mostly willing to tell us all they know, too.

"Now if you think there are things that you cannot learn in a week or two, we should like to hire you; but if you are one of the abominably wise kind, you had better move along, and give us a chance to find somebody who doesn't know quite so much."

SHREWDLY DONE.

"Some time ago I was trading in a village store," says a correspondent, "when one of the clerks came to the junior partner, who chanced to be waiting on me, and said, 'Won't you please step to the desk a moment. Pat Flynn wants to settle his bill, and insists on having a receipt.'

"The merchant was evidently annoyed. 'Why, what does he want of a receipt?' he said; 'we never give one. Simply cross his account off the book; that is receipt enough.'

"'So I told him,' answered the clerk, 'but he is not satisfied. You had better see him.'

"So the proprietor stepped to the desk, and after greeting Pat with a 'good morning' said, 'You wished to settle your bill, did you?' to which Pat replied in the affirmative.

"'Well,' said the merchant, 'there is no need of my giving you a receipt. See! I will cross your account off the book;' and suiting the action to the word he drew his pencil diagonally across the account. 'That is as good as a receipt.'

"'And do ye mane that *that* settles it?' said Pat.

"'That settles it,' said the merchant.

"'And ye're shure ye'll never be afther askin' me fur it again?'

"'We'll never ask you for it again,' said the merchant, decidedly.

"'Faith, thin,' said Pat, 'and I'll be afther kapin' me money in me pocket, for I haven't paid it yet.'

"The merchant's face flushed angrily, as he retorted, 'Oh well, I can rub that out.'

"'Faith, now, and I thought that same,' said Pat.

"It is needless to add that Pat obtained his receipt."

HOW PATTY'S BIRTHDAY CAKE WAS MADE.

"Cut-cut-cadawcut," cried the hen,
"See, I have laid an egg,
And there's another, and a third,
Oh, come at once, I beg!
Come quickly, all these fresh eggs take,
For little Patty's birthday cake."

"Yes," moo-ed the cow, "she's six years old,"
(And how she knew, I cannot tell),
"I'll give my very nicest milk,
And most delicious cream as well.
And with them, cook, please nothing make
But little Patty's birthday cake."

Then James went out into the barn,
And took out Dobbin from his stall.
"Now we will to the village trot,
To buy the raisins, nuts and all."
Old Dobbin gave his ears a shake,—
He too might help to make the cake.

And now cook set herself to work,
The cream she whipped, the eggs she beat,
Citron and raisins stirred in thick,
With all that Patty liked to eat;
And in the oven put to bake
That most delicious birthday cake.

At last then, Patty's cake was done,
All richly seasoned through and through,
With on the top six candles, and
Her name spelt out in pink and blue
So that there might be no mistake.
Oh! what a lovely birthday cake. S.

For the Companion.

THE RACCOON FERRYMAN.

Billy and Bolly were up at daylight, and ran to the window.

"Oh, it's raining again!" they both cried. And they must ride through it all day, in the mail-carrier's open wagon, to get to the bay where they took the steamer!

But Billy and Bolly did not mind it, for they had grown used to rain during their visit at "Grandma's house," in the Puget Sound country.

Besides, they were going home, and now that the rainy season had set in on the Sound, these little mountaineers were homesick for brighter skies.

They stopped at the post-office store to get the mailsack, and the storekeeper's wife ran out to the wagon, all through the rain, with a shawl over her head.

"What! You're not going to leave us?" she said to the two little boys. "Why, I thought you were going to settle here!"

Neither knew what to reply, so mamma spoke up, and said they were going back because they loved the mountains.

"Well," said the storekeeper's wife, "it's a rough road and they will be tired, and they must take this to help them over it." And she slipped two paper bags of candy out from under her shawl, and stuffed them in two bulging coat-pockets.

All the way to the bay, the road ran through the endless forest of firs and spruces; and everywhere it was drip, drip from glooming boughs on fallen logs, and ferns that stood as high as the wagon-wheels.

They came at last to the rope-ferry, and drove right on to the little ferry-boat, swinging to the big cable stretched across the river.

The driver got down and held his horses' heads, for the boat had no guards.

A man stood at the wheel that controlled the boat, and he began to turn it, and out they slid on the racing current, for the river was high from the rains.

The man at the wheel was a big man, and had a black beard that came to his waist.

Any boy but Billy would have known a man with such a beard could do anything with a boat, and he was standing right close to Billy, too, for on the little deck the wagon almost touched the wheel he was turning.

But Billy could not keep from shutting his eyes when the water began to run by so fast on every side.

"Don't be scared, Billy!" said bold Bolivar. "The ferryman'll make the boat go right."

The bearded man heard him.

"The ferryman?" he said. "If you want to see the ferryman, look over there!"

The boys looked, and saw a raccoon sitting on a bench on the opposite side of the boat.

They had never seen one before, and they were so surprised now to be told he was the ferryman that they thought no more of danger.

"Watch out," said the bearded man, gravely. "He will come for the fare in a minute."

Bolivar got out his purse.

"He will not take money," the bearded man said, peeping into Bolly's coat-pocket. "But wait; he will help himself. Here he comes."

The "ferryman" jumped from the bench, and climbed on the wagon-seat.

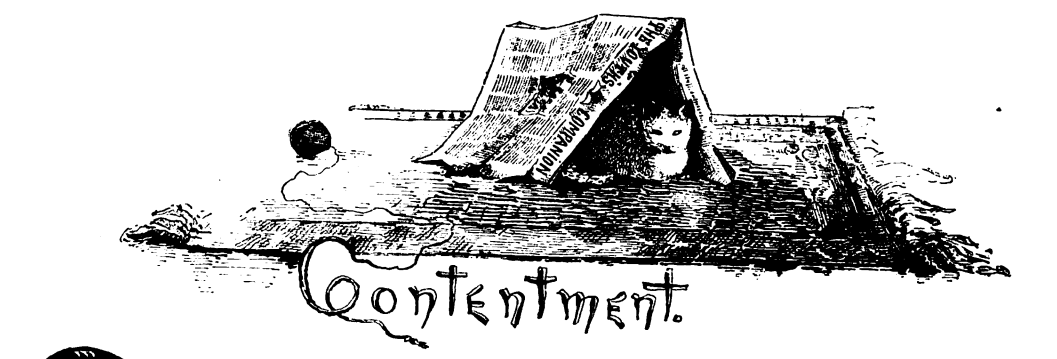
The two boys made way for him, and sniffing about, he put his funny black hands first in one pocket, then another, until he found the candy bags. Then he took his fare.

"Oh, we must have him to take home with us!" said the two boys when they had landed safely. "What will you take for him?"

The bearded man shook his head.

How could the ferry run, he said, without the ferryman? They must stay and settle on the river, and then they could see him every day.

But this could not be, and so they both shook the funny ferryman's little black hands, and were sorry to say good-by, they liked him so well.



MRS. J. S. OAKLING.

CHILDREN'S SAYINGS.

ONE Sabbath evening, not long ago, Edith was at the tea-table, and noticed some cheese on a plate before her. "Mamma," said she, "is that the cheese we sang about in Sunday school to-day?" "Why, no, Edith, you did not sing about cheese in Sunday school." "Yes'm, we did. We sung 'Bringing in the cheese.'" Which was her rendering of the familiar "Bringing in the sheaves."

ONE day at luncheon Mamie was very greatly delighted with some honey which had been sent her by a friend who lives in the country and keeps bees. After eating a while in silence, she exclaimed, "Doesn't Mrs. Lepley teach her bees to make nice honey!"

For the Companion.

BABY'S DINNER.

Baby will not eat her dinner.
Baby is a little sinner.
Give it all to Kitty Cat,
What will Baby say to that?

For the Companion.

ONE SMALL MAN'S PLAN.

The "blue-line" street-car stopped at the corner, and a rather anxious-looking young woman put a small boy inside.

"Now, Rob," she said, as she hurried out to the platform again, "don't lose that note I gave you; don't take it out of your pocket at all."

"No'm," said the little man, looking wistfully after his mother as the conductor pulled the strap, the driver unscrewed his brake, and the horses, shaking their bells, trotted off with the car.

"What's your name, Bub?" asked a mischievous-looking young man sitting beside him.

"Robert Cullen Deems," he answered, politely.

"Where are you going?"

"To my grandma's."

"Let me see that note in your pocket."

The look of innocent surprise in the round face ought to have shamed the baby's tormentor, but he only said again, "Let me see it."

"I tan't," said Robert Cullen Deems.

"See here, if you don't, I'll scare the horses and make them run away." The little boy cast an apprehensive look at the belled horses, but shook his head.

"Here, Bub, I'll give you this peach if you pull that note half-way out of your pocket."

The boy did not reply, but some of the older people looked angry.

"I say, chum, I'll give you this whole bag of peaches if you just show me the corner of your note," said the tempter. The child turned away, as if he did not wish to hear any more, but the young man opened the bag, and held it out just where he could see and smell the luscious fruit.

A look of distress came into the sweet little face; I believe Rob was afraid to trust himself, and when a man left his seat on the other side, to get off the car, the little boy slipped quickly down, left the temptation behind, and climbed into the vacant place.

A pair of prettily gloved hands began almost unconsciously to clap, and then everybody clapped and applauded until it might have alarmed Rob, if a young lady sitting by had not slipped her arm around him, and said with a sweet glow on her face:

"Tell your mamma that we all congratulate her upon having a little man strong enough to resist temptation, and wise enough to run away from it."

I doubt if that long, hard message ever reached Rob's mother, but no matter, the note got to his grandmother without ever coming out of his pocket.

ELIZABETH P. ALLAN.

LITTLE Georgia was visiting a short time ago in a family who were fond of lawn tennis, and saw for the first time a racket.

She seized it the moment her eyes fell upon it, and began making mysterious passes across it with both hands.

She labored at this till at last her patience gave out, and she threw down the racket in disgust, exclaiming: "I don't see how you can make any music out of that kind of a fiddle."

Enigmas, Charades, Puzzles, etc.

1.

CHARADE.

My *first* is hunted by northern lakes;
At my *second* men eat their fill;
My *whole* full many a farmer takes,
To carry his grist to mill.

2.

REVERSALS.

An act or a writing on parchment, whose name,
Spelled backwards or forwards, is still just the same.

A note used in music, whose time doth proclaim,
And backwards or forwards 'tis still just the same.

A beautiful scent, of very great fame,
And backwards or forwards 'tis still just the same.

One who revives either glory or shame,
And backwards or forwards 'tis still just the same.

My next you will find a feminine name,
And backwards or forwards 'tis still just the same.

A word which doth civil affairs proclaim,
And backwards or forwards 'tis still just the same.

N. T. M.

3.

CHARADE.

Although my *first* is made for all
They're few who daily use it,
And if 'twere offered me to keep
I surely should refuse it;
And yet to be deprived, oh, no!
There's nobody would choose it.

My *second* ever is the type
Of innocence bucolic,
And light o' heels enjoys a life
That's full of frisk and frolic.
Strange that my *whole* should always mean
Confusion diabolic.

4.

NUMERICAL ENIGMA.

The answer consists of 85 letters.

From 1 to 77 gives the dying speech of a famous French orator and statesman.

From 78 to 85 gives the name of the above person, who was born in March, 1741.

The 1, 3, 2, 6, 14, 17, 26, 5, 10 is a voracious bird.

The 4, 34, 19, 21, 13, 52, 8 is a tumor on the finger.

The 7, 23, 74, 60, 41 is to issue forth.

The 80, 44, 43, 9, 65, 42 is depends.

The 25, 22, 39, 68, 11, 16, 48 is stooped.

The 12, 24, 77, 33, 32, 45, 69, 70, 71, 72 is counterfeit.

The 15, 84, 78, 35, 85, 73 is a string of shells used as current money by the native North American Indians.

The 18, 47, 50, 40 is to appear.

The 38, 37, 58, 49, 51, 79, 57, 20 is realization.

The 31, 55, 63, 27 is the woof of cloth.

The 28, 66, 30, 29, 36, 59, 53 is the constituent part of a thing.

The 64, 76, 75, 46, 67, 56, 61 is to send away.

The 82, 62, 54, 83, 81 is a kind of tea.

Answers to Puzzles in Last Number.

1. Charles Sumner.

2. 1. "To err is human; to forgive, divine."
2. "The first blow makes the fray."
3. "More haste, less speed."
4. "A noble life keeps off wrinkles."
5. "A merciful man is merciful to his beast."
6. "A drowning man will catch at a straw."
7. "Lively kittens make sober old cats."
8. "You cannot catch old birds with chaff."
9. "Truth lies in a well."
10. "Age thinks all youth folly."
11. "Lying rides on debt's back."

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

VACCINATION AND RE-VACCINATION.

The tendency of small-pox to reappear as an epidemic from time to time is noticeable even in countries where vaccination prevails and is somewhat thoroughly enforced.

Are we, then, to infer that vaccination is a failure, as some persons contend? By no means; the carefully gathered facts of all lands prove the reverse. For instance, in the great epidemic in Sheffield, England, four years ago, vaccinated children were seen to be twenty times as safe from an attack as the unvaccinated, and nearly five hundred times less liable to a fatal result. Three things, however, seem to be established:

(1.) Some persons have a susceptibility to small-pox which is not readily overcome, either by vaccination, or by a previous attack of the disease. A Sister of Charity, who had been successfully vaccinated in childhood, had a severe attack of small-pox at the age of thirteen. Four years later she was again successfully vaccinated, and still again in adult age. Persons have been known to take the disease several times.

(2.) During an epidemic of small-pox, the susceptibility to it is greatly increased. Persons who, in ordinary circumstances, might be exposed to the disease with little risk, will often take it readily during its prevalence.

(3.) Vaccination, as a general fact, loses its protective power after a few years, especially prior to adult age. In the Sheffield epidemic it was found that the safety of the twice-vaccinated was twelve times as great as that of those who had been vaccinated only once.

Every child should be vaccinated in infancy, and again at the age, say, of seven. It is safer to repeat the operation again in youth, if an epidemic is prevailing; but in every case it should be repeated after adult age is reached.

Vaccination should be compulsory. Where it is voluntary, tens of thousands of persons neglect it. In Berlin, under compulsory vaccination and re-vaccination, deaths from small-pox are less than two per cent.; in Paris, under voluntary vaccination, they are nearly twenty-nine per cent. The change in Germany from voluntary to compulsory vaccination reduced the death-rate from this disease from thirty-four per cent. to two per cent.

HE REMEMBERED.

A gentleman who is a great traveller, and who is always accompanied in his wanderings by a bull-terrier to which he is much attached, arrived one day last summer in the city of Florence. His dog was for some reason entrusted to the care of a porter at the station, and in the excitement of the crowd and under the unusual experience of being separated from his master, who generally kept the animal with him, Bruno was moved to make his escape.

The most careful search was made, and before going to his hotel the traveller went to the police station to notify the *gens d'armes* of his loss. It was more than an hour before he reached his hotel. When he got there he spoke of his loss, so that if anything was heard of the dog it would be understood that the animal belonged to him. To his astonishment the porter said:

"But your dog is here, sir. He came before you, and we did not know to whom he belonged."

"The dog is here!" repeated the gentleman in surprise. "How came he here?"

"He ran in, sir, about half an hour ago, and after snuffing about the office for a little, he ran upstairs. I gave orders to have him driven out, but the boys have been busy, and he is up there somewhere now."

The traveller, of course, went upstairs at once, and there on the mat before the chamber numbered forty-four lay Bruno, who sprang up with the most frantic demonstrations of delight at finding his master again.

The gentleman remembered that two years previous he had been with the dog in Florence, and had stayed at this hotel. He did not remember that he had occupied this particular room; but on reference to the hotel register such was found to be the fact.

The dog had remembered not only the hotel but the chamber, and when he found himself lost in a strange city he at once ran to the place where he and his master had been together before.

ONLY ONE SAVED.

Almost every dweller by Maine's rock-bound coast has heard that dreaded sound, so graphically described by Mrs. Thaxter:

"When morning dawned, above the din
Of gale and breakers boomed a gun!
Another! We who sat within
Answered with cries each one."

Mr. S. A. Drake tells, in "The Pine-Tree Coast," the story of a shipwreck on Cutts Island, in which all on board perished except the first mate.

The brig *Hattie Eaton* was caught in the equinoctial gale of March, 1876. Captain Cook, seeing that his vessel was driving on a lee-shore, steered for a strip of smooth water among the roaring breakers. A huge wave lifted the brig, and left her wedged between two rocks, a few cables' lengths from the shore. The seas flooded her deck and pounded her to pieces.

People ran up and down the beach, eager to aid, but were prevented by the surf, which threatened certain death to any who attempted to reach the doomed vessel.

The brave, cool captain worked his way out over the bow, where he could be heard by those on shore, and shouted farewell messages to his wife and the owners, till a wave swept him away.

One by one the crew were torn from the brig and dashed upon the rocks. At last only one man remained on board—he held a place at the bow.

The sight roused the shoremen to attempt his rescue. Taking hold of hands, they rushed out in the wake of a receding wave. The foremost man of the living chain got near the brig, and held out his hand. It was seized by the mate, who, more dead than alive, was dragged ashore.

MUCH PASSING.

When a stranger comes upon a person living in a lonely place, he is usually struck by the complete identification of the man with his locality, and the effect is often droll enough. An illustration of this is given in a scrap of conversation between a traveller and a man who lived in an isolated house on a Western prairie.

"You must find it terribly lonely here," observed the visitor, who was prospecting with a view to establishing a cattle ranch. "I suppose there is never any passing?"

"Oh yes," was the reply, "sometimes there is considerable. Why, only day before yesterday there was three hundred went by."

"Three hundred people!" the visitor exclaimed, in amazement. "I shouldn't have thought it possible."

"Oh, not people," said the other, equally surprised at being so mistaken. "Three hundred head of cattle."

"I see," the stranger answered, smiling at his own error. "I have not become part of the country yet, or I should have known what you meant."

BREAKING IT GENTLY.

In the province of Holstein, noted for its superior breed of cattle, the country people are not only very thrifty but exceedingly fond of their cows, as may be gathered from the following characteristic story:

Farmer Jan was walking sadly down the road one day when the village pastor met him.

"Why so sad, Farmer Jan?" said the pastor.

"Ah, I have a sad errand, pastor," said Jan.

"What is it?"

"Farmer Henrik's cow is dead in my pasture, and I am on my way to tell him."

"A hard task, Jan."

"Indeed it is. But I shall break it to him gently."

"How will you do that?"

"I shall tell him first that it is his mother who is dead; and then, having opened the way for sadder news still, I shall tell him that it is not his mother, but the cow!"

NEW VEGETABLES.

The soil of Nebraska surely exhibits some queer freaks as a result of dry weather, if the little fellow mentioned below is to be believed.

An almost total failure of crops caused the display of farm products at a county fair in western Nebraska to be very limited this year. Little Georgie had been to the fair with his papa, and came home disgusted, and exclaimed, with much indignation:

"Why, mamma, there wasn't a single thing in the vegetable department, except a goose and two glasses of jelly!"

WHAT KILLED HIM.

A typographical error is thus accounted for by the Whiteside *Herald:*

Compositor: That new reporter spells "victuals" "v-i-t-a-l-s."

Foreman: Yes, he's fresh. Make it right, and put the item in here. We must get to press in just three minutes.

The item was put in place, and this is the way the public read it:

"The verdict of the coroner's jury was that the deceased came to his death from the effects of a gunshot wound in his victuals."

SOMETHING FUNNY.

When a boy wants a favor very much indeed, he can generally find a way to express himself.

Little Charley asked his mother to talk to him, and say something funny.

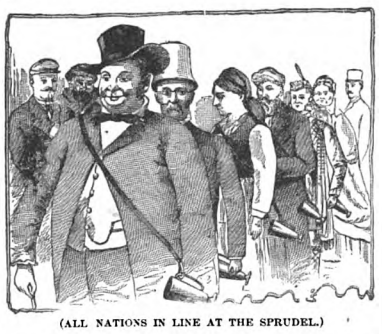
"How can I?" she answered. "Don't you see I am busy baking these pies?"

"Well, you might say, 'Charley, won't you have a pie?' That would be very funny for you."—*New York World.*

A PERFECTLY simple and innocent remark may have a queer sound, as when a lady wound up a letter by saying: "Now I must say good-by, for my feet are so cold that I can hardly hold the pen."—*Pick Me Up.*

Children often look pale and sick from no other cause than worms in the stomach and bowels. Give "*Brown's Vermifuge Comfits,*" a simple remedy. [*Adv.*

Ladies' Underwear should be made from KING PHILIP CAMBRIC, LAWNS and NAINSOOKS. Send stamp for samples. King Philip Mills, Worth St., N. Y. [*Adv.*



BICYCLES ON EASY PAYMENTS. No extra charge. All makes new or 2d hand. Lowest prices guaranteed. Send for cata and save money. Rouse, Hazard & Co., 8 G St. Peoria, Ill

A Mineral Spring in Every Household!

Not everybody can visit the Spas of Europe, the most famous of all which is Carlsbad, and which has been known for centuries for its healing properties; but every one can have the Spa on his sideboard in the shape of the CARLSBAD SPRUDEL SALT, which is evaporated from the Sprudel Spring at Carlsbad, and exported to the United States.

(ALL NATIONS IN LINE AT THE SPRUDEL.)

The CARLSBAD SPRUDEL SALT (powder form) is an excellent aperient, laxative and diuretic. It clears the complexion and purifies the blood. It is of great benefit in temporary and habitual constipation, liver and kidney diseases, chronic catarrh of the stomach and bowels, rheumatism and gout, etc., and should be used early in the morning before breakfast. Care must be exercised to obtain the genuine article, which is imported in round bottles. Each bottle comes in a paper cartoon. Write for pamphlet. Price per bottle, 75 cts. Sent by mail securely packed, $1.00.

GERANIUM "BRUANT" The Giant Among Geraniums.

This magnificent Geranium is the product of Mr. Bruant of Poitiers, France, and is the beginning of a new and distinct class. We consider this the best bedding Geranium of all varieties. The plant redounds in vigor; foliage strong, striking and of perfect habit. Color of the flower is a bright vermilion red of the most pleasing shade. The flowers are absolutely perfect in shape, color and make-up; trusses exceptionally large, and borne in immense spherical balls, often measuring eight inches in diameter. It makes a compact, dense growth, and has all the qualities that go to make the perfect bedder that it is. Fine also in pots. The flower of this Geranium is a happy consummation of what it should be to bloom freely and to be the most effective in appearance. It is of the semi-double type (the most striking of all) only the double form takes place near the base of the petals, allowing them free development, and at the same time showing the semi-double type. It embodies all the advantages of both types, the perfect development and free blooming qualities of the singles, the fullness and beauty of the doubles without their great fault of having the florets damp and drop off and become unsightly when planted outside. I have grown an immense stock of this variety. Try a dozen or more of this beautiful Geranium in a bed or clump, and it will delight you the summer through, with its handsome foliage and pleasing color. Price, 25 Cents; 3 for 50 Cents; 8 for $1.00 or 12 for $1.25.

FOR 75 CENTS I WILL SEND FREE BY MAIL, All Strong Flowering Plants, Each Labeled. 12 Ever-blooming Roses, or 12 Double Flowering Geraniums, or 12 Single Flowering Geraniums, or 6 each Single and Double Geraniums, or 12 Choice Chrysanthemums, or 12 Coleus, or 12 Basket or Vase Plants, or 12 Assorted Flowering Plants, or 25 packets beautiful Flower Seeds, or 20 packets of choice Vegetable Seeds.

THROWN ON HER OWN RESOURCES.

By Mary A. Livermore.

Third Paper.

In no particular has the condition of women changed so greatly for the better, during the last twenty-five years, as in their increased opportunities for self-support.

Fifty years ago the only occupations open to women who were obliged to maintain themselves were teaching, millinery, dress-making, tailoring, household service, factory work, and plain sewing. The available occupations had increased to twenty-seven in 1860, the year before the outbreak of the Civil War.

A few months ago, the Chief of the National Bureau of Statistics of Labor published a report in which he stated the number of employments open to women at the present time to be three hundred and forty-two.

It is possible for the young woman of to-day, with average ability and average force of character, to find remunerative employment. Her compensation will be small at first, but by conscientious work, and by fitting herself to do something better, she will become more valuable, and will command better pay.

In all Northern cities and large towns, there are organizations which endeavor to increase the industrial ability of young women who aspire to better work than they are doing and to larger wages.

In the Working Girls' Clubs, the Helping Hand Societies, the Women's Educational and Industrial Union, I have found girls learning to make button-holes; hard at work, with cash-book in hand, at mental arithmetic, fitting to be cashiers; taking lessons in penmanship, and also in grammar, for the correction of defects in chirography and colloquial speech—all with reference to obtaining a higher place in the world of work.

Two young girls, orphaned, poor and friendless, came to Boston a year ago in quest of employment. They found it in one of the dry goods stores, but were paid only two dollars each per week. Renting a cheap and poor apartment, and carefully husbanding the little store of money and household conveniences they brought with them, they joined a Working Girls' Club, were trained for more valuable service than that performed by cash girls, and now receive each five dollars a week as saleswomen, with a cheerful determination to do better yet.

A young girl of my acquaintance in a suburban town was orphaned some three years ago by the death of her father, who had supported himself and daughter on a salary that was barely sufficient for their daily needs.

Only sixteen years old, penniless, without relatives who could aid her, and untrained in any remunerative industry, her outlook was dreary. But she had good health, a good grammar-school education, energy and courage.

The sale of household goods and of a few valuables belonging to her father, which she could not afford to keep, brought her a little money. She obtained a temporary home with the Young Women's Christian Association, in Boston, where, at moderate cost, she was furnished most excellent accommodations.

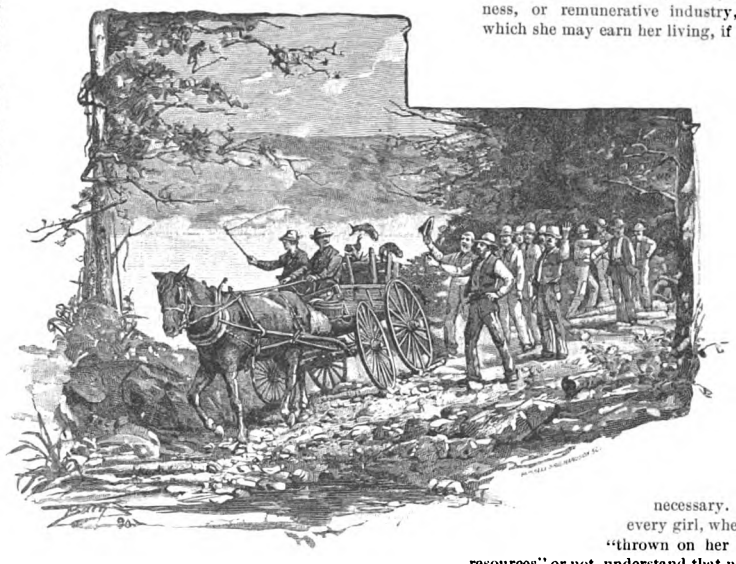
She entered a business school to learn type-writing, and, quick to learn, made such rapid progress that in a few months she began to earn a little money by occasional jobs of copying which she solicited.

Then she made the discovery that she would be eligible to a better position if she united stenography with type-writing. Unhesitatingly she bent all her energies to the acquisition of this art. For nearly a year she has been entrusted with almost the entire correspondence of a business house in one of the inland cities of Massachusetts.

One of the firm dictates replies to the letters that are received by every mail, which the lady clerk takes down as rapidly as they are spoken, copies them in correct style upon the type-writer, and takes them to the office for the signature of the firm. Her bargain was for twelve dollars a week the first year, but her salary is to be increased, for her painstaking experience has greatly enhanced her value to the establishment.

I know another young girl, of nearly the same age, who, with a younger invalid brother, was left even more destitute, with less of health, education and ability. A maiden aunt, herself very poor, received the twain into her humble home.

This girl was a fair hand-seamstress, and a very good sewing-machine operator. By the joint contributions of friends she became the owner of a sewing-machine, and timidly sought employment.



A few women of philanthropic spirit aided her in her quest, and work found its way to her. Sometimes she went out to families to sew by the day, sometimes it came to her by the piece, to be done at her home.

It was impossible for her not to do her very best in any work that came to her hands, for she possessed that kind of conscience which compelled it. Whoever employed her once was sure to engage her a second time, and she began to number among her employers, regular customers, who engaged her to come to their houses to sew by the week.

By and by she was persuaded to acquaint herself with the best methods of cutting and fitting ladies' dresses and children's garments. This added new interest to her work. She developed artistic skill in planning and making dresses for children, while her passionate love for them gave her great joy in the work.

Her health has improved, she has grown happier, brighter and prettier, the demand for her services is beyond her ability and time, her compensation is never less than two dollars a day, and the poor little home, with its beloved inmates, has taken on new life.

There are numerous instances of young girls unable to leave their homes on account of duties there which require their presence. A young girl in Vermont, into whose care was given a blind mother and a paralytic father, needed most urgently an addition to the family income. In the little village where she lived it was impossible to procure it.

Starting again for Uncle Sidney's.

In despair, and with profuse and unneeded apologies, she sent me several pots of fruit jellies, jams and marmalades, which she wished me to examine, and tell her how she could convert them into money. I found customers who immediately bought all her domestic wares, they were so excellent; and as her manufactures increased, they found additional purchasers for her dainties, who paid for them the price she asked.

Another girl, similarly anchored to her home by heavy cares, was in desperate need of money, and yet seemed to be lacking in gifts by which it is acquired.

She applied to several families in the town who were in good circumstances, to be engaged to repair weekly the family wardrobe, and the table and bed linen.

To test her ability, she was at first employed in mending stockings, and carried home with her on the first application forty-one pairs of hose, all needing repair, gathered from eight households. She executed this uninteresting work so well that she was trusted still further.

She has pursued this occupation for at least a dozen years. The repairing of elegant dresses, the re-bosoming and re-cuffing of fine shirts, the mending of lace curtains, with other like work, requiring care and patience, all find their way to her hands, as well as the coarser work of repairing the family wardrobe.

She has elevated her nondescript employment into a business, devotes her whole time to it, and has succeeded so well that she now has in a savings-bank, laid by for "a rainy day," a small amount which is constantly increasing.

I recall another instance of a young girl, living on a Massachusetts farm, whom duty held to the homestead for the sake of her parents and a brother whom they were carrying through college. She got permission of her father to carry out some ambitious plans she had conceived, of raising fine breeds of poultry.

She made her first hennery herself, rude but serviceable. She bought the best books on poultry-raising, and studied the business. She has prospered, enlarged her henneries, found ready customers and good prices for eggs, spring chickens and Thanksgiving poultry, and her profits year before last were nearly five hundred dollars.

I was told of another instance, on a recent visit to Dighton, Massachusetts, where two girls had achieved great success in the culture of strawberries, having cleared jointly, the year before, over one thousand dollars. They had, however, been trained to the employment.

Whether one lives in the city or country, the Women's Educational and Industrial Union, 98 Boylston Street, Boston, will undertake to sell in their Exchange any articles made by women and girls, for which they cannot elsewhere find a market.

Any useful or fancy articles, decorated china and pottery, wares necessary to the toilet or for travelling, dainty gifts for anniversary and birthday occasions,—these are always acceptable, if well done, and if possible will be sold at the valuation of the manufacturer, with a ten per cent. commission deducted, to defray the cost of selling.

Women and girls carry thither for sale bread and cake of their manufacture, jellies, crumpets, pressed meats, and all other kinds of portable dainties, which are always good. The demand in this department exceeds the supply.

Let me, in closing, assert my life-long conviction that every girl, rich or poor, should be trained to self-support. No matter what a girl's accomplishments may be, she is not thoroughly educated unless she is taught some profession, trade, business, or remunerative industry, by which she may earn her living, if it be necessary. Let every girl, whether "thrown on her own resources" or not, understand that never have women and girls had such opportunities for self-support as at the present time.

Never have women been so banded together to help one another as to-day; and never has it been so important that girls should do conscientious and thorough work as now, that they may hold all the advantages that have been gained for them, and that others may follow.

For the first step toward advancement in profitable employment is to do that well and thoroughly that comes first to hand, no matter how humble the work may be.

For the Companion.

OVER TO UNCLE SIDNEY'S.

"Going over to Uncle Sidney's" was one of the bright spots in a lonely boyhood.

Uncle Sidney lived not far from the "great river," as the old people of the county quaintly styled the Androscoggin. How many attractions his farm had! To say nothing of Doat, a stout lad of about my own age, and my other cousins, girls, who at that period of my life did not count, there were a foxhound, two Guinea-hens, a horse that we could ride, two trout brooks, a flock of geese, two large old barns to climb in, hens' nests to hunt, calves to yoke and sheep to salt. It was a boy's paradise.

But alas! the distance from my home was nearly twenty miles, and the way was by many a devious country road. I could go only once a year, or twice at most, when lucky opportunities and my personal behavior chanced to open the way.

"If you will be a good boy and work well till the last of April, you may go over to Uncle Sidney's, perhaps."

Thus spake darkly the family oracle. The "perhaps" was depressing. Yet even with that black shadow of doubt across the sunshine of hope, it was worth a great effort; for a visit to Uncle Sidney's meant four or five days of unalloyed joy.

Even when Doat was obliged to work a few hours of the day, there was time for several enterprises, great to us, expeditions, jaunts, hunts, and two or three games of "I spy" and "hide and coop."

It was on one of these infrequent visits at Uncle Sidney's that the following adventure took place.

At dinner on the second day of my visit, my uncle said to Doat, "Eli Bartlett, who lives over at Kimball's Mill, on Stony Brook, has offered to let me have a dozen of his new buff Cochin eggs to set. I want you to take the horse and wagon and go over after them this afternoon."

"Dear me! are you going to pay the awful price Bartlett asks for those eggs, Sidney?" cried Aunt Cordelia.

"Wal, 'Delia, the last time I saw him, he said he would take off a little from the two dollars that he's usually asked," replied Uncle Sidney. "I guess they're really a fine breed of hens," he added.

"I should think they ought to be, at two dollars a dozen for the eggs!" exclaimed Aunt Cordelia. "And it's fully eight miles over there, and a dreadful roundabout road, too. I don't believe Doat can find the way."

"Humph! I guess I can!" cried Doat, who was elated with the idea of the trip. "Anyway, cousin and I have tongues in our heads and can inquire."

"I'm going to give them a map, on a piece of board," said Uncle Sidney; "a map of the road and all the turns and the forks with other roads. If they follow the map they can't miss the way."

We took a half-bushel measure, filled with oats, in which to pack the precious eggs; and after some time spent over it Uncle Sidney handed us a bit of planed bass-wood board on which he had drawn, with a pencil, a map that somewhat resembled the diagram given below.

"This long line is the road you are to follow," said Uncle Sidney; "and these short lines leading off from it are roads which you mustn't take. You keep to the right all the way over there. It is the last house before you come to the sawmill. The little crosses are places where there are houses beside the road. Now mind the map, boys, and you can't miss your way."

Doat took the reins to drive old Dolly. I held the board map, and we set off in great glee.

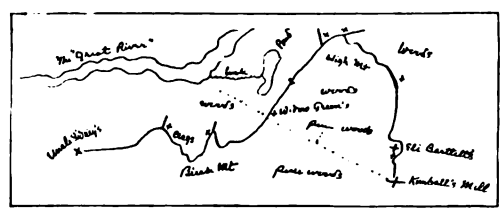
Two boys of our age, with a horse to drive, are not often in low spirits. Our heads were up. We hallooed to all the boys we saw on the road or in the fields, whistled to all the dogs, *yowled* at all the cats, cackled to all the roosters and ganders, and when in the woods a partridge flew up beside the way, oh, how we longed for a gun!

Everything that stirred we saw. I believe we killed two snakes, and we saw two big hen-hawks.

Spring was now at hand; the afternoon was warm, and only in the woods a few little patches of ice remained from the winter snows. The whole drive of eight miles was one long streak of enjoyment.

Thanks to the map, which we consulted at every turn and fork of the road, there was no difficulty in finding the way to Eli Bartlett's, although, owing to our many halts, we did not arrive there until about four o'clock in the afternoon.

Mr. Bartlett was away from home, but Mrs. Bartlett sold us the dozen eggs, for which she exacted the sum of a dollar and eighty-five cents. This she declared was quite too little, since her husband had paid ten dollars for three buff Cochin chickens.



She showed us how to pack the eggs; but before starting for home, we ran down the hill to look at the sawmill, where an upright saw was dancing merrily, up and down, through a spruce log, and at the water-wheel underneath.

We stayed so long at the mill that Mrs. Bartlett came down the hill to call us.

"You've a long way to go, and must drive carefully," said she. "I think you'd better be going. It will be dark before you get home."

The mill men told us that we could save two miles' travel by taking a new road from the mill up through the woods. "It comes out into the old road close by the Widow Green's farm," they explained to us.

We decided to take the new road, so we drove down to the mill and turned into it. The position and the relation of the new road to the old road are indicated by the dotted line in the diagram.

The new road led through pine woods. It was not a well-beaten thoroughfare, and we drove slowly, having the welfare of those precious eggs at heart.

Of course our board-map was of no use to us here. We came to one cross-road, and after a time to another. I thought that this must be the "old road;" and that we ought to turn to the left.

"But where's the Widow Green's place?" said Doat.

There were no buildings in sight near the turn. We heard afterward that they were hidden by a clump of pines a little way along the old road. After some hesitation we drove on, crossing our proper route, and continued along a road—as will be seen from the diagram—which led, still through pine woods, down into the valley of the "great river."

By this time the sun had set; and after going on

Digitized by Google

for a considerable time, our courage and our spirits began to fail us, with the dusk and the uncertainty.

We strained our eyes for some signs of a turn to the left; but still the road led on and on through what seemed endless woods.

At last we saw, or fancied we saw, a dark object run across the road, at a little distance in advance. Fearing that it was a bear, we were much inclined to turn the horse and go back; for old Dolly did not show much spirit on this road.

We came to a halt. Doat proposed that we should keep on a little way further, while I counted three hundred, slowly, and then, if we did not come to a turn, that we should go back. He whipped up and I began to count, slowly.

But before I had quite reached three hundred, we heard shouting ahead. The sound of human voices in the darkened woodland cheered us up so much that we resolved to go on and inquire our way.

The road led at once down a long hill. We saw a fire ahead, and what, in the obscurity, appeared to be a wide, open place, where we caught the gleam of water. Dark forms, as of men, flitted in front of the fire; and again a long halloo woke the forest echoes.

"You don't suppose they're Indians, do you?" I asked Doat.

He was not at all sure, but he did not think they were real Indians.

The old horse plodded along; and as we drew near the men, who were gathered about the fire, two of them saw us and ran toward us with a wild whoop. They seized the horse by the bit and pulled him up into the fire-light.

Thereupon a dozen or fifteen rough-looking fellows rose up, and after staring at us a moment, burst out in a loud laugh, followed by another wild whoop.

They were a gang of river-drivers, or lumbermen, in charge of a "drive" of logs going down the river. No doubt, after reaching this place in the afternoon, one of their number had paid a visit to the much too "accommodating" town liquor-agent, and had returned with a large jug.

At his best, a genuine river-driver is not often a gentle-mannered person; and an intoxicated river-driver is sometimes a dangerous character. By the time we arrived, the men had passed considerably under the influence of the stuff they had been drinking.

Earlier in the evening they had been to a brook hard by, and caught a great number of "suckers"—large, fat fish, weighing three or four pounds apiece. Three frying-pans were upon the coals, and bread was cooking in a tin "baker" nearly six feet long, on the other side. Pending these preparations, the men were passing the jug, dancing, shouting, and brandishing their "peevy-hooks."

It was into the hands of these Philistines of the "great river" that Doat and I had fallen.

They crowded around the wagon. "Hooray, bub!" one shouted. "Glad to see ye! Git right out and walk into the parlor! We'll unharness your hoss."

Before Doat or I could remonstrate, they had lifted us both off the wagon-seat, and had old Dolly out of the shafts.

We tried to tell them that we were lost and that we wanted to find our way home, but no one would listen. They caught us up bodily and seated us on a big box, with a lid and padlock, called a "wangin," in which the river-drivers transport their tools and camp kit.

They danced about us, slapped us on the back and shouted in our ears. I was terribly frightened, for I had no doubt they were all crazy. One of them caught sight of the half-bushel with the oats, and ran to set it before old Dolly, who had been hitched to a tree hard by.

"No, no!" screamed Doat. "You mustn't do that. There are eggs in there!"

"Aigs! aigs!" cried the man, swaying about and stirring the oats with one hand. "So they be! so they be! Let's bile 'em, boys!"

"No! no! no!" screamed Doat, rushing up. "They're buff Cochin eggs, worth two dollars a dozen!"

At this the noisy crew laughed loud and long. But "Bile 'em! bile 'em!" was still the cry. One brought a kettle, and another, with unsteady hands, began to put the eggs into it. Doat tried to take them away, and then the good-humor of the intoxicated men turned to ferocity. Several of them sprang up to seize him, uttering threats.

Doat started to run back along the road, but three or four of the crew gave chase, one snatching up a brand from the fire.

I dared not stir from the "wangin." They caught Doat, and dragged him back to the fire.

"Put him into the wangin!" some one said. This suggestion pleased the humor of the others, and they pulled me off the box, threw open the lid, and thrust Doat down into it. Frightened almost out of his senses at the idea of being shut up in such a place, Doat screamed and kicked; but in he went, and down came the lid.

"Oh, let me out! let me out! I shall smother!" screamed Doat. Hearing this last complaint, two of the men hoisted the lid, with me upon it, to give him air. This they continued to do at intervals, for several of the gang were not so tipsy as to have parted with all prudence. By and by they put a block under the lid, and let Doat peer out.

But they boiled the precious eggs, and ate them with their fried suckers and a great molasses sweet-cake, hot from the tin baking-oven.

At sight of the food and the eating, Doat and I stopped crying and looked on with some little reviving interest in life, for we were hungry. After a time one of the men who had lifted the lid brought a generous piece of sweet-cake to me. I found it so good that my tears dried for the time, and I passed some mouthfuls from it under the lid to Doat.

At last they offered to let Doat out, if he would be "a good boy," which he eagerly promised. He was allowed to sit on the "wangin" beside me again. Then we had more sweet-cake.

But as soon as they had finished their supper the jug was brought out again, and great hilarity followed. They ran races, and hauled our wagon around the fire. Then they began to ride old Dolly, on some sort of wager, up and down the road, one after another. One tried to ride standing on her back, "circus fashion," but fell off repeatedly.

I think it must have been midnight before the carousing flagged. At last the one who had given us the sweet-cake declared, in thick tones, that it "was time lill' boys was abed." He threw down some old coats behind the "wangin," and told us that we could lie there. He brought a blanket, too, and spread it over us; and from some strange freak of memory—memory of a boyhood, it may be, when he had known better associations—he sat on the "wangin" and made us say our prayers.

Some of the lumbermen had already lain down beside the fire. We lay still and waited, but at last we fell asleep.

When I again opened my eyes the sun was shining brightly on the river and among the pines. Doat was still sound asleep. The cook was getting breakfast, and all the men were astir.

They did not seem at all like the wild, noisy crew that had made the woods resound the previous night; in fact, they appeared very sober and woe-begone.

I wakened Doat and we edged out to the wagon. At first no attention was paid to us. Old Dolly had been hitched to one of the wheels of the wagon, and we began to harness her.

The foreman of the gang then came and asked whose boys we were, where we lived and how we had come there. When we had explained it to him he said that he was sorry about the eggs.

"Tell your father I'm sorry. Perhaps he'd like a mess of suckers. I'll send him some."

He picked up twenty or thirty large fish from the heap which they had caught, and put them in the back part of the wagon. Three or four of the other men now came forward; and seeing what the foreman was doing, each brought an armful, laughing. They filled the back of the wagon, and then brought stakes and some bits of board and built up a bin, which they filled at least three feet high with fish.

The half-bushel measure was also packed full and set in front. They then gave us each a piece of cold sweet-cake and told us we might go, and laughed as we drove out of sight with our load, which was so heavy that old Dolly could scarcely do more than walk.

We made the right turn this time, and reached Uncle Sidney's at about eight o'clock. As we drove into the yard with our load, Aunt Cordelia rushed to the door.

"Why, you poor, dear boys!" she cried. "Where in the world have you been all night? Sidney's off looking for you. He started for Eli Bartlett's at four o'clock this morning. But for mercy's sake, what have you got there!"

"A mess of suckers," we replied, disconsolately. "But we've lost the buff Cochin eggs."

We poured out the tale of our adventures. By the time we had finished it and taken old Dolly from the wagon, Uncle Sidney came back from his fruitless quest.

But both he and Aunt Cordelia bore the loss of the buff Cochin eggs with much greater fortitude than we had expected. They put down a barrel of suckers in pickle, and sent the hired man over for another dozen of eggs two days later.

TRAPPERS AND HUNTERS OF THE INSECT WORLD.

I.—The Ant-Lion's Trap.

Most insects that feed upon living creatures take their prey directly with claws and mouth. But some have ingenious ways of trapping their victims which remind one of man's methods of capturing wild beasts.

Among these is the ant-lion *(Myrmeleon obsoletus)*. It belongs to the dragon-fly family—beautiful lace-winged creatures that brighten our landscape as they flit to and fro, seizing and devouring insects in the warm days of summer.

Dragon-flies are not favorite insects among English-speaking people, although their usefulness deserves a better reputation. One may hear them called "devil's darning-needles" and "snake-feeders," to say nothing of the somewhat formidable name already used, which recalls the fabled monsters with whom saints and pilgrims of olden time are said to have done valiant battle, as did Saint George with the dragon.

I like the name by which the French call them much better. It is "demoiselle," or "young lady;" and it shows a sense of the real beauty of the insects.

Our ant-lion has a threefold existence. A part of its life it spends as a larva; another part as a pupa, during which it falls asleep, and wakes up to the third and last stage of its existence, namely, the perfect winged insect.

It is of an ant-lion in its first stage that I wish to write something, and the habit I am to describe gives it its special name, which indicates that it preys upon ants as the lion does upon beasts of the field.

I once had a fine opportunity to observe closely the habits of this insect. Several Myrmeleon larvæ were taken from the sandy soil of New Jersey, during the month of July, and brought in a large bowl filled with sand to my room in the Academy of Natural Sciences of Philadelphia.

In a short time the surface of the bowl was pitted with holes, from the size of a thimble upward. These were the ant-lion's traps. They are little pits in the shape of an inverted cone. They are not dug, but formed in a way peculiar to this insect.

When the larva wants to make a pit, it moves backward over the surface of the sand, directing its course downward and along a spiral line which gradually closes in upon the centre.

The body is just beneath the surface during this movement, and the displaced grains of sand which fall back upon its long jaws are continually thrown upward and well away by sharp jerks of the head. This motion is somewhat sidewise, and not unlike the preliminary passes of a butting sheep or goat.

The larva has another way of forming its pit. It burrows into the sand, just beneath the surface, and commences a series of violent tossings of the head, by which the sand is snapped upward and outward for the distance of several inches. This causes a vortex toward which the surrounding sand runs from all sides, thus naturally forming a cavity or pit with smooth and sloping sides.

In fact, the larva depends upon the well-known law of equilibrium to aid its labor. If the reader will scoop out a handful from a heap of dry sand, he will see all the grains around straightway begin to move toward the centre of the vacuum. They will not stop until they are all in equipoise; and when the motion ceases, it will be found that a cavity has been formed precisely like the ant-lion's pit.

Does the little larva understand this matter? Whether it does or not, it acts as if it did.

When the pit is finished, the ant-lion takes its place in the apex, at the very bottom, with all its body except the head and jaws quite covered over. The jaws are laid flat, extending horizontally and not vertically upward, although the habit may vary in this respect.

Having thus carefully arranged its trap, how does the ant-lion get its victims into it?

The insects most frequently trapped are ants. There is a vast deal of the Paul Pry in emmet nature; and the little fellows peep at and peer into almost everything they encounter.

In the course of its wanderings an ant comes near the ant-lion's pit. There for a moment it pauses, and that pause is often fatal. As it reaches out its two antennæ, waving them to and fro, and stretches its neck over the edge of the crater, the larva within begins a series of violent movements.

There is a popular notion that Myrmeleon throws sand at the ant in order to bring it down; but I have seen nothing to justify this opinion. The fact seems to be that when the ant appears upon the edge of the trap, it is almost certain to dislodge some grains of sand, which roll down and notify Myrmeleon that a visitor is near.

Thereupon, as I have said, it begins a series of violent agitations. The surrounding sand is tossed up by the snapping movements of its long jaws, already described.

In my little colony in the bowl, even pellets of sand as large as grains of rice were hurled clear out of the bowl to the distance of seven inches on the table. The sand was not thrown at the ant, but in all directions. If some of the grains struck the ant, they were chance shots.

This motion causes the agitation of the sand along the sides of the entire pit. Of course the grains dislodged and snapped out of the pit by the ant-lion leave a vacancy, which is at once filled by the grains lying above, and so a general movement downward is caused.

From all sides the grains begin to flow toward the centre of the pit. The sand around the rim shares the movement, and the particles beneath the very feet of the ant standing upon the edge begin to slide into the crater.

When the descent is once begun there is no stopping, and before the little creature knows what has happened, it is borne rapidly down the smooth sides of the pit, and lodged in the jaws of the terrible larva waiting to devour it.

The ants show a strange fascination for the pit, even if they make their escape.

A large Carpenter ant *(Camponotus Pennsylvanicus)* was seized, escaped, rushed out of the hole, then in and out once more, and around the edge as though verily dazed. Perhaps it was only angry, and looking for some one to fight!

It was rather too large an insect for the ant-lion to handle, or it would not have escaped; but I wondered that, having once got out of the trap, it should be disposed to put itself again in danger. However, I cannot affirm that human beings are always wiser, in similar adventures, than this insect was.

I must say that I have rarely seen ants deliberately walk into the pit. The insects usually stopped upon the edge when they reached it in the course of their rambles, then threw up their antennæ and waved them restlessly; sometimes they stretched a forefoot over the brink; sometimes they retreated; sometimes turned and began to walk around the mouth of the pit.

The agitation of the sand produced by these movements generally aroused the ant-lion to action, and by the process above described the sand was withdrawn from beneath the feet of the insect, which slid along with the tiny sand-avalanche into the apex. There it was seized, unless, as sometimes occurred, it was fortunate enough to make its escape.

The jaws of the ant-lion are long, hooked mandibles. When an ant descends into the pit, it is seized by these instruments and held off "at arm's length," so to speak.

Then the larva jerks and threshes its captive violently until it is exhausted. Meanwhile its efforts at defence are made vain by the distance at which it is held from any vital point of its captor.

Ants which are provided with stings try eagerly to use them, but are prevented by this distance from doing so, and are made quite defenceless. In the same way the formidable toothed mandibles of the Carpenter ant, by means of which she excavates her wooden galleries and decapitates her victims with the facility of the guillotine, are rendered useless.

This defence is made more complete by the position of the larva underneath the sand. A Carpenter ant, when seized by a hind leg, was seen to bow her body in order to snap at her captor, but her jaws grasped only the gritty pellets of sand which covered the ant-lion like an armor, and out of which the long hooked jaws alone projected.

A favorite position for ant-lions' traps is near the nests or formicaries of ants. I have seen them placed at the very doors of the immense colonies of the Cutting or Parasol-ants in Texas; and on the Great Divide of Colorado have found them at the entrance of the ant-hills.

Evidently the larva knows how to find good hunting-grounds; or—shall we rather say?—the mother Myrmeleon knows how so to deposit her eggs that her young shall find fitting nurture when they need it.

HENRY C. McCOOK.

For the Companion.

CHEATING THE INSURANCE COMPANY.

Second Paper.

Usually it is the inadequacy of the proofs offered that leads an insurance company to investigate suspected frauds, but sometimes it is the plausibility and completeness of the testimony that first excites suspicion.

Thus when a certain insurance company received a document covering over forty foolscap pages in proof of a death which it had no reason to doubt, the anxiety of the heir to make out his case led the officials to look into the circumstances with more than ordinary care. The result was that the policy-holder, who, it was alleged, had been drowned, was found alive and well, waiting in hiding for the money which he expected his son to get.

The son was a young lawyer, and his desire to show his knowledge of legal forms and the nature of evidence led him into a prolixity which betrayed him. If he had confined himself to a simple coherent statement, he might have succeeded in his dishonest purpose.

Drowning is the cause of death most frequently alleged in attempted frauds on life-insurance companies. A man goes on board a steamer and enters his state-room, but cannot be found after the vessel has started; or he puts off for a row in a small boat, which afterwards drifts ashore without him, having apparently been stove or capsized; or he goes bathing, taking with him some dull-witted person who can be easily deceived, and who, cheated by appearances, returns to tell of his sinking in the water and his failure to reappear on the surface.

One of the most pitiable things in life is the misapplication of talents which, if properly directed, would bring comfort and respect. Turned to evil, they bring only misery and dishonor; for however great the ingenuity may be which is exercised in attempted frauds of this kind, it is circumvented sooner or later, and seldom enables the person endowed with it to escape imprisonment.

An interesting example of the means taken to effect "a mysterious disappearance" is afforded by the case of a young merchant, who had embarrassed his affairs by a long-continued series of forgeries, each committed in the vain hope of concealing that which preceded it.

People who knew him positively saw him leave New York on a Sound steamer one night, but he could not be found the next morning, though the clothing he had worn was in his state-room, apparently just as he had left it after taking it off.

The assumption was that he had thrown himself overboard after finding that the discovery of his crime would be inevitable; but detectives were employed to trace him, and they arrested him as he was about to embark from San Francisco for Australia.

He had merely left the suit of clothes in the state-room of the Sound steamer, and after taking another suit from his valise, had shaved off his beard and gone ashore without being recognized.

There was the similar case of a young cotton broker, who was among the guests at a seaside hotel in Maine one summer.

Sitting with some friends in the parlor, one night, he complained that he was sleepless, and said that he thought an hour's "pull" might tire him and so enable him to find repose. The house was within a stone's throw of the water's edge, where several small boats were moored, and though it was late and dark he rowed off alone.

He did not return. Two days later the boat was found, partly stove in and bottom up, and near it was a "life-preserving" vest, partly filled with air. A further search led to the discovery of the hat which the man had worn.

The cause of his disappearance was plain enough now. He had struck a rock in the darkness, it was decided, and the boat had capsized and drowned him.

"No wonder!" said the fishermen. It was a foolhardy business for a stranger to attempt to row along such a coast on a dark night.

The officers of the insurance companies in which he was insured were not satisfied, however, and began a search which ended in the discovery of the missing man on his way to Canada.

In 1868, a dashing gentleman who called himself General Bowditch appeared, accompanied by his wife, in one of the smaller towns of Indiana, and declared that the place was so attractive to him that he would take up his residence there.

He bought a fine house, drove fast horses, and entertained lavishly. So affable was he, so hearty in manner and so brilliant in conversation, that he quickly became one of the most popular men in the place.

Many honors were bestowed upon him; he was wanted on committees, his advice and encouragement were sought whenever any industrial or charitable project was set afoot. His wife, a small, pretty woman, stood scarcely lower than he did in the esteem of the neighbors.

General Bowditch had seen service in the Civil War, and had been brevetted a brigadier-general! So he said, and no one ever doubted his word or made any inquiry to corroborate it.

When they had lived in the town between three and four years, the "general" and his wife started for St. Louis to take a tour on a steamer up the

Digitized by Google

Missouri, and a day or two later the news came back that he had been drowned.

He had not been well, the widow explained when she reappeared, and at about eleven o'clock at night, several hours after leaving St. Louis, he had gone out of his state-room to get some fresh air, and had seated himself on the rail of the boat with one arm around a stanchion. While seated there he had asked her to get him a glass of water, and as she started to do so he had fallen overboard.

"I sprang to catch him, but could not. I saw him reach the water. There was a splash and all was over. No cry was made. I gave the alarm, but it was some time before the steamer could be put about, and nothing could be seen of him then."

The clerk of the boat stated that he had missed the general at the supper table and had offered to send a steward with some supper to him, but that Mrs. Bowditch had said that he did not wish to be disturbed. When the boat returned to St. Louis she pointed out the precise spot where the general had been sitting, and indicated her own position near the state-room door when she saw him fall.

He was heavily insured, and an agent of the company that had written the policy was present on this occasion.

"Are you quite sure that it was here he sat, madam?" said the agent, putting his hand on the rail.

"Yes, I am positive; and he had hold of this stanchion," she added.

"Very sad, very sad! You saw him fall?"

"Yes; he fell backward, and just as I reached the rail I saw a splash, and that was all," she said, repeating the testimony she had already given.

The agent made no further remark, but looking over the rail he saw that it was impossible for any person sitting on it to fall into the water, for the lower deck projected far beyond it. It was the deck that one falling would strike—not the water.

Mrs. Bowditch received much sympathy, and when, a few weeks later, it was announced that the insurance company would contest the policy, there was great indignation among her neighbors. Even the local agent of the company condemned its action, and declared his belief in the justness of her claim. The feeling grew so bitter against them that the officials were at last obliged to compromise; and though they did not pay the full amount of the policy, they paid several hundred dollars to the supposed widow.

She continued to live in the town, and there was nothing in her conduct to excite suspicion, or lessen the respect which had always been shown her. Meanwhile she was prosecuting a suit against another insurance company, in which, also, the general had held a policy, and the case dragged itself along in the courts.

At the end of three years it was still unsettled, and all this time Mrs. Bowditch was living, irreproachably as ever, in the little town where she was so popular.

The body of the general had never been found, and the insurance people held resolutely to their theory that he was alive.

They were not mistaken. He was discovered in Illinois, where, under an assumed name, he had located himself, and where, petted by society, he was waiting for the successful issue of his wife's suit. She had been in constant communication with him, and had she succeeded in winning her case, would have joined him in victimizing other companies.

How had Bowditch managed to escape from the steamer? A moment before she left the wharf at St. Louis he had sneaked ashore in another suit of clothes, leaving behind those in which he had been seen. He was not on board when the clerk inquired for him, and that was the reason Mrs. Bowditch had refused to allow the steward to go to the state-room.

Both of the impostors were arrested, and when they were released both were broken in health.

"They have gone forth," said an official, writing of the case, "without money, health, friends or reputation, and are left to meditate upon the results of their attempt to defraud the insurance companies. They lost all that is worth having in this life, and are able to offset these fearful facts with a knowledge of having realized for all this, a little more than four hundred dollars of the insurance company's money."

WILLIAM H. RIDEING.

NOT EASILY EXCITED.

Professor Cox—let us call him—was thoroughly in earnest as a scientific worker. Every event that he observed was made to add something to his knowledge, or to illustrate some truth already learned.

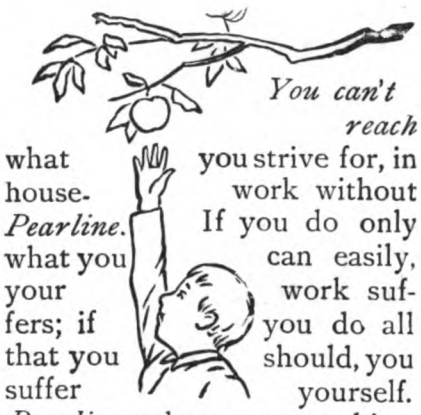
His readiness to make passing events teach practical lessons was well shown by an incident that occurred one day in the lecture-room.

Placed before the class was a machine by which some gas was being liquefied in a heavy cast-steel cylinder by cold and enormous pressure. Suddenly there was a terrible crash, as pieces of the cylinder were hurled violently in every direction. Glass was shattered, plastering knocked down, filling the room with dust, and general havoc reigned.

The condensed gas, suddenly freed from pressure, rushed out like a stream of snow-flakes, adding decidedly to the general effect of storm and destruction. Luckily, nobody was hurt, but two seconds after the explosion every man in the class was scrambling for the door over chairs, settees and whatever else was in the way.

At the door a few of the students paused, and then they heard Professor Cox calling—in the calmest possible tone—for them to return.

Looking back, they dimly saw the professor, a crayon in each hand, standing amid the ruins before the big blackboard, which he was fast covering with the figures of elaborate calculations.



A moment later he began to lecture as quietly as ever, describing fully why the explosion occurred, the amount of work done by it, and the different ways in which this work had been expended. In conclusion he said:

"Gentlemen, never be so excited by any event that you cannot observe it closely, and draw from it some practical lesson."

Well named is the "Multum in Parvo Songster." Where else can you get 600 songs, *words and music*, for 30 cents? See page 142 of March 5th COMPANION. [*Adv.*

Itching Piles.

Burnett's Kalliston is a sure relief. A sample will be mailed on receipt of ten cents by Jos. Burnett & Co., 27 Central Street, Boston, Mass. [*Adv.*

You can't reach what you strive for, in house-work without *Pearline*. If you do only what you can easily, your work suffers; if you do all that you should, you suffer yourself. *Pearline* takes your washing and cleaning on its own shoulders. Beware of imitations. 257 JAMES PYLE, N.Y.

AYER'S Sarsaparilla

has cured others and will cure you. It will cure you of INDIGESTION; it will cure you of LIVER and KIDNEY COMPLAINT; it will cure you of any disease originating in impure blood.

AYER'S Sarsaparilla

is the best medicine to take during the months of **March, April, May.** It is pleasant to the taste, powerful in its action, and never fails to produce the desired effect. It relieves that tired feeling, restores the vigor of health to every tissue and fibre of the body, and makes the weak strong. It quickens the appetite, aids digestion, and is the best—**The Superior Medicine**—for all diseases and ailments peculiar to **Spring.** If you have determined to take **AYER'S** Sarsaparilla, don't be induced to believe that anything else is just as good. Remember that **AYER'S** Sarsaparilla is the only medicine of which it is said, **Has cured others, will cure you.**

SCOTT'S EMULSION

Of Pure Cod Liver Oil with Hypophosphites Of Lime and Soda.

There are emulsions and emulsions, and there is still much skimmed milk which masquerades as cream. Try as they will many manufacturers cannot so disguise their cod liver oil as to make it palatable to sensitive stomachs. Scott's Emulsion of PURE NORWEGIAN COD LIVER OIL, combined with Hypophosphites is almost as palatable as milk. For this reason as well as for the fact of the stimulating qualities of the Hypophosphites, Physicians frequently prescribe it in cases of

CONSUMPTION,

SCROFULA, BRONCHITIS and CHRONIC COUGH or SEVERE COLD.

All Druggists sell it, but be sure you get the genuine, as there are poor imitations.

If Little Babies

Could Write Letters

WHAT a host of grateful testimonials the proprietors of the **Cuticura Remedies** would receive. How their little hearts would overflow in ink. *They* know what they have suffered from itching and burning eczemas and other itching, scaly, blotchy, and pimply skin and scalp diseases before the **Cuticura Remedies** were applied. Parents, are you doing right by your little ones to delay a moment longer the use of these great skin cures, blood purifiers, and humor remedies? Everything about the

CUTICURA

Remedies invites the confidence of parents. They are absolutely pure, and may be used on the youngest infants. They are agreeable to the most sensitive. They afford instant relief in the severest forms of agonizing, itching, and burning skin and scalp diseases, and are by far the most economical (because so speedy) of all similar remedies. There can be no doubt that they daily perform more great cures than all other skin and blood remedies combined. Mothers, nurses, and children are among their warmest friends.

"ALL ABOUT THE BLOOD, SKIN, SCALP, AND HAIR" mailed free to any address, 64 pages, 300 Diseases, 50 Illustrations, 100 Testimonials. A book of priceless value to mothers, affording information not obtainable elsewhere.

CUTICURA REMEDIES are sold everywhere. Price, CUTICURA, the Great Skin Cure, 50c.; CUTICURA SOAP, an Exquisite Skin Purifier and Beautifier, 25c.; CUTICURA RESOLVENT, the greatest of Blood Purifiers and Humor Remedies, $1. Prepared by POTTER DRUG AND CHEMICAL CORPORATION, Boston.

Pimples, Blackheads, red, rough, and oily skin and ' nds prevented and cured by that greatest of all Skin Purifiers and Beautifiers, the celebrated **Cuticura Soap.** For the prevention of facial blemishes, and for giving a brilliancy and freshness to the complexion, **Cuticura Soap** is incomparably superior to all other skin and complexion soaps, while rivalling in delicacy and surpassing in purity the most expensive of toilet and nursery soaps. *The only medicated toilet soap, and the only preventive of clogging of the pores, the cause of pimples, blotches, and blackheads.* Sale greater than the combined sale of all other skin soaps.

A FINE FORM IS NOW THE FAD

and EVERYBODY CAN HAVE ONE.

The Boys and Girls are all crazy on the subject of physical culture, and men and women are equally interested. It is a craze that should be encouraged, for a healthy body creates a healthy mind.

"But," say some, "we have no time; and, besides, we cannot go to a gymnasium." You surely can afford fifteen or thirty minutes a day, and you need not go to a gymnasium, or provide apparatus, unless you wish to: in fact, you may become your own professors of gymnastics, and attain a beautiful form and perfect health by an outlay of only 20 cents; for in the April Number of DEMOREST'S FAMILY MAGAZINE (now ready) you will find a thoroughly practical and complete course of "Physical Training," by the well-known author and lecturer E. B. Warman, A.M., who is an acknowledged authority on the subject. This course gives clearly a system of exercise that can be practiced at home, without any apparatus, and each movement is illustrated, and the special benefit to be derived from it fully explained, so that one may exercise intelligently to attain a desired result. If any particular part of the body needs strengthening or developing, the illustrations and descriptions indicate the proper movements to be practiced for the purpose; and the exercises recommended are suitable alike for men and boys, women and girls. Mothers, buy the April number for your daughters and sons, and you will certainly become interested yourselves; your husbands will also, no doubt, join the Family Class. This number also contains an article by Susanna W. Dodds, M.D., on "Thinness; its Causes and Cure"; "How Art Students Live in New York"; "Mexico, Our Next Neighbor"; "All Kinds of Kites" (for the boys); "Useful French Ways of Cooking Eggs"; "Grotesque Ways of Decorating Eggs for Easter"; "How to Grow Palms," etc., etc., all handsomely illustrated; besides an elegant Water-Color (Easter Lily), that is worth framing. DEMOREST'S FAMILY MAGAZINE is for sale by all newsdealers; or, send 20 cents to the Publisher,

W. JENNINGS DEMOREST, 15 East 14th St., New York.

WONDERFUL MUSCLES.

Not long ago exhibitions were given in London by two marvellously strong men, one of whom carried a cannon weighing four hundred pounds on his shoulder, and the other lifted his companion, who weighed three hundred and seventy-six pounds, high above his head. Instances might be multiplied in which these feats have been equalled or excelled. Beside those strong men who have appeared in public, there have been others of whom the record is interesting.

Charles Louvier, a carpenter of Paris, found it child's play to roll a tin basin between his fingers into a cylinder. On one occasion he carried off a soldier on guard who had gone to sleep in the sentry-box, and deposited both box and soldier on a low churchyard wall close by.

Another man who sometimes found his great strength a source of amusement was a Danish locksmith, Knut Kundson. He, while standing in a window on the ground floor, lifted with one hand half a bullock from the shoulder of a butcher who was toiling past with his load.

Augustus the Strong, Elector of Saxony, once entered a blacksmith's shop to have his horse shod. To show his suite how strong he was, he picked up several horseshoes, and broke one after the other, asking the blacksmith as he did so if he had no better. When it came to paying the bill, the Elector Augustus threw a silver piece on the anvil.

It was a very thick coin. The blacksmith took it up and broke it in half, saying, "Pardon me, but I have given you a good horseshoe, and I expect a good coin in return." Another piece was given him. He broke that, and five or six others. Then the humiliated Elector handed him a louis d'or, saying:

"The dollars were probably made of bad metal; but this gold-piece, I hope, is good."

An Italian, Luigi Bertini, of Milan, performed a similar feat. Besides horseshoes, he broke nails a finger thick.

The Duke of Gramont, the Minister of Napoleon III., frequently astonished the ladies at court by bending a twenty-franc piece in his hand.

A STRANGE LAKE.

A writer in *Donahue's Magazine* tells of a strange lake in Ireland, whose waters have the power of petrifying any substance that may be put into it. Of course it is understood that petrifaction is not the actual turning of a substance into stone, but that the material of stone, dissolved in water, is deposited in its cells where it hardens. A stone is made upon the model of the substance petrified as a casting is made by filling a mold.

An English firm, a well-known cutlery house, heard of this lake, and at once sent a man to examine it. He selected several pieces of hard wood, and having tied weights to them plunged them into the lake, and marked their location by small buoys.

In two weeks he returned and took up two pieces, which he found to be partly petrified. Two weeks afterward the rest were taken up, and each piece of hard wood was hard as flint, petrified through.

Then the firm made experiments with the wood in the different stages of petrifaction, and discovered that unusually excellent razor hones could be manufactured from it. These hones are now a famous product of the firm, but the razor-sharpening world little knows that the stone is, so to speak, wood, petrified in a few weeks in the largest of the Irish lakes.

In several ancient histories there is reference made to the "hard, woody stone," which was taken from the bottom of Lough Neagh for spear and arrow-heads by the early Irish. So that, although Irishmen to day are unaware of the useful peculiarity of their "big lough," those of ten and fifteen centuries ago knew it well, and utilized it. In the museum of Trinity College, Dublin, can be seen several of these spear and arrow-heads made centuries ago.

NEW VERSION.

The mythologies of different nations show how stories of the same action or event are colored by the condition and habits of the story-tellers. The same tendency is illustrated by a deaf and dumb child's version of the famous George Washington legend.

"I have heard and read many pathetic stories," said Senator Hoar to a *Star* reporter in Washington the other day, "but few of them ever excited my sympathy more than one related by Professor Gallaudet.

"The professor had a favorite pupil—a little deaf-mute boy, who was exceptionally bright. Professor Gallaudet asked him if he knew the story of George Washington and the cherry-tree. With his nimble fingers the little fellow said he did, and proceeded to repeat it. The noiseless gesticulation continued until the boy had informed the professor of the elder Washington's discovery of the mutilated tree and his quest for the offender.

"'When George's father asked him who hacked his favorite cherry-tree,' signalled the voiceless child, 'George put his hatchet in his left hand —'

"'Stop,' interrupted the professor. 'Where do you get your authority for saying he took the hatchet in his left hand?'

"'Why,' responded the boy, 'he needed his right hand to tell his father that he cut the tree.'"

WHY HE THOUGHT SO.

The mingling of all ranks and trades in the territorial militia now maintained by almost every European country is a great source of amusement, because such mixing of different elements is not very common in that part of the world.

It is related that, at a recent sham battle, a young Lieutenant, posted with his company behind a wall, ordered his men to fire at a detachment of troops who were marching by.

The guns were loaded with blank cartridges, and no harm was done; but the detachment happened to be on the same side of the sham fight as the company which had fired at it.

The commanding officer came riding up.

"Why did you fire at those men?" he demanded of the Lieutenant, hotly.

"I supposed they were the enemy," said the Lieutenant.

"And what led you to suppose they were of the enemy?"

"Because my tailor was at the head of them, and I saw my butcher in the ranks. What else could I suppose, sir?"

BOSTON, THURSDAY, MARCH 26, 1891.

$1.75 a Year.
Single Copies, Five Cents.

For the Companion.

KITTY'S EASTER OFFERING.

The shade was grateful, for the September sun was unseasonably warm. With a sigh of weariness, Lou settled herself in a corner of the broad Conservatory steps and drew her crutch out of the way of the laughing groups of students, passing in and out. Across the street, the dusty trees of the park stood glorified in the web of golden sunlight cast about them. They were vastly more attractive as a resting-place than the hard step, one would think, yet this was the child's favorite haunt.

There was, in her mind, good reason for it. From the open windows above floated out the sounds of music, to mingle with the city's roar.

So familiar had grown the poor little twisted form, with the patient child face above it, that her presence occasioned no surprise among the gay students, and many smiled a friendly greeting.

From the nearest window sounded the tones of a violin, and, as the bustle outside grew less, the music became proportionally louder. Pretty Katherine Beacham was struggling with the second lesson of the term.

The little lady was not in the sweetest of moods. She looked upon a violin lesson, so soon after the glorious freedom of a summer vacation, as an imposition. The summer's outing had stolen from her some of the skill of her fingers, which stubbornly refused to obey orders.

"Oh, no! It goes not so, mees! You do not attention pay!" Herr Krebs groaned, his patience almost exhausted.

Kitty pursed her rosy lips a little defiantly, and attacked the offending cadenza once more—a rosy danger-signal in her cheeks and an angry sparkle in the brown eyes.

Again the fingers tripped on the troublesome fingering, while the last note scraped most dolefully.

Herr Krebs shrugged his shoulders as he settled his violin in place. The little contemptuous gesture did not escape Miss Kitty's sharp eyes. She listened angrily while the professor played the passage skillfully.

"It is not so hard! Now you vill vonce more play, and do not look around your shoulder!"

This was the last straw. Kitty banged the exercise book together and unscrewed her bow with vigor.

"It's no use, Herr Krebs. I cannot play it, so I'll go home."

He smiled a little scornfully. "You vill play me the same lesson Thursday. Goot afternoon."

He bowed low, with sarcastic politeness, as he held the door open.

As Kitty rushed angrily down the steps, the little crutch lay in her way. With her foot she sent it spinning into the street. Then she went to recover it, and brought it back to the startled owner. It was the work of a moment, but in that moment her anger had taken flight.

"I'm so sorry!" said Kitty. "I hope I have not hurt it."

She looked anxiously into Lou's startled blue eyes.

"Oh, not at all!" Lou exclaimed, eagerly, a wave of color rushing up to the brim of her old brown hat. She was overpowered with delighted surprise that this pretty girl should speak to her. "It is very strong—and anyway it has to be," she said, with a little sigh.

Kitty was much embarrassed, but she made no move towards going.

"I should think you would find the stone steps hard to sit upon," said Kitty. "Don't you like the park?" She looked across to where the fountain leaped in the sun.

"Yes, but there's the music here." Lou suddenly realized that she had been eavesdropping, for she had heard more than the music. "How you must enjoy it!" she added, hastily.

Five minutes before, Kitty had thought she did not enjoy it. The girl's earnestness brought out the real truth in her answer:

"Yes, I do—more than anything else. But perhaps you wouldn't think so if you had heard me quarrelling with my teacher—or did you hear?" she added, quickly, noting the open window and the conscious look in her new friend's eyes.

Lou blushed. "I'm so sorry, but I couldn't help hearing—your voices were so loud."

"It was only a specimen of my naughty temper," Kitty said, and laughed to cover her confusion. "It makes me a great deal of trouble, especially with my music—for one needs all one's patience in that. But he was aggravating!"

"Is it the teacher with the light hair and kind eyes? He looks so tired, these warm days, after giving so many lessons. But I shouldn't think you would mind it, when you play so beautifully."

The girl here extended her hand caressingly toward the violin case.

"Would you like to play the violin?" asked Kitty, absently. Her conscience smote her at the thought of the wearisome round of lessons Herr Krebs had to endure. She nodded to a girl who passed in at that moment. It was Miss Jackson, whose hour followed her own, and against whom Kitty had conceived a jealous prejudice.

"I couldn't play it," said Lou, her voice trembling. "Since I hurt my back I cannot do much anyway."

"Oh, forgive me! I didn't think what I was saying," cried Kitty, remorsefully. "To tell the truth, I was thinking of my rudeness to Herr Krebs. Could I leave my violin with you a moment?"

The girl took it eagerly, and Kitty hastened back into the cool hall, fearing that her courage would not hold out until she reached Herr Krebs's room. Why had she not gone back before Miss Jackson arrived? She knocked hastily. If only Herr Krebs would come to the door! No—it was Miss Jackson's wondering eyes that she saw, and beyond, the cool surprise of her teacher.

"I hope you will pardon my rudeness this afternoon, Herr Krebs," said Kitty. "Indeed I am much ashamed of myself."

Kitty stood, very heated and shame-faced, before the astonished teacher.

"My dear Mees Kitty—don't mention it! I, too, should apologize that I haf so little patience," replied Herr Krebs. He bowed to her as she withdrew, with a very different air from that which he had used so short a time before.

When Kitty reached the door once more, Lou was adjusting her crutch. The afternoon was waning, and her mother would soon return from her day's sewing. She started down the street, with Kitty at her side. As they walked, Lou told something of the cruel accident which had crippled her in her early childhood, and which was slowly sapping her strength.

"You must come to see me," said Kitty, "and I will play to you as much as you like. Perhaps you will come next Thursday after my lesson; I should be very glad to have you!"

"Oh! I should like to so much! If I am able to be out, I will wait on the steps. Sometimes the pain is so sharp that I cannot sit up."

When Thursday came, Lou was at her post, and Kitty led her in triumph to her mother, whose kind heart went out to the shy girl.

This was the beginning of many happy days for Lou. Curled in a corner in the music room, she would listen while Kitty played, with her mother's accompaniment on the piano. Things went better in the lame girl's poor home, for Kitty's enthusiasm led her to make many sacrifices of her time and pleasure in Lou's behalf.

The winter came and passed. Lou's admiration spurred Kitty to greater efforts, and Herr Krebs was astonished at his pupil's progress.

Mrs. Beacham sat before the library fire, one blustering March evening, waiting for her daughter. Her thoughts were upon Lou, who, in spite of loving care, grew weaker every day.

Kitty came in, rosy and breathless from her walk in the wind.

"How did you find her?"

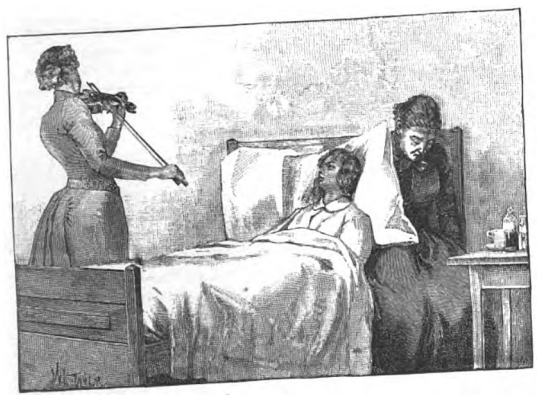
"I'm afraid she is not so well, mamma." Kitty curled herself upon the rug, and settled her head comfortably against her mother's knee. "What did Dr. Loomis say? Surely she will be better when the warmer days come."

"I'm afraid, my dear, that little Lou will never be better." Mrs. Beacham stroked her daughter's brown hair lovingly, her heart full of pity for the other mother who was trying to look bravely upon a coming grief.

Kitty was silent. A lump rose in her throat, and the fire glistened through her tears.

"Dr. Parker was here this afternoon," said her mother, presently. "He wished much to see you. The committee are arranging the Easter programme. Miss Stafford is to sing, and Dr. Parker wishes you to play the violin obligato."

"Mamma!" Kitty sat upright on the rug, with an incredulous face. "Of course you told him it was impossible!"



"I told him you must decide."

Digitized by Google

"But, mamma—to play in church before the people I have known all my life! Oh! it would be impossible!"

"I objected to the prominence it would give you, but the doctor said it could be arranged so that you need not be visible, and none need know who was playing. The doctor was very urgent; he had seen Herr Krebs, who told him you were fully capable of accompanying Miss Stafford. I thought, dear," she said, as she looked down into Kitty's troubled eyes, "that you might make it your Easter offering."

All through the evening Kitty sat in a brown study, which her mother did not disturb. Kitty

was having a struggle with herself. It was quite a different matter to play in the Conservatory recitals—she had grown accustomed to those. But the church, with its great arches, its solemn-toned organ, its pulpit wreathed and hidden with masses of Easter bloom, and, ringing over and through it all, Miss Stafford's pure voice with its undercurrent of sadness!

Kitty could hear and see it all. She always felt the tears spring when Miss Stafford sung; how could she venture to support that glorious voice—to weave about it the tender notes of her instrument?

But what was it that mamma had said about an Easter offering?

After Kitty had gone to her room for the night, Mrs. Beacham heard her calling, softly, in the hall. "If you think it best, and Herr Krebs says I am competent, why, mamma, I will try," she said.

Now that she grew accustomed to the idea, it did not seem such a trial; and, when the rehearsals began, and Miss Stafford praised her accompaniment, she played with a feeling of elation. Her Easter offering bade fair to be no sacrifice at all, but a gratification.

Of all this Lou heard nothing. Each morning found her so tired, with the pain of the night, that she no longer made an attempt to hobble about the two small rooms, but lay quietly, watching the slowly moving clouds above the opposite chimney-tops, or the sickly sunbeams which flickered over the gay quilt.

Her bright hours were those in which Kitty, perched on the bedside, played softly the music Lou loved so well, or when Mrs. Beacham cheered her with her sweet presence, always bringing some dainty surprise for the little invalid.

Yet Lou knew that life was slipping from her grasp. She could read it in her mother's sad eyes, and in her soft sobbing when night came down.

Easter morning was as bright as even an Easter morning can be. To Kitty's eager eyes, as she peeped through the soft silk curtains, it seemed like a new world. It was late in April, and the air was already balmy with a breath of spring. The parks were decked in their bravery of early hyacinths, and tulips thrust up glowing cups to greet the dawn.

The churches would be well filled on such a day, and Kitty's heart gave a little bound of excitement.

Coming down the wide stairway, in her soft gray dress, with the golden light from the stained glass behind her, Herr Krebs thought her a most winning sight.

"Why, good morning, Herr Professor!" cried Kitty, as she ran down the remaining stairs. "How good of you to come and screw up my courage! Are these for me?"

With a quaint little bow, the musician handed her a cluster of blue violets. "It is a bit of the spring itself," she said, and buried her nose in the flowers.

"Ah, mees, I have the hope that you do not feel timid. Dere is no need! I am not timid for you." He beamed broadly upon his promising pupil.

"Oh, I have only a little scary feeling, now and then. I practised very hard, last evening, and all went well. Yes, Emily, what is it?" she added, as a servant came near.

"The mother of your little friend was here early, Miss Katherine, and asked to see you. She told me to tell you, when you came down, that Lou is failing very fast, and asks constantly for you. I asked her to stay, miss, until she had seen you, but she did not dare to wait a moment."

"Oh, mamma! Did you hear? And I haven't been there for two days! I was so busy with this music!"

Kitty turned helplessly to her mother, who appeared in the doorway. "What shall I do? The first bells will ring in half an hour. Dr. Parker told me to come early, but there is Lou watching for me!"

Kitty stood in the middle of the hall, looking up at the golden glory from the window on the stairs. Her mother and Herr Krebs watched her anxiously, for there were signs of an inward struggle in her face.

Ambition and inclination drew her strongly in one direction; in the other, a pale, wasted, childish face, with its patient blue eyes, appealed to her. She knew how wistfully those eyes would watch the door, and how the quick ear would listen for a footstep which did not come.

With a quick throb of her heart she felt that here was the offering she must make; not of talent, where an admiring congregation should smile its approval, but the same gift of sweet harmony to soothe the anguish and gladden the heart of one of the Master's "little ones."

Thrusting out her hand quickly, as if putting away the dream that this day was to realize, Kitty bravely made her sacrifice.

"Mamma," she said, "it would never do to let Lou wait so long. You will not be disappointed, will you? Miss Jackson will take my place; she has played the same obligato many times at the Conservatory. There is time to let her know. I think she will be willing."

Kitty fled up the stairs.

For a moment Herr Krebs and Mrs. Beacham looked silently at each other.

"You are disappointed, I fear," said Mrs. Beacham, "but Kitty has chosen rightly. Do you think the matter can be arranged?"

"I vill play it myself, as a substitute. Mees Kitty is a goot girl!"

When Mrs. Beacham and Kitty reached Lou's home, they found her propped up with her head upon her mother's shoulder. A change had come, and the great eyes were filled with new meanings. She smiled faintly.

"I knew—you'd—come," she whispered. "Play—once more!"

Kitty did play, as her mother had never heard her play before. Tears filled the brown eyes, but the fingers did not falter, nor the hand tremble that drew the bow across the answering strings.

There was a slight rustle in the room. Mrs. Beacham softly laid her hand upon the strings. Startled, Kitty looked up, and read the truth in the agonized face of Lou's mother.

The sunshine fell upon the pale face, the shining hair, the closed eyes. Lou had gone to the Father, taking with her Kitty's Easter offering.

MARION DICKINSON.

For the Companion.

"NEVER FAILETH."

A young woman stood on the forward deck of a crowded ferry-boat, as it forged its heavy way through the water, making swells which rocked the smaller boats near by and washed high up on the piles at the dock.

The young woman did not notice the shipping, the tall buildings, the noisy landing or the pushing crowd behind. She was thinking; and as the boat jarred against the buffers she said in a low tone to herself, "*Love* is the greatest thing in the world."

No one heard or heeded her but one pale-faced little woman in a black shawl, who stood crowded almost against her. She heard the words, and a look of wonder came into her hungry eyes. But the boat was docked, and the crowd pushed them on, and each went her separate way.

The pale-faced little woman in the black shawl hurried from place to place, but all the time she was turning over in her mind the words, "Love is the greatest thing in the world—in all the world."

Love of what—love from whom? It made no difference. Love was not for her. Youth was gone, hope was gone,—there was nothing for her but work. Her husband lived to work, and desired that she should live to work; and love, she could not remember to have heard the word for years—no, nor thought it.

The little children she used to think some day might be hers had never come, and her husband said it was a good thing, for children took time and money, and she had waited and grieved and worked in silence, until now she never thought of it, except to think that it was better so.

Was love the greatest thing in the world? Then she must miss the greatest thing as she had missed all lesser things. But the hungry eyes looked out of a hungry heart, and the words said themselves over and over, not only that day, but through all the next weeks in a trip which she and her husband made to the West.

They had bought some land in Kansas, with a little one-roomed house on it, and there the work of living began again with ten-fold push. There was not a house in sight, and the sun seemed to rise so early and set so late—those long, long days, when she worked till the very grave would have seemed a pleasant place to rest in.

But all through that summer, as she looked back on it, she could see how the weight that bore her down grew lighter.

She seldom saw any one but her husband. They had no books, and those few words, "Love is the greatest thing in the world," began to fill for her the place of books and friends. When the sunlight was bright, and there were fleecy little clouds in the blue sky, and the prairie was blazing with flowers, and the one cottonwood tree rustled its leaves in the light breeze, there came new meaning into those words.

She thought about herself as a little child, remembered all the old days, and how she had been told of the love of God, and of Christ, His Son. The love of God—that was for her, too, as she remembered it; and as she worked, sometimes the words made music in her heart, and she sang them, and it sounded strange to her, for she was a silent woman.

Finally, though she could not have told when or how, she came to feel the love of God very close to her, and she knew that in some way God must mean that she should give out a little love to other things—love the cattle, and the horses, and the pigs, and the chickens; for she was a simple little woman. She loved them all; the work seemed easier, and the living things throve.

"She's got a wonderful knack," said her husband to a passing neighbor.

But as the capacity grew the hunger grew, and then one day there seemed to her to come a very gift from God.

A little sobbing boy came dragging up to the open door—a little boy with dark eyes, with brown hair just long enough to show a tendency to curl, with dirty hands and dirty face, and shoes cut with stones. Such a little boy! About eight years old, she thought.

He cried and reached up his hands to her.

With a hasty look at the milk she was skimming to churn, she picked him up in her arms and held him close. She felt his hot little face against hers, felt the little arm around her neck, and the little heaving chest and beating heart against her own; she held him tight and loved him, and the tears came into her eyes.

But that could only last a minute; there was the milk. Then she gave him water with which to wash his hands and face outside the door, and after that she gave him a slice of bread and a tin cup of milk. He sat there as if he owned the house, his tears dried, and his quick eyes glancing around.

When his mouth was empty enough so that he could talk, he told his story.

"My name is Charlie," he said. "I was in the prairie schooner, and the woman and the man got very mad at me and put me off and shook the whip at me, and I ran across the prairie till I saw this house, and now I'm going to stay here."

"Were the man and woman your father and mother?"

"Oh, no; my mother is in a coffin in the ground. She caught a fever, and this man and woman brought me along. Oh, I'm glad they're gone. I'd rather stay with you!"

She churned fast and thought faster. Her husband would not let him stay; he didn't like boys, and the boy would eat a half more. Then there were the clothes. No; he would have to go.

Her heart throbbed; had it ever throbbed like that before?

"*I* want to do that," said Charlie, eying the churndasher enviously.

A brave thought; perhaps he could work! She looked hastily down the hill. There was her husband's hat coming around the stack.

"Here, quick!" she said, and as the boy grasped the dasher, she took her sunbonnet and went out with the chicken-feed.

Her husband came up the slope. "Helloa, there, Jayhawker," the boy called out, "look at me shove this shover!"

Charlie with his legs apart, his cheeks red, his eyes shining, drove the churn-handle furiously.

The pale face under the sunbonnet was so eager that the man coming up the slope would hardly have recognized it. He smiled in spite of himself at the little figure at the churn. When had his wife seen him smile before?

She came forward with the empty pan, the eagerness schooled out of face and voice. She told what she knew about the boy, and added, "Perhaps he can work."

A gleam came into her husband's eyes. He was beginning to feel his constant labor. His head had ached lately, and his back ached, and he felt stiff in the mornings.

He tried the muscle in the boy's proudly extended arm, and felt his legs.

"We'll keep him," he said, briefly; "he can do a sight of chores."

That night, when that pale-faced little woman could hear the sound of the little fellow's breathing over there in his quilt in the corner, and could hear him turn in his sleep and mutter something now and then, her heart beat fast, and all the sounds of the night went to the music of "Love is the greatest thing in the world."

So the boy stayed, and for a time there was peace.

"You're looking so spry, Malviny, and put more heft into your work. Kansas agrees with you better'n with me," said her husband, one day.

She did feel a difference. The time she could take to sew a button on Charlie's little ragged clothes, the moments when she could bind up one of the little dirty, stubby, cut fingers, the time she could spend knitting little stockings for cold weather, or making coarse little shirts, or cutting down Isaac's worn-out overalls, the times when she could steal out of bed in the dark night, and kneel down by his quilt, and kiss the soft little cheek, and pray with her whole soul that God would bless him and help her love him well, were a very elixir of life to her.

At first Charlie thought the chores some new sort of play, but that did not last long. By the time he was ten years old he was known by all the neighbors as that good-for-nothing boy of Holt's. He was a "bad boy."

"Charlie, have you fed the calves?" Isaac would say in the morning.

"Yep," came very glibly. And at night, "Charlie, now feed the calves," with the same reply. But perhaps by the time the milking was done Charlie would say, "I aint fed the calves to-day!"

"You said you had!"

"I was thinking I had, but I haint fed 'em nor watered 'em."

Then Isaac, with a kick at the boy, which was skillfully evaded, would tramp wearily out into the darkness to do the neglected work.

Charlie would take a horse at four o'clock in the afternoon to go for the cattle off on the prairie, and would drive the cows galloping home long after dark, with his horse foaming with long and heavy riding. He would disappear for a whole day, and when he came home, Isaac, worn out with rage, would try to whip him; but even if the boy were soundly thrashed, in some way he still seemed to have the best of it.

If he were sent out to cultivate the corn, it was quite likely that he would tie the horses and lie down and go to sleep. At milking time he could seem to milk steadily, and yet only milk one cow while Isaac milked three; or if he were sent to milk alone, he might stand whistling till bedtime, waiting "for the cows to give their milk down." If he were ordered to sow seeds, it would usually turn out that he had dug up a clod and planted all in one hole.

Once, Isaac, going on a short trip for cattle, offered to bring Charlie a knife if he would plant the potatoes. Isaac forgot the knife, but he received a scrawl saying, "You needent to bring me any knife. I aint teched the potates. Charlie."

For the anxious little woman, with the Gospel of Matthew for a text-book,—a book given her years before by a tract distributor, but hitherto unread,—had managed during the bad days in winter to teach the boy something of reading and writing.

When Isaac would vow, as he often did, that Charlie should never stay under his roof another night, the boy would suddenly work so well, doing almost a man's work, that Isaac's wrath was sure to cool. For Charlie was really skilful with the cattle, and so strong that Isaac never could make up his mind to do without him.

There was one person, and only one, who never said he was a bad boy. At night he had more than once waked up to catch a glimpse of a white face, quite near him in the moonlight, and to feel hot tears drop on his face. Usually he turned over and tried to appear very sound asleep; once he choked, and put his arms around her neck, and gave her a great boyish hug and kiss that she never forgot.

But the next day he was worse than he had ever been before, and was whipped three times by Isaac.

Meantime Isaac was failing. "I'm breaking, Malviny," he said one afternoon, coming in earlier than usual. He sat by the table, his head in his arms, never heeding milking time, never looking up to growl at Charlie when he entered.

A great tenderness rose up in the patient little woman's heart, and she stole around softly and made the best supper she could. But he did not lift his head to look at it.

In the morning he started out to milk, but came back and sat again with his head in his arms; and then, not knowing that she could do so, but with a love and pity in her heart that must find expression, his wife coaxed him in timid words to go to bed; and when he was there, the womanly instincts came uppermost, and she tidied the room, and darkened it, and moved quietly and smoothed Isaac's forehead, though it almost frightened her to do it.

She tried to encourage him, and as she walked around she sang in a low voice her only song, "Love is the greatest thing in the word."

He heard the words, and roused himself to listen.

"Come here, Malviny," he said. As she sat beside him he took her small, bony, twisted, hard-worked hand in his large one, and said brokenly:

"I'm sorry I aint been lovin'er to you, Malviny. No man ever had so good a wife as I've hed."

There was a long pause, while the chickens could be heard scratching outside the door.

Digitized by Google

"We aint made much of life," he went on. "This day, lying here, watching you and your quiet ways, and feeling your hand, is the sweetest day I ever hed, Malviny."

He said no more. He held her hand, and died at sunset.

The neighbors virtuously hoped that now Widow Holt was left alone, Charlie would do better, especially as he was getting so well-grown. He was sixteen now.

But he did not do better; he did worse. He stayed away whole days from the farm. The milking, and all the hard chores, fell upon one poor little sorrowing woman. She tried to have nice meals, but Charlie was seldom at home to eat them, and the things were put away untasted. Soon she would have nothing to eat, she knew, if Charlie did not help.

When he came home she looked so anxiously at him, trying so hard to say something kind and interested, that he would go outside the house and stay until bedtime; and she would sit reading through blurred eyes her now almost worn-out Gospel of Matthew.

Then she would pray that God would help her love him better. She thought if she had only given him more love, or the right love, he would have been a better boy.

Many rumors were afloat about Charlie. Some of the neighbors' boys were becoming reckless and unmanageable. It was all due to Charlie, the neighbors said, and there was talk of driving him out of the county.

One night Charlie came dashing up on his horse, pale and breathless, and there was a great welt from a whiplash on his neck and cheek. He broke into the little room and said:

"I'm going. Barnes and Clack and Hall met me on horseback at the Corners, and Nat Hall's run away, and they say it's my fault. Barnes cut me with his whip, and they say they're coming up here by midnight, and if I'm not gone they'll horsewhip me out of the county!"

The boy's eyes were like sparks of fire, and his face was white with rage, but not so white as the little woman's who grasped the chair-back.

"I've—loved you so—Charlie!" she said, in a voice like a cry.

The boy's throat worked; the color came into his face and left it; his hands clenched, and then, with a groan, he threw himself on the bed. His strong young shoulders shook, and he sobbed in a storm of tears.

She knelt down beside him. All she could say was, "Charlie—my little Charlie!" She did not know how to talk.

"I won't go," he said, after an hour. "They can horsewhip all they like, but I can't leave you. I'll be good; oh, I'm so bad—so bad! I——" He put his head in her lap, and she smoothed it as she did at night when she thought he was asleep. "I want—to take care of you—but I'm so bad!"

She sat there and soothed him until he fell asleep. She waited until twelve o'clock, but no one came.

Then she looked and looked on the face she loved so much—the square forehead, the tanned, fresh-colored cheeks—on that dreadful welt, the firm chin, the mouth she thought so beautiful, the brown hair with the wave in it, the long lashes on the cheek. It was a reckless face, but it looked like such a good face to her—it always had looked good to her, no matter what he did!

His brows drew together, and he murmured in his sleep just as he did the first night he came. He was only a boy after all; he said he would be good!

"Is love the greatest thing in the world? Can my love for him, and his love for me, and God's love for both, make him a good boy? If it can, love is the greatest thing in the world."

In the morning, when he woke, she was sitting beside him, half-afraid to have him waken; for he was a good boy when he was asleep.

He seemed dazed at first. Then he flushed, and looking square into her eyes said, with a new tone in his boyish voice, "You love me, don't you? Well, I'll show I love you—you see!"

She did see. He was as good a worker as any man around, and he knew it. He began his farming on a small scale, so that he could do everything himself—so "she" could live "comfortable like."

The little woman could not understand the summer that followed. A different look came into her eyes, and Charlie said there was color in her cheeks. Perhaps it was true, for it was a wonderful thing to have a happy voice asking what she wanted, and telling her not to do this or that, but to rest.

Charlie found time to do so many new things! They had a garden with lettuce and tomatoes and sweet peas—things they never had before.

He said that the one room with its shed kitchen was not fit for her to live in, and he worked early and late, and made trades with carpenters, until he added a kitchen and a porch and two rooms for bedrooms.

Then came that wonderful day, the most frivolous day in all that little woman's life, when they took the horses and wagon and started before sunrise for Topeka, and came back by moonlight with a bed, a great rocking-chair, a looking-glass, a carpet, and some dishes.

At night, when everything was all done, and Charlie could hardly contain himself for pleasure, the little woman felt a tickling in her throat, and wondered if she was going to cry while she was frying eggs in the new frying-pan.

Such a night as that was, and such a supper—just they two; Charlie was happy, and looked lovingly at the little woman opposite him.

He was very solemn toward bedtime. He hung over her chair, and held her face in his two big hands, and kissed her, and said:

"You think I love you now, don't you, mother? And we think what you sing—don't we—that love is the greatest thing in the world?"

For the Companion.

NUGGET'S CHURCH.

They were coming down the mountain from the sluice-head—little Nugget, and her father, Thane Meadows; the one a frail child hindered by a withered foot, and bearing upon her thin neck a

head seemingly too large, but as golden as a butter-cup; the other a tall, heavy-framed, broad-breasted miner, with blue eyes, tangled yellow hair, and a beard that covered his chest like a russet mat.

The miner smiled down into the eyes of the child with a fond and listening look. Her thin little fingers were clasped about one of his big grimy ones, as she half swung and half ran beside him.

"Oh, papa Thane," she cried, stopping and pointing toward the west, "aint the sunset nice to-night?"

Back of them, and on the right and left, the mountains of the California Coast Range rose against a pink-gray sky. The whole gorgeous landscape, soft and sea-like with redwood forests, dropped downward in long, sinking waves, until, sixty miles away, it smoothed out into dim, glimmering wastes of ocean. Faintly there they could descry the town of Eureka, and beyond that the vague curve of Humboldt Bay.

"Yes, Nugget," said the man, with a deep breath, "God don't often hang out pictures like that for men to look at."

"He hangs that on the outside of Heaven so we can see what it is like on the inside, don't he, papa Thane?"

The man's lips twitched slightly in his beard, but he said nothing.

"If men was better, papa Thane, would He hang more of them out, and nicer ones?" she asked.

"I reckon not, Nugget," he said; "but if men was better I have an idee they'd see 'em oftener."

They went on a little farther in silence, then the child's voice came again: "Why aint men better, papa Thane?"

"Oh, I guess it's because almost everything's wrong, Nugget."

"But you are good anyway, aint you, papa Thane?"

"Not so very, Nugget," he said, unsteadily. "If it wasn't for you I'm afraid I'd be purty bad."

The child searched his face a moment with wondering eyes. "How do I help you, papa Thane?" The man reached down, swung her upon his big arm, and held her against his breast.

"It's 'cause you're good, and I like you so, Nugget," he said, huskily. "You're all I've got, and I like you so!"

They came to a point where the trail dropped sharply off into a vast gulch, out through which Mad River pours noisily from the inner Range, and in a few moments reached a little cabin near the bottom. It was rude enough—a sort of human swallow's nest plastered in against the mountain—but with a clean, inviting air. At one side a small spring leaped out of the bank, and slipping down upon the floor of the valley, buried its waters in a tiny garden.

Over the entrance to the little structure, whose whole front was a flaming tangle of California creeper, the prongs of a red deer's horns protruded, and just inside the doorway lay a decrepit old mastiff, who, at the approach of footsteps, thumped the floor with his tail in hearty welcome.

"Well, we're back, Buck," said Meadows. "I see you took good care of things." He swung the child down lightly upon the step, and she embraced the old dog affectionately.

The man turned about and looked up the gulch. The wild beauty of the picture did not attract him. He was looking above it all, where, away along the heights, a ring of pines stood around a cup-like dent in the mountain-side. He could see, in fancy, the spring-fed lake which lay so brown and quiet there, and hear its waters hissing down through the iron mains to a huge red gap in the cañon's side below, and his brow drew itself into an angry knot.

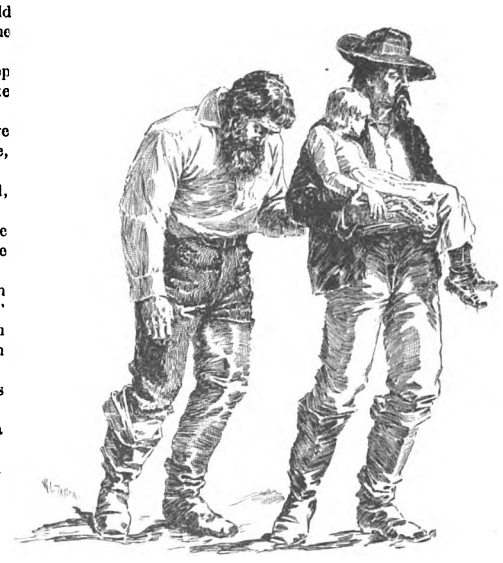
"It's mine if the law did give it to him," he thought. "If I had that water, with what I have now, into my claim—well, Nugget and I and Buck wouldn't be many years longer in these diggin's. One thing he won't forget soon, though, I reckon, an' that's the blow I give him last summer up there by the pond.

"But I hadn't ought to let him go as I did," he thought. "He took the law, and—well, if I had him there again with my fingers round his lyin' throat, I'd—why Nugget!" he burst out suddenly, looking at the little girl.

"Don't, papa Thane! don't!" she said. "You're thinking of Dack Burton again. Your face looked just hard, like a rough bowlder. Don't, papa Thane!"

The man took the child upon his knees and clasped her to him, while she took his big tawny head upon her little chest and smoothed and kissed it. The soft and loving touch of the child's hands upon his head eased him of his dark humor like magic.

That night, when Nugget slept, or he thought she slept, he came out with his pipe and sat down on the threshold. Noises from the big plank saloon among the trees across the river came faintly to him, and he could see, in fancy, the groups of rugged miners about the tables, gambling for one another's "dust," or drinking at the bar.



"We are all a pack of fools and thieves," he muttered, and sat a long time, with the fire fallen dead in his pipe, thinking of his plans and defeats, the wrongs others had done him, his attempts at retaliation, and his gradual merging from a careful, scrupulous youth into a manhood hard and embittered with strife, and believing in the sheer necessity of violent deeds.

"Papa Thane!" came a little voice from within. The man laid down his pipe and entered the cabin. Buck thumped the floor with his tail where he lay by Nugget's bed in her tiny room, and the child's eyes were wide open. The man sat down on the bed and took her hand.

"What is it, little darter?" he asked.

"When we was coming down the mountain, you said I helped you to be good, and that other men would be happier if they was better; why can't I help them, too, papa Thane?"

"You do," said the father, fondly. "You help us all, Nugget, just as the sight of something good and purty helps the worst of men. Maybe you don't help others so much as you do me, but

little darter, there's scurcely a man in the gulch nor on these mountain sides, but what'd let his right hand be cut off afore he'd see a hair of your head harmed; 'cept, maybe, Dack Burton."

A light rose in the child's face as he began speaking, but it died away with his closing words. "He'll like me, too, sometime, won't he, papa Thane? He'll like us both if we're good?" she queried.

The man tapped the floor with his heavy foot, and looked gloomily at the wall. The child stroked his hand a moment in silence.

"Papa Thane," she broke out presently, "if I had a gold mine I'd build a church, like the one that used to be down at Nelson's Bar, where mother and I lived before she died."

The father stared at her in amused astonishment.

"I'd not have it as big as that one was," she went on, "but big enough so we could have Sunday-school, and read in the Testament, and sing, and then maybe the men wouldn't be so bad."

"But who would do the preachin', little darter?"

"Couldn't you, papa Thane, if you tried?"

The man broke into hoarse laughter. The picture which rose in his mind convulsed him; the rough, violent, sometimes intemperate and profane Thane Meadows preaching in a church!

When his merry derision had slackened a little, he saw a look of pain and wonder in the child's face that struck him into instant silence.

"Papa Thane couldn't preach, little blossom," he said; "he's not good enough. But if he could, he'd make a little church for her. Maybe he can some day."

The child's eyes overflowed with sparkles, and she lay a little, looking at the bright vision her fancy painted; then, turning her cheek against his hand, she fell asleep.

The man rose carefully, touched his bearded lips against her cheek, and passed softly out to the threshold.

After a time he suddenly got up again and entered the cabin. The reflection of a good and pleasing purpose lighted his face. Pulling out a wooden pin, which stopped an auger-hole in the log wall, he drew a sack of gold-dust from the hole, and lighting a lantern, whispered loudly, "Buck! Buck!"

Followed by the old dog, the man passed out and down along the side of the gulch a little way and stopped.

"Here's a good place," whispered the man; "it's soft, so she can dig it out easy, aint it, Buck?"

He tore the soft soil apart with his strong fingers, sowed a few dollars' worth of the "dust" about in the rents, and covered it up with many a whispered exclamation of delight.

The next morning, starting for the claim, which lay a few hundred yards up the river, he stopped near the point where he had secreted the gold and called the child from the cabin.

"Little darter," he said, as she came limping forward, with her blue eyes peering out inquiringly from under her curls, "you see that place in the bank, nigh the spring, where somethin' has been scratchin' up the ground? Well, I saw signs of pay-dirt there as I came by. You and Buck get some of the loosest dirt into the rocker, there by the spring, and wash it by the time I come home at noon. Maybe you'll find a mine, an' then, you know, the—church, Nugget!"

The child started toward the spot with a happy cry, and the father went onward, smiling, to his work.

The trail, travelled only by men on foot and by pack-mules, which came up out of the rugged redwood country, and wound away through the "diggings" into the mountains, passed just below the Meadows' cabin, and many a little gift and cheery word were left with the gold-headed Nugget by the rough mule-drivers and miners who stopped at the spring to drink.

She was the only child in the gulch—there were no women—and her sweet face drew all that was decent and tender in the rough, homeless men toward her.

Not an hour had passed, after the burly Meadows had gone to his sluice-box, ere a miner came by with his pick on his shoulder, and a bunch of blossoms for the child. Though it was not yet March, there were violets along the streams.

She took the little nosegay from the miner's hand with a look that was pleasant to see.

The man's face was uneven of feature and leathery from exposure, but the light from the child's eyes made it for the time seem sunny and wholesome.

"I pulled 'em for ye as I came down the crick, little un, to pay fer my drink," he said, turning to the spring. "Hello, Nuggy, what's this 'ere you've got in your pap's rocker?"

"It's pay-dirt," said the child.

The man shook the rocker, scraped some of the silt from its bottom into the palm of his hand, and looked at it. Then he gave a long, low whistle. "Where did this come from?" he said, in a gasping whisper.

"From the bank there," she pointed with her bunch of flowers.

The man looked at her a moment with open mouth, then walked over and began humming a tune to himself as he examined the ground with his pick. The child and dog followed his movements with keenest interest.

"No gravel," he said, under his breath; "no bed rock!" then aloud, "Did yer pap tell ye to dig here, Nug?"

"Yes, sir."

"Then he salted it; he did it for luck," thought the man, and he stared mistily at the child.

Digitized by Google

"It'll bring him luck, too," his thoughts went on, "it's nigh sartin to. If a man hides gold for a good purpose, for an innocent lame child like her, he's purty sure to find it somewhere's else, and a sight more of it."

He got up and went down to the rocker with Nugget and Buck at his heels.

"You've got gold in the rocker here anyhow, little gal," he said. "You'd best look for it in the bank agin to-morrow."

The child gave a scream of delight, and clapped her hands above her curly head, while Buck barked and whipped the air vigorously with his tail.

"I'm going to have a church built!" she said; "a little church, down there among the trees; and we'll have Sunday-school, and singing, and—oh, won't it be nice, Buck? You'll come, won't you, Mr.—Mr. Bill?"

The man broke into a roar of laughter, but his face fell straight the moment he saw the shocked expression that came into the child's eyes.

"Yes, I'll come, little un," he said, "and bring all the rest of the boys. You jist get her built and we'll all be there. Don't forget to prospect the bank, little un! You'll strike it rich to-morrow!"

There was no need of his advice; the child's heart and mind were all upon her mine. When the father came home he entered into her joy like another child; it warmed him through and through to see her happiness.

When the dark hours had fallen again, he with Buck once more sowed the yellow gold-seed for Nugget's harvest. It was only a few dollars he had planted for her, but his hard bunk seemed to rest him like a couch of velvet after the act.

At midnight another sower, too, came up out of the gulch like a shadow, and dropped a few "pinches" of the precious seed in Nugget's mine. "For love and for luck!" he whispered, as he dropped the yellow grains.

Next day Mr. Bill, as Nugget had called him, flung his hat up out of the hole he was digging in the mountain-side, and sent a shout after it which echoed far up the heights.

"For luck!" he cried. "For luck! Hide gold for good, and ye'll find it!"

He had uncovered a "pocket" for which he had been searching for weeks.

The next night two shadows came up out of the gorge and sprinkled "dust" in Nugget's mine; and again and again, as the nights came and went, shadowy forms flitted in by the dark bank and out again, leaving gold for the innocent child to dig up on the morrow.

Thane Meadows was transfixed with wonder at the sums the child got back from the little he had buried in the bank. But at length it dawned upon him that the miners had learned his secret, and out of superstition and regard for Nugget, were "feeding" her mine.

One night he secreted himself by the spring, with a dark lantern, and watched. He saw a dark form come out of the gloom, advance, and deposit some dust in the little mine. As the form receded, Thane sprang out and flashed his lantern upon—Dack Burton.

The two men glared at each other in silence, their hands upon their revolvers, and then—for each had thought of the sleeping child close by—slowly drew back and parted. The golden kernel of the incident was lost, and the opportunity for peace was missed.

As for Nugget, she was in a transport of delight. "When shall we begin the little church, papa Thane?" she asked again and again. Even in her dreams she babbled of it. But the father put her by, telling her that lumber was so difficult to obtain; which, indeed, was true, since all of it must come up out of the redwood country on the backs of mules.

One night the heavens were black far back over the Range, and the next morning the shores of Mad River were strewn with wreckage. When the torrent receded a huge pile of lumber and logs lay at the bend below the Meadows cabin.

"God has sent it!" cried Nugget. "Oh, papa Thane, now we can have the little church ready for Easter-day! Then we will have it all full of flowers, and my Testament laid on the altar, and the men 'll come, and we'll sing, and read, and —won't it be nice, papa Thane?"

"What is Easter for, little darter?"

"Why, it's the day the Saviour was raised from the dead," she said. "He died three days before, an' on Easter He rose up all new and beautiful again."

The man nodded his head, and sat thinking through a little silence.

"Nugget, I'm goin' to build it for you," he said; "some good may come of it."

Three weeks afterward Nugget's vision became a reality—a little homely shell of a building lifting a cross among the boughs of a sheltering pine. At one end stood a tiny altar of unpainted redwood, and each seat was a single plank with the rudest of legs; but to Nugget it was wonderful, and the builder's heart was warm with her joy.

It only lacked five days of Easter when it was finished, and Nugget began to plan to beautify it. All that day and the next she made wreaths of leaves for the walls, and a fern cross and crown, starred with white flowers and edged with violets, for the altar. They were rude and unshapely things, and would fade, being made so long beforehand, but she could not wait.

Within three days of Easter a miner, half in liquor, stopped at the spring, and, after drinking, said, with a tipsy leer:

"You're out of luck, little yaller-head, in selectin' timber fer your church! Your dad built it out of Dack Burton's flume, which the river ripped out of its banks the night of the storm! Dack and your dad's been having it hot up in your dad's mine this afternoon; but your dad won't pay for it; he says he won't, if he dies in his tracks! How he does hate Dack Burton!"

The child's eyes widened with horror. Her *church* made of stolen lumber? God would not accept such an offering!

She went into the cabin with flushed cheeks, panting with the parching eagerness of her purpose. She brought her little deer-skin sack of gold-dust from its hiding-place, and with Buck, started up the river. Nugget was hurrying and whispering, but hindered by her withered foot; Buck was whining from the pain it cost his old legs to follow.

The sun was falling low when Meadows came home that night. He was hot and flushed with anger. When he had called and searched in vain about the cabin for his child, a chill of fear struck through him that whitened his face. Where had she gone? What had happened? He ran up and down the river, peering into the red flood almost in terror. At last he found her footprints going up the river, and pressed after them with throbbing heart.

He had gone but a little way when a bend brought him in sight of a considerable stretch of the river shore. Half a mile away he saw a spot where the stream was crossed by a large log, which served as a footpath to Dack Burton's mine.

Nugget's Church.

There, upon the log above the rushing torrent, a little figure fluttered. For an instant Thane saw it; and then it fell into the torrent below, disappearing below the bank.

Thane was stopped where he stood by the horror of the catastrophe. Nugget had fallen into the river, and would surely be lost!

How he advanced the remaining distance he never knew. But as he staggered down the bank where the log crossed the stream, he suddenly came face to face with Dack Burton.

Across his enemy's arms lay little Nugget. Her curls were straggling down and dripping, her gown was wet and clinging, and her eyes were closed, but she clung to Burton's neck with a grasp which showed that her rescuer had not been too late. Behind, the old dog limped along, now and then springing up stiffly toward the child's head.

"I was comin' down to kill ye, Thane," said Burton, hoarsely, "and just then I see her slip and fall off the log; and I sprung down and lifted her out of the eddy below, just as she was going down. She was gasping for breath, but she had the gold-bag held tight on her breast. She was coming to pay me, Thane! She was coming to pay me for the lumber! Think once o' what kind of men we are!"

The father took the child in his arms. She had fainted, but she breathed still. Burton had saved her life.

"We would have killed her, Dack! We would have killed her with our wickedness!"

He turned back, carrying the child on his breast; but he staggered with excitement and concern, for Nugget had not spoken yet. Burton took the dripping burden from him, and with the father holding his arm, and dragging his feet through the dead leaves as if they were lead, the two went slowly down the river, up the slope, and into the cabin.

The Easter sun rose golden and clear, and climbed slowly into the soft April sky. The great valley was hushed. No powder was blasting the bed-rock; no rainbows of water tore up the red earth; there was no click of pick, nor sound of voices.

At ten o'clock there was a notable congregation at Nugget's little church. Whether or not the altar was made in due form, you could not tell, for the miners had completely covered it with handfuls of wild flowers picked that very morning; and they had garlanded every window, and hung green things along the wall.

Into her church the rough men came, washed clean, holding their slouch hats awkwardly in both hands, and looking down and then behind them, as if expecting some one.

Presently, from out the strong sunshine came Thane Meadows and Dack Burton, leading little Nugget between them. She was pale, and weaker than usual, but she hardly had need to walk; the strong arms of the men held her up. Both men looked very happy; and not only happy, but clearer-faced and purified.

There was an awkward silence; but presently Thane Meadows rose and cleared his throat with a sound that shook the little church.

"Men," he said, "I aint going to preach, but maybe it's as good as preaching to you to see two men like me and Dack Burton here. If I was a coward, a coward like I was a few days ago, I should be ashamed to stand here before you, knowing that you know that my child nearly met her death trying to be honest in my place.

"But I'm a changed man; I say it in humbleness and reverence to her. If I have wronged any man among you, I ask to be forgiven. If I have made light of honesty before you, I take it all back, here.

"This is her Easter, and it's full of joy for every one of us, especially for Dack Burton and me. I hope and believe the goodness of it, as well as the joy, is in us. Let us pray."

He knelt, and uttered a stumbling but heartfelt supplication. Then, after a little silence, a halting, disjointed prayer went up from the kneeling figure of Dack Burton; and when they rose from their knees, Nugget's clear voice led the audience in a quavering, old-time hymn, sung by the mothers of most of the men in their boyhood.

Many a tear was wiped away, and many a good resolve was taken in silence that blossomed into worthy conduct.

ALVA MILTON KERR.

MISJUDGED.

Marie Antoinette, as one of the ladies of her court relates, was once severely criticised for levity when she was, in fact, quite innocent, and when it was one of her ladies-in-waiting, invisible to the critics, who was not serious enough.

After the death of Louis XV., all the ladies of the court felt it necessary to pay visits of condolence, and to render homage to the new sovereigns.

The ladies, old and young, hastened to present themselves on the general reception day. The Queen bore herself with becoming dignity until the Marquise de Clermont-Tonnerre, tired of standing, as her position at court demanded, behind the Queen's chair, sat down on the floor, hiding behind the ample screen afforded by the full skirts and draperies of the Queen and the ladies of the palace.

Then, to amuse herself, she pulled at the gowns of these ladies, and played other little pranks calculated to upset their gravity. Marie Antoinette herself was several times obliged to place her fan before her face to hide an involuntary smile.

The severe old ladies whom she was receiving decided that the frivolous young Queen was making fun of them; that she cared only for young persons; that she was lacking in good manners; and that they should never again present themselves at her court.

This construction of the Queen's conduct was widely circulated, and gave her the undesirable reputation of having a mocking disposition.

"Eleven years later," says the lady who relates the story, "I was describing the day of mourning for Louis XV. to some old ladies in Auvergne, when one of them at once recalled it as the time 'when the Queen uncivilly laughed in the faces of the elderly Duchesses and Princesses who had felt that they were performing a duty in attending the ceremony.'"

For the Companion.

WHO WAS FOOLED?

A group of young people were discussing a very knotty problem, apparently, but it was nothing more than the question how they should "make a fool" of a certain very wide-awake young man on the First of April.

No threadbare trick would do. He was all eyes, and all his eyes were open. There would be great glory in duping him! Hard to catch, none laughed louder than he when he was caught.

All sorts of traps were proposed and rejected—a cotton-pie, a cornmeal-cake, salt for his coffee, sugar for his potatoes—all were too old and familiar.

But all agreed that it should relate to his eating, for he was noted for his good appetite. Indeed, he boasted of it on all possible occasions.

"I think it would surprise him more," said one bright girl, "to get up something really nice for him. That would be the last thing he would be looking out for from us. You know we always think anything for Bob Reed must be for a joke. Even at Christmas-time he got a jumping-jack, a penny whistle and a Bologna sausage, while we worked days making nice things for people we didn't like half as well."

"That's so! We wouldn't have any kind of a time at all, in this dull town, if it were not for Bob, with his wit and his kind heart—"

"And his horse and buggy."

"Yes, indeed; or his bronco, rather. Don't dignify that little creature with the name of horse. Dear me, girls! Shall we ever forget when he bought him?"

"Or with what fortitude we waited for him to be broken?"

"Or how he rode him up and down the street, and let him shake him off over his head for our entertainment?"

They went back to the question under consideration.

"But how shall we get him up something nice? It mustn't be anything nice to eat—he'd scent that a mile away."

"Oh, I have it!" broke in the landlord's daughter. "Why didn't I think of that before? Why, his birthday's on the First of April! He says he has a good excuse for being a 'born fool.' Let's make him a nice, great big—party!"

"Capital!"

"Just the thing!"

There was general and enthusiastic agreement, and it was arranged that there should be a birthday present which should be a real surprise.

Bob Reed was the hero of the village, and he knew it very well. Not that he had ever rescued any one from fire or a watery grave, but he had rescued many a picnic from failure, and many another pleasant village enterprise from collapse.

He pretended to be a martyr to his heroism, and to rebel against his popularity when he was wanted for a tableau, as was not unfrequently the case. Whether his protests were heartfelt or not, his services were always to be had.

Then, to compensate himself, perhaps, he made so much fun at the rehearsals by throwing in passages that were not in the book, overdoing his part, and making every one laugh, that the girls pretended to be angry with him for making necessary so many rehearsals.

Once when they were practising a pantomime, and he was wanted for his part, he was nowhere to be found. Where could he have disappeared? They had left him safely stowed in a curtained corner of the stage. They were in the second story of the tall school-house, and there were no means of escape.

They stood in wonder. One girl mechanically looked out of the open window, the only possible exit from that corner; and there he hung, his hands grasping the window-sill—his only support! He swung himself up lightly, and promised not to do it again.

He was freight agent, express agent, telegraph operator and coal merchant, all in one, and he was not twenty-one years old yet; but he was going to be.

He said that he and Curly were the same age. Curly was a black, kinky dog that he had adopted because no one else wanted him. Perhaps the dog had been handsome when he was younger and had two eyes; but he had long since outlived his beauty and his usefulness.

At any rate, the only possible use Curly could have been to his master, besides being a dependent and humble companion, was the ready excuse he furnished for buying extra baskets at basket-socials. Curly had to have lunches; he liked

Digitized by Google

good things, and got so hungry between meals that an extra basket must be carried for Curly.

But if Curly could have talked, he would have told who else liked lunches, and who got the lion's share of the delicacies; although, as the old dog was so fat that he waddled instead of walked, probably he would have made no complaint.

The little village was soon thrown into a silent bustle. Quick feet sped silently on secret errands. Warning fingers were lifted in silent admonition whenever Bob's well-known figure, usually habited in his ridiculously comfortable plaid blouse, was seen approaching, be that just around the corner or a quarter of a mile away, oscillating between the heavens above and the pony beneath.

Knots of girls might be seen holding noiseless conversations—yes, really!—one moment, and dispersing in all directions the next, looking so very unconcerned and innocent that a far less observing personage than Mr. Bob Reed might have scented a conspiracy. But if Mr. Bob did suspect anything, he held his peace.

The First of April dawned, cloudy, sloppy and muddy. Mr. Bob Reed was not "caught," all day. The boys tried the usual hoaxes, but he would pick up no silver dollars, open no letters, and find no packages that had been conspicuously lost in the middle of the street.

He took a queer notion, that evening. He would scrub the waiting-room! It was muddy and must be cleaned; so he put on his rubber boots, donned a great apron which he called his Mother Hubbard wrapper, and began industriously to carry water.

Presently a young man appeared, and unconcernedly observed, "Oh pshaw, Bob! I wouldn't scrub to-night. It'll be just as bad to-morrow."

"It's got to be done!" answered Bob, sententiously, going on with his preparations.

The messenger disappeared, and presently another young man came in, dressed in his "good clothes."

He had a grin on his face which would have "given anything away," Bob thought.

"See here! You're wanted—over at the hotel."

"Eh? Is that so?" answered Bob, poising his last pailful of water on the edge of the tub.

"A—a—somebody who wants to see you."

"Oh!" He poured the water into the tub with a terrific splash which sprinkled his visitor. "Somebody who can walk? Tell him to come over here."

The messenger carefully wiped the drops from his clothes with his freshly ironed and scented pocket-handkerchief.

"Sorry, Ed," said Bob; "it was careless of me—but you oughtn't to dress up so, for common occasions. You're getting to be a dude. But who is it who wants to see me? Why didn't he come himself?"

"He—can't very well come. He particularly requests your presence over there. He—didn't send any name. Business, I believe."

"Humph! very mysterious business, I should say. Well, I can go, I suppose." He picked up his hat.

"Oh! You're not going to wear that dress?"

"Why, I'll be back, I suppose? What's the use to change?"

He started away, on a sweeping trot, followed by Curly.

The assembled guests saw the party of three—Bob, Curly and Ed—through small, temporary cracks at the sides of window-curtains, amid much silent dancing and doubling and noiseless clapping of hands.

Rushing into the room in his ordinary headlong way, Bob came to a sudden stop. He seemed to be astonished when he saw the big dining-room decorated to distraction and cleared for a party.

He begged pardon; he didn't mean to intrude, but some one had asked to see him—in the office, he supposed—and he was in a hurry, and the nearest way led through the dining-room.

He made as if to go on.

Such stamping and cheering and clapping of hands! Then some one suggested that he stay to the party, inasmuch as he was there.

"But—I didn't receive an invitation."

Then the noise had to be made over again. It took a great deal of explanation, and very many assurances that he would not be in the way, to induce him to make one of the party. Then he excused himself to go to his room and "dress up a little," and sweepingly bowed himself out.

"Caught at last!"

"My! wasn't he surprised?"

"And didn't he take it well after he was caught?"

Mr. Bob Reed grinned all the way back to the office, all the time he was dressing, and half-way back to the party.

It was voted a grand success. The supper was excellent. There were no cotton pies nor frosted johnny-cakes. The present Bob received was not a tribute to his appetite, but a beautiful copy of Shakespeare, finely illustrated.

He accepted it with a modest and appropriate acknowledgment, and with feelings of genuine surprise that he endeavored not to show. Curly received a basket of lunch.

Nothing could have induced Bob to hint that he knew pretty nearly what was going on all the time. But some of the elders shrewdly suspected it, and catechised him. He merely grinned.

The girls said, "I don't believe it! He only acts that way to make believe, because he dislikes to admit that he was caught."

If the girls had presented him with a caricature of a present, in a mock speech, as some of them had proposed to do, undoubtedly he would have turned the tables on them without mercy. But he merely said to himself, "Who would spoil the fun of the party, when they were doing all that, by being mean enough to know anything about it beforehand?"

And no one ever quite knew which was the April fool, Bob or the party; but they had a good time just the same.

SUE GREGORY.

THE PLEASANT MYSTERY.

The child that enters life comes not with knowledge or intent;
So those who enter death must go as little children sent.
Nothing is known, but I believe that God is overhead;
And as life is to the living, so death is to the dead.

—*Mary Mapes Dodge.*

For the Companion.

WHAT THE EASTER EGGS HATCHED.

"Well?"

Marcia Gilbert looked for an instant into the troubled brown eyes that were searching her face so anxiously. Then her gaze fell upon a sealed envelope lying upon the table, with her own address upon it, and "Rejected" written all over it—in invisible characters.

So that venture had failed, like all the rest! The bitterness born of repeated disappointments crept into the girl's sore heart, and lent an unnatural sharpness to her tones as she said, reluctantly:

"It's just as we thought. I've been to all the principal newspaper offices, and the rates for advertising are entirely beyond our means. Don't you think, Doris," she added, hesitatingly, "that we might build up a business,—a small one, you know,—that would keep us in food and clothes, without advertising at all?"

Doris shook her head dejectedly, and a tear appeared on her cheek.

"Everybody advertises nowadays. There is no other way to call the attention of the public to your wares or wants; and with so much competition, one must do it in a way to attract attention, too. I might hang out my little sign, 'Hats and Bonnets Trimmed to Order,' for years, and no one would take any notice of it, unless I had some handsomely trimmed hats to go with it, to advertise my taste and skill as a milliner."

To this indisputable fact her sister could make no reply, and seating herself in the pleasant bay-window, through which the morning sunshine was streaming, she watched listlessly the passers-by, while, with a weary half-heartedness, she tried to think of something—some way by which she and her orphan sister might earn a decent livelihood.

Perhaps, after all, they would have been wiser if they had sold the pretty home—their only heritage. By visiting relatives a great part of the time, and practising a thousand and one little make-shifts, they might have managed to live in some way upon the interest of their money.

But it did not require a strong imagination to see the reluctant faces of country aunt and city uncle, and to hear the epithets applied to herself and Doris that she had so often heard bestowed upon poor relatives.

It would be easier to go hungry than to endure such humiliation, and in this recoil of honest pride, she felt her heart grow stronger and more hopeful.

She picked up the thrice-rejected manuscript, and laid it away in her desk out of sight with the almost cheerful comment, "By and by, when I can afford to risk lots of stamps, I'll send it somewhere else, and keep sending it. No doubt I shall find a market for it in time, for, you know—"

"Come in!" There was a familiar tap upon the door, and the comfortable figure of Mrs. Duganne entered. She was a widow, who, with her daughter, rented the upper part of the cottage,—a cheery, good-natured body,—who came to borrow an egg, explaining, at considerable length, that her egg-basket was getting low now, so near Easter, on account of her daughter Esther's liking for painting eggs as Easter gifts.

The door had scarcely closed behind her when Marcia jumped from her chair, and kissing her sister's tear-stained cheek, cried gleefully:

"I've got it! I've an idea that'll be better than any of your newspaper advertisements!"

Seizing the egg-basket, she began eagerly to count its contents. "One, two, three, six—nine! Plenty to begin with, at any rate. Now, with your big box of odds and ends, my dear, we'll get up an advertisement that will draw more attention than half a column in any of the newspapers."

She laughed so cheerily and with such an air of confidence that even Doris's sad face brightened.

"What?" she began; but Marcia was too intent upon her new plan to wait for questions.

"I am going to paint these eggs with faces; not like the fashion-plates, all alike, but all kinds of faces: old and young, pale and ruddy, dark and light, long and short—in fact, every kind of face; and you shall furnish each one with a hat or bonnet exactly suited to its own peculiar type. Do your very prettiest on them, and we'll hang them in our front window just before Easter, for an advertisement of your skill in millinery."

Doris looked doubtful, but she would not dampen her sister's enthusiasm by giving voice to her feelings. So she only said, in her always gentle, patient tones:

"Very well, dear. Get your heads ready, and I'll do my best to dress them becomingly. But, really, hadn't you better let Miss Grantly have the lilies, and use the money to pay for a modest notice in one of the daily papers?"

Her voice faltered as she saw the hot flush that overspread Marcia's face, and detected the repressed feeling underlying her words as she said, with a glance at the beautiful stand of lilies, slowly unfolding in the warm spring sunshine:

"I can't bear to sell our Easter lilies, if there is any possible way to avoid it. For the last ten years, ever since I was a little girl, I have never failed to have this one gift of my very own to offer to our Lord on Easter Sunday. Perhaps I am superstitious, but honestly, I should feel if I sold them almost as if I had been guilty of sacrilege."

Doris smiled indulgently. She could not always understand her younger sister's fancies, but she never ridiculed nor opposed them.

"I hadn't the least idea," she said, tenderly, "that you felt like that about them. Of course I wouldn't sell them for any money, if it would make you unhappy. Come," she went on, with a determined effort at cheerful interest, "you might as well prepare your eggs and get out your paints, while I look over my stores, and see what I can make a beginning with."

Perhaps Marcia's enthusiasm as well as the really pretty faces with which she adorned the blank sides of the eggs awakened her less sanguine sister's confidence. At any rate, before the day was over she had contrived several dainty little hats. One of these, when glued upon the crown of a golden-haired, blue-eyed egg-fairy, was "perfectly bewitching," as Marcia joyfully declared, with its trimming of pale blue tips and tiny bows, while the broad Rembrandt brim, faced with black velvet, made still fairer the dazzling brilliancy of the sweet creature's complexion, and set off her yellow bangs to perfection.

"Look at her!" cried Marcia, with exultation. "Isn't she a darling, though, with her pink cheeks and yellow hair? Every blonde girl that sees her will want a hat just like hers."

Doris laughed more gaily than she had done before for many a day.

"Then I hope all the blonde beauties in the city will find occasion to walk past our corner when this one is on exhibition," she said, blithely, as she fished out from her box of remnants a bit of old gold silk that was to be worked into a "perfect love of a bonnet" for the dashing brunette, whose carmine complexion was giving Marcia so much trouble.

As the days slipped by, the work gradually assumed an importance and dignity that neither of the girls had really calculated upon.

Marcia, who really had artistic talent, and was far more skilful with her brush than with her pen, was not satisfied, after a time, with painting ideal faces, but, much to her own and her sister's surprise, succeeded in getting several really creditable likenesses of familiar people who passed their window each day.

A bright-faced, innocent-looking young girl, whose way to school led her directly past their door, was pictured with wonderful exactness, and furnished by Doris with a simple straw hat in one of the fashionable styles, with only a wreath of field daisies by way of adornment.

"It isn't every face that can bear a hat of that peculiar style," remarked Doris, with a good deal of innocent complacency, as she held up the dainty trifle.

"I should really like to see the original in a hat just like this; for I've noticed that her hats are not, as a rule, becoming to her."

These bits of successful imitation gave zest to the work, and made the young artists more hopeful of success with each day. Ten days before Easter found heads and hats all completed, and ready to be put on exhibition.

Marcia had herself designed and painted the placard with the important announcement:

"HATS AND BONNETS
MADE AND TRIMMED HERE."

There was a border of the prettiest spring flowers that she could contrive: Hepaticas, with noses blue from the chill April winds, in spite of their furry hoods; violets, in white and purple; and pink-tipped anemones, that paled beside the deeper rose of the sweet-breathed Mayflowers. Yellow and blue crocuses and hyacinths of every shade of rose and purple broke the stiff outlines of the letters, and made the modest little strip of pasteboard a thing of real grace and beauty.

What a world of anxious thought and patient toil was put into the decoration and arrangement of that one small window—of no importance whatever to the great world outside, but meaning so much to the two trembling, anxious-hearted girls, who had built such high hopes upon it!

Every detail was complete the evening before; and at the first peep of day the sisters were astir, too excited and eager to sleep or eat until they had seen for themselves the effect of their daring venture from without.

With the opening of the shutters, a flood of sunshine poured into the cozy little sitting-room, lighting up the quaintly decorated window with such startling brilliancy that Marcia, who had slipped over to the opposite side of the street, to get a first look at the imposing array, scarcely knew whether to laugh or cry at the impression produced upon her.

The first sight of all these suspended heads, with the saucy sunshine staring full in their unwinking eyes, seemed so much like a diminutive travesty of the scene in Bluebeard's secret chamber, that she involuntarily clutched more firmly the door-key that she held in her hand, while a sudden impulse prompted her to call out to the anxiously watching face in the background:

"What do you see, Sister Anne?"

"The whole thing is simply ridiculous," she thought, and a wave of bitter humiliation swept over her, making her feel as if she would be glad to crush every one of these horribly suggestive mannikins into one heap of broken egg-shells, and then run away, and live a hermit's life forever after.

But as she took courage and a second look, things did not seem so very bad, after all. The bodiless creatures, with their dainty topknots, leisurely swung to and fro, or bobbed placidly up and down with the wind, as if mutely calling attention in their slow, stately way, to the pictured placard in their midst; and a feeling of satisfaction and something like confidence gradually took the place of Marcia's unfavorable first impressions.

This confidence was somewhat increased by the comments that she overheard from the passers-by.

"How lovely those crocuses and hyacinths are!" exclaimed one lady, while her companion laughingly called her attention to the painted faces.

"Only painted egg-shells! But see how very pretty some of those faces are."

"Dear me! The wild-flowers look as if they had grown upon the paper," said a third.

But not a word, when she came to think of it, of the millinery display! But then, of course everybody would understand that the paintings were simply advertisements, and nothing more.

All through the day the two girls, wrought up to feverish excitement, watched and waited for the hoped-for customers, but although almost every passer-by stopped to examine, and in most cases to praise the artistic display, not once did the door-bell ring.

"I don't suppose we can expect people to bring their work to us the very first day," was Marcia's cheerful comment, as she closed the shutters for the night. "But I feel it in my bones that to-morrow will bring us a customer."

Sure enough, it seemed as if her hopeful prophecy was to be fulfilled, when, at an early hour in the forenoon, a portly, kindly-faced lady, who had been standing quite five minutes looking at the display in the window, slowly mounted the steps, and ringing the bell, was ushered in by Marcia, as proudly as if she were escorting a princess.

The stranger looked kindly, if curiously, at the flushed, eager faces of the girls, while she asked with frank directness, "Would you object to telling me who painted the faces on those Easter eggs in your window?"

"Certainly not. It was my sister's work," replied Doris, a little surprised at the question, while Marcia looked decidedly cross. Why should everybody persist in putting the paintings before the millinery?

"Did you mean any of them for portraits?"

Marcia grew very red and embarrassed. "Ye-es—that is, I tried to make some of them look something like the people who pass here. I should not venture to call them 'portraits,' though."

The lady laughed good-naturedly at her embarrassment.

"You have succeeded so well in one case, at least, that I recognized the likeness as soon as I saw it. The little girl in the daisy hat is my daughter. I knew her as soon as I saw the picture, and that was what attracted my attention particularly to your work, which, by the way, is just what I want, myself."

The girls looked mystified, and she went on to explain:

"I am Mrs. Brown, proprietor of the Art Store on Twelfth Street—you know the place?—and I should be glad to buy your whole stock for my Easter trade, if you are willing to sell it."

Marcia uttered a quick protest, but Doris's pale face lighted up hopefully.

"We have put them in our window to serve as an advertisement," she said, "and as such, they are, perhaps, worth more to us than to you."

"My dear young lady,"—she spoke so kindly that even Marcia's ruffled feathers were smoothed a little,—"I see that you are new to the ways of the business world, and if you will take my advice, I can perhaps give you a hint that you may find helpful in the future as well as now, in the way of advertising. A few tastily trimmed hats, and three or four rolls of the latest thing in ribbons, would bring you in more customers in a week than all this artistic display would in a year."

Marcia's lips quivered, and she turned away her face to hide the tears that sprang to her eyes. Their visitor went on with a return to her business-like manner:

"Now I will pay you enough for those pretty trifles so that you can buy the materials that you will need for the hats, if you don't plan too

Digitized by Google

extravagantly, and with a few rolls of ribbon, you can make a fair beginning, in a small way."

She named a sum that to the inexperienced girls seemed a small fortune. Nor was this all, for, to Marcia's great delight, she was engaged to supply a certain department in their new friend's establishment with these same painted trifles, in whose manufacture she had developed an originality and skill hitherto unsuspected, even by that most partial of friends—her sister.

Constant and pleasant employment, with fair pay, did not mean reputation or fortune, but it meant a living. And Doris, following the advice so wisely given, succeeded in building up a flourishing business.

But she always persisted, with sisterly partiality, that all the good fortune of their lives was due to those Easter eggs, that hatched out the chickens with golden feathers, instead of the ordinary fowls that they had hoped for.

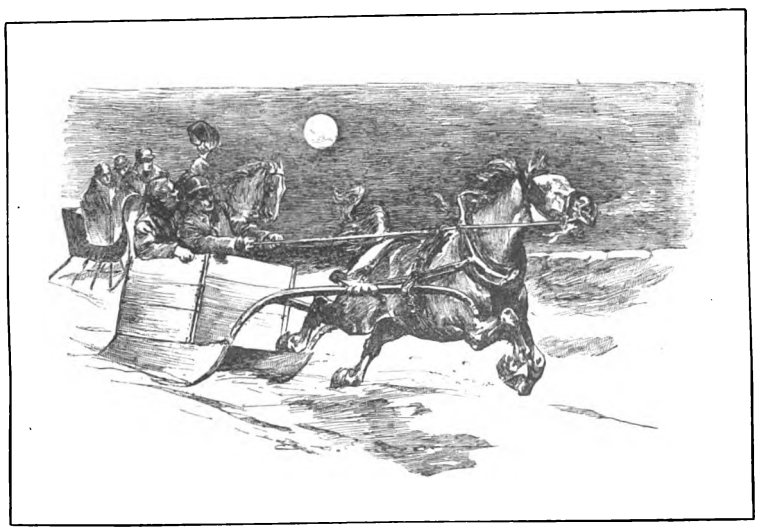
MRS. H. G. ROWE.

For the Companion.

JERRY LEE.

Jerry Lee and I were almost inseparable when we were boys. His father's farm joined my father's. We were almost the same age, studied the same books, and sat together at school. Our tastes were similar. Both of us intended to be farmers when we were men.

Jerry was not exactly a handsome boy. He was small, shock-headed, freckled-faced, and poorly dressed, for his parents were far from rich. Some people thought he had a stupid look; but he was not at all stupid, and was a hearty, excellent fellow.



As companions Jerry and I went to and from school together, and together went to the spelling and singing schools or to the "literary societies" held in the schoolhouses in our neighborhood.

The winter we were fifteen years old we made something that I suppose can be correctly called a vehicle, in which to ride to and from these winter evening entertainments, and to use when we went to town on Saturday afternoons.

There was generally good sleighing from December until March in the region in which we lived, and Jerry and I were very proud of our "cutter," as we called it, when it was done, although I do not think either of us would care to be seen in it today on the streets of the cities in which we live.

But now, after the lapse of years, when Jerry and I are boys no longer, it is a pleasure to think of the merry, free-from-care times we had in the clumsy, uncouth old sled, then so dear to our boyish hearts.

The runners of the cutter had been hewn out of solid oak planks, while the upper part was made of a large dry goods box painted red and green, with an attempt at a border of yellow roses around the centre of the box.

Jerry's Second Victory.

When Jerry and I were seated in this elegant and certainly striking turn-out, the tops of our heads were just visible above the top of the box, which was somewhat lower in front than behind.

With a foot or more of clean, dry straw in the bottom of the box, and three or four buffalo skins and blankets wrapped around us, Jerry's father's old horse "Ned" would draw us along the road, across frozen streams and through long lanes, much to our delight. I am sure our laughing and singing must have been heard in many a farmhouse on those cold winter evening rides.

One evening, after school, as we were about to separate at our gate, Jerry said:

"Let's go to the spelling-school at the Long Lane school-house to-night. Can you?"

"Yes, if father's willing," I replied, with the readiness with which I always fell in with Jerry's suggestions.

"The sleighing is fine, and there is a full moon. It will be just the night for a ride. Besides, we will show those Long Lane boys and girls how to spell, and stop their boasting."

Jerry was what is sometimes called a "natural speller"; that is, he seemed almost intuitively to know how to spell the most difficult words, for he never spent much time in memorizing them. Indeed, he could in an hour commit to memory a list of words I could not perfectly learn in several hours of patient and careful study.

He was the best speller in our school, and had had the honor of "spelling down" half a dozen schools in our neighborhood.

But the Long Lane school had not yet been added to Jerry's list of victories.

The Long Lane district was a new one, made by dividing a large district. A school-house much handsomer than any other in our township had been built, in consequence of which the Long Lane boys and girls were very proud, and had done a deal of boasting that was not pleasantly received by the pupils in other districts.

The spelling-school to be held this evening would be the first in the new school-house, and was likely, on that account, to be of unusual interest.

A saucy message had been sent to our school in the morning to come over and "try our hand" at spelling the Long Lane school down, if we wanted to "be beaten all hollow."

There were several reasons why our school did not care to accept the challenge at that time, although we intended to make the trial a little later.

I was, therefore, surprised when Jerry proposed that we should go alone, since he knew well that I would be quite likely to miss the first word I was asked to spell, and he would have to engage single-handed in the contest.

Seven o'clock found us gliding over the smooth roads, a myriad of stars twinkling overhead, and a full moon shedding its mellow light on the snowy fields and hills.

It was three miles to the new Long Lane schoolhouse, and when we reached it there were ten or fifteen sleds and sleighs hitched near by.

"The whole district seems to have turned out," said Jerry, as we climbed out and tied old Ned to a tree.

A dozen or more boys about our size, some of whom we knew, were snowballing each other in front of the house, which seemed crowded to overflowing.

"Hello, you Sand Ridge fellows!" said one of them, as we drew near, "what do you want over here?"

"What do you suppose?" replied Jerry, tartly.

"Come over to show yer ign'rance?"

"No—to show yours!" said Jerry.

"Huh!" was the sneering reply to this. "You'll have to do some tall spelling if you don't want to sit down at the first round. We've got Third Reader spellers that'll make you open your eyes."

As we pushed our way into the crowded schoolhouse, I looked around but did not see a person from our district. I whispered to Jerry:

"I don't believe you've much chance in this crowd, Jerry. You'd better not try to spell to-night, but wait until the rest of our good spellers come over."

"I shall spell if I'm chosen," replied Jerry, stoutly.

A few moments later the teacher of the school, a young man whom we had never seen before, requested all who were willing to take part in the contest to go to one end of the school-room, while all not intending to spell were asked to take seats and keep as good order as possible.

Jerry, in response to this, walked forward with the spellers, and I followed him, feeling very much out of place.

As we were walking forward, a boy I knew said, in a shrill whisper:

"You fellers had better sit down! We've got some brag spellers here from over in the Four Mile district, and they'll beat you all to pieces."

"Perhaps," I said, with a show of confidence. "But they'll find that Jerry Lee can spell a little, anyhow."

He spelled more than "a little" bit on that memorable night. He surprised every one. Indeed, he told me afterward that he surprised himself.

The "brag spellers" were two extremely spruce young men and two pert young ladies with pink and blue ribbons fluttering among their curls. They were the noted spellers of the Four Mile district, and it was easy to see that they felt quite confident of their ability to "spell down" any school against which they might array themselves.

They glanced superciliously at Jerry, when, after a full hour of spirited spelling, they and Jerry were all the scholars that were left standing of the fifty or sixty who had at first engaged in the contest. Indeed, I saw one of the young men wink in derision at the other, and one of the young women elevated her eyebrows loftily while the other one fell to tittering, when only Jerry was left to spell against them.

But Jerry was a boy of remarkable self-poise. He had already won quite a victory without losing his head, and now he stood erect, calmly indifferent to the sneers of his opponents.

I think that those sneers simply caused Jerry to gird himself up more firmly for the contest. He threw back his head, squared his shoulders, folded his arms, and faced his opponents in a manner that won for him the admiration of even those who did not wish to have him win.

Perfect silence fell upon us all as the spelling went on, although I was tempted to pound the floor and scream "Hurrah!" when Jerry calmly and distinctly spelled word after word I felt sure that he would miss.

Finally, the word "procellarian" was given to one of the young women. She gave her head a little toss of defiance as she calmly spelled it with but one "l."

"Next!" said the teacher.

Jerry spelled it correctly, and the young woman flounced angrily into a seat.

Then one of the young men and the other young woman missed "sisymbrium," and Jerry, to my wild delight, spelled it correctly, amid breathless silence.

The defeated ones took their seats with crimson faces, while the sole survivor of the "brag" spellers angrily faced Jerry with a flushed and defiant face.

The next word was "cylinder," and the remaining "brag" speller in his nervousness made the glaring mistake of spelling it with an "s" instead of a "c," whereupon Jerry, amid the wildest applause, spelled it correctly, putting marked emphasis on the "c," and spelling the whole word in a pardonable tone of triumph.

Loud and long were the shouts that rang throughout the house, and even the teacher of the defeated Long Lane school shook hands heartily with Jerry, and said he had spelled nobly, and richly deserved his success.

So much praise was not agreeable to Jerry, and he hurried out of the room as soon as he could, while I followed him to the tree under which old Ned stood. Within three feet of our "cutter" stood a very fine sleigh indeed, and one that quite put our home-made turn-out to shame. It was a light, graceful two-seated vehicle, with a fine horse attached to it.

While we were unblanketing and untying old Ned, out came the defeated quartette of spellers from the Four Mile district, and began climbing into the sleigh by our side.

Recognizing us, one of the young men said:

"Oh, I suppose you feel very smart, over there! If you were a little older I'd box your ears for you."

"Your defeat might be double even now, if you tried it," said Jerry, in his provokingly serene tone.

"Oh, la! Tom, don't belittle yourself by noticing them," said one of the young women, while the other burst into a shout of derision as she said:

"Do look at their elegant turn-out! Ha, ha, ha! If I could ride in such an elegant affair as that, I'd feel smart enough for anything!"

"And such a splendid horse!" cried the others. "I dare say they get their high spirits from him."

We had driven into the road now, which was the Long Lane from which the school-house derived its name. After us came our angry opponents. One of the young men called out:

"Get out of the way, or we'll run over you!"

Then Jerry stood up and said:

"Will you? I've beaten you in spelling—perhaps you'd like to try to even things up a little by beating us to the end of Long Lane, eh?"

Shrieks of derision greeted this challenge, and one of the young men cried out:

"Why, we'll be at the end of the Lane before your old skeleton wakes up from the nap he is taking!"

The road was wide, and they attempted to pass us. Jerry and I stood up in the box of our sled. Jerry took the reins from me as he said:

"Let me drive. Ned will go faster for me!"

The other sleigh had shot past us, and the jeers of its occupants were ringing out when Jerry spoke softly to old Ned and touched him lightly with the whip. The long-legged, long-winded and wiry old horse plunged madly forward with the speed of the wind.

I stood up by Jerry, clinging to the dashboard as the sled swayed from side to side or bounded up and down as old Ned sped on.

In two minutes we were neck and neck with the horse of the other sled, and Jerry was crying out loudly, but firmly:

"Go along, Ned! Go on, old boy!"

The driver of the other team stood up, belaboring his horse, while the whole party yelled and screeched.

On we went, neck and neck, for a moment or two. My cap blew off and I never saw it again. The clumsy sled threatened to capsize at every renewed plunge old Ned made. He fairly snorted as he stretched out his long neck, while the vapor from his nostrils streamed back on either side of his bony body.

Now we began to gain. We were a foot ahead—three feet, ten feet and gaining fast, while our shouts of triumph rang out.

We reached the end of the Lane fifty yards in advance of our rivals, and turned into the road leading to our homes.

On came the other sleigh with unchecked speed. The driver gave his horse a quick pull to the right, and over went the sleigh, sending its occupants almost out of sight into a great snowdrift by the roadside.

The horse started to run, but Jerry and I jumped out, caught him and led him back. Then Jerry said, dryly:

"This is a deceitful sort of a world, isn't it? You see one can never judge correctly by appearances. Good night!"

They gave us a very civil good-night in reply, and we went on our way, though in recalling the events of the evening we felt that while our opponents were certainly conceited and abusive and foolish, our manner to them was after all but a reflection of theirs. We could have shown a less provoking and more gentlemanly spirit.

J. L. HARBOUR.

For the Companion.

MY "RUNNING FIGHT."

In 1871 I lived alone at a ranch on the plains in Colorado. My partner and the hired man were away up in the timber on the Divide, getting out house-logs and poles with which to build corrals. Some one must stay at the ranch and look after our cattle, which were ranging at will. That some one was I, and the nearest inhabited dwelling was ten miles away.

Living alone for a short time is not a bad plan. One has time to think over a great many things, and as there is nothing to distract one's attention, the conclusions one reaches have a chance to sink in; but after a while solitude becomes a great strain on the nerves. To get up in the morning, cook breakfast, wander all day on the vast empty plains, come back at night to a lonely cabin, and lie down like a wild beast in his den, never hearing the kindly human voice or seeing the kindly human face, is a most trying ordeal.

But hard work kept me fairly cheerful. Every morning I saddled my pony, rode out and hunted up the cattle, and counted them. We had but recently settled there, and our stock, which we had driven from the Platte, were not yet well wonted to their new grazing grounds.

When I had done counting them I often hunted antelope, creeping, crawling, hiding, waiting, and then crawling on again till I could get at last the bead of the Sharps rifle against the point on a buck's side where the brown hue of the back ceases and the white of the under side begins, and shows just where to send a bullet through the heart.

About once a fortnight my solitude was relieved by a visit from my partner or the hired man, coming down with a wagon-load of poles or logs, and taking back some of the meat I had killed.

On these occasions there was one question which we never failed to put to each other: "Have you seen any sign of the Indians?" Not very long before this the Arapahoes and Cheyennes had broken out of their reservations, and scalped thirteen men on the next stream to the one where we had our ranch, and had run off two hundred head of horses and mules.

Naturally, I was on the lookout for the Indians night and day. As I roamed around over the prairie I watched for the tracks of their unshod ponies on the sandy soil, or scanned the horizon for the sight of a band of these roving marauders.

I had more than one false alarm. Both cattle and antelope, travelling to water on a hot day in single file, are often so transfigured by the "smoke" or mirage caused by the currents of heated air rising from the surface of the ground that they look very like a line of horsemen.

The flickering, wavering effect of this "smoke" distorts the shapes and sizes of things amazingly. Objects seen through it are blurred and broken, like the reflections in still water when the ripples from an oar cross them. A soapweed half a mile

Digitized by Google

away will look for a minute like a tall man walking, and then change and look like an antelope or a wolf, and presently change again into what it really is, a big weed.

The constant changes baffle and confuse the eye. One believes, and disbelieves, and believes again; but no matter how often one may have been deceived, one can never know if next time may not be the grim reality. Your eye suddenly falls on what seem to be Indians, and your heart leaps to your mouth; there is no better phrase than that to express the sudden start and the tightening of the chest when the eye discerns something which it takes to be a merciless foe close at hand.

"There they are!" you say, and brace yourself for a struggle against fearful odds or a race for life. You wait for a minute, breathless, expecting your fate. Then the mirage shifts, or the objects come nearer.

"It's only that bunch of cows, with the black muley in the lead," you say to yourself, and all the imaginary struggle and race for life that filled your mind vanishes like the mirage.

One morning I was out as usual after the cattle. I missed a bunch of them from their wonted haunts, and put spurs to my pony and cantered around looking for them.

I was very young in those days, and I was, moreover, what was called a "tenderfoot;" that is, an inexperienced new-comer from more civilized parts. In order to get my face well tanned, I wore on my head, instead of a wide-brimmed cowboy hat, nothing but a little round cap; it was the next thing to going bareheaded. As I had not been to town for months, my hair had grown long, and hung down almost to my shoulders. Furthermore, as I used to walk considerable distances after antelope, I wore light shoes, instead of the high boots, with the trousers tucked in, after the universal fashion of the frontier.

Add to this that my face was as beardless as a baby's, and you will see that I must really have looked, at a distance, rather like an Indian. But we kept no looking-glass on the ranch, so that this fact never occurred to me.

Well, as I galloped around, looking for my stray cattle, I came to the top of a rise in the prairie. Instantly I pulled my pony up short and looked ahead hard, for there, down in a hollow, were my cattle; and there among them was a horseman.

He sat quite still on his horse and looked at me, as I did at him. He was some three hundred yards away, and it was not easy for either of us to make out what the other was. My figure, being outlined sharply against the sky, must have given him an advantage here.

"What is he?" thought I. "An Indian? No, decidedly not; he wears a hat, and appears to be dressed like a white man. Can he be a cattle-thief? No; he isn't driving those cattle off; he's only looking at them."

But before I could make up my mind, he had jumped off his horse and lain down on the ground flat on his face.

"What on earth's the man up to?" said I to myself. "That's a foolish trick for a man to play—to get off his horse on the prairie, right among the cattle!"

Prairie cattle, though perfectly used to mounted men, are generally very much disturbed and excited by the sight of a man on foot, and are likely to make a rush at him. To dismount in the midst of them a man must have a strong reason.

I watched him more closely than ever. Suddenly from the prostrate figure came a puff of smoke. I heard the crack of a rifle and the *ping-g-g* of a bullet whizzing past me.

"What!" said I to myself. "He's shooting at me! I must run quick and explain—no time to lose about it, either."

Touching spurs to my pony, I rode as hard as I could go, shouting out, "Hold on! hold on!"

He didn't "hold on" at all. He sprang up from the ground and upon his horse, and rode away like the wind. I followed him, still trying to explain, and yelling, "Hold on!" at the top of my voice.

But the more I shouted the more he ran. My pony was fast, and I gained on him. Then I saw him cast a look behind him, and leaning forward in the saddle, raise his right hand and begin to belabor his horse's sides with a blacksnake whip, as if more than anxious to get away as fast, and as far, as he could.

Then it dawned upon my perplexed brain that the man mistook me for an Indian! I halloed to him to stop, and to come and see me at home, and dine and sleep. But no; he only took my halloas for war-whoops, and plied the whip harder than ever.

At last I gave up the chase in despair, and reined in on the brow of a wide sand gulch which wound for miles away through the prairie. Down the steep side of it he plunged; I saw the sand fly in showers from his horse's heels as he scurried across the gulch. Up the opposite side he dashed, and away over the broad flats which stretched beyond.

I must have watched him while he rode three miles; and as far as the eye could follow he was keeping the horse at its fastest pace. Evidently he was badly scared—"stampeded," in fact.

I am afraid I must confess that when I gave up the chase, I had, boy-like, to give a whoop or two that might have passed muster as an Arapaho yell. It tickled my fancy to have been under fire, and to have stampeded a real live cowboy, all by myself.

I returned to my cattle, which proved to be all right, and then betook myself as usual to trying to find antelope. I saw no more of the fugitive.

One evening, about a week afterward, as I was picketing out my pony to graze after his day's work, I saw a man ride up to the cabin, and I recognized him as Pat Higgins, a cowboy from the Divide.

"Hallo!" said I, coming toward him with the axe in my hand with which I had been driving the picket pin, "Is that you, Pat? I'm glad to see you. Get off and look at your saddle; and if you think it would look better off, too, strip it and come in and stop for the night."

"Well," said he, slowly dismounting, "it's going on to camp I was, but indade it's a matther of twelve or fourteen miles further, and the baste's tired."

"Oh, come in," said I; "there's plenty of hay for your horse, or you can stake him out on green grass down by the spring there alongside of mine if you like."

"Tell me now wan thing," said he, as he took off his saddle and turned his horse loose to roll in the dust and then graze around. "Have ye seen any sthray work-oxen around here? There's a big red stag with O B on the hip I'm looking for."

"No," I answered, "I haven't seen him. There aren't any strays with our cattle just now. But bring your saddle inside so the wolves won't gnaw it, and I'll fry some antelope meat and have supper ready in a jiffy."

Pat came into the cabin and sat down on my best chair—an empty box turned bottom upward.

A Frightened Cowboy.

"And tell me now," he began, "where's yer folks? Where yer partner, and the man ye had working for ye?"

"Off up on the Divide getting out house-logs."

Having cut up a frying-pan full of antelope steaks I set them on the fire.

It made me very cheerful to have any company at all, and Pat was a capital fellow. He looked at me now with a puzzled expression.

"But how do ye manage here at all?" he inquired. "Ye don't mean to tell me that ye're living out here all alone by yourself?"

"That's just what I am doing," I replied. "I'm alone here, hunting antelope and minding the stock."

"Murther!" he exclaimed. "I wouldn't live alone like that out here for a hundred dollars a month, not if ye paid me for it. Why now, aren't ye afeard of the Injuns? It's a wonder they haven't scalped ye."

"Yes," said I, "I'm always on the lookout, of course; but you see there haven't been any in here this year—at least not nearer than Big Sandy."

Pat opened his eyes wide. "Is that what ye think?" he cried. "This prairie was runnin' over full of Injuns only last week; and however ye kept yer hair I can't tell."

"What?" I almost shouted, jumping up excitedly from the pan, where I was turning the slices of meat with a fork. "Indians in here last week? Why, I've been all about on the prairie every day, and keeping a sharp lookout, too, for tracks, and I've never seen any sign of them."

"Tracks or no tracks, they was right in here on Black Squirrel Creek—a band of about twenty-five bloodthirsty Cheyennes on the warpath. Jim Smart, one of Van Schuyler's herders, up here lookin' for cattle, ran onto 'em in the hills over east toward the head of Big Sandy, and had a running fight with 'em for twenty miles. He says they chased him pretty close, but he killed five of 'em that he knows on. His horse was just about clean give out when he got back to the camp at Crow's Roost."

Naturally I was much excited by this piece of news. Hostile Indians on my range! My little cabin was easily visible from the hills over toward Big Sandy. How had they failed to see it, to creep up to it, shoot and scalp me and run off the horse?

I could not understand how I had escaped.

"Yes," continued Pat, looking meditatively at the frying meat, "Jim must have had a turrible time of it, sure. He's a brave man and no mistake. I'll tell you what he says to me: 'I saw they was too many for me,' says he, 'and I run my horse a bit till I had 'em all strung out, and then I hops off and shoots and drops the foremost wan, and that sort of checks 'em a bit; and then I hops on agin and takes my horse along easy till they begin to crowd me agin, and then I hops off agin and drops another; and that way,' says he, 'I stood 'em off till I got plumb back to camp.' Och now, it's himself that's a cool hand!"

Something in the phrase "hop off and shoot and hop on again" roused my attention. A suspicion flashed across me. Could this hero be the man? No, it was impossible. Still I was not satisfied.

"When did you say all this happened?" I asked.

"Why, the middle of last week," he answered, "when Van Schuyler's outfit was camped down here at Crow's Roost. They've moved from there since."

"Just the time when I had my little encounter with the cowboy who got stampeded," thought I to myself.

"And this man you speak of," I continued, "ran onto the Indians in these hills over east here?"

"That's where he found 'em, or they found him," said Pat, "sure."

Another curious coincidence! That was just where I had found my stray cattle and that strange horseman among them.

"And you say they ran him toward Crow's Roost?"

"That's what they did," said Patrick; "and if you'll hear me talk, you'll not stop here a day longer. It's too lonesome for ye intirely. Ye'd betther move yer stock at wance up on the Divide, where there's more settlers."

His advice fell upon unheeding ears. It was all as clear as daylight to me now. The last I had seen of my stampeded cowboy, he was heading for Crow's Roost as straight as he could go; and I understood very well that Jim Smart, Pat's heroic Indian fighter, was none other than my headlong runaway, and that I by myself was those "twenty-five bloodthirsty Indians" and "five of me was dead!"

JEALOUS CAT-BIRDS.

Some years ago I was living in a town where glass-blowing was a leading business. The glass-blowers often made for themselves and friends globes of glass, which they silvered inside and placed upon their lawns or in their flower-beds as ornaments. Of course these served as convex mirrors, and the surrounding landscape or buildings were reflected in them.

One day a young man connected with the glass-works called to me as I was passing, and asked me to take a look at a cat-bird, which, he said, was fighting its own reflection in one of these mirrors. He had been at it all day, he said, and was just killing himself with his own fury.

Entering the gate near the house, I saw one of these large silvered globes in the centre of a flower-bed, and perched upon the bed was a cat-bird, with his feathers puffed out like an angry turkey's, and eying fiercely his own reflection in the glass.

He was so close that the reflection looked almost as large as himself. He would strike with his wings, bill and feet at the supposed rival, fall back as if almost exhausted, and then rally for another attack.

He continued this for some time, and then hopped and flew feebly away to a neighboring fence, where his mate was awaiting him.

Never was a cowardly warrior skulking away from a fight more indignantly rebuked than the little brown bird was by his dusky mate. She scolded, stormed, sulked, pecked her mate, and said, as plainly as signs and tones can say:

"If you don't go back and finish up that insolent upstart, you and I must part. You are a weak, good-for-nothing little fellow, and I suppose your wife will have to come and help you out of this scrape. I should think you had been long enough about this little affair. Go at once and end it up."

The poor bird literally dragged himself down to the fight once more, and began again its attack upon the glass; while the mate upon the fence kept up a series of harsh cries that sounded like reproaches and insults.

Finally I went near enough to end the struggle for a while; and the pair flew away.

I learned that they returned next day, and renewed the fight for a while; then had another scene of animated discussion, and finally flew away, abandoning a nest which they had just commenced. They could not, evidently, live in peace with their own images.

COMMONPLACE SAMENESS.

"A commonplace life," we say, and we sigh,
But why should we sigh, as we say?
The commonplace sun in the commonplace sky
Makes up the commonplace day.

TOLEDO AND CORDOVA.

Imperial Toledo—Toledo of the Romans, of the Goths, of the Moors, of the Christians! We were full of enthusiasm as we started from Madrid in the early—too early—morning to find it.

The train seemed nearly empty. We could almost fancy it crawled on for our sakes only; but crawl it did. I suppose that even a snail gets somewhere at last, and at last we came in sight of Toledo, towering up from the yellow Tagus, yellower even than the Tiber at Rome.

The Tagus girdles the town, leaving only one landward approach, which is fortified by Moorish towers and walls.

Like Rome, Toledo stands upon seven hills, and like Rome, everything about it is venerable.

No mushroom place this, built in hot haste, as solace for a monarch's gout. All here is substantial and ancient.

For three hundred and fifty years the Moors held sway in Toledo, and you see Moorish remains at every step. It was the Moors who built the noble gates, of which the finest is the Puerta del Sol, in the picture of which you will note the horseshoe-shaped arches which distinguish Moorish architecture.

Externally, nothing could be more imposing than Toledo, but when fairly into it, one realizes that all is desolate, forsaken, going to decay. It once had two hundred thousand inhabitants; it has twenty thousand now.

But how fascinating it is, even now! The narrow, illy-paved streets wind up and down and in and out, and lead you from wonder to wonder of interest and of beauty.

The carving of the stalls in the cathedral choir is so beautiful that I should like to study it every day for a year, and the stained-glass windows are among the finest in the world.

They sparkle as with jewels, and throw their parti-colored reflections on the eighty-eight columns which uplift the gorgeous ceiling. There are noble pictures and glorious tombs—a collection of works of art, in short, which might be the sufficient goal of any pilgrimage.

The Church of St. John of the Kings must not be forgotten, or its lovely cloister, with its richly clustered pillars on three sides, and its perfect Gothic arches. This cloister is being slowly restored, but meantime the undisciplined roses have their way in it. We gathered great bunches of them.

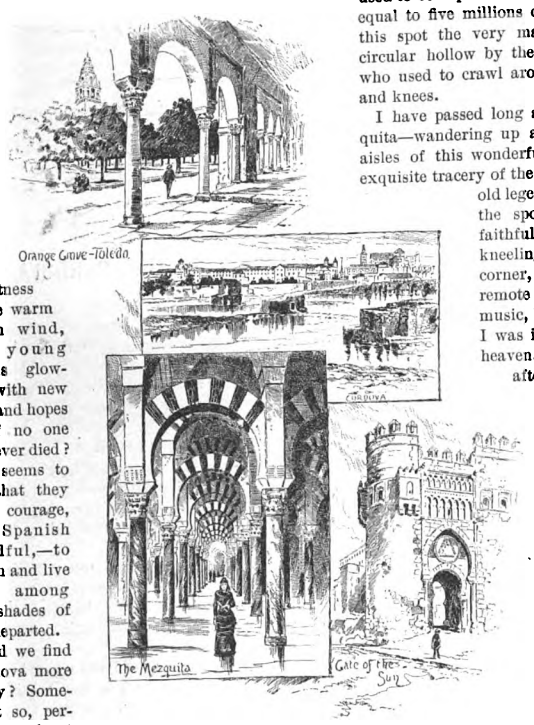
Outside this church hang chains, which were suspended there as votive offerings by captives who had been delivered from the power of the Moorish infidel.

Two synagogues yet remain to attest the former importance of the Jews in Toledo. The ceiling of one of these synagogues was made of beams from the cedars of Lebanon.

Legends say that Toledo was the place of refuge of the Jews when Jerusalem was taken by Nebuchadnezzar. So ancient is it that you can believe anything, from the tale that ascribes its foundation to Hercules to that other solemnly enforced and detailed account which asserts that Tubal began to build it one hundred and forty-three years, to a day, after the Deluge.

It looks old enough to have been begun even before the Deluge, and it is certain that, when the Moors first took it, it was largely populated by Hebrews.

You feel as if nothing there ever had been or ever could be young, until you look up to some vine-wreathed balcony, and meet the dark eyes of some Spanish beauty, smiling coquettishly from under her lace mantilla; and then, suddenly, the old, old world seems eternally young, with love and hope and smiles springing up like flowers in the sun of every summer.



When the Christians recovered Toledo from the Moors they set a heavy tax upon every Jewish head; but the Jews were allowed to retain their synagogues, on the plea that they had not consented to the death of the Saviour. When Christ was brought to judgment, they said, the votes of the tribes had been taken, and one tribe had voted for His acquittal, and from this tribe were the Jews of Toledo descended!

Can you fancy, at all, this quaint old town, high, high above its yellow river, with its substantial Moorish architecture, its narrow streets which wind and climb through the desolate city where two hundred thousand people used to make

Digitized by Google

merry, and where its poor twenty thousand live now as quietly as if they were all holding their breath, in order not to wake the echoes of some long-dead past?

Can you fancy, in this solemn, silent place, possessed by ghosts of Romans, Goths, Jews, Moors and Christians, red roses flaunting their brightness in the warm south wind, and young cheeks glowing with new joys and hopes as if no one had ever died?

It seems to me that they need courage, this Spanish handful,—to laugh and live thus among the shades of the departed.

Did we find Cordova more lively? Somewhat so, perhaps; and yet Cordova, like Toledo, is a city which has been, and is not—which belongs more to the dead than to the living; for the gay days are past when it used to be called "The City of the thirty suburbs and the three hundred mosques."

Here, as in Toledo, are *patios*, and though I have heard them called courtyards, a *patio* is not precisely a courtyard, nor yet is it a garden or a room, but it is a delicious combination of all three.

A small vestibule is usually between it and the street. On its four sides rise slender columns, which support a gallery. It is paved with marble. In the centre there is often a fountain. Palms grow in these *patios*—flowers blossom there, ivy climbs round the graceful little pillars; here are statues, perhaps, or busts or graceful urns.

The *patio* is the heart of the home—the place where you go to sip after-dinner coffee, to chat, to lounge, to dream.

Cordova was of importance in Cæsar's time; he half destroyed it because it sided with Pompey. "The Great Captain," who was born there, used to say that other towns might be better to live in, but the place in which one should be born was certainly Cordova. Cordova was renowned, in those farthest off days, for its men of letters, whose wisdom astonished even the Romans.

Roman Cordova yielded to the Goths. But the Goths were conquered in turn by the Moors, and Cordova became the capital of Moorish Spain. It saw, under the Moors, the days of its greatest glory.

In the tenth century it contained nearly a million of inhabitants, three hundred mosques, nine hundred baths, and six hundred inns. How is the mighty fallen! It is said to have some fifty thousand inhabitants, now; but looking back to a sojourn of some days there, I can scarcely remember to have met any one in the streets, save tourists and beggars.

The place still has beautiful suburbs, and to drive out among the orange orchards and the olive groves is a memorable delight.

But to me Cordova means two things—and to find again those two, gladly would I cross sea and land. I would give you all else of Cordova willingly, if you left me the freedom of the Mosque-Cathedral, La Mezquita, and of the Sultana's Garden.

How shall one picture in words the wonders of La Mezquita? Its exterior gives no hint of what awaits you, for it is surrounded by walls from thirty to sixty feet in height; but once you have entered through the Gate of Pardon the Court of the Orange-Trees, the enchantment begins.

It means so little to say, in set phrase, that there are a thousand columns, surmounted by the Moorish horseshoe arches; and that some of these columns are of jasper, some of porphyry, some of verd-antique, and no two alike. You do not stop to think of these details; you wander on and on, as among the countless trees of a forest. You lose yourself in this divine immensity. It is like nothing else on earth.

Look where you will, the interminable vista stretches out beyond, and allures your tireless footsteps.

The stained glass of the windows, when the sun strikes it, throws patches of vivid color against the marbles. The place is so vast that you scarcely think about the Cathedral church, which that royal vandal, Charles V., allowed to be engrafted in its centre in 1523—a piece of barbarity which even he had the grace to regret when he came to see it later.

There is one tiny chapel, with a roof like a shell, which is adorned with mosaics sent from Constantinople. These mosaics are said to be the finest in the world. This is the Ceca, or Mihrab, the Holy of Holies, where the Koran used to be kept on a stand which cost a sum equal to five millions of dollars, and around this spot the very marble was worn in a circular hollow by the faithful Mussulmans who used to crawl around it on their hands and knees.

I have passed long afternoons in La Mezquita—wandering up and down among the aisles of this wonderful forest, studying the exquisite tracery of the carvings, recalling the old legends which cluster about the spot, kneeling with the faithful at their prayers, or kneeling alone in some far-off corner, and listening to the remote sound of the holy music, half able to fancy that I was in some outer court of heaven. It is after such an afternoon as this that I would gather roses in the Sultana's garden, that thus I might be brought back to the simpler joys of our human life, and find rest for my soul after the exaltation born of the Mezquita.

How long ago did the Sultan make this garden for his love? I do not remember how many hundred years have passed since the dark-eyed beauty gathered its first roses, but still they freight the soft wind with their breath, and still the fairy ferns grow green, and the oranges ripen in the sun, and the solemn old carp are happy in the fish-pool; and I audaciously pluck the roses that are the far-off descendants of those of that long-past time, and the Sultana never heeds my trespass. She is as dead as Cordova.

LOUISE CHANDLER MOULTON.

JOY.

Not by appointment do we meet delight
And joy; they heed not our expectancy;
But round some corner in the streets of life,
They on a sudden clasp us with a smile.
—*Gerald Massey.*

AN UNWELCOME VISITOR.

For twenty years—ever since the great war of 1870–71—the relations between Germany and France have been watchful, suspicious, and at times threatening to the peace of Europe.

The French have never become reconciled to the loss of the provinces of Alsace and Lorraine, which were taken by the Germans as a part of the spoils of victorious war, and they have not ceased to cherish the hope that those provinces might one day be recovered.

On the other hand, Germany, conscious of this strong feeling on the part of the French, has felt obliged to maintain heavy armaments, and to keep a suspicious eye ever upon the conduct of her republican neighbor.

More than once in the last twenty years the two nations have seemed upon the very verge of another war, which has, perhaps, been averted only by great patience or by the mediation of other powers.

This being the state of things between Germany and France, the sudden visit of the Empress Dowager Frederick of Germany to the French capital, in the last week in February, was an event of marked importance, and had unfortunate results.

The Empress Frederick is the eldest daughter of the Queen of England, the widow of the Emperor Frederick, and the mother of the reigning German Emperor, William II. She has always been known as a woman of great ability, to whose opinions her husband paid much deference.

At first, her visit to Paris seemed to be essentially one of peace and conciliation. A great art exhibition was to be held in Berlin, and it is said that the main purpose for which the Empress went to Paris was to invite the best French artists to display their works in this exhibition.

But if the intent of the Empress's journey was a peaceful one, its result was far from reducing the friction between the two nations. The Parisians became restless, and the more extreme spirits became hostile, as her stay was prolonged; and when she drove to Versailles, in order to visit a spot connected with her husband's memory, so much ill feeling was aroused that it was thought prudent for the Empress to leave Paris promptly.

For it was at Versailles that the Germans, having conquered and desolated France, proclaimed their new Empire in January, 1871, and placed William of Prussia at its head, an event which has always bitterly rankled in the French heart. Moreover, it was her husband's connection with this historic event, so humiliating to France, which led the Empress to go to Versailles.

The fact that the Empress was forced to leave Paris so suddenly, and take refuge from insult in her native England, caused great excitement in Germany. The young Emperor hotly expressed his indignation. The German papers teemed with denunciations of the French, and it was freely predicted that the Emperor would reverse his recent policy of friendliness toward France, and recall Bismarck—always the inveterate foe of France—once more to the chief place in his councils.

Already the administration of the former French provinces of Alsace and Lorraine had been made more mild, while the regulations concerning passports had been relaxed. But after the incident of the Empress's visit to Paris orders were sent from Berlin to Prince Hohenlohe, the Governor of the provinces, to maintain the regulations with absolute stringency.

On the other side, the French artists withdrew their promise to exhibit their pictures at Berlin, and at a ball in Paris the ladies pledged themselves never to dance with a German again.

While it is true that a war between the two nations may not immediately issue out of the Empress's well-meant but unfortunate journey, it is a lamentable fact that the relations between the two have become once more strained and critical, and that a slighter provocation would probably now precipitate a conflict between them than would have sufficed before the recent events occurred.

PROVIDENCE.

Sacred and secret hand!
By whose assisting, swift command
The Angel shewd that Holy Well,
Which freed poor Hagar from her fears.
And turn'd to smiles the begging tears
Of yong distressèd Ishmael. —*Vaughan*, 1655.

INTERNATIONAL COPYRIGHT.

Under the laws of the United States as they have existed for many years, a citizen or resident of the country might obtain, for any book, dramatic or musical composition, picture, statue or map of which he was the author or designer, the exclusive right to publish, copy and sell the same for a certain term of years.

This right or privilege is called copyright. It is granted for a period of twenty-eight years in the first instance, with the privilege of renewal for a further term of fourteen years, making forty-two years in all.

The privilege of copyright is regarded as absolute property, in the same way, and to the same extent, as a patent, for the term of its existence, and may be inherited by an author's heirs, or sold to other persons.

A copyright for a book or any other article which comes within the law is obtained of the Librarian of Congress. An author or publisher, in applying for copyright, must send a printed copy of the title-page of his book, and deposit two copies of the book with the Librarian of Congress after its publication.

The privilege of copyright in the United States has never been granted to foreigners not resident in the country until the adoption of a measure of international copyright at the close of the session of the Congress which has jnst adjourned.

Heretofore, indeed, any book published abroad might be reprinted in this country freely, and without payment of royalty to the foreign author. But it has not been uncommon for publishers to give to such authors a part of the profits of the American editions.

For many years the privileges of international copyright have been the rule with most of the countries of Europe. Agreements were entered into between the governments of these countries, and laws adopted by them, under which a copyright might be obtained by a foreigner, even when resident abroad, for a book, a picture, or other such work of the brain, on the same terms as by a citizen or subject of the country.

There have been many attempts to procure the adoption of such legislation in this country, but all such have failed until the passage of the bill referred to. The new law provides that foreigners may obtain copyright for their works in this country, receiving protection for their monopoly of the publication and sale of their works, provided the books are printed from type set in this country or from plates made from type set here.

This provision is different from the international copyright laws prevailing in most foreign countries, and is intended to protect American printers, in the publication of foreign books, from competition with printers in other countries.

When a foreign book has been copyrighted here, the same book cannot be imported from abroad in quantities, though not more than two copies may be imported by any one upon payment of the regular customs duty upon them.

Newspapers and magazines printed abroad are also excluded from importation for sale, under the same terms as books, if they contain matter copyrighted in this country.

Lithographs and certain other pictures, in order to be copyrighted by foreigners, must also be made in the United States.

The privileges granted by the new law apply to citizens of foreign countries only when the countries of which they are citizens grant corresponding privileges to American citizens, which fact is to be ascertained and proclaimed by the President. The effect of the new law will be to prevent the publication of foreign books, and so forth, in the United States, without the consent of the foreign author.

It is expected by the promoters of the new law that it will be of benefit to American authors by discouraging the production of great numbers of exceedingly cheap editions of foreign works—a business which heretofore, it is assumed, has occupied the attention of American publishers to the exclusion of the consideration of deserving American works.

It is also expected that the new law, by discouraging the importation of books printed abroad, will greatly stimulate the business of printing and publishing in the United States.

OUR EARLY EASTER.

Easter comes this year nearly as early as it can. The festival never can occur before March Twenty-second, and we have it this spring only a week later, March Twenty-ninth. The rule which fixes the date was settled many centuries ago. As in some other matters, the Roman and the Greek Churches do not agree in this, but outside of the sphere of the Greek church the day is the same throughout Christendom.

The rule for determining the date of Easter is too complex to be stated in a few words. It does not explain the matter much to say that "Easter Day is the first Sunday after the fourteenth day of the calendar moon which happens on or next after March Twenty-first."

This might answer the purpose if the learned writers on the subject were not obliged to add that "the calendar moon" is not the veritable queen of night which we see in the heavens, nor the mean moon of the astronomers, but "an imaginary moon created for ecclesiastical convenience in advance of the real moon."

It is a pity that the flowers will not comply with the needs of the festival, and bloom two months earlier than usual; but happily for the luxurious Christians of the modern world, our florists know how to create an artificial spring to match the imaginary moon, and they also know how to import from tropical islands the flowers that bloom in *their* spring a thousand miles away.

On Easter Sunday morning of last year a noted florist of New York had fifteen thousand pots of Easter lilies ready for distribution among the churches of New York and Brooklyn, the fragrance of which, it is said, could be perceived at the distance of half a mile.

All through this snowy and frosty winter fields of lilies have been growing for us in Bermuda, and are now exhaling their fragrance in city green-houses. The early Easter, therefore, will not lack its flowery offerings, nor would it lack them if it should come in the middle of January.

The flowers that salute the morning of this beautiful festival connect us with the remotest recorded antiquity. The oldest Egyptian tombs bear testimony, both in their pictures and in their inscriptions, that four thousand years ago human beings made the same use of flowers in the religious festival of the spring that we do in 1891.

Before Pharaoh reigned, the Eastern peoples placed flowers upon such altars as they had in token of gratitude and gladness. Wreaths and garlands of flowers were hung in the temples. Bouquets and mounds and pyramids of flowers were employed precisely as they are with us.

At private feasts a bouquet was offered to each guest on his arrival, and we perceive that it was a polite observance for guests to exchange flowers selected from their bouquets. It would be difficult to think of any use of flowers made by us, whether in private entertainments or in public ceremonials, which was not perfectly familiar to civilized peoples before the Pyramids were built.

If, in some of our conspicuous churches, there is ostentation or excess in the display of costly flowers on Easter morning, we need not harshly condemn an indulgence which has the merit of being harmless, and of giving a banquet of delight to a great multitude of people at the close of such a winter as we have had in this latitude.

Nor is it the waste which it once was, for after the glorious music of the festival has died away and the congregation has dispersed, the potted flowers bloom on as before, and the gathered flowers are carried away to the hospitals and asylums.

AT THE RECEPTION.

Patty and Sarah Amber, who lived in a village in Delaware, were delighted when their cousin, the wife of a cabinet officer in Washington, asked them to assist her at a reception. She advised them as to their gowns and gloves; hence they had no anxiety on that score.

But they were anxious on more important matters.

"I shall see so many wise and brilliant people," thought Sarah. "I wonder if I shall be able to understand their wisdom and wit?" She resolved to pay the closest attention to all that was said, lest some golden grain should escape her.

Patty, too, thought of the many politicians, authors, diplomatists and leaders in society whom she should probably meet that day.

"Just to speak and bow, and pass on!" she thought. "It gives me no chance at all! How can I produce any impression on them in that mere glimpse of me?"

She was busy for days concocting smart little speeches, epigrams and repartees, which she could make in reply to the commonplace greetings of her cousin's guests.

On the eventful day, the girls took their places in the line of ladies who received. Patty, eager, anxious, self-conscious to her finger-tips, did not speak or move or even glance, except for conquest. Every hair in her frizzled bang, every flirt of her fan said, "Look at me!"

Sarah, too, was eager, but it was to catch every

Digitized by Google

word which was spoken to her. She listened with such deference and attention to the most trifling remark that more than one pleased guest lingered to talk where his words were so keenly appreciated, and stopped again to tell their hostess how charming her cousin was.

"So well-bred and womanly." "Such singular fascination of manner!" they said.

There could be no doubt that Sarah was the most popular of all the girls in the room, while Patty provoked only some smiles and cynical comments upon her artificial manners.

This experience of the two girls exemplifies the truth of an old saying, "He who gives himself receives all, but he who grasps to enrich himself is left a beggar at the last."

SAVING A LIFE.

It is the practice of some writers of serial stories to begin the publication of their romances before the end is written. In the early stages of the story, they do not know any better than the public who read it how they are "coming out." This is especially the case in France, where nearly every newspaper has a *feuilleton* or department in which a continued story is published.

It is related by M. Aurélien Scholl, in a budget of literary anecdotes just published, that when Paul Duplessis was publishing a serial romance in the *Patrie* newspaper, he was visited one evening by Millet, the artist.

"By the way," said Millet, after a little conversation, "I am seeking a bit of information. You know that in the *Patrie* this morning you left the countess in the most alarming situation; she had fallen into an ambush, and was surrounded by those who have every motive to cause her to disappear."

"Yes?"

"Well, does she die?"

"Yes; she meets her death at the point of the Corsican's poignard."

Millet struck the table with his fist. "No luck for me!" he exclaimed.

"Why, what is it to you?"

"Oh, nothing but ten louis, that's all! I made a foolish wager with a devoted reader of your stories that the countess was necessary to the 'come out' of the romance, and that she would get out of the scrape."

"Dear me!" Duplessis exclaimed. He drew out his watch. "Only nine o'clock," he said. "There's time enough yet."

"Time for what?"

"Time to get into a cab and go to the *Patrie* office and save the countess's life!"

"Truly? Would you do that?"

Duplessis shook the artist's hand solemnly.

"It's very little to do for a friend," said he.

He rushed away to the newspaper office, overhauled his proofs, and made the grumbling printers turn the countess's distressing death into a marvellous rescue.

INDUSTRIOUS INDIANS.

The efforts of the United States Government to render the Indian tribes self-supporting and industrious have been most successful in cases where it has been possible to take advantage of and develop some kind of industry already known among them in at least a rudimentary form.

With such a tribe as the Navajos, for instance, the government has had no trouble, since the wars with the tribe ceased, because these Indians are natural horse and sheep raisers. They have been able to support themselves by dealing in horses and sheep. An attempt to make them farmers in the sense known in the Eastern States would probably have not only failed, but would have demoralized the Indians and made them dependent upon the government.

Other far Western tribes of Indians have subsisted largely in the past by digging roots which grew spontaneously over a great extent of country. It is hoped that these Indians, now that they no longer have free range over a vast tract, may be easily taught that they can make a living by planting other kinds of roots on a more limited area.

One of the difficulties with which the government has to contend in the process of civilizing the great mass of the Indians now classed as "wild," is the fact that they occupy a country of dry plains, where very little agriculture was practised when the Indians were in their primitive state, and where it was comparatively easy and pleasant to derive a living from the herds of buffalo and other game that were to be found ranging the plains.

Such a people must almost be made over again in order to be rendered agricultural. But they have a kindly feeling toward cattle, which are a sort of natural successors to the buffalo. They make excellent herders and very good drivers of oxen.

Cattle-raising, therefore, seems to be the natural means of civilizing these Indians; and they are being encouraged with gifts of stock and instruction in the best means of taking care of it.

TOUCHING LOYALTY.

The grand old Douglas motto, "Tender and True," was once touchingly illustrated by the representative of another Scotch family. The Duke of Athole had a disease which was certain to end fatally. When he was assured that he would soon be taken away, he called on all his tenants, and bade each one farewell with a cheerfulness that testified to his peace of mind. During his last days there occurred a touching incident, which is told in *Blackwood's*.

Queen Victoria visited Blair-Athole to bid adieu to the dying Duke. She had returned to the station, where a crowd of persons had collected, but in sympathy with the solemnity of the occasion, they maintained perfect silence.

The train was about to start, when there was a shout of "Stop! stop!" and a brougham was seen driving rapidly from the castle.

Out of it, wrapped in flannels, staggered the Duke. He went to the door of the royal car, knelt, kissed the Queen's hand, waved his cap and called out, "Three cheers for the Queen!" Then re-entering his carriage, he drove back to the castle, and never left it again alive.

NEEDFUL INFORMATION.

A little girl who was showing a middle-aged woman about the seminary where the latter had once been a student led her finally to a recitation-room with which she had of old been very familiar. "And what is this room used for now?" asked the lady. "The classes in Literature and Languages recite here," was the reply. "And that," said the child, pointing to the board, where some short sentences were written, "that's French!"

Lord Chief-Justice Coleridge, who visited America not many years ago, is a man of great ability and wide learning. During his tour through the West, he stopped at one capital where he was given a dinner at the expense of the State.

The feast was an abundant one, and all the great men from miles around were invited to it, to honor the Lord Chief-Justice. His honor had the Governor on one side of him at the table, and the Lieutenant-Governor of the State on the other side. As the party sat down, the *menu* cards had already been laid beside their plates. These cards were very fine. They cost twenty-five dollars apiece, and they bore at their heads the State coat-of-arms, upon which was engraved a motto in Latin.

As Lord Coleridge sat down, he took up this card, and looking at the motto, said to the man on his left, "Very good indeed, and very appropriate."

"What's good?" asked the Lieutenant-Governor.

"I refer to these words," said Lord Coleridge, as he pointed to the motto.

"Yes," replied the Lieutenant-Governor, with a knowing look. "Them words is Latin."

"NO, THANKS."

It is a satisfaction to know that an English traveller who never had learned at home how discourteous is the use of the phrase, "No, thanks," was taught the lesson when he visited Norway and ventured to translate that brief and slangy substitute for "No, I thank you," into Norwegian. The lesson was given him by the waitress in a restaurant at Hamer. The young woman asked him if he would take coffee, and he replied, "*Ikke tak*," which is a literal translation of "No, thanks."

The young woman, writes the Englishman, answered in quick, strong and unintelligible jargon. I knew that magnates and menials intermix in Norway, and concluded that here was a lineal descendant of some fierce Viking princess. Fearful tragedies might have ensued had not a Norseman crossed over to my rescue, and on bowing to each other, I understood him to say to me:

"If you please, what was it that you said, or wanted to say? She says you were not asked to give her anything; and she serves here gratuitously; and she is a free and independent elector; and you ought, at any rate, to have thanked her for her attendance, whereas you would not give her a 'thank you' for her coffee."

"I said 'Ikke tak.' I want no coffee, and I said 'No, thanks,' did I not?" said I in self-defence.

"Ah! you should *always* give 'Tak'!" said the interlocutor, insinuating that I needed instruction.

"Tell me, then, how you say 'No-thank-you,'" said I, bewildered.

"Nai, tak! Nai, tak!" said he, bowing himself away.

SERVING EARLY WRITS.

It was not the easiest thing in the world to bring malefactors to justice in the early administration of the law in Virginia, as the following returns, made to executions, will illustrate. The extract is from the "History of Augusta County."

"In the case of Johnson vs. Brown (1751), 'Not executed by reason there is no road to the place where he (Brown) lives.'"

Again: "Not executed by reason of excess of weather."

"Nov., 1752.—'Not executed by reason of an ax' (the axe being in the hands of defendant, uplifted, no doubt, to cleave the officer's skull).

"Not executed because the defendant's horse was faster than mine."

"Not executed, by reason of a gun."

"Emlen vs. Miller.—'Kept off from Miller with a club, etc.; Miller not found by Humphrey Marshall.'"

"Not executed, because the defendant got into deep water—out of my reach."

"Nov., 1754.—'Executed on the within, John Warwick, and he is not the man.'"

"August, 1755.—Forty-nine executions returned "not executed, by reason of the disturbance of the Indians.'"

GRACEFUL.

The ready and graceful wit of the Abbé de Voisenon once enabled him, in a truly discouraging social difficulty, "to pluck victory from defeat." His courageous effort to escape from an embarrassing situation certainly deserved success.

The Abbé accepted an invitation of the Prince de Conti to dinner, but forgot the date, and at the dinner his chair was vacant. The next day a friend said to him:

"Monseigneur was very angry with you yesterday." The Abbé felt that he had been remiss and attended the Prince's next reception to offer a humble apology.

His Highness, as soon as he perceived his discourteous guest, turned his back. But the undaunted Abbé exclaimed:

"O Monseigneur, you overwhelm me with gratitude. I had been told that you never more would have anything to do with me; but I am happy to see that I have been misinformed."

"How?" asked the Prince.

"Your Highness has turned your back upon me, and I know that that is not your custom before your enemies."

ANALOGOUS.

The Boston *Transcript* reports a conversation between a little girl and her uncle, who is evidently addicted to quizzing:

"Uncle George," said Mattie, "papa says you were a private in the army. Is that something very grand?"

"No, Mattie, not exactly grand," answered Uncle George, with beaming modesty; "not grand, but a post of great responsibility. Mr. Halford is private secretary to President Harrison, and you know that is a position of distinction. Well, I was a private in the army. Do you see, my dear."

"Brown's Bronchial Troches" are an old and world-renowned remedy for the relief and cure of colds, coughs, hoarseness and all throat troubles. Neglect of a cough or sore throat frequently results in a chronic throat trouble or consumption. *"Brown's Bronchial Troches"* act directly on the inflamed parts, giving prompt and effective relief. Sold only in boxes. [*Adv.*

THE LATEST.

TRAUT'S PATENT TROUSER STRETCHER AND HANGER. The only reliable article made to retain the new appearance of your trousers and restore their shape after being wet or wrinkled. Trousers take up less room in wardrobes when suspended by same. Also keeps them straight when packed up in trunk. Introduced in Military Schools and Companies. Send 50 cents, we will forward sample, prepaid. *The Traut & Hine Mfg. Co., New Britain, Conn.* A rare chance for Agents.

"BLACK BEAUTY."

Probably no book has ever received such universal and unanimous praise from both the secular and religious press. 260 *pages.*

"Rightly called the 'Uncle Tom's Cabin' of the Horse."—Philadelphia Star.

"This book has the fascination of a story, the truthfulness of an essay, and the moral sincerity of a sermon."—New York Independent.

"No more useful or entertaining book can be put into the hands of boys and girls."—Philadelphia Ledger.

Mailed upon receipt of eight cents in postage stamps.

FRANK MILLER & SONS,
349 West 26th St., New York.

Artistic Embroidery Work.

We have taken especial care to secure for this Outfit patterns that are not only adapted to practical work, but are also artistic in design.

The patterns, over fifty in number, are full-size. In addition to the patterns the Outfit contains one alphabet, 3 boxes indelible stamping powder, 3 pads and full instructions.

Special Offer.

For the next 30 days we will include with above Outfit 2 sheets Briggs's Patent Transfer Patterns. These Patterns can be transferred merely by the application of a flat-iron.

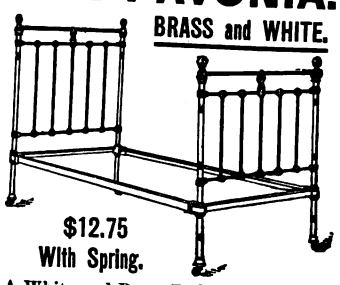
The price of the Outfit is $1, postage and packing, 15 cents.

THE YOUTH'S COMPANION, Boston, Mass.

COWDREY'S DEVILED HAM

"A Most Delicate Preparation."

DEVILED HAM SALAD.



Mix two teaspoonfuls of Cowdrey's Deviled Ham with four tablespoonfuls of cream sauce. Sprinkle one-half of a teaspoonful of salt over three cupfuls of boiled potato cut into cubes, and add one teaspoonful of minced parsley, one teaspoonful of lemon juice.

Stir in gently one-half of the cream dressing and pour the balance over the whole. Garnish the top with sliced hard-boiled eggs and gherkins, and sprigs of fresh parsley.

Send Postage Stamp for "Tid Bit Receipts."
E. T. COWDREY CO., Boston, Mass.

"THE PAVONIA."

BRASS and WHITE.

$12.75
With Spring.

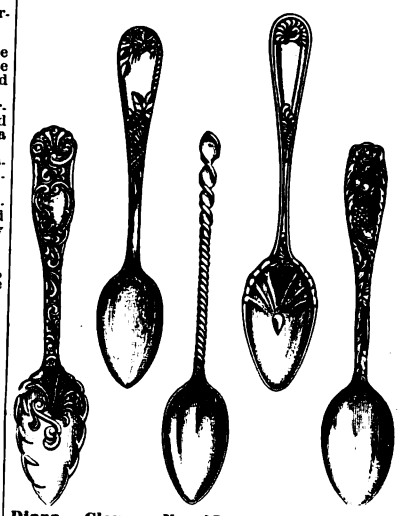
A White and Brass Bedstead of good design, attractive, and perfect in construction.

Price, with Woven Wire Spring,—

6.4x3 feet, $12.75; 6.4x3.6 feet, $12.75; 6.4x4 feet, $12.75; 6.4x4.6 feet, $13.75.

Burlap and Packing, 50 cents. No charge for packing for lots of six or more.

ESTIMATES for furnishing residences with Silver, Brass and Iron Bedsteads and Fine Bedding of every description given upon application. Mention COMPANION.



PUTNAM & CO.,
546 Washington St., Boston, Mass.

"I am glad, my dears, you find Rubifoam so pleasant to use, as it is perfectly harmless. Our dentist says the care of children's teeth should be a mother's first thought."

Send for Treatise "How to have Good Teeth." Mailed Free.

E. W. HOYT & CO., Lowell, Mass., Manufacturers of RUBIFOAM for the Teeth.

Diana. Clover. (Engraved.) No. 28. (Twist.) Lenox. Pomona. (Oxidized.)

CUTS ONE-HALF SIZE.

Orange Spoons
IN
STERLING SILVER.

Useful and Beautiful Wedding, Birthday or Souvenir Presents. A necessity and luxury for every home. Prices within reach of all.

Ask your Jeweller to show you these designs, and if he does not have them and will not procure them for you write to us and we will give name of one who will.

SUGGESTIONS

EASTER.

What is the significance of the word?

What discussion has there been regarding the time of its occurrence?

How is its date now fixed each year?

Can you find the origin of the use of colored eggs at Easter?

How is the butterfly associated with Easter?

Is Easter universally celebrated?

For the Companion.

EASTER HYMN OF ATHENS.

They stood in the shadows the Court and the people,
And waited the midnight, the priests chanting low,
Each hand clasped a torch, in the darkness, unlighted,
In the palpitate air but one Light rose aglow.
The thin moon sank golden o'er Salamis waters,
The lambent stars burned o'er Hymettus, and white
The Acropolis lifted its blossoming marbles
Theseus's ghost 'mid pale columns of night.
"He will rise! He will rise!" breathed the Patriarch lowly;
"He will rise! He will rise!" said the people, and still
The priests chanted on, the one Christ-light above them,
And faded the moon from the Capitol Hill!

A sound rends the sky, the deep voice of the cannon,
And *Christos anesti!* ascends from each tongue,
From the Christ-flame in air has the King his torch kindled,
And the flame is fast speeding the people among.
Each jubilant torch swiftly kindles another,
The One Flame is filling the city with light;
The noble the shepherd boy hails as a brother,
And the shout of "Anesti!" leads onward the night.
They are shouting, the temples of Pan and Apollo,
They are singing, the shrines of the Muses again,
From Pelion's pines to the groves of Ilissos,
From the gardens of Plato, to Marathon's plain!
The old shrines are shouting "Anesti! Anesti!"
Minerva is vanished, and Delphi is dumb,
And Theseus's columns are empty and broken,
But the Zeus long unknown to his altar has come!

Haste! haste to Mars' Hill, where once stood the Apostle,
'Mid the close-crowding temples of Victor and seer;
The priests in the night the sweet canon are singing,
Haste, haste ye the glorious anthem to hear!
The hymn of St. John of Damascus is thrilling,
The heart of the watchers with rapture divine!
The moon has gone down, but over Hymettus,
The stars of the morning like vestal lamps shine.

"Hail, morn of Resurrection!
To earth proclaim the word!
Now comes to hope immortal
The Passover of God;
Lord, shrive our hearts from evil
And give our spirits sight,
That we may hail with gladness
The Resurrection light!

"All hail! said Jesus risen,
All hail! our lips shall say.
Ye heavens, be bright and joyful
This Resurrection day!
Lord, shrive our hearts from evil,
And give our spirits sight,
That we may hail with gladness
The Resurrection light!

"Let people unto people
Proclaim the joy abroad,
Our Christ has died and risen
The Passover of God,
Lord, shrive our hearts from evil
And give our spirits sight,
That we may hail with gladness
The Resurrection light!"

'Tis morning in Athens, the broad sun is shining
On lone Caryatids, through Propylons dumb,
But the Cross gleams above the dead shrines of the city,
The Zeus long unknown to his altars has come,
The white palace sleeps in the shade of the mountain,
The west winds breathe balm, and the silver chimes cease,
And Peace leads the hours for the Lord has arisen,
And blesses the earth with the gladness of peace!

HEZEKIAH BUTTERWORTH.

For the Companion.

POWER TO DO GOOD.

Mr. Parks is one of the oldest men in a church in one of our largest cities. He has wealth, education, and a sincere wish to do his duty. He can make money, and gives it liberally to organized charities. He is just and polite to every one, but he is a nonentity in the church and in the community, and he knows it. He feels that, though he has some business influence, he has no influence over men, not even over his own family.

He knows nothing of his boy's struggles in college, and takes no interest in his girl's pursuits or fancies. In fact, he takes no personal interest in any one. If he should meet one of his clerks on Broadway, he could hardly name him.

He wonders why, with his wish to do good, he should so stand apart from other human beings, as if he were one of the stone statues in the park.

John Nasby is one of his book-keepers. John is slow and plodding; a man who will probably remain a poor book-keeper all his life. He has but little money to give away, and is very sorry that he has no more, for there are such hosts of people whom he loves that need it. He does what he can for them. He is so eager in his sympathy, so full of courage and devices to help, that all who know him come to him with their perplexities and troubles.

This morning, for example, he was up before day to explain Bob's problems in algebra. During breakfast Susy poured forth to him her grievances against her teacher, and was tenderly comforted and advised. As he went out of his door, the milkman stopped him to consult him about a mortgage on his farm.

As he bought a paper from the old woman at the corner, he gave her a bottle of liniment for her rheumatism, and when he took his seat at his desk, the office-boy whispered, "He is all right now, sir," with a beaming face. "He" is the boy's father, who had a cataract over both eyes. John gained him admission to a hospital, and he has been sent home cured.

So John goes to his work with a fire in his heart ready to warm every one who comes near him, rich or poor, white or black.

It was a common belief for many ages that a mysterious fluid existed in the bodies of Kings, which enabled them to heal diseases by their touch.

Science disproved this superstition long ago. But it is true that a mysterious spirit in the souls of certain persons gives them the healing touch, and that without it, strive as they may, they can neither cure nor help.

It is simply love for their fellows, giving their sympathy and help, as Christ gave Himself for men.

WHAT THE MONEY DID.

Mrs. Wray, the village doctor's wife, who had not a large sum for her household expenses, had contrived to save ten dollars during the month. She resolved to spend it in plush and silk—materials for making an embroidered table-cover which she had long coveted. She was just starting out to buy them, when a bill for ten dollars was brought in from Pitts, the carpenter.

She scanned it impatiently. "Tell Mr. Pitts he must wait, Mary," she said. "I will pay him next month." But before the maid closed the door she called her back.

"Here is the money," she said, adding to herself, "I would rather see a bare table before me than an unpaid bill."

Mr. Pitts's debtors were not usually so prompt. He took the bill with a chuckle of surprise and satisfaction, and walked down the village street in high good-humor. As he turned the corner he met Sarah Good, the tailoress, who had done many little jobs of sewing for him, for Pitts was not married.

"Here, Sarah!" he called. "I will settle that bill which I have been owing you since Christmas, and here is a trifle over. These button-holes were so neatly worked that my Sunday coat looks like new."

Sarah turned the bright new dollar over in her hand as she left him, with a sudden joyous consciousness of unexpected wealth. She had almost given up hope of ever getting any part of Mr. Pitts's bill, and here it was in full—with a dollar which might almost have dropped from the skies!

At the door of the station stood the Carrsville stage, a Jersey wagon which Jem Bold drove to Carrsville once a week. Jem was standing by his horses, awkwardly cracking his whip, while beside him waited a bent, shabby little woman, who carried a baby.

"I can't do it, ma'am," he said. "The stage aint mine. I'm only the driver, and the owners don't allow me to take no free passengers."

"How far is it to Carrsville?" asked the woman, in a feeble voice.

"Eight miles. There's a storm coming up. You can't walk it."

"What's the matter?" asked Sarah, stopping on the sidewalk.

"This woman come down from the city on the train, an' she hes no money. She didn't know as she'd have to stage it to Carrsville," explained Bold.

The woman came up to Sarah, trembling and pale. "It is my husband that is at Carrsville. He has been drinking hard—he ran away from me a month ago. He was hurt last night—they sent me word to come if I would see him alive—and I can't go—I can't go!"

"You shall go!" said the little tailoress. "How much is it, Jem? Fifty cents? All right. Open the door for her."

She watched the wagon drive down the street, and then took her way home, her money jingling in her pocket, and her heart beating glad and warm in her bosom.

Three months later Sarah had business in Carrsville. As she passed a snug little cabin, a woman ran out and caught her by the hand. Her face was plump and rosy; she laughed with excitement.

"Here you are! I can thank you at last! My husband did not die. They said my nursing saved him. He is hard at work now—he does not touch a drop! Come in and see the baby and our house."

She brought her in, placed her by the fire, and put the baby on her lap. "I am such a happy woman," she said, "and it was your money did it all!"

As Sarah rode home that evening she thought, "It was not my money, but that dollar which Pitts gave me."

Pitts, perhaps, would have traced it back still farther. So little do we reckon, when we plant a single seed of good, into what forests it may grow.

COUNTIES.

A revision of the areas of counties in the United States, made by the census bureau, reveals some facts of interest with regard to these minor divisions of the territory of the Union. The "county" is a territorial division which the United States derived from Great Britain, where the counties correspond to the provinces or departments of other European countries, and in a limited sense, to the States of the American Union. An Englishman addresses a letter to "Bromley, Kent," as we address a letter to "Worcester, Mass.," or "Rochester, N. Y."

One State of the Union, which derived its usages from French and not from English originals, has no counties at all. In Louisiana these subdivisions of the State are still called parishes, both officially and in ordinary speech, though they are now divided into many real parishes of the church.

There are about two thousand eight hundred counties in the Union, with an average size of about one thousand square miles; but this average is enormously exceeded in many instances, and is also frequently fallen below. Leaving out the great unsettled counties of the West, the average county would be about five hundred square miles in extent.

In much of the Western part of the country the size of the county is regulated mathematically. It consists of sixteen townships, each composed of thirty-six square miles, making five hundred and seventy-six square miles in all. In other words, each township is six miles square, and each county twenty-four miles square.

In Iowa there are thirty-nine counties which were formed in this way, each one of which has exactly five hundred and seventy-six square miles. Such divisions were possible in the newer West, where these minor political divisions were made in advance of settlement. In the older parts of the country the territorial arrangements were largely accidental.

The largest county in the United States is Yavapai County, Arizona, which has an area of almost thirty thousand square miles. Nine States of the Union are each smaller than this one county. It is larger than the whole of West Virginia, and almost as large as South Carolina.

The sixteen counties of Montana average a greater size than the State of Massachusetts.

Among the other great counties of the Union are San Bernardino and San Diego, in California, which are not only vast regions, but contain a very great amount of productive territory; Humboldt and Lincoln Counties in Nevada, which are exceedingly sparsely populated, and Lincoln County in New Mexico, which may some time have a large population.

Although the New England States are small, the average size of the counties is greater than that in most of the Middle, Western and Southern States. Worcester County, in Massachusetts, is an example of an Eastern county which is at the same time large in area and very populous. It has more than fifteen hundred square miles, and almost three hundred thousand people. It is larger in area than the adjoining State of Rhode Island.

The smallest State in the Union has the smallest county as well. Bristol County, Rhode Island, is only twenty-five square miles in extent. At one place it is not more than two miles in breadth.

Alexandria County, Virginia, is not much larger, having only thirty-two square miles. Kings County, New York, has but thirty-seven. One of the new Western States possesses an exceedingly small county as well as some large ones; Todd County, South Dakota, is only forty-five square miles in extent.

BEAUTIFUL EASTER.

Day of the Crucified Lord's Resurrection;
Day that the Lord by His triumph hath made;
Day of Redemption's seal of perfection;
Day of the Crown of His power displayed;
Beautiful Easter, dazzlingly bright;
Sun-Day that filleth all Sundays with light!

Queen of all festivals; glad culmination
Of the bright feasts that encircle the year;
Glimpsing the Life, in a transfiguration,
That shall at length in its glory appear.
Beautiful Easter; day in its height;
Sun-Day that filleth all Sundays with light!

Banish the gloom in the house of the mourner
Keeping the vigil that sorrow compels;
Melt the cold walls of that prison forlorner
Where unbelief in its solitude dwells;
Beautiful Easter, dazzlingly bright;
Sun-Day that filleth all Sundays with light!

Pierce with thy rays those saddest of places
Hearts that are darkened by sin or despair;
Stream o'er the earth's most desert-like spaces
Making them blossom than Eden more fair;
Beautiful Easter, dazzlingly bright;
Sun-Day that filleth all Sundays with light!

Day of the hope that is almost fruition;
Day of Christ's message of "Peace" to His own;
Day of the pledge that His creatures' condition
He will transform to a glory unknown;
Beautiful Easter, dazzlingly bright;
Sun-Day that filleth all Sundays with light!

He who redeemeth, consoleth, forgiveth;
Who His own body raised up from the dead,
Holdeth all evil in bondage and liveth,
Source of all blessing, our Life and our Head.
It is His Glory that maketh thee bright,
Sun-Day that filleth all Sundays with light!

HARRIET MCEWEN KIMBALL.

HE WENT.

Many stories are told of an old German who formerly kept a small hotel at McGregor, Iowa. The house was noted far and wide for the excellence of its table and the eccentricity of Peter, the landlord, who, as he expressed it, "ran the hotel to suit himself, and if any one didn't like it, he could go elsewhere." One day there came a "drummer" to Peter's hotel, and before retiring he left orders to be called in time to catch the down-river boat, which was expected at the Mc Gregor levee between midnight and daylight.

"Don't forget," said the guest, earnestly. "I must catch that boat."

"All right," said Peter, confidently.

The guest retired, yawning, and Peter, who was very conscientious, sat down in the "office" to wait for the boat. About two o'clock in the morning the hoarse whistle of the *Mary Lee* was heard, and old Peter hastened upstairs and rapped loudly on the guest's door.

"What—what's that?" came the sleepy query.

"It's the boad," answered Peter. "Git oop, quick!"

There was a short silence, and then the same sleepy voice asked:

"What kind of weather is it?"

"Rainin' like cats unt togs," replied Peter.

"Well," yawned the guest, "I guess I won't get up. I'll take the train in the morning."

"Vat!" cried Peter, explosively. "You von't go?"

"No, I tell you."

"Vell, you *vill* go!" exclaimed Peter, giving the door a mighty kick. "Git oop right away!"

The guest was out of bed in an instant, and throwing open the door, confronted the landlord with an indignant face.

"Confound your insolence!" he cried. "Don't you suppose I know when I want to go?"

By way of answer Peter strode into the room, and seized the guest's garments lying on a chair.

"I know dis much," he said, stolidly. "Your clothes vill go if you don't!"

The guest struggled, pleaded, argued and stormed, but Peter was inflexible. He had been told to call the guest for the boat; the boat was at the levee, the guest had been called, and now he must go.

And go he did. He had to dress in the office, and then Peter took his bag and literally marched the drummer down to the levee, and saw him safely aboard the steamboat. Then he returned to the hotel, wet and weary, but exultant in the consciousness of having had his own way.

LUCKY DELAY.

One afternoon some years ago a gentleman, accompanied by his guide, went out upon a foraging expedition in a country where bears were plentiful, and were often shot for food when nothing better offered. The two men took parallel courses along the hillside, where from time to time a slight rustling sound betrayed the presence of the one to the other; but subsequently they drifted apart.

"For a long time," says the gentleman, "Ivan and I had been stalking in this way, without any event occurring to wake the stillness of the wood, when from a point above me, and coming down toward me, I heard a sound like that of approaching game. Slowly it came on, and as the leaves were crushed softly under its heavy, even tread, which stopped from time to time that the beast might listen or pick up a chestnut, I recognized the step as that of Bruin, strolling slowly homeward after an early breakfast.

"Stooping to get a better view through the hazel stems, I saw them swing and shake some eighty yards above me, and caught a glimpse at the same moment of something lighter in color than the covert, and passing through it. Instinctively my rifle covered it, and for quite three minutes, I should think, I followed the bear's every movement with my rifle's muzzle.

"Twice I half-pressed the trigger, as a larger piece of the creature's gray side was visible while he picked his way slowly past me; but just as I was upon the point of firing, he turned and came down hill toward me. Thanking my stars that I had not fired a random shot into the brown of my game, I waited for him to come closer. Twenty yards from me there was a little open space, and here, if he entered it, as he seemed likely to, I meant to kill him.

"Jealously my rifle followed his every movement, dreading a change of direction, and in another moment the shot would have been fired. The gray thing suddenly rose on end, or seemed to do so, parted the thorn-vine with its fore-arms, and walked into the open—my man Ivan!

"For a moment I felt absolutely sick, and I think I was never more unhinged in my life than I was for the rest of the day. Ivan, it seemed, had gone on too fast to the end of his beat, and getting tired of waiting, thought he might as well come back to meet me."

UNSENTIMENTAL.

It is well-nigh impossible for man to understand the mental state of animals. As Mr. Hamerton tells us, "We always commit one of two mistakes; either we conclude that the beasts have great knowledge because they are so clever, or else we fancy that they must be stupid because they are so ignorant." It certainly is a great error to assume that they have a knowledge like that which man has attained through experience and education.

The long-tailed cows of the Lama herdsmen are so restive that they can only be milked by having a calf beside them, to lick meanwhile. Messrs. Huc and Gabet say that one day a herdsman came in, with a dismal face, to announce that the calf belonging to his cow had died.

The Lama forthwith skinned the poor beast, and stuffed it with hay. When the operation was completed, we found that the hay-calf had neither feet nor head; whereupon it occurred to us that it was a pillow the Lama contemplated.

We were in error, but the error was not corrected till the next morning, when our herdsman went to milk his cow. Seeing him issue forth, the pail in one hand, and the hay-calf under the other arm, the fancy occurred to us to follow him.

His first proceeding was to put the hay-calf down before the cow. He then turned to milk her. The mamma at first opened enormous eyes at her beloved infant; by degrees she stooped her head toward it, then smelt at it, sneezed three or four times, and at last proceeded to lick it, with the most delightful tenderness.

This spectacle grated upon our sensibilities; it seemed to us that he who first invented this parody upon one of the most touching incidents in nature must have been a man without a heart. A somewhat burlesque circumstance occurred, however, to modify our indignation.

By dint of caressing and licking her little calf, the tender parent one morning ripped it. The hay issued from within, and the cow, manifesting not the slightest surprise or agitation, proceeded tranquilly to devour the unexpected provender.

"OUR LITTLE DOT."

A writer in the New York *Sun* describes a scene which he witnessed, late one evening, in the streets of St. Louis. A group of gamins were hanging about an old gray-haired woman, shabbily dressed, who carried a large package under her arm. The writer of the sketch followed, thinking to say something at the right moment.

The boys were jeering, and the woman was begging to be let alone. By and by she sat down on a doorstep. Then the young Arabs gathered thickly about her.

"Give us a song, old woman!"

"If you'll dance us a jig, we'll let you off!"

When there was a moment of silence she replied:

"Boys, come closer round me. I've got something here to show you."

They crowded up to her, and she removed the newspapers which concealed the object she was carrying, and held it up before them.

If a bombshell had dropped among them it would not have scattered them more quickly. What do you suppose it was? A piece of board about three feet long by a foot wide, painted white, and on it in black letters the epitaph:

OUR LITTLE DOT
DIED OCT. 17TH, 1886.

It was the headstone for a child's grave—such a headstone as only the poor and lowly erect over the grave of a loved one. Out of pity for her poverty and sorrow, the painter may have done the work for nothing.

The boys could read, and as each read for himself he turned and vanished in the darkness. The last one to go took off his ragged cap and said:

"We didn't know it, aunty; please excuse us."

TO THE RESCUE.

A traveller is likely to be seriously gulled by the practical jokes of foreign countries. With the witticisms of his native land, to which he is accustomed, he can contend, but there is an alarming element of the unexpected in those of other races. Irving Montagu writes, in "Wanderings of a War Artist:"

One evening I met two very fascinating Spanish girls in a quiet quarter of Irun, one of whom, being a blonde, was enveloped in a white mantilla.

It being customary on meeting a white mantilla to extend her somewhat similar homage to that paid to royalty, I raised my hat, and stepped on one side to allow the couple to pass, when, in doing so, I saw, to my horror, by the light of the moon, that they were followed closely by a grim and grotesque reptile, half-lizard, half-frog, which, with a series of spasmodic bounds, was making directly for their heels.

Oh, the horrid beast, the indescribable monstrosity! To rush forward and trample on the uncanny thing was the work of a moment.

I was dumfounded; my exploit of heroism, far from inducing the gratitude I expected, was immediately followed by roars of laughter, the merry ring of which reverberated on the still night air.

"Unconscionable fool" does not express the littleness I felt, as I was subjected to the ridicule of those wily damsels, and if a man is capable of that becoming peculiarity, I must have blushed scarlet.

I had trodden on *El drap*—a piece of cloth cut into the semblance of some monstrous lizard, and attached by a thread to the skirt of the maiden, so that, by certain dexterous movements and hitches, it could be made to leap after her as she hurried along. It was the Basque equivalent for the old English jokes practised on the First of April.

"SENCE DE WAH."

A sale of paintings in New York proved a puzzle to Uncle 'Rastus, if we are to believe Kate Field's bright Washington Journal.

"Tings hab changed pow'rfully sence de wah," remarked Uncle 'Rastus to Aunt Recca, as he laid aside the newspaper and polished his spectacles. "Befo' de wah hit was only de slaves dat war sold; but heah dis papah states dat an 'ole mastah' war sold at auction in New York for a 'normous 'mount er money. Tings hab changed, I tole you."

WHEN a man promises to come at a quarter of twelve, and does not arrive till three o'clock, can he be called punctual?

TOMMY DAY'S EGGS.

Dame Dorking sits in the last year's hay,
On a dozen eggs as white as snow,
And where they are hidden safe away
None but I and old Dorking know.
If they should come to Mamma's eyes,
She would take them all for custard-pies.

The hen is mine, and her eggs are, too,
And I want them all for Easter Day;
Some I shall color a lovely blue,
Some shall be purple, and some be gray.
Then Mamma, surprised, will say, "Why, here,
Where did you get those eggs, my dear?"

Now somebody else had heard the news
Of Tommy's hen and her stolen nest,
And Mamma was never known to lose
The chance for a joke or harmless jest;
Besides, she knew, ere Easter morn,
The twelve little chicks would all be born.

So Mamma a secret had as well,
For she kept her paints and brushes there,
And as they broke from the dainty shell,
She touched their down with the softest care,
Till soon they mingled their motley hues,
Chickens in purples, grays, and blues.

Do you wonder whose was the great surprise,
When the brood ran out from off the hay?
Well, a funny gleam was in Mamma's eyes,
And the hen looked puzzled; but Tommy Day—
Oh dear! when he found his mother out,
He just rolled over and gave a shout.

JULIA M. DANA.

THE CHILDREN'S SERVICE.

"Aint that bootiful!" whispered Mary, as the peal of the great church organ sounded through the open doorway.

"Luffly!" said Betty. "Let's go in!"

"Oh no, no! I'm 'fraid!" gasped little Mary, pulling back.

"Why, it's a church! There are lots of children in there; I saw 'em go. They won't do nothin' to us. Come, I'm goin'."

Noiselessly the barefooted waifs climbed the stone steps and crossed the vestibule, and at last slipped inside the audience-room.

Awed and half-dazed, they hugged the wall tightly.

The church was very full, and people were standing all around the entrance.

Near the children was a deep window-seat, banked with the choicest flowers. Mary was the first to spy it, and she tugged at her sister's dress, and pointed to the beautiful sight. Betty gazed in rapture, her lips formed into an "Oh!" which she dared not utter.

Then sweet, far-away music, that drew nearer and nearer, claimed their attention.

Soon they saw, coming through a doorway at the right of the altar, a procession of white-robed boys, singing as they came. Betty and Mary had never in all their lives heard such music before, and they were sorry when it stopped.

A man in a white robe began to speak, but they did not understand what he was talking about, so they looked at the flowers and the people, but the flowers most of all.

Their eyes rested longest on a great cross of blossoms in front of the altar-rail, and they wished they could go near to it.

After a little, chairs were brought in for the people near the entrance, and a kind man gave the children a seat, which they shared between them, their arms around each other.

It was a long service, that Easter afternoon; but it was so beautiful to Betty and Mary that they never thought of going. Almost the last thing that took place made these two look on with very wistful eyes. It was the taking apart of the beautiful cross of flowers. The cross was composed of small bouquets, and these were distributed among the children of the Sunday school.

At last, it was all over, the white-robed boys had gone singing as they came, and the people were going away.

"Let's stay, an' see 'em go by!" whispered Betty.

Thus it happened that as Miss Barnard's class of six little girls were passing out of church, they saw two ragged, barefooted children shyly eying them and their flowers.

Sweet Lily Stone was ahead, and without an instant's hesitation she placed her own bouquet in Mary's hand. Tina Gray was close behind, and with a smile she tendered her flowers to Betty. The other four, not to be outdone by their leaders, gave their flowers to the little strangers, and when Miss Barnard came up she found Betty and Mary with flushed, beaming faces, hardly knowing what to do or what to say.

The young teacher gave her class one glance of loving approval, and then turned to the two children, who were still fingering their flowers with intense rapture.

She asked their names and where they lived; she found out that their mother was ill in bed, and that their father did little to make them happy, and when she left them she promised to go and see them soon.

This promise was more than fulfilled, and Betty and Mary found in Miss Barnard one of the best and kindest friends.

"Aint you glad we went in that Sunday?" said Mary.

"Yes, I guess I am," said Betty; "and I do think, Mary, churches and church folks is luffly!"

WHAT THEY SAID.

What Meg's Brother said.

If somebody sent me a rose-colored egg,
Though I might prefer a blue,
I wouldn't shed tears about it, like Meg,—
I know I wouldn't, would you?

What Meg said.

If my egg were blue and my sister's pink,
When she had been hoping for blue,
'd exchange with her, as quick as a wink,—
I know I would, wouldn't you?

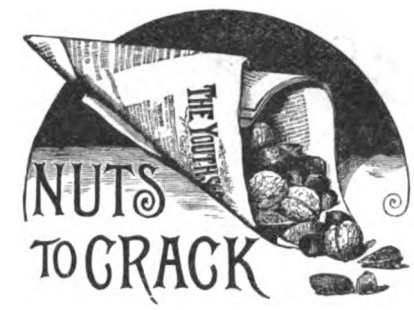
A CHINESE EASTER EGG.

"Only one Easter egg," said Gracie, in a disappointed tone, "and I know I've hunted everywhere! On my birthday, too! Only just one!"

She sat down by the bay-window to look at it, and all at once she saw that it wasn't a common egg at all.

Then she looked very close indeed, and saw what seemed to be a crack, only it was perfectly straight, and reached all the way around the egg. She pulled gently at the two halves, and they came apart—and out rolled another egg, just like the first, only a shade smaller.



She put the halves together again, and then she had two eggs. She picked up the second one, and found that it opened the same way, and out rolled egg number three.

So she kept opening and shutting till she had ten, all the way, in size, from a hen's egg to a quail's egg. And this last little egg opened like the rest, and there was the dearest little gold ring!

"I'd rather have that for my birthday than anything, mamma," she said afterward. "'Twas the very nicest nest of Easter eggs I ever did see, and to think I felt bad because it seemed like only just one!"

EUDORA S. BUMSTEAD.

MARION went out to make a call with mamma. The children took her out in the garden, and she found an ant-hole. In great haste she ran into the house, crying out, "O mamma, mamma, come out here and see what lots of grandmothers I've found!"

Enigmas, Charades, Puzzles, etc.

1.

LETTER ENIGMA.

In the vast "Cathedral" grand,
In each "Chapel" in the land;
In the "Minster," old and gray,
In the "Cloister," where nuns pray;
In the "Convent" and the "Shrine,"
In the "Sacrifice" divine.

In the "Psalms" and "Hymns" so sweet,
In the "Churches" where we meet;
In the "Supplications" laid,
In the "Benedictions" made;
In the "Homage" that we pay;
In the "Prayers" we all should say.

Now find the Feast of Flowers here,
A Festal day that comes each year;
A happy, holy, joyous time,
In honor held in many a clime;
Oh, dear that day to you and me,
For 'tis the Christian jubilee.

2.

RIDDLE.

Once there was a little house, and in the house lived a tiny creature. After awhile the little creature wanted to go away from home and see the world; but there was no door or window in his house, and he scarcely knew how to get out. At last he made a door large enough for him to go through; but it spoiled the house, so that he could never enter it again. I think he did not want to go back, however, he was so happy in the outside world.

Who was the little occupant of the little house?

3. Thorny.
4. Wretched.
5. To breathe.
6. To regain health.
7. A special messenger.
8. A castle or country-seat.
9. To become dense.
10. In place of.
11. From beyond sea.
12. To deprive of force.

Primals and finals give two names of a well-known Church festival.

COUSIN FRANK.

5.

CHARADE.

My *first* might be called a governess.
My *second* is a governor.
My *third* is governed in one sense by the latter, in another sense by the former.
My *whole* is a phrase often applied to Easter.

SALEM.

6.

NUMERICAL ENIGMA.

The whole, composed of twenty-five letters, is an Easter custom and when it takes place.
The 7, 2, 6, 23, 12, 4, 5, 8, 19 is a boatman.
The 16, 17, 24, 9 is a fleet-footed animal.
The 3, 18, 20, 21, 13 is a tropical fruit.
The 1, 25, 14 is a grain.
The 11, 22, 15, 10 is a sharp, rough branch.

7.

RIDDLE.

I am a small animal. I am most admired when I am black, brown, or golden, though some people like me when I am gray. When I am red, I am generally counted ugly, but I am reverenced when I am white. Sometimes I am thin and sometimes thick; I am often many feet in length. I am so shy that I run out of sight whenever I can, yet you handle me and care for me every day. I am said to bring gifts to good children at Easter.

Conundrums.

Which month is the most pleading? May.

Which month is best suited to military orders? March!

How far is it from February to June? A single spring.

Why is a wise man like a manufacturer of perfumes? He is a man of sense (scents).

What carriage might a sailor mention at sight of land? Landeau (land, ho!).

Answers to Puzzles in Last Number.

1. Buck-board.

2. Deed, minim, Otto, reviver, Hannah or Anna, Civic.

3. Bedlam (Bed-lamb).

4. "Crown me with flowers—intoxicate me with perfumes—let me die to the sounds of delicious music!" Mirabeau.

Key-words. Cormorant, whitlow, exude, relies, couched, fictitious, wampum, seem, fruition, weft, element, dismiss, bohea.

ECCENTRIC BIRDS.

Ostriches, like all animals, exhibit interesting qualities strikingly like those of human kind, to those who observe their daily actions. When they are setting, the cock takes his place upon the nest at sundown, and at precisely nine o'clock in the morning is relieved by his wife, who assumes her position for the day. At the end of the six weeks' incubation both birds are miserably thin and weak.

One undutiful hen, says the author of "Home Life on an Ostrich Farm," absolutely refused to sit at all, and the poor husband did all the work, until the chicks were hatched out. The next season, however, he evidently made up his mind that he would stand no more nonsense, for he gave the hen so severe a thrashing that she never again rebelled, but sat most submissively.

Another Darby and Joan had a different experience. One unlucky morning the hen injured herself so severely on a wire fence, that she had to be killed, and for two years poor Darby was a disconsolate widower. All attempts at finding him a satisfactory second wife were unavailing. Several hens were successively placed in his camp, but were afterwards rescued from the death which would have resulted from their husband's kicks. Day after day the poor male bird would wander up and down the length of his camp, in the hard-beaten track worn by his restless feet.

When, at length, Darby's time of mourning came to an end, and poor Joan's long vacant place was filled, it became evident that he had entered a state of complete subjection. His spirit seemed broken, and his tyrant even prevented him from obtaining a satisfactory meal, unless stratagem ensured him one.

As a father, Darby was no less devoted than he had been as a husband, and the whole family were set free to roam wherever they liked. This was contrary to the usual custom, but Darby seemed so zealous a guardian that to please him the exception had been made. It was not long, however, before the poor little birds were all dead.

Their over-zealous father, apparently thinking no pasturage good enough for them, kept them continually on the move, and took them such long distances that he literally walked them, as well as himself, to death. Not many days after the last chick's departure, Darby's own poor body, worn to a skeleton by these restless wanderings and his six weeks' incubation, was found on the plain.

Another eccentric ostrich was the possessor of two wives, one of which persisted in setting on the nest where the other was laying. One bird was therefore removed from the enclosure, a proceeding which the male regarded with great disfavor. He expressed indignation in various ways, and at length rushed to the nest, and jumping violently on the eggs, broke them all.

JOKING AN INDIAN.

It is dangerous to joke with an Indian. His sense of humor is so dull that he may think himself insulted, when he is merely made the butt of a bad joke. Mr. Alexander was a decayed Scotchman, who, having strayed into Fort Carlton, served the Hudson Bay Company as a clerk, at one hundred and twenty dollars a year and his food. Life was very dull at the Post, but one day "White Cloud," the Sioux chief, arrived here with seventeen warriors. The chief, an Indian Apollo, stood over six feet in his moccasins, and was proud of his courage and strength.

One day White Cloud was in Alexander's room, who, thinking with Julius Hare that "the next best thing to a very good joke is a very bad joke," put on a pair of boxing-gloves, and told the Indian that with these the white men learned to fight. Showing another pair, he asked White Cloud if he would like to put them on. The Indian, not knowing what would happen—for Indians never hit with the hands, and consider a blow from the fist a gross insult—said he would.

Alexander first took away the chief's knife and pistol and locked them up. Then putting the Indian in the middle of the room, he showed him how to stand on his guard. With one blow Alexander knocked the chief down. He rose, rushed at the clerk, and was again knocked down.

The maddened Indian tore off his gloves, and tried to get his knife from the drawer, but the drawer was locked, and he calmed down and demanded to be let out.

"What will you do when outside?" asked Alexander.

"Attack the fort and kill every man in it," said the chief.

Alexander, seeing what his foolish joke had done, resorted to a desperate measure. He took his revolver from a drawer, and told the chief that unless he promised to give up his purpose and make friends, he would shoot him on the spot. For a minute or two White Cloud was obstinate; but Alexander produced two bottles of whiskey and promised him these.

Then the chief shook hands, and receiving his knife and pistol, left the room, carrying the present for which an Indian will do almost anything. He kept his word, though he never again treated Alexander as a friend.

RESTRICTED.

Summer schools have increased greatly in numbers in the land during the past ten years. They have doubtless been a source of much good to many people in many places, but we do not often hear of just the sort of improvement which has come to Deerfield from the establishment there of the summer school of history and romance.

"The school has done everything for the residents," said one enthusiast. "Why, there is one poor old sick woman there who used to call her disease rheumatiz, and now speaks of it as neuralgia!"

"I know that woman," said another. "I went to see her once, and she said, 'Oh dear, I've got the neuralgy so bad that for three weeks I haint been able to git my knife to my mouth to eat my victuals.'"

HARD TO BELIEVE.

The small boy hears many wonderful things, and some of them are too much for his credulity.

The school-master was talking about Great Salt Lake in Utah, the water of which is so extremely salt that, as he said, no fish can live in it.

"What, sir," said one of his listeners, "can't mackerel live in it?"—*Street and Smith's Good News.*

For the Companion.

THE WHITE DOVE.

The choir was full of children
Singing with heart and word,
With melody almost divine,
The praises of the Lord.
O sweet their ringing voices
Went up to the Father's ear,
And throngs of Easter angels
Drew nigh, their songs to hear.

But not to listen, only;
With heavenly zeal and love,
The angels sing the melodies
Of the great choirs above;
And blending with the children,
Their Easter anthems rise,
Until the rapturous harmonies
Roll out beyond the skies.

So heaven and earth were blended,
In those sweet jubilees,
The unheard voices throbbing
Through the eternities,
Yet with the children singing,—
When lo! far, far above
The listening congregation,
There flew a fair white dove.

Down on the air it floated,
Its wings all silver-bright,
Now in the shadowed chancel,
Now on its pillared height.
As some soft breeze from heaven,
It stirred the listening air,
Like whispers after silence,
Like singing after prayer.

O Christ, thou loving Saviour,
Thine emblem was the bird!
As round and round it circled,
By the grand choral stirred,
Each heart swelled high with worship,
With joy and sweet surprise,
And Paradise to Earth drew near,
And Earth to Paradise.

MARY A. DENISON.

HE PUNCHED IT.

The tact and good temper displayed under exasperating conditions, by a conductor on the Pennsylvania Railroad, afforded great satisfaction and amusement to many passengers one day recently. The Washington correspondent of the New York *Tribune* gives the following account of the incident:

A graduate of the Pennsylvania Railroad school of manners was conductor on one of the limited trains between New York and Washington the other night. When he entered the first coach he found it crowded, and in one of the front seats upon the left was a young man—perhaps it would be more correct to say a young person of the masculine gender. He was well, even elegantly, dressed. In his hand he held a French novel. Upon his small and ordinary countenance there sat the haughty look of reserve of the imitation gentleman.

When the conductor entered and called for tickets, this youthful person affected to be so absorbed in his book that the conductor passed him by, calling first upon the rest of the passengers, even going clear through the train before he returned to disturb the haughty reader.

When the conductor came back, the young person still refused to pay any attention. The conductor waited a moment, and then called out rather sharply for his ticket. The youthful and now thoroughly contemptuous person, noticing that the man whom he called the guard of the train had addressed him with brusqueness, which he translated into rudeness, took his ticket from his pocket, and without looking at the conductor threw it upon the floor.

The graduate of the Pennsylvania school of manners was fully equal to this unusual situation. He showed no temper, no excitement, nor any lack of repose.

With the calm gravity of a man who is sure of himself, he stooped to the floor, punched the fallen ticket the requisite number of times with great gravity, and then quietly laid it back upon the floor where it had been dropped, and walked calmly on amid the roar of the entire car.

GEORGE.

It is very difficult for a man unlearned and untravelled to understand, in the slightest degree, the customs of foreign nations. George Mabbedy, a Copt, born at Jerusalem, and educated at an English school there, has for many years served as guide to travellers in the East. Yet, after all his acquaintance with "Franks," he fails to understand their customs. "With the Bedouins" contains the following illustrations of his conclusions in regard to an English lawyer, and his mode of life.

He proposed going to England and helping me in my office.

"What would you do there, George?" I asked.

"I stand at door with my sword. This man come in, I let him come. That man go out, I put him out."

His main idea is that I must be constantly engaged on murder cases, and that those whom I am opposing must be always seeking my life. He therefore wishes me to be on my guard against avenging knives.

George has been much puzzled to understand exactly what I do when I am at home, and how I earn my living by the law. After much pondering he proposes this question:

"When one man kill another, and come to see you, what you tell him?"

"When one man kills another, he does not come to me. He runs away. If he is caught, he will be hanged."

"But if he bribe the judge?"

"Judges in England do not accept bribes."

"Well, it is different in Syria," says George with a sigh of perplexity. Life in Syria is to him an open book, but England is too much for him.

"HARD ON THE CHAIRS."

Among the ancestors of Wendell Phillips were several Puritan clergymen. Perhaps it was a push of heredity which made him at five years of age a preacher.

His congregation was composed of circles of chairs arranged in his father's parlor, while a taller chair, with a Bible on it, served him for a pulpit. He would harangue these wooden auditors by the hour.

"Wendell," said his father to him one day, "don't you get tired of this?"

"No, papa," wittily replied the boy-preacher, "I don't get tired, but it *is* rather hard on the chairs!"

Easter Toilettes.

Dressmaking at home is one of the "social nuisances," but a stylish wardrobe at half the cost is one of its compensations. Besides, you have an opportunity of working out your own ideas, which the modiste either can't or won't do. It is a great satisfaction to have a costume that is your own creation, that is unlike any one else's. But it is impossible to make a dress that will look just right and hang gracefully without the aid of Hall's Bazar Form.

Before commencing your **Easter Gown,** send money order for either Complete Form, $6.50; Skirt Form (Iron Standard), to which bust can be added, $3.50; or Skirt Form (Wood Standard), $3.

When sending for Form or illustrated brochure —"More Dresses for Less Money"—please mention THE YOUTH'S COMPANION.

ALL IT WAS.

A gentleman who travelled in the rural districts of the West some years ago, says that to this day he has a "creeping sensation" when he recalls his experience in spending the night at a farm-house. It was late in the summer and the farmers were doing their threshing, while their wives were emptying their ticks and refilling them with clean straw.

Just before dark the traveller reached a comfortable-looking house, where a hearty welcome was accorded him when he asked if he might stay all night. While eating his supper he heard the farmer's wife say to her husband and son:

"The straw tick from the spare-room bed will have to be filled. I emptied it to-day and forgot all about it until this minute."

When the tired guest was shown to his room he undressed hastily and climbed into bed. Every movement of his body caused the straw to rustle under him, and pretty soon he discovered that it rustled even when he was lying perfectly still. He was of a nervous temperament, and the strange noise disturbed him.

It was only occasional. He would be still for a moment, and then the straw would rustle loudly. He fancied that he felt something moving under him. The rustling grew more frequent, and he wondered what caused it. It might be a rat!

He sat up in bed. At once the rustling became more violent than ever, and he distinctly felt movements under him. He jumped from his bed, lighted his candle, and looked at the straw tick. All was still now.

"I guess it's nothing but grasshoppers or crickets," he said. "I'm not going to be cheated out of my rest by some harmless insect."

He got back into bed, but passed a restless, wearisome night, hearing the rustling sounds frequently. The next morning he said to his host:

"I beg your pardon, but I think that a mouse or some small animal was in the straw you put into the tick on my bed last night. I heard and felt something rustling around constantly."

"We must see about it," said the man. "Henry, you pitch the tick out on the grass and empty out the straw. Like as not some of them plaguy field mice got into it. It was so dark we couldn't have seen it if it had been a ground-hog."

A few minutes later Henry appeared at an open window with a black snake fully four feet long, dangling from the end of a stick.

"There you air," he said, laconically. "That's all it was. He was turrible mad, and come at me the minute I let him out. But I tromped the life out of him in no time."

"And I slept all night with that thing in my bed!" gasped the stranger, shuddering from head to foot.

"Shucks!" said the farmer. "He wouldn't 'a' hurt you none if he had bit you. Them kind of snakes aint pizen."

CONCERNING FOOLS.

From time immemorial, we have been counselled in one way or another, to beware of fools. Disagreeable consequences are mentioned of answering one kind of fool according to his folly, and of refraining to answer another kind. Yet in spite of the general prejudice, there is a variety of fool which is expected to mirror most of the Christian virtues. He is supposed to be absolutely good-natured under ridicule, and never justly revengeful. When attacked, he is expected to smile with his tormentors, and join in the general laugh.

Though he be by nature a modest man, he must bear with equanimity the cross of finding himself suddenly dragged into public notice, with the eyes of a score or more of people turned on him at once.

He must be self-sacrificing, willing to yield his own dignity for the amusement of others. If he but resent ill-usage by a word of remonstrance, he receives contempt as a crusty bear, and a despiser of ancient customs.

This species of fool is born on the morning of April First, and like certain summer insects has a brief existence of one day. If his general insensibility to ridicule, his meekness under abuse and his unfailing good temper should continue in the same measure throughout the year, one might call him a miracle. As it usually happens, however, he is content with a brief exercise of such virtues, and the temporary title of April fool.

DISAPPOINTED.

A dear old lady who was taken to see the sights, not long ago, in the city where her children live, was one night passing with her daughter a huge building full of electric light "plant." They paused by a basement window, and looked down among the swiftly whirling bands and moving wheels.

"Is this a factory?" asked the mother.

"No; it's where they make electricity for the electric light. I don't know just how they do it, but John will explain it to us when we get home."

"What turns the machinery, Malviny?"

"Steam, I suppose. There's an engine on the other side of the room. I've often seen it from the back windows."

"And does all this have to go on, night arter night, for the city to be lighted?"

"Yes, mother."

"Well, I don't want to hear another word about electric lights," said the old lady emphatically. "I thought electricity was a gift of natur', free to all, but accordin' to this, you've got to work as hard for it as if 'twas common gas or kerosene."

TOO MUCH.

The Lewiston *Journal* prints a story of a man who lived several years ago on one of the islands of Maine, and was commonly reputed to be a miser. The anecdote does not of itself establish the truth of this common report, but it shows pretty conclusively that he was not a man of the world.

He possessed considerable property, and one winter, during the session of the legislature, had occasion to visit Augusta. He stepped to a restaurant for dinner, and the waiter spread before him the printed bill of fare.

The novice took it for a bill of charges. He ran his eye over it and quickly footed up the figures at the right of the page. Then he sprang to his feet in indignation.

"What!" said he, "all that to pay, and I haint eat a mouthful yet?"

No doubt he thought Augusta people a set of sharpers, and according to the *Journal*, on his next visit to the capital he carried with him a pail of victuals.

Good Housekeepers are fast finding out that a pure Extract made by Joseph Burnett & Co., costing a cent or two more a bottle, goes farther and makes the most delicious of dishes. Avoid goods only recommended by their cheapness. [*Adv.*

For the Companion.

AN APRIL BIRTHDAY.

Child of April! In thine eyes
Are reflected April skies,
And thy mingled clouds and mirth
Suit the month that gave thee birth—
April, with its varied moods!

When the crocus, growing bold,
Shoots its spire above the mold,
When the streamlets flow between
Fields enrobed in tender green,
When arbutus decks the woods,

When the robin's song is heard,
When the buds with life are stirred,
When alternate rain and sun
Aid the springtime's work, begun,
And foretell the summer's sheen,

Then we think that April's best,
Exceeding sweet and rare bequest,
Was that fair child of April, we
Behold and cherish, dear, in thee,
And we hail thee April's Queen!

C. C. D.

NORWEGIAN ENGAGEMENT.

"Leap-year reigns forever in this heathen land!" exclaimed an English tourist, stopping in a Norway village. One evening he had been taking a lesson in Norsk from a young lady, a good-natured Norwegian being present, who had just walked sixteen miles across the mountains. When the lady rose to go to her lodgings in an adjoining house, the Englishman offered to escort her through the darkness.

She declined the offer, and in so abrupt a manner as to surprise him. When she had gone, the Englishman asked the Norwegian if he spoke English.

"Not much—only a few words," he answered. "Tell me what means that ring the lady wears." "She is going to be—how you call it?" asked the Norwegian, in scarlet perplexity. "Going to be married?" "Yis, yis!"

"But," continued the Englishman, "what I am ignorant of is the difference in your rings between married, unmarried, going to be married and never going to be married."

"Oh, you will never tell that," said the Norwegian, laughing loudly. "We cannot mark the women in this country as you do, but *they* mark the men. Amongst us it is the man who wears the ring."

"Oh, I see! That is a new light!" said the Englishman, taking the man's large left hand, on whose fourth finger was a plain solid gold ring. "That is your wedding ring, then?"

"Nai, nai!" he replied, laughing and blushing. "That means I have got to be married!"

"And then what becomes of it?"

"We put it on the right hand instead of the left," said the Norwegian, holding out his hand to bid the Englishman "Godt nat."

Then, as he was closing the door behind him, he said in confidential tones: "Yis, that young lady who was talking to you is going to marry me next month!"

GERTIE'S FRIENDS.

Lady Dufferin, in the sweet old song, has told us that

"The poor make no new friends,
But oh! they love the better far,
The few their Father sends."

A touching "local" in the Detroit *Free Press* shows vividly enough the tender pity which the lowly feel for each other in sorrow and suffering. A passer through Clinton Street one day observed a little Irish boy hiding in a door-way and crying. A sympathetic inquiry brought to light one of the most beautiful stories ever recorded of the sick poor.

In a wretched cellar, a little girl ten years old lay very ill. The window-panes were broken—it was March, by the way—and variously stuffed. For one pane the supply of upholstery had given out. The wind and the boys looked in easily. Just within range of curious eyes the cot of the sick child was stretched.

The *gamins* of Clinton Street discovered her plight. One little fellow dropped an orange through the broken glass; a plaintive voice thanked the unseen giver. Such acts of mercy became the fashion in that poor neighborhood. Every day saw the cubs of the street cuddling like cossets outside the window.

Wisps of evergreen, swept out of florists' doors, broken flowers thrown away, offerings of fruit with the decayed part cut out—every delicacy for the sick that the resources of Clinton Street afforded, went through that broken pane. One little fellow begged a bunch of frozen Malaga grapes from a dealer, to whom he offered his ragged cap in payment.

One day the boys said, "Gertie is dead," and the street-boys became the mourners behind the hearse of the starved and frozen child.

VIRGINIA GIANTS.

If ever the United States Government, like Frederick the Great and the present King of Belgium, requires a regiment of Titans, it can doubtless recruit one without advertising very largely or very long. A correspondent of *The Companion* tells us how big some of the men grow in Pulaski and Montgomery Counties, Va.—and other States are still to be heard from.

Three brothers, Messrs. Henry, James and William McGavock, are respectively six feet, six and one-half inches, six feet, five and one-half inches, and six feet, seven and one-quarter inches tall. Two brothers, near neighbors of mine, Andrew and William Ingles, are each six feet, four inches, while several others in Pulaski County, whose height I cannot give from positive knowledge, are known to be upwards of six feet. In fact I believe the men of this county will *average* at least six feet tall.

In the adjoining county of Montgomery, near me, there are two brothers, one of whom, Mr. James Childress, is six feet, seven inches in height, and weighs two hundred and fifty-five pounds; the other, Mr. Thomas P. Childress, is six feet, six and one-half inches high, and weighs two hundred and five pounds. William Myers, of the same county, is six feet, five inches, and weighs two hundred and forty pounds.

A Mr. Urquhart, of Lynchburg, is six feet, five and one-half inches tall, and weighs three hundred pounds, and a Mr. Fetherstone, of the same place, is six feet, seven inches.

"Brown's Household Panacea" will quickly remove pain and soreness from cuts, bruises and burns. Also an excellent remedy for internal pain. [*Adv.*

DONALD KENNEDY
Of Roxbury, Mass., says:
My Medical Discovery seldom takes hold of two people alike! Why? Because no two people have the same weak spot. Beginning at the stomach, it goes searching through the body for any hidden humor. Nine times out of ten, inward humor makes the weak spot. Perhaps it's only a little sediment left on a nerve or in a gland; the Medical Discovery slides it right along, and you find quick happiness from the first bottle. Perhaps it's a big sediment or open sore, well settled somewhere, ready to fight. The Medical Discovery begins the fight, and you think it pretty hard, but soon you thank me for making something that has reached your weak spot. Write me if you want to know more about it.

EVERY HOUSEKEEPER NEEDS THE PERFECTION

ONE ENJOYS both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers, and cures habitual constipation. Syrup of Figs is the only remedy of its kind ever produced, pleasing to the taste and acceptable to the stomach, prompt in its action and truly beneficial in its effects. Prepared only from the most healthy and agreeable substances, its many excellent qualities commend it to all, and have made it the most popular remedy known. Syrup of Figs is for sale in **50c.** and **$1** bottles by all leading druggists. Any reliable druggists who may not have it on hand will procure it promptly for any one who wishes to try it. Do not accept any substitute. **CALIFORNIA FIG SYRUP CO., San Francisco, Cal., Louisville, Ky., New York, N. Y.**

A Mineral Spring in Every Household!
Not everybody can visit the Spas of Europe, the most famous of all which is Carlsbad, and which has been known for centuries for its healing properties; but every one can have the Spa on his sideboard in the shape of the CARLSBAD SPRUDEL SALT, which is evaporated from the Sprudel Spring at Carlsbad, and exported to the United States.

(ALL NATIONS IN LINE AT THE SPRUDEL.)

The CARLSBAD SPRUDEL SALT (powder form) is an excellent aperient, laxative and diuretic. It clears the complexion and purifies the blood. It is of great benefit in temporary and habitual constipation, liver and kidney diseases, chronic catarrh of the stomach and bowels, rheumatism and gout, etc., and should be used early in the morning before breakfast. Care must be exercised to obtain the genuine article, which is imported in round bottles. Each bottle comes in a paper cartoon. Write for pamphlet. Price per bottle, 75 cts. Sent by mail securely packed, $1.00.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

IMPURE WATER.

Comparatively few persons have ever seen absolutely pure water. Even rain-water, which is the nearest common approximation to it, is far from reaching the absolute standard, and though it is good for washing, not many persons would care to drink it. Spring-water is popularly supposed to be pure, but it always contains more or less of earthy or saline substances. Indeed, the value of most springs is due to this fact.

The ocean itself is a huge spring, containing not only salt, but many other minerals, in solution. The Dead Sea is charged with such elements almost to saturation. Only distilled water is pure. By distillation sea-water itself is rendered drinkable, though not pleasant.

As sand consists largely of silex, which water at the ordinary temperature does not dissolve, the water of a sandy region is comparatively pure. The "hard" water of other regions is due to earthy matter held in solution. This earthy matter, however, is seldom harmful to those who drink it.

Impure water, in the medical sense of the word, is water that contains infectious microbes. Water, as such, never contains these; nor does any form of simple impurity ever give rise to them, though it may greatly facilitate their multiplication.

Every case of infectious disease implies a previous case, and when water is infected, it is because infected secretions have in some way entered it, having been thrown upon the ground and thence carried to the well or spring or river which supplies the family or the community.

It should be remembered that the deeper the well, the larger the area from which the rain-water finds its way into it. No discharges or other secretions from the room of a sick person should be thrown on the ground, or buried in it, within at least one hundred feet of the well.

But water which is drank is not the only source of danger. Many a widespread and fatal epidemic has been traced to milk from dairies where the pans had been washed in impure water, or the milk itself adulterated with it.

Is there any way in which ordinary people may test well-water for microbes? We are compelled to answer no. The only sure test is the microscope, in the hands of an expert.

A SHOWER OF MANNA.

The keeper of a pharmacy in the city of Bagdad, in Asiatic Turkey, has sent to the scientific journal, *La Nature*, a specimen of an edible substance which fell recently during a copious shower of rain in the vicinity of Mardin and Diarbekir, in the same country, in August, 1890. The sender of the substance stated that, on falling, it had plentifully sprinkled over a considerable area of country.

The inhabitants came out and eagerly gathered up the substance, and with it made excellent bread. The "manna" was floury, palatable, nutritious and very digestible.

La Nature states that the sample of the "manna" which it received was in the form of small globules, about the size of millet seeds, and the mass, yellowish on the outside, was perfectly white within.

The substance was given to skilled botanists to examine, and they pronounced it to be a vegetable substance of the lichen family, scientifically known as *Lecanora esculenta*.

This lichen is frequently found in the most arid mountains of the desert of Tartary, where the soil is calcareous and gypseous, and grows on the ground amidst the pebbles, from which it is to be distinguished only with the closest scrutiny.

Considerable quantities of lichen are found also in the desert of Turkestan, and in other parts of Western Asia.

Parrot, the traveller, brought home a quantity of this substance as long ago as 1828. It had fallen in a shower in Persia, and was said to have covered the ground to a depth of several inches. Cattle ate it eagerly, and the inhabitants gathered it in quantities.

It is regarded as likely that this lichen, abundant in the country where it fell, had been drawn up by a water spout,—not an infrequent phenomenon there,—and after being carried by a vaporous wind at a high altitude, had fallen to the earth again in a rain-shower.

Showers of manna of the same sort have several times been mentioned in that part of the world, in the course of history.

GENERAL SURPRISE.

The man-eating tiger is a creature both cunning and audacious. One described by Sir Samuel Baker, which became the victim of a practical joke, was not the typical old and mangy animal, but a powerful beast, of almost unexampled ferocity. It was a merciless highwayman, which infested a portion of the road, and frequently carried off the drivers of bullock carts to feast upon them in the jungle.

The natives feared to travel with a single cart, and it became the custom to pass the dreaded spot with several teams together. This, however, proved a vain precaution, for the tiger seized the driver of the hindmost cart, and made away with him, in spite of the cries of those left behind.

At length, Mr. Duff, the superintendent of police, provided two covered carts, each drawn, as usual, by two bullocks. The leading one was fitted with strong bars of bamboo, which formed an impenetrable cage. In this the driver was seated, and Mr. Duff himself sat with his face toward the rear, prepared to fire through the bars at the moment of attack.

This would have been an exciting time for the driver, but that individual was personated by a dummy stuffed with straw, which might prove tempting to the tiger's eye, but would hardly satisfy his palate.

Slowly the carts moved along the dreaded path. Suddenly there was a roar and crash in the jungle. A large tiger bounded forth, seized the dummy driver, and dragged him away. Nothing could have been better planned, but one chance, necessary to success, had been forgotten. No sooner had the tiger roared and bounded upon the cart than the bullocks, terrified beyond control, went full gallop across the country, followed by the other team, all in the wildest panic.

It was impossible to fire, and after a few seconds of desperate chariot-racing, both carts capsized, and lay, with the animals, in a heap on the ground. The victorious man-eater, victim of what he must have considered a practical joke, was left to a dry meal of a straw-stuffed carter, instead of the juicy native he had expected to get.

POOR ME.

The custom of pinning papers on the clothing of unsuspecting persons forms a venerable April fool joke. In fact, it is so time-worn and shows so little inventiveness, that one is occasionally surprised at finding it still considered funny. Sometimes, however, even so ancient a pleasantry takes an unexpected turn.

A little boy was deftly pinning a bit of paper to an old gentleman's coat when the latter suddenly turned, saw him, and laid a detaining hand on his shoulder.

"What's that you're doing?" he asked, gruffly. "What are you putting that piece of paper on my coat for?"

"For—for an April fool, sir," stammered the boy, too much confused to evade the question.

The gentleman suddenly marched him along to a mirror in a shop window.

"There," said he, "look at your own back."

On the boy's jacket was pinned a paper of startling size, which certainly must have rustled audibly as he walked.

"Who did I understand you to say was the April fool?" inquired the gentleman, politely; and the boy opened his lips for one word, more humble than grammatical, "Me!"

HE GOT THEM ON.

Desperate circumstances call for desperate measures, as is laughably illustrated by a story told by the New York *Tribune* of a newly elected congressman.

When a school-boy he was chosen valedictorian of his class. He prepared for the event by ordering a new pair of shoes.

Late in the afternoon of the great day the shoes came, but to Dan's utter dismay they would not go on. He had no other pair fit for use, and was in a sorry plight.

The shoemaker was sent for, and while the perspiration rolled down the valedictorian's face he explained the seriousness of the situation.

"Oh, that's nothing," said Crispin. "Get a couple of eggs and break one in each shoe."

Dan did as he was told, and the result was charming. His feet went into the shoes like a duck's feet into mud.

UNREASONABLE.

A father who is fond of telling his little son about the famous men of old time, was talking the other day about one of his favorite heroes, Philip of Macedon.

"I think he should have been called 'Philip the Great,'" he said.

Just at that moment Aunt Sally, the colored servant, came in. She caught the last three words.

"Fill up de grate?" she cried. "Why, I'se jes' put a hod o' coal on!"

STRANGE GROCERIES.

An invoice received by the caterer of an English regiment stationed in India contained this bewildering item: "One case of Tomcats."

No one had asked the caterer to order any dainties of that kind, and the mystery remained unsolved until the package arrived.

Then it appeared that the grocer's assistant had a fancy for abbreviation, and that "tomcats" was only his way of writing the name of that useful condiment, Tomato catsup.

TARDY.

In politeness, as in quarrels, human language must often be taken in a Pickwickian sense. Some one reports, in the New York *Herald*, a bit of conversation between two gentlemen.

"Did she thank you for the seat?" said the first man—as if one ever needed to ask such a question about a lady!

"No," answered the other; "but after she had settled down in it, she smiled sweetly and begged me not to rise."

To cleanse and preserve the teeth use "*Brown's Camphorated Saponaceous Dentifrice.*" Microscopical examinations have proved that the use of soap is the only safeguard against the accumulation of animal and vegetable parasites on the teeth. Camphor strengthens and relieves soreness of the gums. Price, 25 cents a bottle. Sold at drug stores. [*Adv.*

THE HEYGOOD TEA SERVICE.

IN FIVE CHAPTERS.—CHAPTER IV.

Clearing a Mystery.

Fred found it hard to recollect where he was when he awoke, late in the day. While he was still mulying his dazed wits, Mrs. Heygood came in, and the sight of her motherly face refreshed his memory.

"I am all right," he assured her, "and I'm ashamed to have slept so late."

"You couldn't have done a better thing," she said. "The doctor insists that you must keep your room to-day."

"But I must set my mind at rest about that rascal Meyrick!" cried Fred. "He ought not to go unpunished."

"You must have breakfast first," replied Mrs. Heygood, "and then my husband and the doctor will come up and discuss this matter with you. I assure you, we are all interested in getting at the truth of this strange affair."

"And the truth of this strange affair is just precisely what I can tell you," said Fred to himself.

It was of no avail to remonstrate against breakfasting in his room. The only concession he could win from his cousins was that he might dress, and remove from the bed to the lounge.

Mrs. Heygood and the pretty little bride-elect insisted upon serving his breakfast themselves, and when the meal was ended, Mr. Heygood and Doctor Smith came in with Mr. Brent, the gentleman whom Miss Dorina Heygood was to marry.

Mr. Brent reported that he had been in search of Meyrick, but had not been able to find him, though he had heard, just as he came in, that Meyrick had left the ferry to come to town.

"He must be arrested!" cried Fred.

"So he shall be," Mr. Heygood assured him. "But let us hear your story, cousin. Doctor Smith gives you leave to tell it."

Fred related the details of his adventure.

"It is incomprehensible," said Mr. Heygood, with a perplexed frown. "Meyrick has grown up in this community. He is respected as a sober, honest, steady fellow. It seems incredible that he should have been guilty of such an assault."

Fred could not help being angry. Was his word to go for nothing because this Meyrick had friends, and he was a stranger?

"It happened precisely as I tell you," said he, doggedly.

"Oh, no doubt about that!" Mr. Brent hastened to say. "But you know Meyrick must have something to say. If robbery was the motive, why did he leave you your watch and purse?"

"It was my trunk he was after," said Fred, who had alluded to the present for Dorina without mentioning the silver.

"But didn't you find your trunk all right this morning?" inquired Dorina.

He had found his trunk all right, he admitted, with rather a bad grace. It was too much that Dorina, too, should be against him—this girl for whom he had brought Great-great-grandmother Heygood's silver at so great peril to himself!

Fred's anger was increasing with every moment.

"What I cannot account for, on any supposition," said Mr. Heygood, "is Meyrick's having Fred bound hand and foot."

"The fact is," interpolated Mr. Brent, "that we can't account for any feature of the occurrence satisfactorily. If your guest will pardon my saying so, he is as much in the dark as any of us—only he doesn't know it."

Fred could not join in the laughter provoked by this remark. "It looks to me like a pretty clear case of attempted highway robbery," said he, frowning, "and hardly a matter for jest."

"Then our people have been deceived in Tom Meyrick all these years," said the doctor. "We must hunt him up, Brent, and hear his story."

It was intolerable to Fred that every one should be bent on taking Meyrick's part. So vexed was he at this aspect of the case that, for the present, he could not bring himself to speak of the wedding present, which as yet he had no more than alluded to as something of value.

It was safe in the little hair trunk. Fred had satisfied himself of that fact when he took out a change of clothing, and there was the trunk at the foot of the bed. But Fred was in no mood at the present moment to display the silver.

Three pieces missing.

"Well, if I may credit my eyesight," exclaimed Mr. Brent, who was looking out of the window, "here comes Meyrick now! I'll run down and bring him up."

Without waiting for permission he darted from the room.

Presently he returned, accompanied by a robust, dark man, whose neck was swathed in a red silk handkerchief.

Fred recognized his assailant.

"Well, sir," said Meyrick, advancing toward Fred with a grin, "Mr. Brent here has just been telling me your side of the story, and now I'd like to tell mine. I'll back you in any crowd for a word-and-a-blow sort of fellow; but since we can cry quits, let us shake hands."

Fred would not see the proffered hand. Meyrick turned away with a shrug of his broad shoulders, saying, as he settled himself in a chair:

"It's hard to tell which of us was the worst frightened."

"I wasn't frightened in the least!" Fred declared. "I was simply on my guard; and if I may speak my mind, I am far more surprised now than I was then."

"Like enough," returned Meyrick, coolly. "A good laugh might be the death of me just now, Mr. Witheredge, thanks to that blow with your pocket-knife, so I must keep a sober face while I tell my story. But I aint ashamed to confess that I was scared—mortally scared, sir, when you faced me in the road and defied me as you did!

"For there's no doubt, Mr. Heygood," he continued, turning toward that gentleman, "that I was particularly cross that night. A valuable horse I'd paid a good sum for last week had gone lame, and I was too worried to lay myself out to entertain strangers.

"Besides, I don't commonly talk much while I'm driving. Knowing my road and knowing my team, I can manage to snatch a nap along the way, and I was pretty sound asleep all along that bit of road that runs through the river-bottom for fully five miles.

"But I woke up just before we came to the ferry, and found I'd lost my whip. So remembering what a pull that sand-hill this side the ferry calls for, and knowing my horses would need a little stimulating, I got out the wagon, unsheathed my jackknife, and cut me a switch as innocent as a baby, to provide myself with a substitute for my whip.

"I went up the bank at the corner of the old field, and found a proper sapling, and then I discovered I hadn't my knife. So I turned about to ask the loan of one from my passenger, and there he was in the road, shouting to me to come on, and he'd let me have his knife."

"And you came!" said Fred.

"Yes, gentlemen, I went for him. I had it to do—so it seemed to me. The first thing I thought of was that time, five years ago, when I was driving down from Tuscaloosa —"

All at once the doctor and Mr. and Mrs. Heygood and the pretty Dorina and Mr. Brent began to smile; and the smile grew to a laugh, and the laugh to a shout.

Meyrick sat holding his jaws in his hands, staring wildly, and beseeching them not to be the death of him by making him laugh, too.

"Well," said Mr. Heygood, "we had forgotten that story, Meyrick; but Cousin Fred Witherden doesn't know it."

"Why, sir, you see," resumed Meyrick, addressing himself to Fred, "it was, that time five years ago, driving along moderately in the dusk of the evening, with nobody in my wagon but myself, when I overtook a very nice-looking, middle-aged man. He hailed me, and asked civilly for a lift; so I halted, and he got in.

"Well, a more companionable stranger I never met. He was a man of information, too. But after a while he ran out of talk, and in that silence I dropped my whip.

"Of course I got down to pick it up, and before I could raise my head, that pleasing stranger had bounded to the ground, and was standing over me with an open knife. Said he, scowling fearfully, 'If you don't submit to be bound, hand and foot, I'll cut you to pieces!'

"Well, I tripped somehow over my whip, and the man snatched out a rope from somewhere about him, and almost before I knew it I was bound, hand and foot, and a handkerchief was tied around my mouth.

"How he managed it I don't know, but in that fix I was hauled up into the wagon. That interesting stranger took the reins, turned my horses' heads, and by eleven o'clock delivered me over to the Insane Asylum in Tuscaloosa.

"He was a lunatic gentleman who had got away from his friends, who were trying to take him to the asylum, and I suppose he thought he'd cheat them and the asylum people in the bargain by handing over another man."

"So you thought our young cousin here was another lunatic?" said Mr. Heygood, laughing.

"Pre-cisely!" answered Meyrick, with emphasis. "When I saw him standing in the road there, I thought that whole business was to do over again; and I just said to myself, 'Tom Meyrick, you are a fellow for similarity of crank-sided luck, but you'll have to fan it.' So I thought, being so much heavier and having the advantage of the bank to leap from, I could overpower him with a rush.

"But I caught it, and I'm not ashamed to say I made the woods echo. I knew I was close to the ferry, and I wanted help badly.

"'Give me a good cause, a fair fight, an open field, and a head as level as my own, and there isn't any back down in Tom Meyrick; but a lunatic at dead of night, out on a lonesome road—excuse me! Once is enough of that, thank you, gentlemen.

"Then the Healy crowd came running from the ferry—old Jake and his wife and Fergus and Joe, all of them shouting. But by that time I thought I and my passenger were done for, and you know the rest."

As Fred listened, the humor of the situation dawned upon him. His supposed villain was really an honest man, and each of the two, himself and Meyrick, had been the victim of his own fears.

He laughed with the rest, and held out his hand. Meyrick grasped it with a hearty shake.

You had Fred bound in order to retaliate upon him what you had suffered from your lunatic, I suppose?" said Dorina.

"It looks that way, Miss Dorina," Meyrick admitted. "But the truth is, I was very uneasy about him, and anxious to turn him over to his friends; so I pretended to be worse off than I was, so that I needn't be expected to talk too much.

"I had to consider Fergus's safety, you know, for if I wasn't sure it was a crazy man I had in the wagon, you may shoot me! But on the whole, I think I did my duty pretty well, according to my lights."

"Yes, you did!" Fred declared. "I am ashamed to remember that I was so rash."

"Oh, you're a young fellow; that's what's the matter. You'll cool down as you grow older," said Meyrick, encouragingly, as he went out, accompanied by Doctor Smith and Mr. Brent.

A moment later the mail was brought in.

"A letter for you, cousin," said Mr. Heygood. "It's from Sally!" cried Fred, "and mailed the day after I left! How could it reach here so promptly?"

"You came around your elbow to get to your thumb, seeking an adventure, I suppose," said Mr. Heygood, laughing, "and the letter came direct."

"We thought the route I came was the direct route!" said Fred.

"That's because you Georgians won't take the

trouble to learn all you ought to know about Alabama," returned Mr. Heygood.

Fred was deep in Sally Holmes's letter, which ran thus:

MY DEAR FRED: We miss you dreadfully, and though you left us only this morning, it seems as if you had been gone a month. The Colonel pretends he doesn't mind it, and goes about the house whistling "Bonnie Doon," to keep up his spirits, and keep ours down, I suppose, for I feel just like crying when I hear him, and Cousin Dorina is openly "low in her mind."

To-night, when she was going to bed, she made me bring the big red morocco Prayer-Book that was her father's, and told me to find the prayer "For a Person Going to Sea!" I couldn't help reminding her that you wouldn't catch even a distant glimpse of the Gulf of Mexico; but she said that you would certainly cross many a roaring torrent, and then I had much ado to keep from laughing.

I tell you I felt sober enough, though, when she went on to say that sea and land are just alike to Him Who made them both, and that "the violence of enemies" may overtake a traveller on any road.

O Fred, I do actually *hate* Great-great-grandmother Heygood's old silver coffee-pot and things, and wish I never, *never* had seen a piece of it; and I do pray you may escape "the violence of enemies."

Now what I want to say is, that if you shouldn't have the luck to get to Baybridge with that silver safe and sound in your venerable trunk, do, *do* bear the calamity like a philosopher; and above all, never, *never* let Cousin Dorina know, for I verily believe that it would almost break her heart.

It is late, so no more from

Your affectionate cousin,

SALLY W. H.

P. S. Arnold told the Colonel about our last night's burglar-scare, and he has had extra fastenings put on all the doors and windows, which he bought in town to-day—I mean the fastenings; and it was nothing but a bat and *me*, Fred!

S. W. H.

As he came to the end of this epistle, Fred was inspired with a sudden anxiety about the silver. True, when he opened his trunk that morning, it had seemed to be safe, and he believed it was safe; but he had not examined closely, and besides, it would be a relief to surrender his onerous trust. So he told his cousins of his Aunt Dorina's gift, and begged Mrs. Heygood to take it out of the trunk.

Mrs. Heygood proceeded, with deep interest, to unpack the silver.

"There are twelve pieces, all told," said Fred. "Will you count them, please?"

Mrs. Heygood counted as far as nine. Then she paused, and looked at her daughter.

"We'll begin again," said she, hastily; but she stopped again at nine.

"There's a list pasted in the top of the trunk; compare with that, please," said Fred, who was so much excited that he could not remain upon the lounge.

He stood beside the trunk, while Mrs. Heygood read off the list, and Dorina set the pieces aside one by one.

"What is missing?" he asked, breathlessly.

"Three pieces—the bowl, the coffee-pot, and one cream-jug."

"I have been robbed!" cried Fred, wildly. "How foolish I was to credit that rascal Meyrick's plausible story! He is the man! He, and his crew at the ferry! Oh, wasn't he a sharp fellow, to leave me my watch and my purse? But justice I will have, if there is justice in Alabama."

"Now, my dear boy," remonstrated Mrs. Heygood, "you will make yourself ill, and that would be worse than losing the silver. Go lie down again."

Fred could not obey her.

"Sir," said he, turning to Mr. Heygood, whose silence exasperated him, "I must take out a warrant immediately against Meyrick and those Healys. Delay would be criminal."

"Stay a moment," counselled Mr. Heygood. "Let me think."

"Papa," said Dorina, with her hand on her father's arm, "the Healys, we know, are good people; we've known them always. They are very poor, but entirely upright. It can't be true, and it would be a cruel injustice to bring such an accusation."

"Let us think," said Mr. Heygood, again. "Fred, are you sure you left home with all the silver?"

"Absolutely sure. Sally Holmes and Arnold and I packed the trunk under Aunt Dorina's directions. We counted the silver again and again; it all went in."

Then Fred suddenly remembered the burglar-scare, but as suddenly dismissed that suggestion to the bat in the garret.

Besides, Fred reasoned, no burglar could have abstracted three pieces of silver, and left the trunk to all appearance unmolested. But at that lonesome ferry, while he lay unconscious—drugged in all probability—it was an easy matter to accomplish such a feat.

"Laying aside all personal considerations," said Fred to Mr. Heygood, "I feel it my duty, sir, to expose this proceeding. I shall have these persons arrested promptly; but of course I don't insist that you and Mr. Brent shall countenance me."

"Cousin Fred," said Mr. Heygood, mildly, "you must bear to be told that you are not in a temper, just now, to act wisely. Can't you trust us as friends? I frankly acknowledge that I do not believe these people are guilty; I've known them too long as good, honest folk. But while I would spare them the injustice of a hasty accusation, I have no idea of conniving at the loss of the silver. Suppose you leave this matter in my hands or in Brent's, until to-morrow? In your present condition you ought to remain quiet. Excitement is not good for you."

This last was an unanswerable argument. Fred's head ached violently, and he sank back upon the lounge, murmuring some words of apology for his hasty speech.

He was left to take a quiet rest, and he did not see any of the family again until after dinner, when they came in to spend the evening with him; but no allusion was made to the silver, and Fred had the self-control to ask no questions.

He slept well, that night, notwithstanding his losses, and awoke in the morning with a keen appetite for his breakfast, which was served to him in Mrs. Heygood's sitting-room upstairs, the doctor having counselled prudence.

The servant had just carried out the empty dishes, when Mrs. Heygood came in with a note in her hand.

"You have something to tell me?" cried Fred.

"The silver is found!" she said.

"Where? How?"

"I cannot tell you; I only know that Mr. Heygood left home at half-past six, this morning, to play detective, he said; and just now he sent me this little note which reads, '*Tell Fred that the silver is found.*'"

"I hope," said Fred, with sudden and contrite sympathy, "I do hope it isn't those people you care so much about!"

"Ah, those poor Healys!" sighed Mrs. Heygood with troubled eyes. "Do you know, Fred, we would rather lose the silver? Mr. Heygood telegraphed your grandfather last night, and I hope this note means that you left those three pieces of silver at home."

"That is impossible!" said Fred, stoutly.

"O mamma! mamma!" cried Dorina, rushing in, "the silver was found here in Baybridge!"

"I am very sorry," said Fred.

ELIZABETH W. BELLAMY.

(To be continued.)

A CHILD AGAIN.

Oh for an hour in that dear place!
Oh for the peace of that dear time!
Oh for that childish trust sublime!
Oh for a glimpse of mother's face!

—*Selected.*

For the Companion.

JASPER PRICE'S CORNER LOT.

"I'se *done* wid you, Jasper Price! Yes, sah, I'se done wid you for good an' all!"

A woman's voice rose, loud and shrill, from a little tumble-down cabin by a Georgia roadside.

Evidently the person addressed had no response to make, for after a little silence, the woman's voice rose again.

"I jes' wants you to pack up your traps an' cl'ar out, Jasper Price! An' doan't you nebbah show your face heah no mo' long ez you lib an' breave! I mean jes' 'zackly what I says, an' I doan' want to fin' you heah w'en I comes back from de spring!"

A moment later a short, solidly built, elderly black woman came out of the cabin, holding a tin pail in each hand, and hurried away toward a little spring in a ravine some distance from the house.

Her face was both wrathful and tearful, and she had a worn, tired look. A flapping old calico sunbonnet, drooping about her face, added to her dejected appearance.

A few minutes after she had left the house, a black man, not much taller than the woman, but stouter and slightly gray, came out of the cabin, and walked slowly, and with an evident attempt at dignity, down the dusty road.

In one hand he carried a small bundle tied up in a faded red cotton handkerchief, and in the other a cane, curiously carved, of a piece of gnarled wood. A green cotton bag was on his back, and within it could be seen the outlines of a violin.

It was Jasper Price, who had at last been stung to take this well-deserved rebuke from his wife in earnest.

Jasper had been born with a constitutional tendency toward slothfulness, which his will-power was quite too weak to overcome.

His wife, on the other hand, was a very industrious and energetic woman. She worked early and late, providing by far the greater part of the support of their large family of children. She had provided for her husband's wants as well, until her patience had been quite exhausted by several weeks of needless idleness on Jasper's part.

There had been a most vigorous outpouring of wrath, ending with this command to "Cl'ar out for good and all!"

But she did not suppose he would take her at her word and go.

"Dar aint no sich good luck for me as dat," she said, when she returned to the cabin and found that Jasper was not there. "He'll be back 'bout supper-time. Maybe he'll lay out ontel he gits oncommon hungry; but he'll come home den, sho' 'nough. I 'clar' if I aint a mind nebber to gin him anudder bite to eat!"

She had no opportunity to refuse him food. He did not come back to ask for it. He did not come back at all; days, weeks and months passed without a word of tidings from Jasper from any quarter.

His wife, kindly at heart, though overworked and worried, began to reproach herself. She discovered in her memory traits of excellence in her husband's character for which she had never before given him credit.

"I reckon I was too ha'sh wid 'im," she said. "He come f'm a lazy fambly; his daddy befo' 'im was too lazy for to draw his bref, an' some tink he died on dat 'count. I reckon Jasper's no-'countness was bawn in 'im, an' I done druv 'im 'way for what he couldn't holp!"

She found excuses to talk about him.

"He was mighty willin' an' 'bligin' 'bout some tings," she told a neighbor. "He'd 'ten' de baby by de hour. He'd allus car'y home de washin' I done fer de ladies in de town, an' my, couldn't he play de fiddle *beau*tiful! Dar aint nobody 'round heah dat could bring out 'Moneymusk' an' 'De Swanee Ribber' an' 'Git out'n de way, Ole Dan Tuckah' like Jasper Price could. I does miss his fiddle a-jiggitin' away out on de po'ch ob a summer ebenin'."

Four months after Jasper's departure from home a stout, travel-stained black man, slightly gray, walked slowly and wearily up the trail leading to a new and promising Rocky Mountain mining camp.

He carried a little bundle tied up in a ragged red cotton handkerchief. The outlines of a violin could be traced within a green cotton bag on his back, and he gave his name, at the mouth of a shaft where he stopped to get a drink of water, as Jasper Price.

"Well, old pardner," said the man who gave him the drink of water, "you look as if you'd walked all the way from Georgia."

"You done struck pretty close to de trewf, sah," said Jasper, ruefully. "I'se walked many weary miles ob de way, an' I'd 'a' done walked de hull ob it ef it hadn't 'a' ben for dis yer fiddle."

He had heard wild stories of the ease and quickness with which fortunes were made in this mining camp, and in his simplicity he almost expected to find nuggets of gold and silver unregarded in the streets.

He found quite a different state of things. People here had to work hard for their living as elsewhere; only the rewards of energy and industry were perhaps larger and more prompt than in the older parts of the country.

Jasper could get no farther, and presently he found himself possessed of some share of the restless energy of the people around him. His dormant powers seemed to be aroused by the spirit of activity that was in the crisp and exhilarating mountain air.

No one could be supinely idle long in such a place as this great mining camp. Jasper was soon busy with axe and saw and hammer, putting up a little cabin for himself on a corner lot he had staked out for his own.

When the cabin was done, Jasper nailed a pine board over the door, on which was the one word, "LAWnDry." He could not read nor write, but he had induced an acquaintance among the miners to paint his sign for him.

In his spasmodic hours of industry when at home, Jasper used to help his wife with her daily washings and ironings, and had in this way acquired something of the wonderful skill that had given her the reputation of being the finest laundress in all the country round about her home.

Since Jasper did not know how to do anything else, and as there was a great demand for the one industry in which he had some skill, he had resolved to open a laundry.

His success was great and immediate. There were as yet in the camp very few women, and the prejudice against Chinamen was so great that it was not safe for one of that race to come into the camp.

Before the end of the first week Jasper was so overwhelmed with work that he hired a poor boy who had strayed into the camp as an assistant. Another helper was needed early in the second week, and still a third before a month was done.

Jasper had a flourishing business, and found it necessary to enlarge his shanty. He developed a capacity for business that he himself had never suspected.

His industry increased with his success. There was plenty of money in the camp, and it was not long before Jasper was possessed of ten times as much money as he had ever seen before. Moreover, his head was not turned by his success.

He had a queer habit of going about chuckling to himself and saying, "I mus' write a lettah one ob dese days; for a fac', I mus'. Hi! I bet hit'll be a mighty welcome lettah to de pusson what gits it, c'ase ob what 'll go 'long wid it. Oh, I'se gwine write a lettah by 'n' by, 'deed I is!"

Even-tempered as he had been in the midst of steadily increasing prosperity, Jasper almost lost his head when he was one day offered five thousand dollars for his corner lot. It was needed for a business block.

So fast had the town grown, and so speedy and great had been the rise in real estate, that Jasper's lot had become so valuable as this in less than three months. Fearing a possible decline in values, Jasper prudently sold his lot and removed his laundry.

It was then that he wrote his letter, or rather, had it written for him. Among his patrons was a young lawyer who had befriended Jasper on his first arrival in the camp, and who had taken an interest in him afterward. It was this friend to whom Jasper applied when he was ready to have the letter written, and the lawyer kept his secret.

It was about a month after the letter had been sent that the crowd which always assembled to await the arrival of the two stage-coaches, which came together from the slowly approaching line of railroad in the valleys below, noted the restlessness and peculiar actions of Mr. Jasper Price, who was by far the most prominent figure in the throng.

Newly shaven and spotlessly clean, he was arrayed in a shining suit of black, and wore a glossy high silk hat. He had given a bootblack twenty-five cents for an extra shine on his large shoes. His wide expanse of white shirt-front shone in the sunshine, and upon it was a huge breastpin of red and green glass and a gorgeous necktie of blue and yellow.

On his hands were kid gloves of a saffron hue, while a watch-chain of mighty and shining links was stretched across his waistcoat front.

His black face was beaming with kindly smiles, and he frequently chuckled softly to himself as he moved around restlessly in the crowd.

His excitement grew intense when some one called out, "There they come!" and a great cloud of dust rose at one end of the long, stony street.

The second of the two coaches bore such a load as it had never before carried. The driver, with his hand at the side of his mouth, had told the "boys" as he came up that "all Africa had broke loose."

At the side of the driver sat a short, well-knit, dust-covered negro woman, with a black and happy baby in her lap. Her face was wreathed in smiles as she looked down on the crowd, and a great responsive shout came from her lips when Uncle Jasper called out:

"Jinny! Heah I is! Doan' you see me, Jinny?"

From every window and door of the coach grinning black heads of all sizes and ages, and in all sorts of hats and caps and bonnets were now thrust with cries of "Daddy! daddy! We's come, daddy! Heah we is, daddy!"

"Hit's my fambly!" cried Jasper, as he pushed his way through the crowd. "Dem's my folks, in dat stage. Hallelooyer!"

Down and out they came into his outstretched arms.

"Glory!" he cried. "You's all heah! Heah's Jacky! An' Lotty! An' Libbutty Ann! An' Ab'aham—laws, how dey has all growed! An' de baby! Bless my soul, I'd nebbah knowed dat chile in all dis world—he's growed so! An' dis aint Washin'ton? How he am changed, too! An' heah's Matildy an' 'Minty Jane! Come an' kiss yer daddy!

"What! yo' aint 'feerd o' yer daddy kase he's dressed out so fine? I'se yer daddy, all de same! William Henry aint afeerd, is yo', boy?

"Is yer all out? No, dar's little Moses—I hardly knowed de chile, he's got so big! Well, well, well, if dis aint de happies' day I eber see!"

They made a queer procession as they walked away from the smiling crowd. Jasper led the way with the huge baby on his shoulder. His radiantly happy wife walked by his side, loaded with baskets and bundles, while the nine older children followed, each carrying a pot or a pan or a teakettle which their mother had foolishly seen fit to bring all the way from Georgia.

Fortunate days had dawned for the reunited family. Jasper's industry did not flag, and he and his thrifty wife showed great good sense in the use of the little fortune that had come to them.

When the decline of the camp's prosperity came, and the laundry business was no longer profitable, they went to fertile valleys below and bought a ranch, that their numerous boys and girls might be trained to habits of industry.

There, I dare say, they are still.

J. L. HARBOUR.

TIMES CHANGE.

In a copy of a magazine of the date of February, 1875, which was picked up in an attic the other day, was found a fashion-plate torn out of a magazine of the year 1859; and upon the margin of this older slip a well-known hand had written:

"How ridiculous these old 1859 fashions look, compared with our graceful, tasteful and becoming fashions of 1875!"

The person who had picked up the magazine then opened the large folded, colored leaf which had upon it the pictured forms of half-a-dozen highly dressed figures, and beneath it the legend:

"*Les modes Parisiennes—February, 1875.*"

It was impossible to restrain a burst of hearty laughter at these "graceful and tasteful fashions" of only sixteen years ago.

The women are draped in gowns that seem entirely made up of loops, tucks and bows. Their skirts do not seem to hang downward at all, but to be built up from the bottom in successive layers of flounces and bows, and overhung with immense "polonaises."

Around their necks are ridiculous ruffles. Their hair is built up in "chignons" at the back of the head, and upon the extremity of this projection a bonnet or hat is perched.

From beneath the bright green or dazzling blue skirts of the dresses, the absolutely square toes of a very singular shoe are seen to project.

The same hand that wrote the original comment takes up a magazine of 1891, and inserts between its leaves both the fashion-plates of 1859

Digitized by Google

and 1875; but instead of an appreciative note, the fashion-plate of 1891 bears this comment:

"I *know* our fashions of 1891 are nicer than those of 1875; but I suppose they'll look just as ridiculous in 1907."

VEILED PROMISE.

More royal the rays of the rainbow
The deeper the tempest's gloom,
And, the darker the clouds of April,
The brighter the violets bloom.

For the Companion.

THE BOMBAY MUTINY.

On a fine November morning in the year 1842, the ship *Bombay*, fifty-three days out from New York, sighted the Sugar Loaf, and running in past the forts that guard the entrance, anchored in the lovely bay of Rio de Janeiro.

Negroes and natives in curious boats and canoes surrounded the ship, offering for sale a bewildering variety of tropical fruits. The Brazilian Port Captain, in gorgeous uniform of green and yellow, came off to the ship in a barge with wooden awning, flying an enormous Brazilian flag, and pulled by twelve coal-black Congo negroes, naked to the waist.

The *Bombay*, John Gay, master, of six hundred tons register, was considered a vessel of good size in those days. She carried a crew of twelve men, with the Captain, two mates, carpenter, steward, cook and two boys.

I was in the mate's or port watch. Jim, the other boy, who was about my own age, was in the starboard watch. We boys messed in the steerage with the carpenter, a sour-tempered Dane.

On the first Sunday after our arrival, the port watch was given a day's liberty, and I went on shore with the rest. Passing through a great fleet of vessels of all nations at anchor, gaily dressed in flags, we landed, and were soon on the plaza.

I soon separated from the sailors, who sought the drinking shops. Wandering about, I saw many curious things. In a gay carriage, with six horses, outriders in rich livery, and a brilliant cavalry escort, I saw the youthful Emperor, Dom Pedro II., then scarcely seventeen years old.

I spent so much time in sight-seeing that when toward evening, I returned to the place where I had left the *Bombay's* boat, I found that it had gone off nearly an hour before; but for a small fee two black men pulled me off to the ship in a boat of their own.

As we neared the *Bombay*, I saw evidences of unusual commotion on board, and a signal of distress hoisted in the mizzen rigging. Arriving on board, I found what was the cause of the trouble.

Among the naval stores which composed our cargo were six hundred barrels of whiskey. In those days this liquor was served out as a daily ration in the United States Navy; but the practice did not prevail in the merchant service, liquor being allowed on board but few ships, and served as a ration in none.

Sailors were in those days noted for their ingenuity in stealing liquor, and to keep this out of his men's reach our Captain had stored the barrels in the fore and after runs or lowest parts of the lower hold. The sailors were aware of this, and on this day had found their chance to get at it.

Mr. Bowker, the chief mate, and the port watch were on shore, and Captain Gay had gone on board another ship, the *Angier*, to pass the day and dine with her commander. This left Mr. Daniels, the second mate, in charge. He was a rather easy-going young man, and soon retired to his stateroom to enjoy the day in reading an interesting novel.

Chips, the carpenter, after smoking a pipe, went to sleep in his bunk, and the sailors found little difficulty in taking from his chest such tools as they wished. With these the starboard watch proceeded to cut a hole through the forecastle deck, and succeeded so well that by dinner-time they had broken out the upper tiers of stores, and exposed the barrels.

The cargo thus removed they piled up carefully in the quarters of the absent port watch, filling their side of the forecastle up to the carlines.

Not satisfied with broaching one barrel, they rigged a whip and hoisted three barrels of whiskey up into the forecastle, and concealed them underneath their berths.

They then returned the rest of the cargo to its place, and refitted the deck planks so carefully that scarcely a trace was left of their work.

After dinner the watch settled down to the business of drinking and carousing. When, at five o'clock in the afternoon, Mr. Daniels, having finished his novel, came forward to call away the boat to bring the liberty men on board, he was startled to find the entire watch drunk, and inclined to be quarrelsome.

The second mate at once sent the carpenter and the boy Jim in the dinghy on board the *Angier* for Captain Gay. The Captain, learning the state of affairs, accepted his friend Captain Edson's offer to send the *Angier's* boat for our liberty men. The two Captains came at once on board our ship in the dinghy. The arrival of the liberty men, who were also drunk, made matters worse instead of better, for the two watches fell to fighting in the forecastle.

This was the disturbance which was taking place when, amidst the cries and shouts of the rioters, I arrived on board. Captain Gay, who was one of the old-time sea-captains, and "a very taut hand" with his crews, ordered the second mate to go down into the forecastle, and bring up any rum he might find there. He supposed that the liquor the men had been drinking was smuggled on board from the bumboat.

Mr. Daniels went down with a very ill grace, I thought. The forecastle was just then a very lion's den. He did not stay long, as you may suppose, but came up with a rush through the hatchway, with a bleeding nose and puffed eye.

When he could get his breath, he exclaimed, "They've got a barrel of whiskey there on tap, sir, and they are fighting over it like a lot of wild Indians! It was all I could do to get out of it alive."

This was nothing less than mutiny, and Captain Gay felt that his action must be summary. Going to the cabin, he returned with four revolvers, and gave one each to the officers and carpenter.

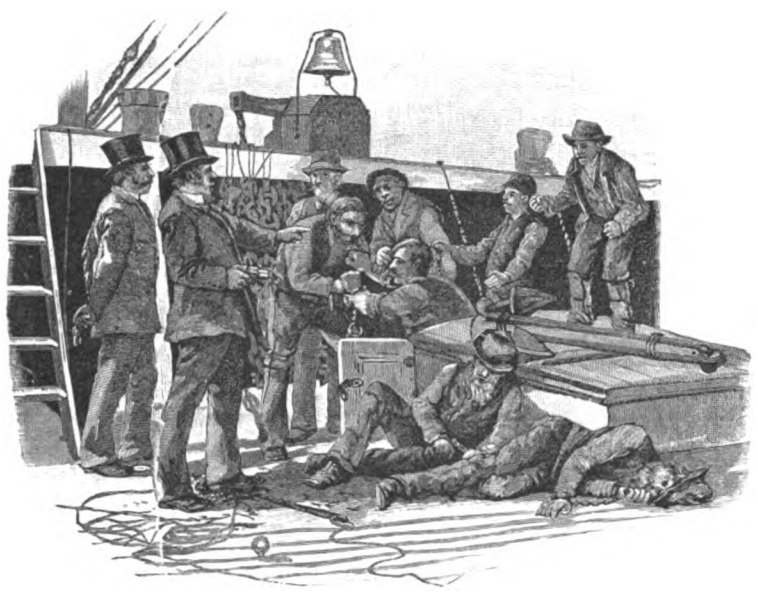
Then, looking down the hatch, he shouted, "Men, come up on deck, every one of you!"

A howl of derision was the only reply.

"I will give you five minutes to get up here, or I'll come down there and find out the reason why!" he cried.

They simply yelled defiantly in drunken chorus.

"Come along, Mr. Bowker," said the Captain. "You and I will start these fellows up. Mr. Daniels, you and the carpenter put the irons on them as they come up the hatchway!"



The Captain and mate bravely started down the ladder, revolvers in hand.

They were taking desperate chances. It is no small thing for two men, even with arms in their hands, to face a dozen maddened sailors, at close quarters, in a hand-to-hand encounter such as this must be.

Jim and I had gone forward to see the outcome of the affair. We were, of course, in a high state of excitement as the Captain and mate disappeared below.

For several minutes there was a terrible confusion of voices, and then a sound of blows, followed by the sharp crack of a pistol. Then a pause, followed by a renewal of the uproar. Another shot was fired, and almost immediately the Captain appeared, struggling with a stalwart fellow who had grasped the pistol by the barrel, and was striving to get possession of it.

The carpenter leaned over and struck the sailor a heavy blow with a pair of iron handcuffs, upon which the fellow let go his grasp and fell heavily down the ladder. The Captain then came up, bleeding from a blow on the side of his face, and with his clothing torn to shreds. Mr. Bowker quickly followed in an even worse condition, and without his pistol, which he had lost in the affray.

Quelling a Mutiny.

Mr. Daniels pulled over the scuttle and slipped in the bar. Feeling that the wild beasts were at least caged, our side called a parley.

"I hit one of the scoundrels in the arm," said the Captain. "Did your shot take effect, Mr. Bowker?"

"I think so, sir."

I happened just then to glance through a port, and saw a boat coming alongside. "Here's a boat, sir, with some officers," I reported.

The Captain went to the gangway, and received a Brazilian officer who came on board. Looking curiously at the Captain's disordered condition he said, "I am sent by the Port Captain to inquire what trouble you are in, as you have a distress signal flying."

The Captain explained, and the Lieutenant went forward to investigate. Mr. Bowker opened the hatchway, and the Lieutenant called down in his formal English, "Mariners, I command that you come on deck at once!"

"Who are you, monkey-face?" came a voice from below. "Get out of this, or we'll serve you worse than we did old Bowker!"

A pistol-shot whistled ominously past the young officer, while a chorus of yells and cat-calls saluted him as he drew back.

"But, Captain," said the officer, "this is a mutiny! I must report to my commanding officer and obtain further assistance." He hurried to his boat and left the ship.

By this time it was growing dark, and affairs were in a bad state for the night. The two Captains consulted together as to the best course to pursue. As discipline had become almost a dead letter, we all gathered aft, having first secured the forward hatchway, and several propositions were discussed by the officers.

"Captain Gay," said Captain Edson, "if you take my advice you will not allow the authorities to meddle in this matter, at this stage of the mutiny at least. If you do allow them to interfere they will put you to both trouble and expense, and possibly delay your voyage. I would at least exhaust your own resources first."

"That is good advice," replied our Captain. "But what shall I do with those wild men down there?"

"Come below and we will talk over a plan by ourselves," said Captain Edson, as he glanced at my companion Jim, who, with mouth and ears both wide open, was pushing forward to catch every word. They went below, and Mr. Bowker, now that the excitement was over for the moment, found time to give us his attention. We were soon set at work clearing up the decks, securing the boats and making all snug for the night.

In a short time the steward brought up an order to the mate to take the *Angier's* boat and to go on board the Brazilian man-of-war *Independenzia*, with Captain Gay's compliments, and say that we should not require any assistance that night, but should be glad to have the police boat sent in the morning to take the prisoners on shore.

Before going, the mate was directed to see that the forward hatch was lashed down and a kedge anchor put upon it.

As the "prisoners" were as yet a long way from being secured, we were all very much mystified by this message, and the mate remarked to Mr. Daniels, in my hearing, that he thought "the Captain had better catch his chickens before he counted them."

But he obeyed the order, nevertheless, and we went down into the steerage to supper, there to discuss the mutiny in all its aspects. When the *Angier's* boat returned, Captain Edson went back to his own ship.

That night the mates and the carpenter kept the anchor watches between them, and the crew, long before midnight, succumbed to the effects of the liquor, and were all quiet in the forecastle.

The next morning we were aroused bright and early, and for once found the Captain on deck as early as any one. Jim and I were sent off in the dinghy to bring Captain Edson on board, who came, bringing with him a package of something that smelled very much like matches.

Captain Gay received him at the gangway, and they both went forward with the mates and the carpenter, who to his and our surprise, was ordered to bring his broadaxe with him.

The Captain looked about carefully, and at last ordered the carpenter to cut a hole through the deck planks, about a foot square. The carpenter gazed in astonishment, but obeyed orders, and the chips began to fly.

The Captain then went to the galley and returned with an iron pot, to which he attached a line; and Captain Edson poured the contents of his package into the kettle.

By this time the hole was cut through the deck.

"Stand by to open the scuttle, Mr. Bowker," said the Captain. "Now, men," he called down, as the hatch was opened carefully, "are you ready to come up like men, or shall I make you come up like sheep?"

The men greeted this with more shouts of derision. Many of them had waked, and were again drinking the liquor.

The Captain closed the hatch, and called out, "Cook, bring a shovelful of coals here!"

The cook came with the live coals, which he put, as directed, into the pot.

As the dense white smoke of the burning brimstone in the vessel curled up, the Captain lowered the pot through the hole, keeping it just below the deck and out of reach of the men, and placed two wet swabs over the orifice, so that none of the fumes might escape.

Flesh and blood could not have endured the suffocating vapors that presently filled the forecastle. In less than ten minutes there was a terrific rush up the ladder, and a violent effort was made to raise the hatch, which was prevented by the lashings and the kedge anchor.

"Stand by, now, all of you," said the Captain, "and clap the handcuffs on them as I let them through."

He opened one door, through which the first man precipitated himself. He was secured, and the door quickly closed.

They were let out, one by one, until the whole twelve lay handcuffed on the deck in a row. The last ones were scarcely able to crawl up, so suffocating were the noxious fumes to which they had been exposed in the forecastle.

Captain Gay walked up and down the deck in glee at the complete success of his experiment, and addressed the captives as he passed.

"Oh, you are a precious lot of scoundrels, aren't you? You thought you had the weather-gage of me, did you? I think you will sing a different tune when you find yourselves in the calaboose! Mr. Bowker, signal for the police boat, and send these fellows off as quickly as possible, and let us be rid of them."

He turned aft, and went down to breakfast with Captain Edson.

When the police boat came, which was in a short time, the officer was greatly surprised to find so large a number of subjects awaiting him. They were taken on shore, and after remaining in the city prison until we had sailed, they were finally allowed to ship in a whaler that came in short of hands, rather than be sent home for trial.

Our Captain picked up another crew without difficulty, and went on unlading. We then took on board a cargo of coffee, and carried it to New Orleans.

The new crew remained with the *Bombay* while she loaded with cotton for Liverpool, and thence home to Boston, where all hands were paid off, and the ship discharged.

F. STANHOPE HILL.

For the Companion.

AT HOME IN THE BUSH.

Though, according to the almanac, this is spring, and there are birds to tell us so, there are few blossoms, even in warm nooks, and the "oak scrub" is the last of the underwoods to brighten into life.

At present it looks peculiarly uninviting, seeming determined to keep its secrets hidden from any impertinent Paul Pry. But in spite of scratches and interfering fingers, I struggle into the tangle, and am rewarded immediately.

A restless bit of canary-yellow among the low branches draws near bit by bit, until it is but a few feet away; a summer warbler, surely, but brown-capped like a chipping-sparrow.

There is something suggestively feminine in the agitated manner, and an odd, jetting motion of the tail, as he moves incessantly from twig to twig. Unable to satisfy his curiosity at long range, he suddenly flies up, and poising on fluttering wings, looks straight into my eyes for an instant, then flits slowly away, bush by bush, out of sight.

This red-capped "palm-warbler," as he is called, is apparently of different mettle from our common yellow warbler, who certainly shows neither diffidence nor nervousness, except when his maltese younglings are threatened; then what a fierce little fury he becomes!

In the top of the tallest hickory the brown thrush is pouring out his notes in whimsical hurry, and the catbird, skulking in the alders, answers my greeting with a sulky, discontented squawk. In an open space sparrows, with black stripes upon their caps, are playing a pretty game—a mixture of running and flying; and at intervals they all spring, twittering, into the air together.

There is a flash of bright color through the leafless branches, and down into a crotch above my head drops a larger bird, with velvety black head and throat and crimson pinafore.

There is no mistaking the rose-breasted grosbeak, but this is not his usual song. A quick chirp, as if to call attention, is followed by soft, beseeching, legato tones: "Here! You wouldn't harm us, would you?" Receiving a reassuring answer, he wings away again.

The oak level slopes steeply to the bog, where the triumphant "O glee-e-e!" of the red-wing is mingled with the clear, sweet notes of the meadow lark, and the liquid gurgle and trill of swallows.

Some new birds have arrived since yesterday; notably the redstarts, with their black caps and coats, and bars of orange and flame upon wing and tail. They are as restless as they are brilliant; always in a flutter, spreading wings and tail so wide that they resemble butterflies rather than birds. They are as full of curiosity, too; circling from branch to branch, they peer over at the intruder into their paradise, or alight with handsome tail outspread, head downward, upon the nearest tree-trunk, questioning the while in rapid tones.

Now two or three birds drop together straight down through a swarm of gnats, and we hear the rapid clicking of tiny bills. A solitary speck of yellow is also busy at fly-catching, but you must listen closely to distinguish her contented chirps.

Ah! here is a play worth watching. Moving up and down the path is a linnet, spreading and fluttering his wings to display his bright colors.

Hear his notes of anxious entreaty! He is fairly dancing in the endeavor to make a favorable impression upon his sober-gowned mistress. Would you suspect that she was conscious of a lover's proximity?

Apparently deaf to him, her attention is given solely to gleaning a supper among the weeds. Not a glance nor a syllable does she vouchsafe.

Suddenly she turns and dashes at him angrily. He retreats crestfallen, but she has hardly made feint of forgetfulness before he approaches again.

Allowing him to come quite near, she darts at him with a savage peck, and chases him from the field. Then she comes back to perch upon a bush, to preen her feathers and set her cap anew, with a comical air of having done a very praiseworthy action.

But we have wandered from the oak thicket, where a rustling among the dead leaves tells me that one of my especial friends has arrived. So prepare to fight your way among the thorny bushes, and we will observe him.

It is slow progress, but at every pause the rustling is nearer. Now it is but a few feet away, when up springs "Chewink" to the lowest bough of a hickory, crying, "*Towhee?* Who are *you?*"

There! isn't he a beauty? "Ground robin" the children name him, but his black is not rusty, like that of our more familiar bird. His red waistcoat is much richer in tint than the robin's, and a long tail adds much to his grace and dignity.

"*Towhee?* Who are *you?*" he repeats sharply, hopping a branch higher at every call, until, reaching the treetop, he sails slowly down into the scrub and falls to scratching again.

Following him up, we gradually drive him from the bushes, and in the open have a good view of him and his mate, who has hitherto kept herself concealed. Both are perfectly at ease, merely taking care to keep a dozen or fifteen feet ahead of us, and feeding as they go.

The thicket is beginning to show other life at last; golden-green tassels, crimson tufts and velvet leaves are slowly hiding bare branches. Little by little the bird voices grow fewer. Some of our

Digitized by Google

trouble to learn all you ought to know about Alabama," returned Mr. Heygood.

Fred was deep in Sally Holmes's letter, which ran thus:

MY DEAR FRED: We miss you dreadfully, and though you left us only this morning, it seems as if you had been gone a month. The Colonel pretends he doesn't mind it, and goes about the house whistling "Bonnie Doon," to keep up his spirits, and keep ours down, I suppose, for I feel just like crying when I hear him, and Cousin Dorina is openly "low in her mind."

To-night, when she was going to bed, she made me bring the big red morocco Prayer-Book that was her father's, and told me to find the prayer "For a Person Going to Sea!" I couldn't help reminding her that you wouldn't catch even a distant glimpse of the Gulf of Mexico; but she said that you would certainly cross many a roaring torrent, and then I had much ado to keep from laughing.

I tell you I felt sober enough, though, when she went on to say that sea and land are just alike to Him Who made them both, and that "the violence of enemies" may overtake a traveller on any road.

O Fred, I do actually *hate* Great-great-grandmother Heygood's old silver coffee-pot and things, and wish I never, *never* had seen a piece of it; and I do pray you may escape "the violence of enemies."

Now what I want to say is, that if you shouldn't have the luck to get to Baybridge with that silver safe and sound in your venerable trunk, do, *do* bear the calamity like a philosopher; and above all, never, *never* let Cousin Dorina know, for I verily believe that it would almost break her heart.

It is late, so no more from

Your affectionate cousin,

SALLY W. H.

P. S. Arnold told the Colonel about our last night's burglar-scare, and he has had extra fastenings put on all the doors and windows, which he bought in town to-day—I mean the fastenings; and it was nothing but a bat and *me*, Fred!

S. W. H.

As he came to the end of this epistle, Fred was inspired with a sudden anxiety about the silver. True, when he opened his trunk that morning, it had seemed to be safe, and he believed it was safe; but he had not examined closely, and besides, it would be a relief to surrender his onerous trust. So he told his cousins of his Aunt Dorina's gift, and begged Mrs. Heygood to take it out of the trunk.

Mrs. Heygood proceeded, with deep interest, to unpack the silver.

"There are twelve pieces, all told," said Fred. "Will you count them, please?"

Mrs. Heygood counted as far as nine. Then she paused, and looked at her daughter.

"We'll begin again," said she, hastily; but she stopped again at nine.

"There's a list pasted in the top of the trunk; compare with that, please," said Fred, who was so much excited that he could not remain upon the lounge.

He stood beside the trunk, while Mrs. Heygood read off the list, and Dorina set the pieces aside one by one.

"What is missing?" he asked, breathlessly.

"Three pieces—the bowl, the coffee-pot, and one cream-jug."

"I have been robbed!" cried Fred, wildly. "How foolish I was to credit that rascal Meyrick's plausible story! He is the man! He, and his crew at the ferry! Oh, wasn't he a sharp fellow, to leave me my watch and my purse? But justice I will have, if there is justice in Alabama."

"Now, my dear boy," remonstrated Mrs. Heygood, "you will make yourself ill, and that would be worse than losing the silver. Go lie down again."

Fred could not obey her.

"Sir," said he, turning to Mr. Heygood, whose silence exasperated him, "I must take out a warrant immediately against Meyrick and those Healys. Delay would be criminal."

"Stay a moment," counselled Mr. Heygood. "Let me think."

"Papa," said Dorina, with her hand on her father's arm, "the Healys, we know, are good people; we've known them always. They are very poor, but entirely upright. It can't be true, and it would be a cruel injustice to bring such an accusation."

"Let us think," said Mr. Heygood, again. "Fred, are you sure you left home with all the silver?"

"Absolutely sure. Sally Holmes and Arnold and I packed the trunk under Aunt Dorina's directions. We counted the silver again and again; it all went in."

Then Fred suddenly remembered the burglar-scare, but as suddenly dismissed that suggestion to the bat in the garret.

Besides, Fred reasoned, no burglar could have abstracted three pieces of silver, and left the trunk to all appearance unmolested. But at that lonesome ferry, while he lay unconscious—drugged in all probability—it was an easy matter to accomplish such a feat.

"Laying aside all personal considerations," said Fred to Mr. Heygood, "I feel it my duty, sir, to expose this proceeding. I shall have these persons arrested promptly; but of course I don't insist that you and Mr. Brent shall countenance me."

"Cousin Fred," said Mr. Heygood, mildly, "you must bear to be told that you are not in a temper, just now, to act wisely. Can't you trust us as friends? I frankly acknowledge that I do not believe these people are guilty; I've known them too long as good, honest folk. But while I would spare them the injustice of a hasty accusation, I have no idea of conniving at the loss of the silver. Suppose you leave this matter in my hands or in Brent's, until to-morrow? In your present condition you ought to remain quiet. Excitement is not good for you."

This last was an unanswerable argument. Fred's head ached violently, and he sank back upon the lounge, murmuring some words of apology for his hasty speech.

He was left to take a quiet rest, and he did not see any of the family again until after dinner, when they came in to spend the evening with him; but no allusion was made to the silver, and Fred had the self-control to ask no questions.

He slept well, that night, notwithstanding his losses, and awoke in the morning with a keen appetite for his breakfast, which was served to him in Mrs. Heygood's sitting-room upstairs, the doctor having counselled prudence.

The servant had just carried out the empty dishes, when Mrs. Heygood came in with a note in her hand.

"You have something to tell me?" cried Fred.

"The silver is found!" she said.

"Where? How?"

"I cannot tell you; I only know that Mr. Heygood left home at half-past six, this morning, to play detective, he said; and just now he sent me this little note which reads, *'Tell Fred that the silver is found.'*"

"I hope," said Fred, with sudden and contrite sympathy, "I do hope it isn't those people you care so much about!"

"Ah, those poor Healys!" sighed Mrs. Heygood with troubled eyes. "Do you know, Fred, we would rather lose the silver? Mr. Heygood telegraphed your grandfather last night, and I hope this note means that you left those three pieces of silver at home."

"That is impossible!" said Fred, stoutly.

"O mamma! mamma!" cried Dorina, rushing in, "the silver was found here in Baybridge!"

"I am very sorry," said Fred.

ELIZABETH W. BELLAMY.

(To be continued.)

A CHILD AGAIN.

Oh for an hour in that dear place!
Oh for the peace of that dear time!
Oh for that childish trust sublime!
Oh for a glimpse of mother's face!

—*Selected.*

For the Companion.

JASPER PRICE'S CORNER LOT.

"I'se *done* wid you, Jasper Price! Yes, sah, I'se done wid you for good an' all!"

A woman's voice rose, loud and shrill, from a little tumble-down cabin by a Georgia roadside.

Evidently the person addressed had no response to make, for after a little silence, the woman's voice rose again.

"I jes' wants you to pack up your traps an' cl'ar out, Jasper Price! An' doan't you nebbah show your face heah no mo' long ez you lib an' breave! I mean jes' 'zackly what I says, an' I doan' want to fin' you heah w'en I comes back from de spring!"

A moment later a short, solidly built, elderly black woman came out of the cabin, holding a tin pail in each hand, and hurried away toward a little spring in a ravine some distance from the house.

Her face was both wrathful and tearful, and she had a worn, tired look. A flapping old calico sunbonnet, drooping about her face, added to her dejected appearance.

A few minutes after she had left the house, a black man, not much taller than the woman, but stouter and slightly gray, came out of the cabin, and walked slowly, and with an evident attempt at dignity, down the dusty road.

In one hand he carried a small bundle tied up in a faded red cotton handkerchief, and in the other a cane, curiously carved, of a piece of gnarled wood. A green cotton bag was on his back, and within it could be seen the outlines of a violin.

It was Jasper Price, who had at last been stung to take this well-deserved rebuke from his wife in earnest.

Jasper had been born with a constitutional tendency toward slothfulness, which his will-power was quite too weak to overcome.

His wife, on the other hand, was a very industrious and energetic woman. She worked early and late, providing by far the greater part of the support of their large family of children. She had provided for her husband's wants as well, until her patience had been quite exhausted by several weeks of needless idleness on Jasper's part.

There had been a most vigorous outpouring of wrath, ending with this command to "Cl'ar out for good and all!"

But she did not suppose he would take her at her word and go.

"Dar aint no sich good luck for me as dat," she said, when she returned to the cabin and found that Jasper was not there. "He'll be back 'bout supper-time. Maybe he'll lay out ontel he gits oncommon hungry; but he'll come home den, sho' 'nough. I 'clar' if I aint a mind nebber to gin him anudder bite to eat!"

She had no opportunity to refuse him food. He did not come back to ask for it. He did not come back at all; days, weeks and months passed without a word of tidings from Jasper from any quarter.

His wife, kindly at heart, though overworked and worried, began to reproach herself. She discovered in her memory traits of excellence in her husband's character for which she had never before given him credit.

"I reckon I was too ha'sh wid 'im," she said. "He come f'm a lazy fambly; his daddy befo' 'im was too lazy for to draw his bref, an' some tink he died on dat 'count. I reckon Jasper's no-'countness was bawn in 'im, an' I done druv 'im 'way for what he couldn't holp!"

She found excuses to talk about him.

"He was mighty willin' an' 'bligin' 'bout some tings," she told a neighbor. "He'd 'ten' de baby by de hour. He'd allus car'y home de washin' I done fer de ladies in de town, an' my, couldn't he play de fiddle *beautiful*! Dar aint nobody 'round heah dat could bring out 'Moneymusk' an' 'De Swanee Ribber' an' 'Git out'n de way, Ole Dan Tuckah' like Jasper Price could. I does miss his fiddle a-jiggitin' away out on de po'ch ob a summer ebenin'."

Four months after Jasper's departure from home a stout, travel-stained black man, slightly gray, walked slowly and wearily up the trail leading to a new and promising Rocky Mountain mining camp.

He carried a little bundle tied up in a ragged red cotton handkerchief. The outlines of a violin could be traced within a green cotton bag on his back, and he gave his name, at the mouth of a shaft where he stopped to get a drink of water, as Jasper Price.

"Well, old pardner," said the man who gave him the drink of water, "you look as if you'd walked all the way from Georgia."

"You done struck pretty close to de trewf, sah," said Jasper, ruefully. "I'se walked many weary miles ob de way, an' I'd 'a' done walked de hull ob it ef it hadn't 'a' ben for dis yer fiddle."

He had heard wild stories of the ease and quickness with which fortunes were made in this mining camp, and in his simplicity he almost expected to find nuggets of gold and silver unregarded in the streets.

He found quite a different state of things. People here had to work hard for their living as elsewhere; only the rewards of energy and industry were perhaps larger and more prompt than in the older parts of the country.

Jasper could get no farther, and presently he found himself possessed of some share of the restless energy of the people around him. His dormant powers seemed to be aroused by the spirit of activity that was in the crisp and exhilarating mountain air.

No one could be supinely idle long in such a place as this great mining camp. Jasper was soon busy with axe and saw and hammer, putting up a little cabin for himself on a corner lot he had staked out for his own.

When the cabin was done, Jasper nailed a pine board over the door, on which was the one word, "LAWnDry." He could not read nor write, but he had induced an acquaintance among the miners to paint his sign for him.

In his spasmodic hours of industry when at home, Jasper used to help his wife with her daily washings and ironings, and had in this way acquired something of the wonderful skill that had given her the reputation of being the finest laundress in all the country round about her home.

Since Jasper did not know how to do anything else, and as there was a great demand for the one industry in which he had some skill, he had resolved to open a laundry.

His success was great and immediate. There were as yet in the camp very few women, and the prejudice against Chinamen was so great that it was not safe for one of that race to come into the camp.

Before the end of the first week Jasper was so overwhelmed with work that he hired a poor boy who had strayed into the camp as an assistant. Another helper was needed early in the second week, and still a third before a month was done.

Jasper had a flourishing business, and found it necessary to enlarge his shanty. He developed a capacity for business that he himself had never suspected.

His industry increased with his success. There was plenty of money in the camp, and it was not long before Jasper was possessed of ten times as much money as he had ever seen before. Moreover, his head was not turned by his success.

He had a queer habit of going about chuckling to himself and saying, "I mus' write a lettah one ob dese days; for a fac', I mus'. Hi! I bet hit'll be a mighty welcome lettah to de pusson what gits it, c'ase ob what 'll go 'long wid it. Oh, I'se gwine write a lettah by 'n' by, 'deed I is!"

Even-tempered as he had been in the midst of steadily increasing prosperity, Jasper almost lost his head when he was one day offered five thousand dollars for his corner lot. It was needed for a business block.

So fast had the town grown, and so speedy and great had been the rise in real estate, that Jasper's lot had become so valuable as this in less than three months. Fearing a possible decline in values, Jasper prudently sold his lot and removed his laundry.

It was then that he wrote his letter, or rather, had it written for him. Among his patrons was a young lawyer who had befriended Jasper on his first arrival in the camp, and who had taken an interest in him afterward. It was this friend to whom Jasper applied when he was ready to have the letter written, and the lawyer kept his secret.

It was about a month after the letter had been sent that the crowd which always assembled to await the arrival of the two stage-coaches, which came together from the slowly approaching line of railroad in the valleys below, noted the restlessness and peculiar actions of Mr. Jasper Price, who was by far the most prominent figure in the throng.

Newly shaven and spotlessly clean, he was arrayed in a shining suit of black, and wore a glossy high silk hat. He had given a bootblack twenty-five cents for an extra shine on his large shoes. His wide expanse of white shirt-front shone in the sunshine, and upon it was a huge breastpin of red and green glass and a gorgeous necktie of blue and yellow.

On his hands were kid gloves of a saffron hue, while a watch-chain of mighty and shining links was stretched across his waistcoat front.

His black face was beaming with kindly smiles, and he frequently chuckled softly to himself as he moved around restlessly in the crowd.

His excitement grew intense when some one called out, "There they come!" and a great cloud of dust rose at one end of the long, stony street.

The second of the two coaches bore such a load as it had never before carried. The driver, with his hand at the side of his mouth, had told the "boys" as he came up that "all Africa had broke loose."

At the side of the driver sat a short, well-knit, dust-covered negro woman, with a black and happy baby in her lap. Her face was wreathed in smiles as she looked down on the crowd, and a great responsive shout came from her lips when Uncle Jasper called out:

"Jinny! Heah I is! Doan' you see me, Jinny?"

From every window and door of the coach grinning black heads of all sizes and ages, and in all sorts of hats and caps and bonnets were now thrust with cries of "Daddy! daddy! We's come, daddy! Heah we is, daddy!"

"Hit's my fambly!" cried Jasper, as he pushed his way through the crowd. "Dem's my folks, in dat stage. Halleloover!"

Down and out they came into his outstretched arms.

"Glory!" he cried. "You's all heah! Heah's Jacky! An' Lotty! An' Libbutty Ann! An' Ab'aham—laws, how dey has all growed! An' de baby! Bless my soul, I'd nebbah knowed dat chile in all dis world—he's growed so! An' dis aint Washin'ton? How he am changed, too! An' heah's Matildy an' 'Minty Jane! Come an' kiss yer daddy!

"What! yo' aint 'feerd o' yer daddy kase he's dressed out so fine? I'se yer daddy, all de same! William Henry aint afeerd, is yo', boy?

"Is yer all out? No, dar's little Moses—I hardly knowed de chile, he's got so big! Well, well, well, if dis aint de happies' day I eber see!"

They made a queer procession as they walked away from the smiling crowd. Jasper led the way with the huge baby on his shoulder. His radiantly happy wife walked by his side, loaded with baskets and bundles, while the nine older children followed, each carrying a pot or a pan or a teakettle which their mother had foolishly seen fit to bring all the way from Georgia.

Fortunate days had dawned for the reunited family. Jasper's industry did not flag, and he and his thrifty wife showed great good sense in the use of the little fortune that had come to them.

When the decline of the camp's prosperity came, and the laundry business was no longer profitable, they went to fertile valleys below and bought a ranch, that their numerous boys and girls might be trained to habits of industry.

There, I dare say, they are still.

J. L. HARBOUR.

TIMES CHANGE.

In a copy of a magazine of the date of February, 1875, which was picked up in an attic the other day, was found a fashion-plate torn out of a magazine of the year 1859; and upon the margin of this older slip a well-known hand had written:

"How ridiculous these old 1859 fashions look, compared with our graceful, tasteful and becoming fashions of 1875!"

The person who had picked up the magazine then opened the large folded, colored leaf which had upon it the pictured forms of half-a-dozen highly dressed figures, and beneath it the legend:

"*Les modes Parisiennes—February, 1875.*"

It was impossible to restrain a burst of hearty laughter at these "graceful and tasteful fashions" of only sixteen years ago.

The women are draped in gowns that seem entirely made up of loops, tucks and bows. Their skirts do not seem to hang downward at all, but to be built up from the bottom in successive layers of flounces and bows, and overhung with immense "polonaises."

Around their necks are ridiculous ruffles. Their hair is built up in "chignons" at the back of the head, and upon the extremity of this projection a bonnet or hat is perched.

From beneath the bright green or dazzling blue skirts of the dresses, the absolutely square toes of a very singular shoe are seen to project.

The same hand that wrote the original comment takes up a magazine of 1891, and inserts between its leaves both the fashion-plates of 1859

Digitized by Google

and 1875; but instead of an appreciative note, the fashion-plate of 1891 bears this comment:

"I *know* our fashions of 1891 are nicer than those of 1875; but I suppose they'll look just as ridiculous in 1907."

VEILED PROMISE.

More royal the rays of the rainbow
The deeper the tempest's gloom,
And, the darker the clouds of April,
The brighter the violets bloom.

Western Christian Advocate. —*Luella Clark.*

For the Companion.

THE BOMBAY MUTINY.

On a fine November morning in the year 1842, the ship *Bombay*, fifty-three days out from New York, sighted the Sugar Loaf, and running in past the forts that guard the entrance, anchored in the lovely bay of Rio de Janeiro.

Negroes and natives in curious boats and canoes surrounded the ship, offering for sale a bewildering variety of tropical fruits. The Brazilian Port Captain, in gorgeous uniform of green and yellow, came off to the ship in a barge with wooden awning, flying an enormous Brazilian flag, and pulled by twelve coal-black Congo negroes, naked to the waist.

The *Bombay*, John Gay, master, of six hundred tons register, was considered a vessel of good size in those days. She carried a crew of twelve men, with the Captain, two mates, carpenter, steward, cook and two boys.

I was in the mate's or port watch. Jim, the other boy, who was about my own age, was in the starboard watch. We boys messed in the steerage with the carpenter, a sour-tempered Dane.

On the first Sunday after our arrival, the port watch was given a day's liberty, and I went on shore with the rest. Passing through a great fleet of vessels of all nations at anchor, gaily dressed in flags, we landed, and were soon on the plaza.

I soon separated from the sailors, who sought the drinking shops. Wandering about, I saw many curious things. In a gay carriage, with six horses, outriders in rich livery, and a brilliant cavalry escort, I saw the youthful Emperor, Dom Pedro II., then scarcely seventeen years old.

I spent so much time in sight-seeing that when toward evening, I returned to the place where I had left the *Bombay's* boat, I found that it had gone off nearly an hour before; but for a small fee two black men pulled me off to the ship in a boat of their own.

As we neared the *Bombay*, I saw evidences of unusual commotion on board, and a signal of distress hoisted in the mizzen rigging. Arriving on board, I found what was the cause of the trouble.

Among the naval stores which composed our cargo were six hundred barrels of whiskey. In those days this liquor was served out as a daily ration in the United States Navy; but the practice did not prevail in the merchant service, liquor being allowed on board but few ships, and served as a ration in none.

Sailors were in those days noted for their ingenuity in stealing liquor, and to keep this out of his men's reach our Captain had stored the barrels in the fore and after runs or lowest parts of the lower hold. The sailors were aware of this, and on this day had found their chance to get at it.

Mr. Bowker, the chief mate, and the port watch were on shore, and Captain Gay had gone on board another ship, the *Angier*, to pass the day and dine with her commander. This left Mr. Daniels, the second mate, in charge. He was a rather easy-going young man, and soon retired to his state-room to enjoy the day in reading an interesting novel.

Chips, the carpenter, after smoking a pipe, went to sleep in his bunk, and the sailors found little difficulty in taking from his chest such tools as they wished. With these the starboard watch proceeded to cut a hole through the forecastle deck, and succeeded so well that by dinner-time they had broken out the upper tiers of stores, and exposed the barrels.

The cargo thus removed they piled up carefully in the quarters of the absent port watch, filling their side of the forecastle up to the carlines.

Not satisfied with broaching one barrel, they rigged a whip and hoisted three barrels of whiskey up into the forecastle, and concealed them underneath their berths.

They then returned the rest of the cargo to its place, and refitted the deck planks so carefully that scarcely a trace was left of their work.

After dinner the watch settled down to the business of drinking and carousing. When, at five o'clock in the afternoon, Mr. Daniels, having finished his novel, came forward to call away the boat to bring the liberty men on board, he was startled to find the entire watch drunk, and inclined to be quarrelsome.

The second mate at once sent the carpenter and the boy Jim in the dinghy on board the *Angier* for Captain Gay. The Captain, learning the state of affairs, accepted his friend Captain Edson's offer to send the *Angier's* boat for our liberty men. The two Captains came at once on board our ship in the dinghy. The arrival of the liberty men, who were also drunk, made matters worse instead of better, for the two watches fell to fighting in the forecastle.

This was the disturbance which was taking place when, amidst the cries and shouts of the rioters, I arrived on board. Captain Gay, who was one of the old-time sea-captains, and "a very taut hand" with his crews, ordered the second mate to go down into the forecastle, and bring up any rum he might find there. He supposed that the liquor the men had been drinking was smuggled on board from the bumboat.

Mr. Daniels went down with a very ill grace, I thought. The forecastle was just then a very lion's den. He did not stay long, as you may suppose, but came up with a rush through the hatchway, with a bleeding nose and puffed eye.

When he could get his breath, he exclaimed, "They've got a barrel of whiskey there on tap, sir, and they are fighting over it like a lot of wild Indians! It was all I could do to get out of it alive."

This was nothing less than mutiny, and Captain Gay felt that his action must be summary. Going to the cabin, he returned with four revolvers, and gave one each to the officers and carpenter.

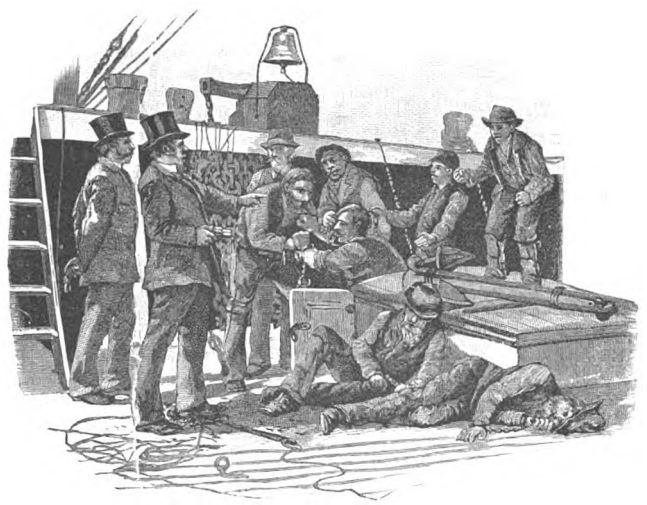
Then, looking down the hatch, he shouted, "Men, come up on deck, every one of you!"

A howl of derision was the only reply.

"I will give you five minutes to get up here, or I'll come down there and find out the reason why!" he cried.

They simply yelled defiantly in drunken chorus.

"Come along, Mr. Bowker," said the Captain. "You and I will start these fellows up. Mr. Daniels, you and the carpenter put the irons on them as they come up the hatchway!"



The Captain and mate bravely started down the ladder, revolvers in hand.

They were taking desperate chances. It is no small thing for two men, even with arms in their hands, to face a dozen maddened sailors, at close quarters, in a hand-to-hand encounter such as this must be.

Jim and I had gone forward to see the outcome of the affair. We were, of course, in a high state of excitement as the Captain and mate disappeared below.

For several minutes there was a terrible confusion of voices, and then a sound of blows, followed by the sharp crack of a pistol. Then a pause, followed by a renewal of the uproar. Another shot was fired, and almost immediately the Captain appeared, struggling with a stalwart fellow who had grasped the pistol by the barrel, and was striving to get possession of it.

The carpenter leaned over and struck the sailor a heavy blow with a pair of iron handcuffs, upon which the fellow let go his grasp and fell heavily down the ladder. The Captain then came up, bleeding from a blow on the side of his face, and with his clothing torn to shreds. Mr. Bowker quickly followed in an even worse condition, and without his pistol, which he had lost in the affray.

Quelling a Mutiny.

Mr. Daniels pulled over the scuttle and slipped in the bar. Feeling that the wild beasts were at least caged, our side called a parley.

"I hit one of the scoundrels in the arm," said the Captain. "Did your shot take effect, Mr. Bowker?"

"I think so, sir."

I happened just then to glance through a port, and saw a boat coming alongside. "Here's a boat, sir, with some officers," I reported.

The Captain went to the gangway, and received a Brazilian officer who came on board. Looking curiously at the Captain's disordered condition he said, "I am sent by the Port Captain to inquire what trouble you are in, as you have a distress signal flying."

The Captain explained, and the Lieutenant went forward to investigate. Mr. Bowker opened the hatchway, and the Lieutenant called down in his formal English, "Mariners, I command that you come on deck at once!"

"Who are you, monkey-face?" came a voice from below. "Get out of this, or we'll serve you worse than we did old Bowker!"

A pistol-shot whistled ominously past the young officer, while a chorus of yells and cat-calls saluted him as he drew back.

"But, Captain," said the officer, "this is a mutiny! I must report to my commanding officer and obtain further assistance." He hurried to his boat and left the ship.

By this time it was growing dark, and affairs were in a bad state for the night. The two Captains consulted together as to the best course to pursue. As discipline had become almost a dead letter, we all gathered aft, having first secured the forward hatchway, and several propositions were discussed by the officers.

"Captain Gay," said Captain Edson, "if you take my advice you will not allow the authorities to meddle in this matter, at this stage of the mutiny at least. If you do allow them to interfere they will put you to both trouble and expense, and possibly delay your voyage. I would at least exhaust your own resources first."

"That is good advice," replied our Captain. "But what shall I do with those wild men down there?"

"Come below and we will talk over a plan by ourselves," said Captain Edson, as he glanced at my companion Jim, who, with mouth and ears both wide open, was pushing forward to catch every word. They went below, and Mr. Bowker, gazed in astonishment, but obeyed orders, and the chips began to fly.

The Captain then went to the galley and returned with an iron pot, to which he attached a line; and Captain Edson poured the contents of his package into the kettle.

By this time the hole was cut through the deck.

"Stand by to open the scuttle, Mr. Bowker," said the Captain. "Now, men," he called down, as the hatch was opened carefully, "are you ready to come up like men, or shall I make you come up like sheep?"

The men greeted this with more shouts of derision. Many of them had waked, and were again drinking the liquor.

The Captain closed the hatch, and called out, "Cook, bring a shovelful of coals here!"

The cook came with the live coals, which he put, as directed, into the pot.

As the dense white smoke of the burning brimstone in the vessel curled up, the Captain lowered the pot through the hole, keeping it just below the deck and out of reach of the men, and placed two wet swabs over the orifice, so that none of the fumes might escape.

Flesh and blood could not have endured the suffocating vapors that presently filled the forecastle. In less than ten minutes there was a terrific rush up the ladder, and a violent effort was made to raise the hatch, which was prevented by the lashings and the kedge anchor.

"Stand by, now, all of you," said the Captain, "and clap the handcuffs on them as I let them through."

He opened one door, through which the first man precipitated himself. He was secured, and the door quickly closed.

They were let out, one by one, until the whole twelve lay handcuffed on the deck in a row. The last ones were scarcely able to crawl up, so suffocating were the noxious fumes to which they had been exposed in the forecastle.

Captain Gay walked up and down the deck in glee at the complete success of his experiment, and addressed the captives as he passed.

"Oh, you are a precious lot of scoundrels, aren't you? You thought you had the weather-gage of me, did you? I think you will sing a different tune when you find yourselves in the calaboose! Mr. Bowker, signal for the police boat, and send these fellows off as quickly as possible, and let us be rid of them."

He turned aft, and went down to breakfast with Captain Edson.

When the police boat came, which was in a short time, the officer was greatly surprised to find so large a number of subjects awaiting him. They were taken on shore, and after remaining in the city prison until we had sailed, they were finally allowed to ship in a whaler that came in short of hands, rather than be sent home for trial.

Our Captain picked up another crew without difficulty, and went on unlading. We then took on board a cargo of coffee, and carried it to New Orleans.

The new crew remained with the *Bombay* while she loaded with cotton for Liverpool, and thence home to Boston, where all hands were paid off, and the ship discharged.

AT HOME IN THE BUSH.

Though, according to the almanac, this is spring, and there are birds to tell us so, there are few blossoms, even in warm nooks, and the "oak scrub" is the last of the underwoods to brighten into life.

At present it looks peculiarly uninviting, seeming determined to keep its secrets hidden from any impertinent Paul Pry. But in spite of scratches and interfering fingers, I struggle into the tangle, and am rewarded immediately.

A restless bit of canary-yellow among the low branches draws near bit by bit, until it is but a few feet away; a summer warbler, surely, but brown-capped like a chipping-sparrow.

There is something suggestively feminine in the agitated manner, and an odd, jetting motion of the tail, as he moves incessantly from twig to twig. Unable to satisfy his curiosity at long range, he suddenly flies up, and poising on fluttering wings, looks straight into my eyes for an instant, then flits slowly away, bush by bush, out of sight.

This red-capped "palm-warbler," as he is called, is apparently of different mettle from our common yellow warbler, who certainly shows neither diffidence nor nervousness, except when his maltese younglings are threatened; then what a fierce little fury he becomes!

In the top of the tallest hickory the brown thrush is pouring out his notes in whimsical hurry, and the catbird, skulking in the alders, answers my greeting with a sulky, discontented squawk. In an open space sparrows, with black stripes upon their caps, are playing a pretty game—a mixture of running and flying; and at intervals they all spring, twittering, into the air together.

There is a flash of bright color through the leafless branches, and down into a crotch above my head drops a larger bird, with velvety black head and throat and crimson pinafore.

There is no mistaking the rose-breasted grosbeak, but this is not his usual song. A quick chirp, as if to call attention, is followed by soft, beseeching, legato tones: "Here! You wouldn't harm us, would you?" Receiving a reassuring answer, he wings away again.

The oak level slopes steeply to the bog, where the triumphant "O glee-e-e!" of the red-wing is mingled with the clear, sweet notes of the meadow lark, and the liquid gurgle and trill of swallows.

Some new birds have arrived since yesterday; notably the redstarts, with their black caps and coats, and bars of orange and flame upon wing and tail. They are as restless as they are brilliant; always in a flutter, spreading wings and tail so wide that they resemble butterflies rather than birds. They are as full of curiosity, too; circling from branch to branch, they peer over at the intruder into their paradise, or alight with handsome tail outspread, head downward, upon the nearest tree-trunk, questioning the while in rapid tones.

Now two or three birds drop together straight down through a swarm of gnats, and we hear the rapid clicking of tiny bills. A solitary speck of yellow is also busy at fly-catching, but you must listen closely to distinguish her contented chirps.

Ah! here is a play worth watching. Moving up and down the path is a linnet, spreading and fluttering his wings to display his bright colors.

Hear his notes of anxious entreaty! He is fairly dancing in the endeavor to make a favorable impression upon his sober-gowned mistress. Would you suspect that she was conscious of a lover's proximity?

Apparently deaf to him, her attention is given solely to gleaning a supper among the weeds. Not a glance nor a syllable does she vouchsafe.

Suddenly she turns and dashes at him angrily. He retreats crestfallen, but she has hardly made feint of forgetfulness before he approaches again.

Allowing him to come quite near, she darts at him with a savage peck, and chases him from the field. Then she comes back to perch upon a bush, to preen her feathers and set her cap anew, with a comical air of having done a very praiseworthy action.

But we have wandered from the oak thicket, where a rustling among the dead leaves tells me that one of my especial friends has arrived. So prepare to fight your way among the thorny bushes, and we will observe him.

It is slow progress, but at every pause the rustling is nearer. Now it is but a few feet away, when up springs "Chewink" to the lowest bough of a hickory, crying, "*Towhee!* Who are *you?*"

There! isn't he a beauty? "Ground robin" the children name him, but his black is not rusty, like that of our more familiar bird. His red waistcoat is much richer in tint than the robin's, and a long tail adds much to his grace and dignity.

"*Towhee!* Who are *you?*" he repeats sharply, hopping a branch higher at every call, until, reaching the treetop, he sails slowly down into the scrub and falls to scratching again.

Following him up, we gradually drive him from the bushes, and in the open have a good view of him and his mate, who has hitherto kept herself concealed. Both are perfectly at ease, merely taking care to keep a dozen or fifteen feet ahead of us, and feeding as they go.

The thicket is beginning to show other life at last; golden-green tassels, crimson tufts and velvet leaves are slowly hiding bare branches. Little by little the bird voices grow fewer. Some of our

Digitized by Google

friends have gone north for the season; others are much occupied with family cares, and have less leisure for mirth and frolic.

The field-sparrow sings rapturously; the catbird is as saucy and voluble as ever; the summer warbler announces every visit to his nest with rapid, golden tones; but the wings that flit about

Early Spring Birds.

the scrub are not so easily distinguished among the green. Our especial warbler—his nest is in the mock-orange bush by the window—objects to anything resembling a crow. He it was who first called our attention to a crow blackbird that was prospecting in the dwarf cherry-trees, long before the fruit began to redden.

One afternoon we were drawn to the window by the excited cawing of the blackbird, who had just discovered that cherries were ripe. He called many times, and answering caws came from the meadow willows; but no one came to see.

"Cherries!" he shrieked, but only received derisive answers.

Then he flew across to his companions, shouting as he went, and there was a stormy discussion. But his friends were incredulous; not one of them would trust him.

Back he came, plucked a sample of the fruit, and taking it across to the unbelievers, brought over the whole noisy troop at once.

We drove them away, but looked out an hour later to find that they had all returned, and were enjoying themselves—in perfect silence.

One sunny October afternoon we were crossing a brook near the shore, when our attention was attracted by the strange behavior of a cow in the meadow. She was standing motionless, with her neck craned forward, looking intently at the further side of the brook, where the falling tide had left a wide curve of sandy mud.

Drawing nearer to see what she was gazing at, we became aware of a large flock of sandpipers. Most of them were feeding along the margin of the stream, but the others—fourteen in number—were engaged in a lively game upon the hard mud of the flat. The players were stationed about three feet apart in two rings, which revolved in opposite directions.

In other respects the game was similar to "leap-frog." Each bird ran forward, and met its opposite of the other "set;" both sprang into the air with a twitter, and, alighting, continued the revolution, to take up the figure again with the next in line.

All were running, leaping, and running on with great rapidity and regularity, so that the rhythm of a dance was kept fairly well. Evidently they had had plenty of practice.

A wagon, rumbling over the bridge, startled the busy foragers, and they rose with a great whirr of wings, and drifted away over the fields seaward; the dancers, intent upon their game, were left behind.

Then appeared the man with the gun. The cow, still "pointing" patiently, prevented any "comprehensive" shooting. We had once eaten bird-pie; for the moment we sympathized with the sportsman's attempt to obtain that tempting delicacy. We were curious, too, to see how he would shoot around the cow without hitting her.

Creeping as near to her as possible, he fired. The cow had learned her dancing lesson well, and during the progress of the tragedy, she imitated every motion of the birds to the best of her clumsy ability. At the first report of the gun she leaped into the air, regained her feet, sidled off a few paces, stopped and pointed at the surviving birds, who, rising at the shot, had dropped back upon the ground, and were attempting to resume their interrupted game.

The cow continued to occupy the most inconvenient position for the perplexed gunner, and continued to watch the birds. This was repeated with each of seven shots that the man fired, until a solitary, bewildered birdling, alone remaining of the merry company, drifted farther down stream among the tall rushes, and we left the cow rigidly "pointing" at the place where it had disappeared.

"All young birds!" said the sportsman, as he regained the bridge. Poor children! They had never been under fire before, and had, no doubt, thought this a very kind and pleasant world.

EVENING.

Slow, slow, the lashes of the twilight
Are drooping o'er the tired eye of day,
And stars are stealing through their shadows
Like dreams of dazzling wonders far away.

CHAS. H. BATTEY.

THE CANADIAN ELECTION.

On Thursday, March Fifth, a general election was held throughout the Dominion of Canada for the choice of a new Parliament. This election was watched with unusual interest, not only in Canada itself, but in the United States and in Great Britain. It was, perhaps, the most exciting and important political crisis which has hitherto taken place in the Dominion.

The main issue of the election was upon the question of the commercial relations between Canada and the United States. The ministry in power, with the veteran Sir John Macdonald at its head, advocated what they called "limited reciprocity;" that is, a treaty with the United States which should exchange a certain limited and specified number of products between the two countries free of duty.

The party in opposition, or Liberals, on the other hand, favored "unrestricted reciprocity," which meant that there should be a general exchange of products, raw and manufactured, between the Dominion and the United States, without the imposition of duties on either side thereon. The Liberals, in short, proposed virtual free trade between the two countries.

While Sir John Macdonald suggested that Canada should only send natural products free into the United States,—such as articles raised on the Canadian farms,—the Liberals were ready, apparently, for a commercial union with our Republic, even if that implied the maintenance of a tariff against the mother country, Great Britain.

But the main issues thus presented at the beginning of the campaign were somewhat modified as it advanced.

Sir John Macdonald suddenly charged the Liberal leaders with the "treasonable" design of aiming at not only a commercial, but a political, union also with the United States, and appealed with great fervor to the patriotism of Canadians, and to their loyalty to the English connection.

This was a shrewd and adroit electioneering device, and no doubt had the desired effect on a considerable number of Canadian voters; the Liberals were put on the defensive, and so lost the advantage, which, at the outset of the campaign, they seemed to have in placing Sir John in that position.

The result of the election was a moderate triumph for Sir John and the Conservatives. At the last general election, in 1887, the Conservatives had carried the day by choosing one hundred and twenty-two members, while the Liberals chose ninety-three.

But since that election a certain number of opponents of the ministry had been won over to its support, so that at the dissolution last February the Canadian House of Commons stood one hundred and thirty-one Conservatives to eighty-four Liberals—a majority for the ministry of forty-seven.

The election just held resulted in placing the relative strength of the two parties at just about the same figures as it stood after the election of 1887. That is, of the new House of Commons, one hundred and twenty-three are Conservatives and supporters of the Macdonald ministry, and ninety-two are Liberals, following the leadership of Hon. Wilfrid Laurier and Sir Richard Cartwright.

These figures may be slightly changed by the official count, but they nearly represent the actual extent of Sir John Macdonald's victory.

The results of this election are likely to be more important than appears on the face of it. A very large minority of the Canadian voters, to say the least, are in favor of practically a commercial union with the United States, which would establish virtual free trade between them; and this feeling seems likely to grow instead of to lessen.

Besides, the subject of political annexation to this country has begun to be boldly and openly discussed in Canada, and the sentiment in its favor is evidently more widespread than ever before.

AN APRIL FOOL.

Snow on the ground,
With June in the skies,
Birds in the air
And gay butterflies,
Sunshiny laughter, with tears all a-flow,
Sap snows, and sweet scent of maples a-blow.
Brooks gleaming with trout, and snowbanks with flowers,
We're nipped by Jack Frost, we're pelted by showers.
South winds to warm us,
North winds to cool us,—
And this is the way
April will fool us.

HATTIE A. PIKE.

SETTLING OLD ACCOUNTS.

Among the last acts of Congress at its late session were the settlements of two very old accounts. One of them finds the circumstances on which it was based in the first year of the Civil War. The other is a claim so ancient that President Polk vetoed it in 1846, and it was then almost half a century old.

The expenditures caused by the Civil War were enormous, but it was a long time before the government could get its great taxing and borrowing machinery in order so that it would yield enough money to pay the bills as they came in.

Among the devices adopted to provide funds was that of a "direct tax,"—that is, a tax laid directly upon the people according to their numbers. Such a tax the Constitution requires to be levied in the same proportion upon the States as representatives in Congress are apportioned.

The amount to be raised was twenty million dollars, but any State which assumed the tax on behalf of its citizens, and paid the sum to the United States, was allowed a commission of fifteen per cent. upon the amount levied. About fifteen and a quarter million dollars was collected under this law.

But while the Northern States paid the full amount, only one of the Southern States did so; though various sums were collected by United States tax-collectors, directly from the people, in every one of the seceded States.

It has long been urged upon Congress that the government should either collect the rest of the taxes from the States that had not paid, or return all that had been collected.

The fiftieth Congress passed an act to refund the amount, but it was vetoed by President Cleveland. The Senate then passed the bill over the veto by more than a two-thirds vote, but the House of Representatives did not vote on the question. At the late session the bill was passed, and signed by the President.

The sums paid by the States are to be refunded to them. Whatever was paid to tax-collectors by individuals will be refunded directly to them or their heirs. And all amounts still due from the people of any State are remitted.

The French Spoliation Claims arose out of the depredations committed by the French upon American commerce between the years 1793 and 1801. The American Government asked merchants to send to it their claims against the French.

By the terms of a treaty between France and the United States, in 1800, these claims were offset to claims which France made upon the United States. This government having thus benefited by releasing the claims of its own citizens, became bound to pay those claims.

These facts were reported to Congress, and the obligation was admitted, as early as 1803. But money sufficient to settle the claims was not easy to get in those times, and Congress never passed a bill favorable to the claimants until 1846. That bill was vetoed; and so also was another—by President Pierce—passed by the thirty-third Congress.

Meantime, and since, reports to the number of between thirty and forty have been made to Congress, not one of which since 1826 has been against the claims.

Finally, by an act passed in 1885, the Court of Claims was authorized to ascertain the amounts due on account of French Spoliations, but it was expressly provided that this act should not commit the government to the payment of them.

Since then there has been in each Congress an attempt to secure the payment of the claims ascertained, but in each case it has failed until the present year. The amount now authorized to be paid is less than two million dollars, but there are many claims not yet passed upon by the Court.

There has been much debate, some of it exceedingly bitter, over each of these two old accounts, and at times it has verged upon political debate. But the appropriations in both instances have been made with the strong approval of members of both parties.

THE REASON WHY.

A crowd had gathered in the village street, watching a bear-dance. Mr. Grove, the storekeeper, passing, laughed at the bears, nodded to his neighbors, but went on his way.

"Say, Grove!" shouted Abe Lake. "Stop and look at this. You never saw anything funnier in your life."

"I am too busy," said Grove, as he hurried on.

Abe, who was plowing a field for Squire Smith, followed the bear and the organ-grinder through the town, pitching pennies to them until his pockets were emptied.

"I'm a poor man, but I can afford to pay for my fun!" he bragged. "There's that skinflint Grove can't waste half an hour or a penny!"

At the end of the day, however, when he went to the Squire for his wages, he was enraged because he received only a half-day's pay.

"You followed the bear all the morning," said his employer, dryly.

Abe's wrath was increased when, a moment later, he met Mr. Grove driving out with his wife in a comfortable carriage. The Squire of the village happened to be passing at the time, and heard Abe call down vengeance on "bloated aristocrats and misers who were rolling in riches, and hoarded every penny and every minute."

"Hold up there, Abe," said the Squire. "Grove is no miser. He gives away more than you earn; but he takes his amusement when his work is done. Did it ever occur to you," he said, meaningly, "that Grove is able to live in a comfortable house and to drive in a carriage because he and his forefathers were industrious and careful of their money and time, and that you are poor because you and your fathers wasted both?"

Abe was silenced, but not convinced.

There are people in every community who act and reason like Abe. They know that they would enjoy riches and the pleasures which riches bring, and rail against Providence as unjust for withholding those pleasures, and against the rich man as unworthy because he has them.

In this country, where the chances are so many and vast, the man who has good health and reason, and yet reaches middle age in want, must, in most cases, be in some measure himself to blame. Wise frugality, and steady, persistent industry, rarely fail to place a man far above want.

A poor man is not necessarily worthy because he is poor, nor a rich one a miser and tyrant because he is rich. In no country have great capitalists used their money so wisely and freely for the benefit of their fellow-men as here, where the money gained by almost every rich man has been by his own personal effort.

WITH A DIFFERENCE.

"So your old school friend did not forget you, when she became an heiress," said a lady, just returned from Australia, to her sister, a sweet woman, rich in everything save money. "When you wrote me that she invited you to lunch and took you to drive I was pleased. I fancied she might be spoiled by prosperity."

"She does invite me to her house," said the other, slowly, "and yet, she does it 'with a difference.' She takes care to ask me when no one else is there, and though my clothes are not of the best, I sometimes think they are not bad enough to shut me out from good society. Janet means to be kind, but sometimes her favors only serve as pins to prick me."

The socially "undesirable" are sure to notice and to feel a behavior thus nicely adapted to their inferior position.

"Why," said a little ragged child, who had picked up the handkerchief of a beautiful and gracious woman, "she spoke just as if I was like her own little girl! She said, 'Thank you, my dear. You are very kind.'"

"And didn't give you a cent!" suggested a coarser-natured companion. "I guess not!" flamed the other. "She was a real lady. She knew better than to spoil it."

Another woman, of a gracious tact, was taking a cup of chocolate at a railway counter, when a pinched-looking newsboy found his way to her, and asked her to buy a paper.

"I have one, thank you," said she. "Won't you take a cup of chocolate?"

Undoubtedly he would, and the beverage was ordered.

"Large or small cup?" asked the waiter, and when the lady answered, "Large," a friend at her side whispered:

Digitized by Google

"Why, they're like bowls! give him a small one."

"My own is large," was the answer. "Would it be quite courteous to offer him less?"

A lady who had invited a party of the London poor into the country, for a day, being resolved that they should be treated exactly like her usual guests, had them shown to a chamber, to leave their wraps. When she learned that the idea of a beautiful and dainty bedroom was almost awe-inspiring to a set of people accustomed to herd together on filthy mattresses, she did not regret her hospitality.

"Will you tell me," said one starved-looking girl, to the trim maid in waiting, "if this little white bed was ever slept on?"

Another called out, in irrepressible excitement, "Mother, mother, come up here! Here's a bed with a room all to itself!"

THE CZAR'S BACK.

The penalties of being an absolute ruler are well illustrated in a story of the Emperor Nicholas of Russia which was recently related by Prince Bismarck. It emphasizes the familiar saying that the Government of Russia is "an absolute despotism, tempered by assassination."

At one time, the story goes, the Emperor Nicholas's physicians, to relieve him of some bodily suffering, ordered that his back should be rubbed thoroughly every day.

The Emperor neglected to take steps to have the injunction carried out, and the doctors insisted. The Emperor then wrote a letter to King Frederick William of Prussia, asking him to send to St. Petersburg three or four non-commissioned officers of the Prussian Royal Guard to perform the service required by the physicians.

King Frederick William promptly detailed four stalwart non-commissioned officers of his guard to go to St. Petersburg and rub the back of the Russian Emperor.

They performed the service faithfully, and the Emperor recovered from his malady. When, at last, the men returned to their regiment, they were laden with valuable gifts.

The Emperor, in speaking of the matter to the Prussian King afterward, said:

"As long as I have my people face to face, all is well. But I cannot trust my back to their hands. That would be risking altogether too much."

The fault, however, was not all with the Czar's people. It was with the Czar himself, and the system of despotic authority which he represented.

TOO MANY IMMIGRANTS.

A very interesting report made by Mr. Frank L. Dingley to the Department of State suggests a new fact relating to emigration which deserves attention. Mr. Dingley studied European emigration on the spot, and gives a vast amount of useful information in regard to it.

Picturing a scene at Naples in the spring of 1890, a steamship loaded with emigrants about to sail for New York, he says: "It is an exodus, not of political or of religious persecution; obviously the gospel of this movement seen in those half-fed faces is the gospel of want. There was never in politics so much bread and so little butter."

The fact to which we refer is that the collapse of the finances of South American countries has quite stopped the movement of Italians to the Argentine Republic, and that the stream of emigration is now wholly diverted to the United States.

In 1888 and 1889 South America received four times as many Italian emigrants as came to this country. The passion for emigration has now become so general that there is likely to be no cessation of the movement; and as there is now little inducement for emigrants to go anywhere except to the United States, they will all come here.

This circumstance forces anew upon the attention of our public men the importance of taking measures to regulate and control immigration.

It seems to be time to shut the doors.

DENIED FOR A REASON.

In Germany it cannot be said with truth, as it is said in England and other monarchical countries, that "the King reigns, but does not govern." The German Emperor fulfills many of the actual functions of government.

Not long ago the newspapers of that country ascertained this fact, and at the same time received a little rebuke which was not sugar-coated.

In Germany the telegraphs are the property of the government. The proprietors of a large number of daily newspapers, believing that they were required to pay too high a charge for their telegraphic messages, petitioned the government for a decrease of the press rates.

The petition was referred to the Emperor William. He considered it a few moments, and then wrote upon the margin:

"The present rate is not too high. The useless despatches that the newspapers publish every day prove this superabundantly."

The newspapers did not obtain their reduction.

CONSERVATIVE.

One seldom meets in these days an old-fashioned English Tory, but thirty years ago they were not uncommon. The late Richard H. Dana, during his visit to England in 1856, found one while riding in a railroad car from Salisbury to Portsmouth.

The man was an English farmer of the middle class, a heavy, beef-fed, big-fisted fellow, full of prejudices. He said that the laborers and servants of the country were being ruined. "And, strange to say, sir," he added, "our church is at the bottom of it."

"Indeed, I am sorry to hear that," remarked Mr. Dana. "How is it?"

"Why, they are educating them—for charity. Now there's no use in making a charity of reading, writing and arithmetic. When it's proper they should know these things, there's no master or mistress but will see they are taught them.

"Then too," he continued, "these ladies teach 'em to do crochet work."

Here he made an absurd imitation of crochet-working with his great clumsy fingers.

"And then, instead of making a coarse frock for their father or brother to work in, they are doing crochet work. And then if master or mistress rings the bell, no answer; ring again, no answer; ring again, no answer. You go upstairs to see what the matter is, and she's writing a letter!

"No, sir, that won't do. There'll be nobody left to milk the cows and scour the floors."

HEINRICH SCHLIEMANN.

Doctor Schliemann, who died during the past winter, was one of those men whose dreams come true, but only because he had the indomitable resolution which never fails. First he conquered poverty, and then he conquered ignorance, for he became not only a wealthy but cultivated man entirely by his own efforts. More interested in the heroic age of Greece than in his own time, and fully determined to unearth ancient Troy, he found delight from day to day in making the scene-setting of his life as truly Homeric as possible. As an enthusiastic friend writes from Athens to the *Independent*:

Among his busy servitors were Æneas and Creusa; Bellerophon was his porter, and Priam kept his garden; Circe and Electra were his handmaids. His own children were Andromache and Agamemnon from their birth.

From the day he looked upon the rude picture of burning Troy in his father's lowly parsonage, he knew his mission. From the moment when, apprenticed to retail molasses over a village counter, he heard a drunken *Bursche* spouting Homer, the passion of his soul was constant. He had to wait, indeed; to dig up Troy was a task, he knew, that wealth alone could compass, and to wealth, for Troy's sake, he hewed his way through the very fastnesses of fate.

The goal reached at thirty-six, he sat down, like any little child, to learn his *alpha beta*, and master the mighty epics in the tongue divine. Henceforth Homer was his gospel. He never lay down to sleep without reading some Homeric verses. It was his evening prayer, and even at table his servant would read aloud to him from the master until, in his enthusiasm, he would cry:

"Hear the music! hear the music!"

The lines of Homer were his orchestra.

He went to Mycenæ to find Agamemnon, and he found him. He went to Troy to uncover Priam's citadel, and he uncovered it, even though centuries had piled city upon city on its ruins. And now, his mission accomplished, he sleeps, with his beloved Homer on his breast.

WOOD STEWS.

We have all had our sympathies aroused by the statement that the natives of Northern Siberia are often during famines compelled to resort to wood for food. The fact is that careless observers have simply been imposed upon, or they have jumped at conclusions without caring, or perhaps being able to make inquiries, and because they thought that a statement about being compelled to use wood for food would make a heart-rending page for their books, and by inference show what a distressing time they themselves must have had among such surroundings.

Wood in a certain form is a most common and constant article of diet on the Lena River, all along the north coast, and in the immediate neighborhood of Yakutsk, in fact wherever the Yakut resides.

North of Verchoyansk, except in a few sheltered valleys it may be said there is no other wood than the larch, and for miles south of the tree limit absolutely no other.

The natives eat it because they like it. Even when fish are plentiful it usually forms part of the evening meal, as the many cleanly stripped larch logs near every hut testify.

These people know by experience that the fact of their eating wood arouses the sympathies of strangers, and shrewdly use it to excite pity and to obtain a gift of tea and tobacco. They scrape off the thick layers immediately under the bark of a log, and chopping it fine mix it with snow. It is then boiled in a kettle. Sometimes a little fish roe is mixed with it, and further south cow's milk or butter.

"I have often," says William H. Schuetze, "seen it eaten without anything additional, although, as in the present instance, there was apparently enough other food on hand."

HE WAS "PORTER."

Etiquette is after all so intangible a thing that it is necessary to learn it anew for each situation in which one is placed, and there are often instances where there is a strong temptation to laugh at the whole scheme of social distinctions.

Not long since a gentleman who has travelled much, and has acquired the habit—which certainly is a questionable one—of calling every waiter John, chanced to be in a parlor-car between New York and Boston, and to wish to ask some service of the porter.

"Look here, John!" he began, "I wish —"

But the porter interrupted him with the utmost gravity of manner.

"On this car, sir," he said, "it is etiquette to call me 'porter,' and that I will answer to. You have not an acquaintance with me that warrants your calling me by my Christian name, although," he added, seeing that the stranger was staring at him in undisguised amazement, "if you really wish to know my name, I will give you my card."

The passenger muttered something incoherent, and then went meekly away to sit down and to try to recover his moral balance.

GIVE AND TAKE.

The following story may not be true. Indeed, it probably is not; but we may say that if it were true, it would teach a lesson as well as excite a smile. We find the story in a New York paper.

When Jay Gould arrived in Boston a few days ago, he was confronted by a youngster with an unusually dirty face, who shouted, "Mornen' paper, only two cents!"

The millionnaire bought a paper, and gave the boy a five-cent piece, saying, "Keep the change, and buy a cake of soap to wash your face with."

The newsboy counted out three cents, and dropped them into Mr. Gould's hand.

"Keep your change," said the boy, "and buy a book on politeness."

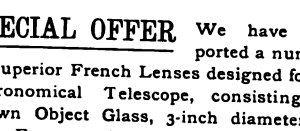
"Neat-Foot" Shoe, Ladies and Misses, $2.87, $2.25 and $2.00, post-paid. Selling consumer direct, less jobbers' and retailers' profits, fine class goods only. Rochester shoes are known the world over. See our large advt., page 187, YOUTH'S COMPANION, March 26th. Neat-Foot Shoe Mfg. Co., Rochester, N. Y. [Adv.

Eastman COLLEGE, Poughkeepsie, N.Y., offers both sexes the best educational advantages at the lowest cost. Business houses supplied with competent assistants. Address as above for illustrated catalogue.

THE NEW WEBSTER.

Just Published. WEBSTER'S INTERNATIONAL DICTIONARY Cost $300,000.

SUCCESSOR OF THE UNABRIDGED.



Re-edited and Reset from Cover to Cover. Sold by all Booksellers. Illustrated pamphlet free.

Caution!—Cheap books called "Webster's Big Dictionary," "Webster's Encyclopedic Dictionary," etc., are being advertised. The body of these from A to Z is printed from plates made by photographing the antiquated 1847 edition. The authentic "Unabridged" (still copyrighted) and the new "International" both bear the imprint of G. & C. MERRIAM & CO., Pub'rs, Springfield, Mass.

IF your roofs need repainting, please remember that Dixon's Graphite Paint will cover 2 or 3 times more surface and last 4 or 5 times longer than any lead or mineral paint. A tin roof, well painted, will not need repainting for 10 or 15 years. It will pay you to send for circular.

JOS. DIXON CRUCIBLE CO., Jersey City, N. J.

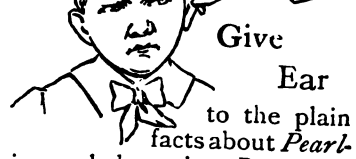
Set of Astronomical Lenses.

SPECIAL OFFER We have imported a number of superior French Lenses designed for an Astronomical Telescope, consisting of Crown Object Glass, 3-inch diameter, 36 inch Focus, and an Eye Lens of 1 inch Focus. This combination will make a Telescope giving a power of 36 times.

With the directions accompanying these Lenses any bright boy can easily construct a real Astronomical Telescope that would bring the moon and planets thirty-six times nearer our earth than they appear to the eye. We have only a limited number of these Lenses on hand. The price at which they are offered will soon exhaust our stock. They are sold in New York City at $2 a pair. For the next 30 days we offer these Lenses, with full directions for making the Telescope, at only 50 cents, postage paid by us.

THE YOUTH'S COMPANION, Boston, Mass.

SEEDS 10 pkts. reliable *Flower Seeds* 10c. 5 pkts. *Vegetable Seeds*, 10c. Large pkt. *mixed German Flower Seeds*, 400 kinds, 10c. *Moon Flower*, 10c.—all 30c. Best and cheapest. *Beautiful Cata.* tells how to grow and cook, *free*. J. J. BELL, Windsor, N. Y.



LADIES, we want a reliable woman in every County, to establish a Corset Parlor for the sale of DR. NICHOLS' CELEBRATED SPIRAL SPRING CLASPS AND CORSETS. Wages, $40 to $75 per month and expenses. We furnish complete stock on consignment. $3 Sample Corset free, conditionally (see terms). Send 18 cents postage for sample and terms. Nichols & Co., 25 E. 14th St., New York.

Three forms of the Pittsburgh Lamp for everybody—one for reading, etc., that's the little one; one for the dining room—tall enough to light the whole table—that's the middle one; one to light the whole room.

We'll send you a primer.

Pittsburgh, Pa. PITTSBURGH BRASS CO.

Give Ear to the plain facts about *Pearline*, and then give *Pearline* a chance to prove them, by giving it a fair trial. Nothing else will give the same result. It washes safely, as well as surely; it cleans carefully, as well as easily. It is as cheap as soap and better. Anything that can be washed, can be washed best with *Pearline*. It lightens labor and does lightning work. As nearly as we can figure, about eight millions of women use it. Do you? You will sooner or later.

Beware of imitations. 237 JAMES PYLE, N.Y.

COWDREY'S DEVILED HAM

"A Most Delicate Preparation."

DEVILED HAM ROLL.

Make some light, rather rich, pastry, roll thin and cut in squares of about four inches. Spread thin upon each square some of Cowdrey's Deviled Ham, moistened with cream sauce or milk, leaving about one-half of an inch around the edge uncovered. Moisten the edges with cold water and roll each sheet of ham and pastry, compactly pressing the ends together. Brush over with white of egg and bake.

Send Postage Stamp for "Tid Bit Receipts."
E. T. COWDREY CO., Boston, Mass.

French Soups

TRADE MARK ON OUR LABELS.

5 Hours or 5 Minutes?

You need five hours, to say nothing of the trouble to make a soup which, when served, is often a failure.

Five minutes only are required to heat a can of our soups made by French Chefs of world-wide reputation, who make it their business.

Our soups are carefully and cleanly prepared, and cause a dinner to begin like a feast.

Green Turtle, Terrapin, Chicken, Consommé, Purée of Game, Mulligatawny, Mock Turtle, Ox-Tail, Tomato, Chicken Gumbo, French Bouillon, Julienne, Pea, Printanier, Mutton Broth, Vegetable, Beef, Pearl Tapioca.

First-class grocers keep them, but look out for imitations.
None genuine without the above trade-mark on the label.
A sample can sent on receipt of the price of postage, 14 cents.
Packed in quart, pint and ½ pt. cans, and in 1¼ pint glass jars.

The Franco-American Food Co.,
West Broadway and Franklin St., New York City.

SUGGESTIONS

GROWTH OF THE UNITED STATES.

Note on a map what was the extent of the United States in 1789.

Where was then the geographical centre of the country?

What was the first new territory gained?

Why and by what means was it acquired?

What territory has been gained since?

Learn why, when and how each piece was obtained.

Where is now the country's centre?

For the Companion.

A REJOINDER.

Why should you deem my faith is gone,
Because my locks are turning gray,
In pixie, gnome and leprechawn,
And all Titania's glad array?
With me 'tis quite the other way.

For all around me, as I walk
Through verdant tokens of the spring,
I hear the tasselled larches talk
Of gifts the elves have toiled to bring,
While nesting birds new love-notes sing.

Estrays from Wonderland they come
Each year, despite what science tells;
From jewel-corniced cave and dome,
Where flower-born sprites endue their spells,
And everlasting summer dwells.

By lake and woodland, sea and strand
All beauty of the year to be
Is forged for us in Fairyland,
And, fashioned where we cannot see,
For bird and beast, for flower and tree.

While oftentimes Frost-gnomes are fain.
When all the land is white with snow,
To picture on each window-pane
Foreshadowings of what months will show
When with all odorous hues they glow.

And so I think that Life, not Death,
Is always potent, always true;
That, after we have stayed our breath,
Love will its own fair germs renew
And open Dreamland to full view!

JOHN MORAN.

For the Companion.

THE DAKOTAS.

Scattered throughout the length and breadth of a great tract of land that soon will be a recollection and a name only,—the great Sioux Reservation,—little bands of devoted men have for many years been at work quietly, but effectively and unostentatiously.

They have learned the various dialects of a complicated language—complicated because of the combination of signs and spoken words that cannot be reduced to any rule; they have healed the sick and bound up the hurts of the wounded; they have quelled tumults, braved death and preached the gospel, and now they stand triumphant and revered, while over them and those whom they guide and teach waves the white banner whose only symbol is the Cross of Christ.

To the missionaries and teachers of the Far Northwest—ranging in denomination from Catholic to Unitarian, but all animated by the same high purpose—is due, more even than to the soldier, the pacification of the vanquished nation of the Dakotas.

In the prosecution of their work what did these self-sacrificing men find? They found, once they had gained the Indian's confidence, that he was not all vicious, violent and bloodthirsty.

They found that, unlike his white brother, he never swore. He never took in vain the name of the Great Spirit, nor even the names of any of the numerous subordinate deities to whom he believed that the supreme God delegated supernatural powers.

If he disliked a thing, he simply called it bad; if it pleased him, it was good. To him whiskey, the curse of his kind, was mini-sica, bad water—only that and nothing more.

The missionaries found also that the Dakota in general was a good husband, a loving father, and a faithful friend. Save as a stratagem of war, he scorned and abhorred a lie.

He combined the attributes of a hero with the foibles, extravagances and follies of an overgrown boy. He was improvident, careless, inconsistent.

With the toothache he would shed tears of anguish. Place him in the hands of his foes, let him be staked to the ground, and a fire kindled on his breast, and the same man would die by the awful torture without a moan, chanting his death-song defiantly to the last breath.

The Dakota was likewise found to be a communist, in the literal sense of the word. Whatever he had, belonged, and was cheerfully given, to any other member of the tribe.

"Shall my brothers starve while I have abundance?" replied a successful hunter to a white friend who suggested that he save his surplus meat against the scarcity of winter, instead of dividing it among his fellows.

His liberality extended even to a foe. If an enemy entered his teepee, and so much as partook of a draught of water, his life was safe; for the Dakota laws of hospitality were sacred and inviolate.

In religion, the teachings of Christ came to the red man as a beautiful explanation of his own vague but often sublime conceptions, and under the mild guidance of the wise and good, he is adapting himself, slowly, it may be, to the spirit of the age, and accepting the restraints by which he is environed, with less of restiveness and friction, because the force which impels him forward toward civilization is that of the soldier of the Cross instead of the soldier of the sword.

NATURAL GAS AS FUEL.

When natural gas was first employed for heating dwellings, several years ago, the devices for adapting it to stoves and grates were very crude, and the amount of gas consumed was correspondingly extravagant. The end of the pipe—from half an inch to an inch—was run into the stove or grate, a perforated iron burner was fitted upon it at right angles, and the cavity filled with broken fire brick, slag from the glass furnaces, door-knobs of porcelain, balls of fire-clay, or other substances that would radiate a great deal of heat.

Frequently the bits of broken brick were whitewashed, as were the back and side walls of the grates; or they were artistically done in water-colors, the gas flames neither smoking the one nor burning off the other. After a time fire-clay was molded into imitations of logs of wood, the cut ends of the logs, the cracks and knots and the bark with moss on it being imitated so successfully that the results could scarcely be told from the real back-logs of olden times.

These imitation logs were placed on large brass andirons, and when the flames were seen issuing from fissures, the illusion was complete to the sense of sight, and to the sense of feeling, too, for while "one side roasted, the other side froze," as used to be said of attempts at keeping warm by the fireplaces of our grandfathers.

But about a year ago it began to be noticed that the supply of gas was diminishing. People woke up on cold mornings to find only a sickly blue flame languishing at the bottom of the grate or stove, where once had been a roaring furnace. They were assured that there was plenty of gas; that some temporary obstruction in the pipes had caused the shortage, and all would soon be right.

And all was right as soon as the weather became warmer; but presently the gas companies were insisting that consumers should burn gas by meter, instead of paying so much for each fire, and consuming all they pleased. This initiated the economic stage of natural gas use.

Inventors set their wits to work, and soon the market was flooded with all sorts of devices for getting the largest amount of heat from a minimum consumption of gas. The deep-set back-walls of the fireplaces built for coal were moved out, and the throats of the chimneys stopped up.

Various metal heaters with reflecting surfaces and draughts arranged on scientific principles were made to set into the fireplaces, until a fire that formerly required from one hundred to one hundred and fifty feet of gas an hour could be made to do the same service with a consumption of but fifteen feet. When the price of gas was raised from ten cents to fifteen cents per thousand feet in Pittsburgh last winter, thousands of economic gas grates, ranges and stoves were sold during the first cold spell.

One of the cheapest and most cheerful devices now in use is an adaptation of asbestos to fire-backs and radiating surface. A heavy cardboard, coated with asbestos, is perforated with rows of holes, from which are suspended fringes of skein asbestos, which becomes incandescent in the flame, and gives forth a beautiful, scintillating glow which imparts great cheerfulness to the apartment, and at the same time radiates considerable heat.

But by far the most economical thing is a small sheet-iron stove, not much larger than a man's silk hat. This is lined with copper, and sometimes filled with asbestos fibre, and is connected with the supply pipe by means of gum hose, so that it can be set in the middle of the room or near the wall, as may be desired. One such stove, consuming no more gas than an ordinary argand burner, will heat a medium-sized room to a comfortable temperature, and reduce gas bills to proportions correspondingly comfortable.

THE BABY.

It was the day express train on one of the great trunk lines of railway in the Middle States, filled as usual with through passengers. They sat for the most part silent, each absorbed in his own thoughts. There were two great railway magnates, on their way to New York to consult about a "deal;" there were commercial travellers with their canvas valises beside them; there were merchants, lawyers, farmers glancing over their note-books, reading the papers, dozing; there was a richly dressed, supercilious-looking woman, who, with her child and maid, sat a little apart from the rest; there were chattering, giddy school-girls, an old negro "aunty," and asleep at the back of the car a bloated, shabby old man smelling of whiskey. These people, gathered out of all classes, had no intercourse; they looked askance and indifferently at each other.

The train, with a shriek and a jar, came to a full stop in the midst of the mountains. For a few minutes the passengers sat undisturbed, with the calm faith of the American in the power of officials to set all things right. As the train continued stationary, however, one man after another went out.

They returned with tidings that a bridge had given way, and that the train would be detained for twelve or fifteen hours.

There was a general outcry of annoyance and vexation. It was near noon, every one wanted luncheon. Each man insisted that his business was urgent and could not be delayed. One little woman in the corner, with a baby in her arms, began to weep unnoticed. The other women complained more or less loudly. For a few minutes, every face was clouded, and the car was filled with a babel of angry voices. Presently somebody noticed the mother crying over her child, and spoke to her.

"Oh, my baby!" she sobbed. "It is sick, and I hoped to get home in an hour! I think it is dying!"

There was a startled silence. Then an elderly gentleman at the back of the car came forward. "I am a physician," he said. "Let me see the child."

It was dangerously ill, and in need of active treatment. The haughty woman who had hitherto held herself aloof was the first to speak; she had a box of mustard plasters in her satchel, and she tore up her fine handkerchiefs for bandages. The old negro woman quietly went out, kindled a fire on the roadside, and heated some water to give the child a hot bath.

One woman knelt and chafed its feet; another made a bed for it with shawls. The porter brought pillows; a Hebrew drummer produced from his bag a bottle of laudanum, for which the doctor expressed a wish, and even the poor drunkard at the back of the car urged his flask of brandy on the mother, as being "a first-rate medicine, ma'am." He looked at the child for a minute and turned away. "I'm a poor loafer," he said, "but I kin feel for the baby as much as any of you."

In the course of three or four hours the child was relieved, and fell into a sweet sleep. But before that time the passengers in the car had all become its nurses and kinsfolk. When it was out of danger, and lying calmly in its mother's arms, they went out to the grassy bank by the side of the river, and improvised a picnic.

Some of the men had found a farm-house a mile or two away, and brought bread and ham; a few of the other passengers opened their satchels and produced some dainty morsel. The Jew had potted chicken; a Presbyterian minister, oranges; a farmer passing had cheese. There was but a little of each article as it was handed around, but there was abundance of good-will. They talked, told stories, and one or two who had good voices sang.

When, late in the evening, the engine puffed and whistled, and the conductor shouted, "All aboard!" a company of friendly companions crowded into the car, and when they parted, a few hours later, it was with many hearty hand-shakes and a general exchange of good wishes.

"What good, kindly folks they all were!" said the grateful little mother. "But I believe if it had not been for my sick baby they would never have found each other out!"

We are apt to forget that pain and sickness are keys to unlock the hearts of men toward each other. The happy, prosperous man rarely knows of the depth of tenderness which lies in his brother's bosom, ready to meet his call of need.

For the Companion.

ILLUSIONS.

The free, bright gold-mines of the sunset hills,
The pure, sweet promises that star the stems
When quick-foot May her emerald garment hems
With apple-blossoms; diamond shower that fills
Winter with white forgetfulness of ills—
All cheats! Gold—dross! May's imitation gems!
And where are all the frail, snow diadems
The world has wept away in annual rills?

Yet has the Hand that framed our stately dwelling
Hidden in beauty architrave and beam;
Placed no black orbs in hopeless heavens knelling,
But azure arch with studded stars agleam;
And spirit voices keep on softly telling
To doubt the Doubter and to trust the Dream.

CHARLES H. CRANDALL.

HIS DIARY.

How many of the boys and girls who began the year fully determined to keep a diary have persevered to the present time? Not all of them, it is safe to say. Too many would be able, even now, to match the experience of an old correspondent of *The Companion*. In journal-keeping, as in many other things, it is easy to "run well for a season."

I lately came across a little diary which was started, no matter how long ago, by a boy of ten years. On the first day of the year he wrote:

"*Jan. 1.*—Am going to keep a faithful record for this year. Papa says it will be interesting for me to read when I am a man. I suppose it will. It is a beautiful day. So bright and sunny. Had a two-bladed knife for a New Year's gift. Went skating with Charley Lyons. Fell and like to broke my head. Charley tried to cut a pigeon's wing on the ice, and skinned his nose awfully. Went to entertainment in the evening. No good. Went to bed.

"*Jan. 2.*—Up at half-past six. Codfish balls for breakfast. I hate them. Went to school. Got kept in for not knowing grammar lesson. Went coasting with the boys on Mount Bowdoin Hill. Great fun. Sprained my leg. Struck curbstone, and took awful header in a snow-bank. No more to-day.

"*Jan. 3.*—Most the same as yesterday, only it was arithmetic instead of grammar lesson that I got kept in for. Had quarrel with Jimmie Lane, and shall never speak to him again.

"*Jan. 4.*—Made up with Jim Lane. He had bag of chocolate drops. We traded knives, sight unseen, and came out about even. Too tired to write more.

"*Jan. 5.*—Raining. Traded back with Jim Lane, and he gave me lead-pencil to boot. To bed.

"*Jan. 6.*—Up at six. Snowing. Sleepy.

"*Jan. 7.*—Nothing to write.

"*Jan. 8.*—I aint going to keep this diary any more. It don't pay."

The record ends here.

DESERVED RETALIATION.

Over-shrewd lawyers often furnish their adversaries with weapons. Even the cleverest of them have been put down in open court by equally ready witnesses. "Did you see this tree that has been mentioned, by the roadside?" an advocate inquired.

"Yes, sir; I saw it very plainly."

"It was conspicuous, then?"

The witness seemed puzzled by the new word. He repeated his former assertion.

"What is the difference," sneered the lawyer, "between plain and conspicuous?"

But he was hoist with his own petard. The witness innocently answered:

"I can see you plainly, sir, amongst the other lawyers, though you are not a bit conspicuous."

In another instance, a blow directed against the character of a witness forcibly recoiled.

"You were in the company of these people?" he was asked.

"Of two friends, sir."

"Friends! Two thieves, I suppose you mean."

"That may be so," was the dry retort; "they are both lawyers."

The blow that destroys the effect of an adverse examination is occasionally more the result of accident than of conscious effort. In a trial, not long ago, a very simple witness was in the box, and after going through his ordeal was ready to retire. One question remained:

"Now, Mr. ——, has not an attempt been made to induce you to tell the court a different story?"

"A different story to what I have told, sir?"

"Yes; is it not so?"

"Yes, sir."

"Upon your oath, I demand to know who the persons are who have attempted this."

"Well, sir, you've tried as hard as any of 'em," was the unexpected answer.

It ended the examination.

MEN FOR SAILS.

To navigate a ship in a violent storm, with the danger on the one hand of drifting on merciless reefs, and on the other of going down in the vortex of a typhoon, requires a high degree of skill and courage. Prof. John S. Sewall describes the thrilling experience of the *Saratoga* when caught in a cyclone off the Gulf of Tonquin, and to windward of that immense tract of reefs and shoals known as the Paracels.

As day wore on, all the sails had to be reefed. All this time we were heading to the northward and eastward on the port tack. Though we were forging slowly ahead, we were drifting very much faster toward those fatal rocks. It was decided to get the ship about, if possible, and run her out into wider sea room.

She was got round on the starboard tack, and headed about southwest; but she made no perceptible headway. We watched the barometer. Are we nearing the centre? Shall we go down in this horrible vortex? If the typhoon is of great diameter, or is passing slowly, the wind must hold for a long time, and there will be no escaping the shoals. In any case, we had better be on the port tack.

Accordingly, preparations were again made for waring ship; but by this time she had become unmanageable. She would not mind her helm. In this dilemma an expedient was adopted which I had read of, but had never expected to witness.

The ship was under bare poles, and not a stitch of canvas could live on her for a moment. With a good deal of persuasion,—some of it more force than suasion,—a hundred or more of the men were driven into the weather fore rigging, where they formed a dense mass, against which the hurricane drove with tremendous pressure.

Drenched with spray, benumbed, whirled and jerked through the air by the writhing ship beneath them, held over the boiling caldron of waters, now on one side and the next instant on the other, it was a miracle that every man of them was not snapped off and shot headlong into the sea. The helm was put hard up; but the poor ship seemed unable to make any further effort.

Half an hour of anxiety had passed since the men crept into the rigging. At last she began to feel her helm and pay off. Slowly and painfully she swung around into the trough of the sea.

It was a perilous moment. Would she roll herself under and go down? But with a few tremendous lurches she shook herself clear of the immense masses of water on her decks, and rose heavily and wearily on the next wave. When she was fairly round on the port tack, it was found that the change had come. The wind was veering to westward, the storm was rapidly passing. By eleven o'clock it was safe to make sail, and crippled as she was, the *Saratoga* did her best to crawl out of the dread neighborhood where she had so nearly met her doom.

ONE MORE.

The man who is always prying into the private concerns of other people would be an unqualified nuisance, but for the fact that he is sometimes amusing and lends himself readily to caricature, as in this sketch from the Chicago *Tribune*.

"Goin' fur, mister?"

The question was asked by a long-nosed, thin-lipped man with pointed chin-whiskers, a slouch hat and a hungry expression of countenance. He was resting his elbows on the seat in front of him, which seat was occupied by a passenger in a gray check suit.

The passenger addressed turned partly around, took a look at his questioner, and replied:

"Yes, I am going to Nashville, down in Tennessee. My business there is to sell four shares of bank stock, dispose of my interest in a farm of eighty acres ten miles from the city, and invest the proceeds in a clothing establishment on North Cherry Street. I am from Beardstown, Cass County, Illinois.

"I got on the train there at 9.35 this morning. It was forty-five minutes behind time. My ticket cost me eleven dollars and sixty-five cents. I shall take the sleeper when the sun goes down. Had my dinner about an hour ago. Paid seventy-five cents for it. This cigar cost me ten cents. I have been a smoker for about thirteen years.

"My name is Chauncey McConnell. I am thirty-nine years old, have a wife and four children, came originally from Harrodsburg, Kentucky, and am a member of the Congregational Church. I was formerly a druggist, but sold out to a man named Treadway, and I am not in any business now. I am worth perhaps ten thousand dollars. My father was a cooper, and my grandfather was a sea-captain.

"My wife's name was Carr before I married her. Her father was a surveyor. That's all I know about her family. We live in a two-story frame house, and the children have all had the mumps, chicken-pox and measles. When I reach Nashville I expect to stop at the Maxwell House."

He stopped. The long-nosed man regarded him a moment with interest, and then asked, in a querulous, dissatisfied way:

"What did yer great-grandfather do fur a livin'?"

THAT WAS ALL.

The masculine mind is not always readier to grasp a situation than is the feminine. Women are said to be unbusiness-like, and yet they are sometimes able to smile at the unpracticality displayed "over the way." A young lady one day went to inquire about the price-list to be observed at a certain hall during the approaching season of a celebrated lecturer. About thirty people were standing in line to buy tickets for an inferior but popular course, and she took her place with them.

On reaching the box-office, she made her inquiry, and the ticket-seller answered, hastily, pushing her a programme, "The fifth page of this will tell you."

Leaving the line, she turned to the page in question, and found that, although it gave the ordinary prices of seats, it did not say whether an advance would be made in the case of the one eminent speaker.

Meanwhile twenty more people had taken their places before the window, and almost at their head was a young man of her acquaintance. He would solve her difficulty, and she need not wait her own turn.

"Would you be willing to ask what the prices will be for Mr. S——?" she said, approaching him.

"Certainly, certainly!"

"I shall be so much obliged!"

His opportunity came, and presently he turned and approached her, his face animated by a consciousness of kindness performed.

"He says the prices will be just the same," was the cheerful announcement, "only higher!"

MAGNANIMOUS.

It is a common human failing to feel an unreasonable impulse to punish any innocent person we may happen to meet, when things are going wrong with us. No such mean-spirited anger was cherished by this sorely tried Louisiana gentleman.

"We had an hour to wait at a railroad junction in Louisiana," says a writer in the Albany *Argus*, "and four or five of us sat down in the shade on the edge of the platform, and hung our legs over.

"While we were talking, a man with a rope in his hand, evidently looking for a stray mule, came out of the bushes opposite us, and stood looking up and down the track.

"By and by he directed his gaze toward our feet, but we didn't mind him until he drawled out:

"'You all, there!'

"'Well?' queried one.

"'H'ist up yer feet!'

"We 'h'isted,' without waiting to ask why, and then looked down to see a big rattlesnake just coiling himself for a strike.

"A handy grindstone was dropped on the snake, and when some one thanked the native he called back:

"'Some men who hev lost a mule and hunted fer him three days would hev been onery about it, but thar's nothin' mean about me.'"

DAISY'S CALENDAR.—IV.

This A-p-r. is for April Fool:—
Just season it well with the Golden Rule,
And there's plenty of fun from sun to sun
For every one at home and at school.
It stands for the dear little violets, too,
All of the truest, bluest blue;
For little pink darlings under the leaves;
For spattered windows and dripping eaves;
For mud to mix into elegant pies;
For fuzzy chicks with their beady eyes;
For early gardening far and near;
For the workers gay on Arbor Day;
For the lovely April, Daisy, my dear.

For the Companion.

HOW LELAND WAS APRIL FOOLED.

Leland had tried everybody in the house by turns.

He had dressed up the hat-rack to look like a burglar, to fool grandma; he had slipped grandma's spectacles into papa's spectacle-case to fool papa; he had hidden cook's gridiron, and pinned a big poster to Cousin Lizzie's gown. But in that well-ordered household it seemed impossible to fool anybody.

"Leland," said grandma sternly from the top of the stairs, before the little boy had time to say so much as "April—," "Leland, go right down and put those ridiculous coats and things in their proper places, and move the rack back into the corner where it belongs."

And, disappointed and crestfallen, the little boy obeyed.

"Where is Master Leland?" called Jane from the kitchen. "And would you send him right here to go out into the yard and get me the gridiron out of the limb of the apple-tree where I saw him hide it a minute ago?"

"Where's Leland?" called papa. "Leland, what have you been up to? Don't you know that if I can't find my glasses it will take me a good two hours to get my eyes fitted to another pair, and spoil my forenoon's work?"

Papa spoke gravely; and with a dejected air Leland returned the missing glasses.

Very slyly he slipped behind the chair where Cousin Lizzie sat scanning the forty lines of Virgil that made her day's lesson; very carefully he caught the bent pin into the folds of her gown. And he was just going to say "April fool!" when Cousin Lizzie screamed:

"Leland Wells! you've stuck that pin right into my back. Take it away, this minute!" and again poor Leland obeyed.

There was nobody left but the cat. Leland admitted to himself that it did not seem quite fair to fool pussy, who knew nothing about dates and couldn't understand if she were fooled ever so much; but, as nobody else would submit, he thought he would try just one little trick on pussy.

Jane was busy broiling the steak, but not so busy but that she saw Leland prepare a saucer full of very thick, milky-looking soapsuds.

"Are you going to blow bubbles, Master Leland?" asked Jane, innocently.

"Perhaps I will, by and by," replied Leland with a blush.

Jane said no more; but a moment after, when Leland went out to look for pussy, she set the saucer of soapsuds in the pantry, and placed another saucer, full of sweet new milk, in its place.

"Kitty, kitty, kitty, kitty!" called Leland.

Then Leland carried the saucer of milk into the yard, and watched to see what kitty would do with a breakfast of soapsuds.

To his great surprise she began to eat at once, and did not stop till she had licked the last drop from the saucer.

"Well, you're a queer kitty!" he said at last.

Just then he spied Jane's face at the window. She was smiling so broadly that he could see all her dimples, and most of her teeth.

"How do you like to be fooled?" said Jane. "It's April fool to yourself this time, for sure, there isn't a better drop of milk in the house than that Miss Puss has been drinking."

Poor Leland! he felt very foolish, and it didn't make him feel a bit better when pussy came rubbing her head against his legs, as much as to say:

"You are a good boy; my breakfast was very nice, and I thank you for it."

But Leland's own breakfast was ready now, and he ran into the dining-room to eat with papa.

"What time is it, Leland?" asked papa; "look on your watch, please, and see."

"It's a dumb watch," said Leland, "and it doesn't keep time."

"But look at it and see!" papa still insisted.

So Leland took hold of the little brass chain and pulled the watch out of his pocket. But—what did it all mean? The dumb watch was gone, and in its place was a real silver watch, a tiny Waterbury, that ticked and kept time just like papa's.

"April fool!" "April fool!" "April fool!" came from all round the table.

How gay and happy everybody looked; even Jane, who had just brought in the cocoa, gave Leland such a good-natured little tap as she passed him that he laughed outright; and papa said, with his pleasantest smile:

"I hope my little son will remember that it is better, even on the First of April, to make people happy than to make them unhappy."

"I do remember it," said Leland; "and after this I'm only going to fool people with pleasant s'prises."

IDA WHIPPLE BENHAM.

A LESSON SONG

1

Bow down, green Forest so fair and good;
Bow down, green Forest and give us wood!
The forest gives us tables,
The forest gives us chairs,
The bureau and the sideboard,
The flooring and the stairs,
The ships that skim the ocean,
The cars in which we ride,
The crib in which the Baby sleeps,
Drawn close to Mothers side.
Bow down, green Forest so fair and good,
Bow down, green Forest and give us wood!

2

Give up, ye Mines, so dark and deep,
Give up the treasure that close ye keep!
The mines are dug
In the earth so deep.
'Tis there that silver
And gold do sleep.
Copper and iron,
And diamonds fine,
Coal, tin, and rubies,
All come from the mine.
Give up, ye Mines, so dark and deep,
Give up the treasure that close ye keep.

3

O Sea, with billows so bright, so blue,
Full many a gift we ask of you.
Corals, yes and sponges,
Clams and oysters too,
And the radiant pearl drop
The oyster hides from view,
The fish we eat for dinner,
The shells upon the shore,
The whale bone for our Mother's gown,
All these and many more,
O Sea, with billows so bright, so blue,
Full many a gift we ask of you.

4

Ye broad green meadows, so fresh and fair,
Oh, ye have many a treasure rare,
Flowers the loveliest,
Barley and corn,
Oats, wheat and clover tops,
Berry and thorn,
Grass for the flocks and herds,
Herbs for the sick,
Rice, too, and cotton,
The darkies do pick,
Ye broad green meadows, so fresh and fair,
Oh, ye have many a treasure rare.

5

So earth and air, so land and sea,
Give kindly gifts to you and me.
Should we not be merry,
Gentle, too, and mild,
When the whole wide earth doth wait
On each little child?
Should we not, in quiet,
At our Mother's knee,
Praise our Heavenly Father,
Thank him lovingly?
Since earth and air, and land and sea,
Give kindly gifts to you and me:
Since earth and air, and sea and land,
Come from our Heavenly Father's hand!

1.

ANAGRAM.

The omitted words are formed from those omitted from last line.

I'm glad I've remembered the date of this day,
Which children delightedly * * * *.
When last I forgot it, I made up my mind
To remember next time without * * * *.

For it cost me a walk of a mile and more,
Quite over the top of the * * * *;
And if I should all my adventures relate,
A twenty-page book I should * * * *.

Suffice it to say,—at the close of that day
Brother Jack said,—"My dear, if you wish,
Translating the words which a Frenchman would use,
I will call you an * * * * * * * * *."

2.

ENIGMA.

24 letters.

Would you know what they say in the Jewish schools,
Of the 1, 2, 3, 4, 5, 6 7, 8 9, 10, 11, 12, 13, 14 15, 16, 17, 18, 19 20, 21, 22, 23, 24?
12, 4, 3 7, 17, 12, 14, 18, 13 was 19, 5, 13, 14 10, 14, 21,
When floods o'er all the earth did flow,
And Noah, 19, 22, 5, 11, 18, 13, 14 20, 17, 7, 9 the 15, 17, 11,
Longed for the time to disembark.
'Twas then he sent a 1, 21, 7, 18, 13, 14 dove,
Which found no rest the waves above,
But when she could no longer 17, 22, 10, 6,
She turned 10, 14, 15, 18, 13 2, 13, 4, 7 her home.
A bootless errand 'twas to her,
On the first day of Noah's year,
Which corresponds to 10, 16, 17, 12, 23 8, 12, 17, 24, 4,
10, 24 15, 19, 23 men know who are well versed
In Hebrew lore. And so they say
That 10. 23, 19 who shal. .orget the day,
2, 16, 5, 13 some bootless errand sent,
Shall learn, 15, 4 23, 10, 24, 4, just why they went.

Answers to Puzzles in Last Number.

1. Easter Sunday.

2. A chicken in an egg.

3. Easter Sunday at Rome is always celebrated with elaborate ceremonials. St. Peter's is richly decorated for the occasion. The Pope officiates this day at mass with great pomp. He is borne into the church seated in his crimson chair of state, which rests upon the shoulders of twenty men in white robes. He wears the tiara or triple crown, and enormous fans are borne beside him. After the ceremony of mass he appears upon a balcony and pronounces a benediction upon the people assembled. On the evening of Easter Sunday, the dome and other extreme parts of the outline of St. Peter's are beautifully illuminated with lamps.

TERMS.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given in six additional pages over fifty issues of the paper. All additional pages over fifty issues of the paper. All additional pages are free to subscribers from the time given for $1.75—are a gift to the subscribers from the publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. If neither of these can be had, the safest way to remit money is in Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is against the law to wrap a bank bill around a letter and send it by mail. Neither should it be sent in any way in a letter sent do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office without an order, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name is changed to show that you have paid. Until your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified when you wish your subscription to your paper stopped. All arrearages must be paid.

Recurring your paper will not enable us to discontinue it, as no notice to discontinue is required by us, unless a positive address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

THE GROWING AGE.

The brain of a child is proportionately much larger than an adult's, but of much softer consistency, and its convolutions are not complete until the seventh year. This is one of the reasons why early study is dangerous.

The child's heart beats much more rapidly than that of an adult, and the growth of the heart, instead of being regular, like the growth of the body as a whole, is accomplished by fits and starts. The more rapid action of the heart renders the child peculiarly liable to fever, and the liability is further increased by his weaker vital resistance. Hence childhood is the special season for scarlet fever, measles, whooping-cough, and other similar complaints.

The irregularity of the heart's growth may give rise to disturbances of the organ of a seemingly dangerous character, but with proper care they will pass away as the heart attains its full development. Such proper care includes ample nourishment, sufficient sleep, and the avoidance of special strain.

The season of rapid growth and development, say between the ages of ten and twenty, needs particular attention. Nature is then at work, as it never will be again, in building up the tissues and developing the nervous sensibilities. And in the period which makes the largest demands for an outdoor life, for pure air, sunlight, active exercise, abundance or nutritious food, a vigorous digestive tract, a ready assimilation, and an active elimination of waste.

It is the period of study and ambition, as well as it is wisdom that thinks itself wiser than it is. The increasing mental activity needs to be regulated by experienced teachers and considerate mothers, lest the brain be worked at the expense of other organs and tissues.

Duller minds should not be forced to keep step with those which are naturally more active, and the influences of the home and the school-room should be tranquillizing and adapted to evoke the kindlier feelings. Fretful parents and scolding teachers may do a life-long injury during this susceptible period.

It is a period when neither study nor slight excitements should interfere with sleep; when dinner bowls do their worst work; when soothers need to know what their children read, and to be their confidential counsellor in all delicate matters; when the use of tobacco is specially perilous, almost surely giving rise to affections of the heart, and when spirituous liquors and all opiates are peculiarly pernicious.

For the Companion.

SUN-SPOTS.

For several years the sun has been in a quiescent condition, his surface being comparatively free from spots, and his prominences of comparatively infrequent occurrence and insignificant proportions. The great luminary has been passing through his minimum sun-spot period; for the spot-producing activity of the sun is governed by laws that the close observation of the last two centuries has interpreted, while observers are still groping after the cause of the spots themselves.

It takes about eleven years to complete a sun-spot cycle, though the intervals are irregular. Each cycle includes a maximum and a minimum period, which are also irregular. The spots vary greatly in number. During some cycles the sun's face is never free from them; during others it is unmarred for days, and even for months. As the last maximum period occurred about 1881-82, it is time to anticipate a recurrence of solar activity, and recent observations show that the activity has already begun.

Enormous fluctuations are taking place on the surface of the sun, and will be followed for the two or three coming years by spots of every variety. There will be normal spots, consisting of dusky nuclei and penumbræ, and spots irregular in form or gathered in groups. The sizes of the spots vary from five hundred miles to fifty thousand miles or more, and they are often large enough to be visible to the naked eye. They may last for a few days, or for weeks or months. Their distribution is mostly confined to two zones on the sun's surface, between five degrees and forty degrees of latitude north and south.

Other signs of solar agitation follow in the wake of the sun-spots. Gigantic solar eruptions, known as roy protuberances, rise from the sun's border, like tongues of flame, sometimes to the height of hundreds of thousands of miles. The earth bears witness to the disturbed state of the sun, for aurora flash in the heavens, magnetism reaches its greatest point of oscillation, and electricity takes on its most brilliant manifestations.

The sun-spot periodicity is a subject of universal interest, and little has been sounded of its unfathomable depths. It is known that the cycle is completed in about eleven years, containing a maximum of activity and a minimum of quiescence, that the spots are cavities in the solar photosphere, filled with gases or vapors cooler than the surrounding portions; that the spots move with a varying velocity, and that the spot-producing activity has a direct influence on the magnetism and electricity of the earth.

The cause of the sun-spots, and the nature of the mysterious tie that binds together the disturbed sun and our planet, are among the problems of the future.

VERY CAREFUL.

"Like many admirable people," writes a correspondent, "our Biddy had but one fault. She was tidy, honest and obliging, but she would put kerosene on the fire. Her mistress had remonstrated in vain, and one morning entered the kitchen in time to see her with the oil-can tilted at a dangerous angle over a grate where there were still a few sparks.

"'Now, Biddy, stop at once!' cried she, indignantly. 'How often have I told you not to use a drop of oil on the fire?'

"'Sure, I'm careful,' said Biddy, as she reluctantly set down the can, 'it niver yet did anybody harm.'

"'There are accidents every day from the careless use of kerosene.'

"'Sure, I'm careful, but not when a body's careful like me.' But folks is that afraid of having it used! Why, Mrs. Windsor, at our last place, locked up the can for fear I'd use it, but I got a bottle every morning for me self all the same, so I did.'

"'Were you frightened?'

"'Well, ye see, ma'am, that morning I'd put on a dhrop too much, and it blew all the stove covers off, and split the fireboard!'"

A LIVING ROPE.

Quick thought and prompt action in time of danger have averted many an otherwise fatal accident, as is well illustrated in what came near being a case of drowning last winter. A dozen boys were skating on a pond, when one of them broke through the ice, and the next moment was struggling in the water.

The accident occurred near the middle of the pond; there was no house near to which the boys could carry their unfortunate companion, nor yet a pole or stick of any kind. For a minute they stood aghast, huddled together, watching the poor boy's struggles in the icy water, and his futile efforts to hold on to the edges of the ice as it broke away.

Suddenly David Small threw himself, face down, upon the ice and cried, "Quick! Show me up to the edge. John, you lie down and get hold of my feet, and Ned, you get hold of his. I'll catch hold of Jim's hands. Now, all the rest of you get hold of you fellows grab hi and haul us out of this."

The brave boy took the post of danger himself, and the others followed his directions, and when he had secured a firm hold on the signal was given. All hands pulled with a will, and the drowning boy was saved.

HE LOVED SAUSAGES.

A correspondent sends from Michigan a true story of a farmer's dog who has been found guilty of obtaining goods under false pretenses.

He is extremely fond of sausages, and has been taught by his owner to go after them for himself, carrying a written order in his mouth.

Day after day he appeared at the butcher's shop, bringing his master's order, and by and by the butcher began to suspect that all was not right. Finally, when settlement day came, the farmer complained that he was charged with more sausages than he had ordered.

The butcher was surprised, and the next time the dog came for the sausages, he took the order, as he thought, to look the trouble to look at it. The paper was blank, and further investigations showed that the dog had been in the habit of carrying home a basket-ful of sausages, and a piece of paper, and trotted off to the butcher's.

The farmer is something out of pocket, but squares the account by locking of his dog's intelligence.

DEFECTS AND EXCELLENCIES.

The Boston *Transcript* hears of a school-boy who has found out, what all of us find out sooner or later, that a single fault attracts much notice than many excellencies.

"I am sorry, Henry," said Uncle George, "that you exhibit so little proficiency in orthography. Why, I remember when I was a boy I could spell as well as many misspelled words that I see the whole of the counting-room in a row."

"Yes, I know," said Henry, "That's just the way in this world. There never's a good man's words in that letter that I know were spelled right, but of course I get no credit for that."

BENEVOLENT.

Even the kindest-hearted of us sometimes say things that, without explanation, sound rather queer.

It was one of the best of women who said to her husband, "What a pity it is that none of our neighbors are sick now."

"Why?" was the surprised query.

"Because," she said, "I have just found them some of this new jelly," was the complacent answer.

5 Choice Greenhouse Plants, 5 sorts named, 25c. | 5 Rare Cacti, different sorts named, 50c.
The above 8 collections and Mary Washington Rose, by mail, postpaid, for only $1.00.

JOHN LEWIS CHILDS, Floral Park, Queens Co., N. Y.

A SURPRISE!

The Gem Tin-Type Camera and Outfit.

Given for two new names, and 50 cts. additional.

A New Industry.

The Youth's Companion family is a large one. Its bright boys and girls are numbered by the hundreds of thousands.

THE COMPANION believes not only in providing its family with the best of reading, but it seeks to encourage and develop a mechanical taste among its young readers. To this end THE COMPANION employs mechanical experts whose entire time is given to the work of experiment and of developing amateur industries.

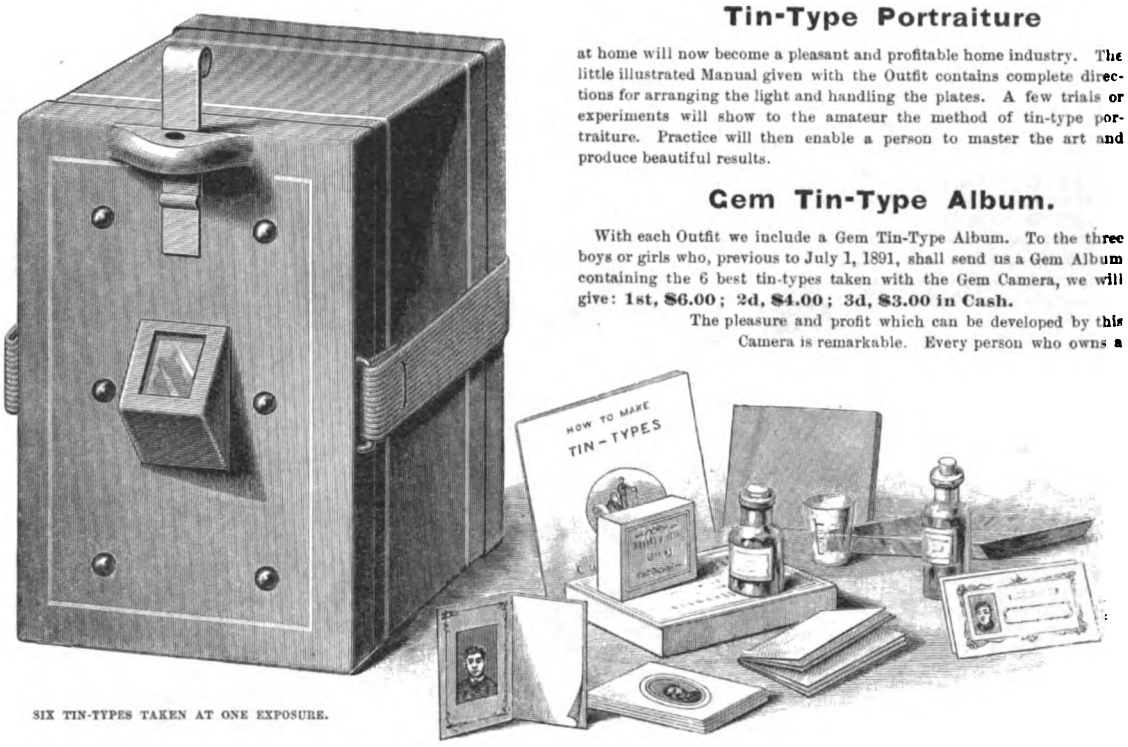
A Difficult Task.

Some months ago our experimental department took in hand a difficult task. The successful result of the effort is here illustrated.

No wonder you are surprised at this mysterious-looking **six-eyed** Camera. Listen and we will tell you all about it.

It's the **first** Tin-Type Camera ever made for the use of boys and girls. The cut illustrates the Camera at two-thirds its actual size. It is made in the best and most thorough manner, and ought to last a lifetime.

The Outfit



consists of the Six-Lens Tin-Type Camera with complete Outfit and instructions for taking tin-type portraits. Included with the Outfit, we give **24 Gem Mounts, 1 Gem Tin-Type Album, 1 Package Sensitized Plates** (which will make 36 pictures), **1 Graduate, 1 Sheet Ruby Fabric, 2 Bottles of Developer, 1 Box Hyposulphite, 1 Tray, 1 Manual.**

Any boy or girl of ordinary intelligence can learn to take tin-type portraits, and thus be able to earn sums of money in an easy and delightful way.

Exchanging Tin-Types.

At the present time the exchanging of tin-types among both children and adults has become very popular. The possession of a tin-type Camera will enable a person to take advantage of this demand.

The art of taking tin-types is remarkably simple. You have only to "expose" the plate in the Camera, then "develop," "fix," dry and mount the tin-types, the whole process not requiring more than **eight minutes.**

SIX TIN-TYPES TAKEN AT ONE EXPOSURE.

Tin-Type Portraiture

at home will now become a pleasant and profitable home industry. The little illustrated Manual given with the Outfit contains complete directions for arranging the light and handling the plates. A few trials or experiments will show to the amateur the method of tin-type portraiture. Practice will then enable a person to master the art and produce beautiful results.

Gem Tin-Type Album.

With each Outfit we include a Gem Tin-Type Album. To the three boys or girls who, previous to July 1, 1891, shall send us a Gem Album containing the 6 best tin-types taken with the Gem Camera, we will give: **1st, $6.00; 2d, $4.00; 3d, $3.00 in Cash.**

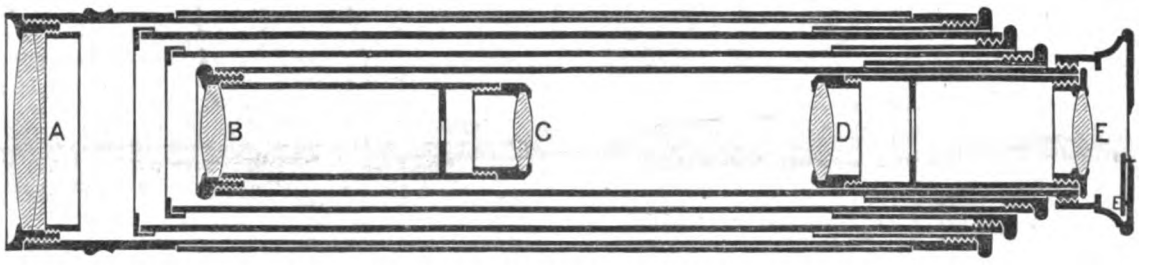
The pleasure and profit which can be developed by this Camera is remarkable. Every person who owns a

With our Outfit, **six tin-types** can be made **at one exposure,** and can be produced at a cost of less than one cent each. This low cost of production will allow a generous margin for profit on all tin-types sold.

We know that you will wonder how we can afford this Camera and Outfit at such a low price. It must be remembered that when an article is made in large numbers and supplied direct, a low price is possible. If this Outfit was made in small numbers and sold through the jobber and retailer, its price would be not less than $5 each.

Harvard should have this valuable Outfit. The Tin-Types taken with this Camera are larger by fully one-half than those taken by Boston professionals. The Gem Mounts given with the Outfit are made in assorted styles and colors.

Remember, we give the Camera and the entire Outfit all ready for work, for only **two new names, and 50 cts.** additional. We offer it for sale for only $3. **Postage and packing, 50 cts.,** when sent as a premium or purchased, or it can be sent by express, the charges to be paid by receiver, which in many cases will be cheaper.



Our Achromatic Telescopes.

Two Watches

may look alike on the outside; it's the inside that tells the story. Two telescopes may look alike on the outside—they may both be called "Achromatic," but it's the inside that tells the story.

The Inside

of our Telescope is here illustrated closed. You can see that lenses are located at A B C D E—five lenses in all.

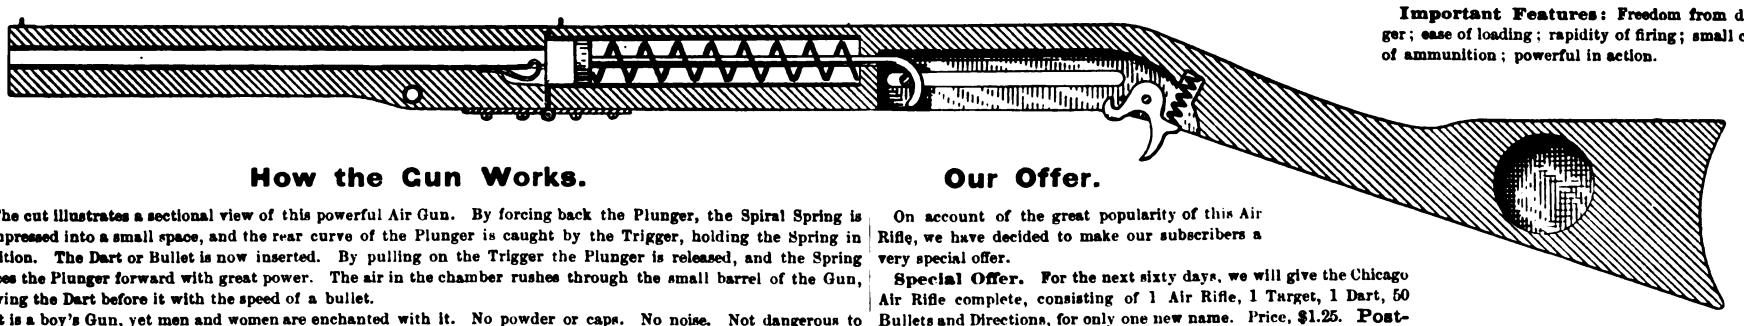
The lens A is achromatic. It is composed of two lenses in one—one made from flint, and the other from crown glass, so ground and fitted as to make **one lens.** Many of the so-called Achromatic Telescopes so extensively advertised have but two plain lenses, one located at A and the other at E.

We hope that this explanation will be clear to all. Our Telescopes are made to our especial order by one of the best Paris makers. We guarantee each instrument to be absolutely faultless. Although the duty on Telescopes has been increased, we shall not advance the price this year. Both of the Telescopes are encased in French Morocco.

Our Telescopes.

Telescope, No. 12. The first is our No. 12. The diagram illustrates it at its exact size when closed. When open, it is sixteen inches long.

The tubes are made from brass, polished and lacquered, while the body is covered with French Morocco.



With it the moons of Jupiter can be seen, or the beauties of some distant mountain view. We give with each our Prize Essay on the Achromatic Lens.

Given for only one new name, and 75 cts. additional. Price, $3. **Postage and packing, 20 cts.,** when sent as a premium or purchased.

Telescope, No. 22. Given for five new names, and $2.50 additional. This Telescope has four draws. Length, when extended, 36 inches. Closed, 11 inches. Diameter, 2 inches. Power, 35 times, or an object one mile away will appear to be only about ten rods away. This fine Achromatic Telescope is given for five new names, and $2.50 additional. Price, $9. **Postage and packing, 60 cts.,** when sent as a premium or purchased.

The Chicago Target Air Rifle. Special Offer.

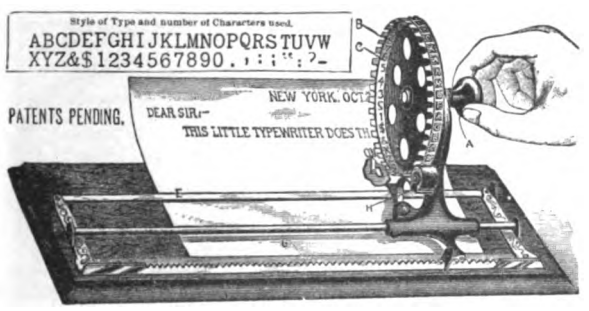
Given for only one new name.

Important Features: Freedom from danger; ease of loading; rapidity of firing; small cost of ammunition; powerful in action.

How the Gun Works.

The cut illustrates a sectional view of this powerful Air Gun. By forcing back the Plunger, the Spiral Spring is compressed into a small space, and the rear curve of the Plunger is caught by the Trigger, holding the Spring in position. The Dart or Bullet is now inserted. By pulling on the Trigger the Plunger is released, and the Spring forces the Plunger forward with great power. The air in the chamber rushes through the small barrel of the Gun, driving the Dart before it with the speed of a bullet.

It is a boy's Gun, yet men and women are enchanted with it. No powder or caps. No noise. Not dangerous to handle. Just the thing for target practice. By its use a person can become a good shot. It is 33 inches long. The air-chamber and all working parts are made of brass and steel. The stock is maple, nicely stained and varnished.



Our Offer.

On account of the great popularity of this Air Rifle, we have decided to make our subscribers a very special offer.

Special Offer. For the next sixty days, we will give the Chicago Air Rifle complete, consisting of 1 Air Rifle, 1 Target, 1 Dart, 50 Bullets and Directions, for only one new name. Price, $1.25. **Postage and packing, 35 cts.,** when sent as a premium or purchased, or it can be sent by express at the receiver's expense. The weight of this Rifle all packed is less than three pounds. It is carefully wrapped in a pasteboard box.

Automatic Type-writer. Given for one new name, and 10 cts.

This Type-writer has an automatic feed and a self-inking type wheel, uses copying ink, will accommodate the largest sized letter paper, and possesses some of the features of a higher cost machine.

There is a great fascination among the young in sending or receiving a type-written letter. To such a class, this Type-writer will afford almost endless delight and amusement, and also become a most valuable educator in teaching the art of spelling, punctuation and composition.

Premium offer above. Price, $1. **Postage and packing, 15 cts.,** when sent as a premium or purchased.

Conditions.

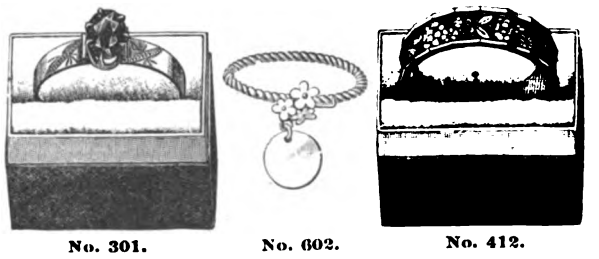
The conditions for obtaining the Premiums offered on these pages are the same as those given in our last October PREMIUM LIST. Any one can purchase premiums, whether subscriber or not.

PERRY MASON & COMPANY, BOSTON, MASS.

14k Solid and Rolled-Gold Bead Necklaces.

This style of neck jewelry is very fashionable. Each Necklace is thirteen inches in length, is made by hand, and is warranted.

We can furnish these Necklaces in solid gold or silver, or heavy 14k rolled gold, Roman finish. The rolled-gold Beads are unusually heavy, and should wear nearly as long as the solid.



Solid 14k Gold Bead Necklace is given for five new names, and $2.50 additional. Price, $6 each.

Solid Silver Bead Necklace is given for one new name, and $1 additional. Price, $2.50 each.

14k Rolled-Gold Bead Necklace is given for one new name, and $1 additional. Price, $2.50 each. **Postage and packing** on either of the Necklaces, **6 cts.,** when sent as a premium or purchased.

Solid Gold Rings, with Plush-lined Boxes.

Garnet Ring, No. 301. Solid Gold. This is one of the most desirable Rings we offer. We import the Garnets from Europe, and have them set to our special order. It is just the Ring for a young miss. Given for one new name. Price, $1.25.

No. 301. **No. 602.** **No. 412.**

Friendship Ring, No. 602. This is solid gold, ornamented with two tiny enamelled Forget-me-nots, with gold bangle. Very handsome. A plush-lined box given with each Ring. Given for one new name. Price, $1.

Beautiful Forget-me-not Solid Gold Ring, No. 412. This beautiful Gold Ring is made expressly for our subscribers. Engraved with beautiful Forget-me-nots. Given for one new name. Price, $1. **Postage and packing on either of the Rings, 6 cts.**

Digitized by Google

The Complete Harvard Photograph Outfit.

Given for one new name, and 50 cts. additional.

Daguerre and Photography.

In 1827, THE COMPANION'S birth-year, Niepce and Daguerre began experimenting together in Photography. Niepce soon died, but Daguerre persevered and at last discovered and announced the wonderful art. For a while, the world could not believe him. But finally his marvellous sun-pictures forced the truth to be confessed.

Three years ago, we began advertising the Harvard Camera. It seemed impossible that a practical Photographic Camera and Outfit could be sold for $1.75. Still, many of our subscribers believed our statements, and tried the Camera. Friends of theirs saw its work and hastened to secure Harvard Cameras for themselves. So the news spread until now tens of thousands of our subscribers are owners of this wonderful Photographic Outfit. In fact, so great is the demand that our manufacturers find it almost impossible to keep us supplied.

It is no Longer

necessary for us to describe the delights of Photography. The art has become so popular of late, the whole world knows its pleasures and wants to try its hand at it.

How Can We

sell the Harvard Outfit for $1.75? Because there are no middle-men to add to its cost with their percentages. The Camera is manufactured for us and for us alone, thousands being ordered at a time. Were this Camera to go through the regular channels of trade, it could not be sold for less than three dollars.

Rebate Ticket.

But some may say, "I prefer to wait until I can buy a large Camera." To these we reply, Art is not measured by the square yard. As artistic a picture can be made with the dainty Harvard as with a large Camera costing many dollars. Begin with the Harvard, become expert in its use and then, if you want a costlier one, you can purchase it at a discount by means of a Rebate Ticket which we give with every Harvard Outfit.

The Illustration.

The illustration shown above is no fancy sketch drawn from the imagination of our artist, but is a composite picture made from a number of Photographs that have been taken by young people with the Harvard Camera. Each section or figure will be instantly recognized by its taker.

The Harvard Prize Photograph Album.

To provide a way by which present owners of Harvard Outfits may compete for the Prizes named in the next column, we make the following offer: On receipt of six cents in stamps we will mail to any address one Harvard Prize Photograph Album, and will include with the Album a sample Photograph taken by some boy or girl with the Harvard Camera. The conditions which govern the awarding of the prizes, together with full instructions for those intending to compete, will be enclosed with the Album.

The Harvard Camera.

The Camera is made of metal and handsomely japanned and striped. The lens, imported from France, is unusually quick in action and adapted to a large range of work.

The Finder is an ingenious attachment which enables a person to see the view before it is taken. One of our experts failed to see in the Paris Exposition any Finder costing less than the entire Harvard Outfit. But he received a suggestion that finally developed into the wonderfully simple but effective Finder we give with the Outfit.

Amateur Camera Clubs.

Among the thousands of owners of Harvard Cameras, there are multitudes who are anxious to form Camera Clubs. To aid the young people in this direction, we have secured the co-operation of the **National Amateur Camera Club**, a recently incorporated body of enthusiastic lovers of Photography.

Benefits of a Camera Club.

1. **Camera Club Meetings** for papers and practical talks on Photography by members or invited speakers.
2. **A Studio** and other conveniences for the general use of the members of the Club.
3. **Club Albums**, for preserving interesting and meritorious Photographs.
4. **Field Days** for friendly contests in Photography.
5. **Public Exhibitions** of Club work, with awarding of prizes, etc.
6. **Exchange of Ideas.** The members of a Club thus have a grand opportunity to exchange ideas and experiences, and receive the inspiration and enthusiasm of such companionship.

While these reasons should be a sufficient inducement for organizing Branch Amateur Camera Clubs in every town in America, yet the National Club authorizes us to make the following offer:

Offer to Clubs.

Upon the receipt of an application signed by at least three persons agreeing to form an Amateur Camera Club, there will be sent **free**, a Camera Club Constitution, Application Blanks for Membership and General Aids showing how to organize such Clubs.

Each application for Blanks must enclose a two-cent stamp for postage, and should be sent directly to the publishers of THE COMPANION.

Prize Offer.

With each Harvard Outfit we will give **free** a Harvard Prize Photograph Album.

To the person who, previous to July 1, 1891, shall send us one of these Albums containing the best collection of six photographs that have been taken by the sender with the Harvard Camera, we will give a choice of either

1st Prize—Cash to the amount of	$15.00
Or Hawk-Eye Outfit, price	15.00
2d Prize—Cash to the amount of	10.00
Or Anthony's 4 x 5 Photographic Outfit, price	10.00
3d Prize—Cash to the amount of	5.00
Or any Selection of Photographic Materials, value	5.00
4th Prize—Cash to the amount of	3.00
Or The Phenix Gem Tin-Type Outfit, price	3.00

The Complete Harvard Outfit.

The Harvard Outfit includes the Camera, Finder and Tripod-head, together with Developing Pan, Printing Frame, Glass Graduate, Ruby Glass, Gold, Chemicals, Mounts, Dry Plates; and Sensitized Paper for making the finished picture. Size of picture, 2½ x 4 inches.

The complete Outfit given for only **one new name, and 50 cts. additional. Price, $1.75. Postage and packing, 50 cts.**, or it can be sent by express at the receiver's expense, which in very many cases will be cheaper.

Regulation Foot Ball, No. 5, with Manual.

Given for one new name, and 25 cts. additional.

This fine Foot Ball is the regulation size—27 inches in circumference—and is made of the best of stock. We give with each Foot Ball an Official Manual, containing Referee's Duties, Score Sheet, Field Chart, and Foot Ball Rules, as authorized and adopted by the American Intercollegiate Association.

The Foot Ball and Manual given for one new name, and 25 cts. additional. The regular price of the Ball and Manual is $2. Our price is only $1.50. **Postage and packing, 20 cts.**, when sent as a premium or purchased.

Although the cost of rubber has considerably advanced during the past few months, we shall not for the present increase the price of our Foot Balls.

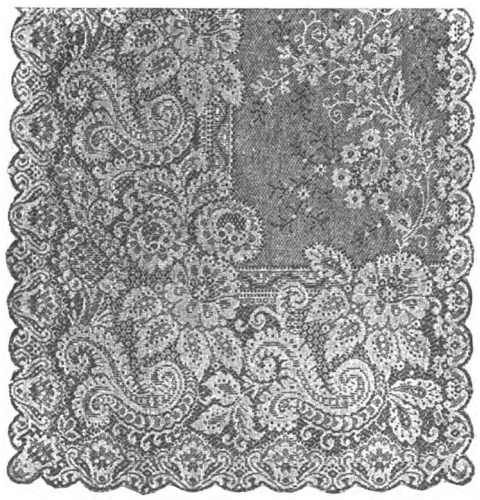
Portable Changing Bag, and One Dozen Dry Plates,

Size, 2½ x 4. All given for one new name.

This valuable apparatus will be keenly appreciated by all who own a Harvard or Gem Camera.

By means of it a person can remove and insert plates in a Camera, although the brightest of sunlight is all about; thus being entirely independent of a dark room. By having two boxes in the Bag, one of unexposed plates and the other for exposed plates, any desired number of pictures can be taken on a single trip.

The Portable Changing Bag is made of an impervious and light-tight material, can be rolled up and carried in the pocket, and is very simple in construction.



Premium offer above. Price, 85 cts. **Postage and packing, 25 cts.**, when sent as a premium or purchased. Price of Bag alone, 50 cts., postage 10 cts. additional. Send stamp for a Catalogue of Photographic Supplies.

Nottingham Lace Curtains.

Lace Curtains always give a most pleasing effect, not only to the furnishings of a room, but also to the house itself as seen from the outside.

Every good housewife knows the value of Nottingham Lace Curtains. We purchase them by the case directly from the factory. The styles are the latest and most attractive. The patterns are assorted. The one illustrated in the cut was taken at random from a case.

The cut, being a greatly reduced photo-engraving of the lower end of the Curtain, does not give exactly the same effect as the Curtain itself.

Nottingham Lace Curtains, No. 1. These Curtains are nine feet long, forty inches wide, and are all bound with tape.

A pair (two curtains) given for one new name, and 25 cts. additional. Our price only $1.25 for the pair. **Postage and packing, 25 cts.**, when sent as a premium or purchased.

Nottingham Lace Curtains, No. 2. These Curtains are three and one-half yards long, fifty-two inches wide, and bound with tape.

A pair (two curtains) given for two new names, and 25 cts. additional. Our price only $2.50 for the pair. **Postage and packing, 35 cts.**, when sent as a premium or purchased.

Combination Premium Package, No. 1.

Given for one new name.

This Package contains a most valuable assortment of articles for young folks. 1st, a Rubber Printing Outfit, consisting of a 3 A font of Type, Type Holder, Ink Pad, Tweezer, and Directions. Just the thing for marking clothing or printing cards. 2d, a Duplex Call Whistle, having two cylinders of different lengths and capable of producing a most powerful sound. 3d, a practical Fountain Pen, which is easily filled and kept in order. 4th, a package of Calling Cards. 5th, a fine 6-paged Ivorine Pocket Memorandum Book. 6th, a beautiful Gold-plated Pocket Pencil.

The entire Combination given for one new name. Price, $1. **Postage and packing, 10 cts.**, when sent as a premium or purchased.

Wright & Ditson's Regulation League Base Ball.

Given for one new name.

A young man's education is now considered incomplete without at least a thorough technical knowledge of the rules of Base Ball. An acquaintance with the game, acquired by practical contest on the "diamond," is of far more value, however. To afford our subscribers an opportunity to enjoy or perfect themselves in this truly great game, we offer Wright & Ditson's Regulation League Ball. This is one of the leading Balls, and is used by professionals. If you intend to use a Ball, get the best.

Moulded rubber centre, double cover. Weight, 5 oz. Size, 9 in. Horse-hide cover, red-stitched. Each Ball is carefully made, and warranted to be regulation size and weight, and especially adapted for match games.

This fine Ball is given for one new name. Price, 90 cts. **Postage and packing, 10 cts.**, when sent as a premium or purchased.

For the Companion.

INHUMANITY.

Farmer Snowden, well-fed and ruddy, stood at his door one morning, as Holt, his nearest neighbor, passed down the road. Holt drove a mule so thin and gaunt that its bones almost pierced the skin. The wretched animal staggered under the weight of several bags of grain.

"Isn't Jack overloaded a trifle?" Snowden called.

"No," said Holt. "He's used to it. He likes it."

"That beats me," said Snowden, indignantly, to his wife. "How any Christian man can work a brute to death I can't understand! Is my basket ready, mother?"

Mrs. Snowden hastily finished packing the basket of sandwiches and pie for the luncheon in the field, and gave it to her husband, who followed his haymakers down the road.

The kitchen was in disorder. It was scarcely day, but Mrs. Snowden had already cooked breakfast for three hungry men. The dishes must be washed, a dozen pies made, the ironing done, and the house set in order.

She began to work, but stopped presently to prepare a delicate breakfast and arrange it prettily upon a table in the parlor. Her daughter, a victim of some nervous ailment, came down, and languidly tasted it.

"I have no appetite," she moaned. "I think perhaps I could eat a bit of broiled chicken."

Mrs. Snowden hurried to make ready the new dish. When Laura had eaten it—and she finished every morsel—her mother helped her to creep out to the hammock in the cool shade, brought her a book, a fan, a pillow and a dish of fruit.

Laura spent the morning there, out of sight of the kitchen. She was an educated girl, fond of painting and all beautiful things. She declared that the heat, the cooking and the work made her ill. "Mother had been used to it all her life. She never tired of it. She liked turmoil."

Presently Laura managed to walk as far as the post-office, and brought back a letter. It was from her brother Joe who was in a store in Boston, and was full of amusing gossip about parties, club-meetings, and concerts. In a postscript Joe said,

"Ask mother if she will make me a set of new shirts as soon as possible. It does not take her long to run them off on the machine, and it saves me some dollars. Poor clerks in Boston have to look after the pennies!"

Mrs. Snowden gave a wan smile as she received the message. "I am glad Joey is so saving," she said; but as she oiled her machine for the work she sighed quietly. It was harvest-time. She was busy in the kitchen all day. The shirts must be made after night-fall.

Day after day went by. The family and the two hired men were fed, the house was kept in order, the washing and ironing were done, Laura was nursed and humored—all by the one quiet, gaunt woman.

When night came, she sat down at the machine to make the shirts, with loving thoughts of her boy.

"The doctor says that I need exercise," said Laura, feebly, one day. "I shall try riding horse-back, I think."

Joe, when he received the shirts, merely wrote back that "They were not as neatly finished as those in the shops. Mother's machine must be wearing out."

He often spent in a supper, given to his friends, more money than would have bought the shirts.

When harvest was done, Farmer Snowden congratulated himself on his profits. Some of his neighbors, he said, hired help in the kitchen during harvest. "But I told them mother undertakes it all herself. She is used to work. She likes it."

He took pleasure in abusing Holt, who had worked his mule almost to death. But when he saw his wife's face grow more lean and sallow each day, it never occurred to him nor to his children to consider the drudgery, the dullness, the absence of hope, amusement and cheer from her life, or to think that they were urging her, step by step, each day nearer to her grave.

Into how many farm-houses does *The Companion* enter, in which a Mrs. Snowden may be found?

For the Companion.

HOW TO MAKE DURABLE TABLE MATS.

The materials used are a ball of white corset lacing and No. 40 white cotton.

Cut a 20-inch length from the ball of lacing and mark the centre of the piece cut off.

Commence at one end of the length and roll the lacing toward the marked centre, sewing the roll neatly on one side to hold it in place.

When the centre is reached, take the other end and repeat the operation, only rolling the lacing in the direction opposite from the first.

The figure when completed is a double wheel. See illustration.

Fig. 1.

Make six of these double wheels and one single one. The last made with a 10-inch length of lacing.

Using the single wheel for a centre, sew the end of a double wheel on either side, making a string of five wheels.

Now sew the remaining double wheels in pairs, making two strings of four wheels each, and place one on either side of the first. These thirteen wheels to be used as the centre of the mat. With the lacing, now measure around this centre once and a half, *four times*, and cut the length so measured, from the ball. Cut this piece in two equal parts and fold each part at its centre. Pin the two folds together on a cushion (or anything to hold them) and make a common four-strand braid, and sew it around the centre of wheels.

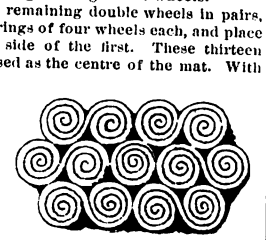

Fig. 2.

Next, measure around braid eight times, find the centre of length, pin down and proceed to make a chain of "True Lovers' Knots" a quarter of an inch apart.

The knot is made thus:—

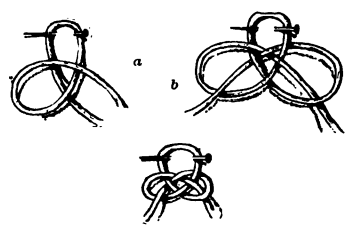

Fig. 3.

The chain when completed to be added to the braid which has just been made.

Now add another row of braid, measuring for it (around the knots) once and a half, four times. Finish with a row of wheels.

This makes a mat measuring about 10x12 inches, and larger or smaller ones can be made by increas

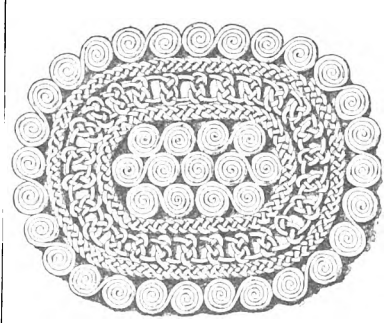

Fig. 4.

ing or diminishing the number of wheels in the centre. One ball of lacing will make several mats.

"Brown's Vermifuge Comfits" will expel worms without injury to the system. 25 cents a box.

The Throat. For Coughs, Hoarseness, or any trouble of the Throat, use *"Brown's Bronchial Troches."* Sold only in boxes. Price, 25 cents. [*Adv.*

Burnett's Cocoaine.—A PERFECT DRESSING FOR THE HAIR.—The Cocoaine holds in a liquid form a large proportion of deodorized COCOA-NUT OIL, prepared expressly for this purpose. *No other Compound* possesses the peculiar properties which so exactly suit the various conditions of the human hair. It is conceded by all who have used it to be the *best and cheapest Hair Dressing in the World.* [*Adv.*

CLOSELY WATCHED.

A subject of frequent complaint among American men who travel in Europe is the lack of skill on the part of the barbers, who seldom know how to use their razors without inflicting suffering upon their customers. So few men, comparatively, depend upon barbers to be shaved, in the Old World, that the art is not always mastered by those who practise it. A traveller in England relates an incident, however, which seems to indicate that barbers in the country districts are no more expert in cutting hair than they are in shaving.

"I was travelling leisurely through Warwickshire, the country of Shakespeare," this traveller says, "when, seeing a rather neat barber-shop, and being aware that my hair needed cutting, I went in and submitted myself to the shears.

"I did so with some little uneasiness, for these shears were vast and murderous-looking weapons, which looked as if they were ordinarily employed in cutting sheet-iron instead of men's hair.

"The barber went through many preparations, which gave me a chance to observe that his dog, a wiry-looking little bull-terrier with a singular droop in his left eye, and a vicious expression about his cropped ears, was eying me intently from a point a little to one side of me, on the floor.

"The barber at last set at work at my back hair, very deliberately. The bull-terrier still eyed me as a cat watches a mouse, now tipping his head a trifle on one side, now on the other.

"I stood this eager scrutiny in silence for a few minutes, but presently my curiosity led me to speak.

"'Hum!' I said; 'a sharp-looking dog, that of yours.'

"'Sharp!' the man laughed. 'No more hintelligent beast than 'im in all War'icksh're to-day, sir.'

"'Can you tell me why he is watching me in that way?'

"'Ah, there's the hintelligence of 'im, sir. Sometimes it happens, you know, sir, as 'ow, when I'm a-cuttin' a gent's 'air, sir, as 'ow I chips a little hoff the top of the gent's hear with the shears, sir. An' then you should see, sir, as 'ow Sir Garnet—that's the dog's name, sir—as 'ow he lights on that bit of hear in a hinstant, sir!'

"This very interesting piece of information sent such a cold chill down my back as I had seldom felt before. I did not dare to speak and beg the man to be careful, lest my agitation should cause him to make the unlucky stroke with the shears.

"I certainly did not dare to move. The man took a long time with his hair-cutting, and all that time Sir Garnet eyed me keenly and hungrily from the floor, while the cold drops of perspiration were starting out on my forehead.

"Fortunately I escaped mutilation; but in my dreams, for weeks, I was haunted by the vision of that expectant bull-terrier, watching me with his malevolent eye out for the tip of my ear. I see him in an occasional vision still, and I never expect to be quite rid of him."

FOR RHEUMATICS.

Old remedies for diseases were of a fearful and wonderful nature. It is to be hoped that the world is growing wiser in this regard, but there are still those who apparently have firm belief in strange specifics. The author of "Wild Life on a Tidal Water" became acquainted with the watermen of Norfolk, England, and gives the following specimen of their various remedies for rheumatism.

The conversation turned on "rheumatics," the common ailment of watermen. "Wal, I hev carried a tater in my pocket since Christmas, an' it fare ter me it dew no good; the tater waste, but the rheumatics doant go," said Larin, a swarthy, determined-looking young shrimper.

"An' them magnetic stones fare ter me to be fooleries," continued a stout old eel-catcher.

"Them magnetic belts work better," broke in Horngee, dogmatically, "but arter all, fares ter me nothing like the fat o' a good silver eel. Jest prick 'im an' let the fat run out afore the fire, an' rub it inter the j'ints. I have cured myself like that, an' so hev my missis."

"Wal," rejoined the shrimper, "I hev found a little black rosin, as much as you can hold on a shillin', twice a week, do some good. Wenus turps rubbed on the j'ints do good, but carrying pigs' left fore trotters an' taters an' brimstone fare ter me silly."

"Wal, old matey, what dew you think about these cures?" asked Larin, turning to an old sailor, who had served in the coastguard.

"What dew I think? On'y wiper's oil will cure all yore scrumatics."

"Fares ter me hosses' oil cures quickest," interrupted a little gunner, who had just come in.

"Hosses' oil is good stuff, ah! werry good stuff!" acquiesced each patient, gravely shaking his head.

IDENTIFYING HANDWRITING.

When the experts in handwriting meet on the witness-stand and swear hard against one another, the jury has a difficult task. Nevertheless, there have been remarkable cases of identification of handwriting.

An English gentleman offered a large sum of money for the discovery of a marriage register, the production of which was necessary in an important lawsuit. An officer in a country church wrote him that the missing register had turned up in the vestry box of his own parish. A lawyer and an expert in handwriting were sent to examine the document.

The man showed them the marriage register, and after a careful examination, they went to lunch.

At the table, the expert expressed an opinion unfavorable to the genuineness of the register. It was modern handwriting and did not, therefore, possess the antiquity claimed for it.

"Then how in the world did it get there?" asked the church officer.

"Why, you forged it yourself," quietly replied the expert, who had studied the handwriting in the note sent the gentleman.

The man, being threatened with prosecution, fled the country, and thus confessed his crime.

SIGNIFICANT.

Bridget could neither read nor write, but she was no fool, for all that.

"That was a very nice letter of Patrick's, offering you marriage," said the mistress. "What shall I say in reply for you?"

"You may tell him, if you plaze, mum, that when I gets my wages raised next month, mum, I'll begin to save for the weddin' things."

The mistress laughed, and saw the point.

DONALD KENNEDY

Of Roxbury, Mass., says:

My Medical Discovery seldom takes hold of two people alike! Why? Because no two people have the same weak spot. Beginning at the stomach, it goes searching through the body for any hidden humor. Nine times out of ten, inward humor makes the weak spot. Perhaps it's only a little sediment left on a nerve or in a gland; the Medical Discovery slides it right along, and you find quick happiness from the first bottle. Perhaps it's a big sediment or open sore, well settled somewhere, ready to fight. The Medical Discovery begins the fight, and you think it pretty hard, but soon you thank me for making something that has reached your weak spot. Write me if you want to know more about it.

MARCH to search,
APRIL to try,
MAY to tell if you live or die.

So runs the old adage. But if you take Ayer's Sarsaparilla during the months of March and April, the result in May will be all you could desire. To overcome the ailments peculiar to Spring, purify and invigorate the blood by the use of

AYER'S Sarsaparilla

All who make use of THIS as their Spring medicine need have no fear of **That Tired Feeling, Indigestion, Headache, Pains in the Back and Limbs, Feverishness,** and other disagreeable symptoms so prevalent at this period of the year. For the young, the old, the middle-aged — for all — AYER'S Sarsaparilla is the **Superior Medicine for Spring.** Don't be induced to take any other medicine. Be particular that your druggist gives you

AYER'S Sarsaparilla

Prepared by Dr. J. C. Ayer & Co., Lowell, Mass.

Cures others, will cure you.

DIXON'S AMERICAN GRAPHITE PENCILS

Are unequaled for smooth, tough leads.

If your stationer does not keep them, mention *Companion* and send 16c. in stamps to Joseph Dixon Crucible Co., Jersey City, N. J., for samples worth double the money.

THE HEYGOOD TEA SERVICE.

IN FIVE CHAPTERS.—CHAPTER V.

The Culprit Discovered.

When Mr. Lewis Heygood left his house at half-past six in the morning, he knew that it was too early to look for a reply to the telegram which he had sent the night before to Colonel Witheredge; but he was so much troubled and puzzled over the loss of the silver that he hoped by some happy chance to hit upon a clue to the mystery.

He was unwilling to believe in the possibility of the guilt of Merrick or the Hinslys.

He had nevertheless requested young Brent to ride over to the ferry early, and see if anything could be learned there bearing upon the disappearance of the silver. Mr. Heygood thought that he might meet Brent on his return.

He was passing the Baybridge hotel, when he heard his own name in the air, and looking up, saw, at one of the second-story windows, a pretty girl, with a Scotch cap on her head, and a travelling wrap gathered about her shoulders.

The girl did not see him; she was looking down at a group of little negro boys who had been playing leap-frog on the sidewalk, but who now crowded under the window, and sent up a clamor to this wise:

"Me! Me, ma'am! I kin do it!"

"Dinkyer de feller to aim dem two bits!"

"Doan' you mind him, ma'am! He cawn-da' boy, dat feller!"

"She seed me first!"

"Yes, she aint! She seed me fust!"

Words were coming to blows, when the girl, leaning out of the window, commanded silence.

Mr. Heygood turned to watch her dealings with this little rabble, upon whom, at the sound of her voice, had settled a profound, expectant stillness.

The girl lifted her finger and counted:

"One—two—three—four—five—six—seven! Do you suppose I am going to pay you all two bits apiece?" she demanded. "I'll take that one over there with the blue gallowses. What is your name?"

"Cæsarbanker Jones!"

"Well, Cæsbanca, you just hold the burning deck until I come down."

The girl disappeared with a laugh.

Apparently Cæsbanca Jones's idea of holding the burning deck was to stand on his head and make faces at his six rejected and crestfallen companions until the young lady came out on the doorstep. Then he regained his feet, and offered to take the red carpet-sack which she carried.

"Oh, I'll manage this," she said. "You show me the shortest way to Mr. Lewis Heygood's, quick!"

At these words the six defeated candidates for the prospective two bits set up a shout.

"Hi-yo! Mr. Lewis Heygood! Dar de gemman! Mr. Lewis Heygood, sah! White lady axin' de way ter yo' house!"

Cæsbanca Jones, who had begun to cry when he saw that there was no further occasion for his services, was pacified with a dime, and the young lady turned with both hands extended to greet Mr. Heygood.

"Oh, are you Cousin Lewis Heygood?" she asked, breathlessly. "I am Sally Witheredge Holmes."

"From Georgia? Is it possible?" exclaimed Mr. Heygood, as he grasped her hands. "Why—why —" he stammered; but words failed him in his surprise.

Sally nodded, as she surrendered the carpet-sack to his keeping. "And the Colonel," she said, "and Cousin Polly Piper and Cousin Dorrie! We all came!"

Mr. Heygood's surprise was greater than ever. "Miss Dorrina Witheredge do you mean? Why, they tell me she has not been outside her home grounds for over forty years!"

"It's all because of Fred. She found out that he hadn't any pistol, and she was uneasy about all that load of silver; so she ran away with Cousin Polly Piper, and then the Colonel and I followed, and overtook them at Atlanta. We reached here at four o'clock this morning, and they wanted to go straight to your house. They said that was the good old Georgia way, but I told them they couldn't be sure it was the Alabama way. So we stopped at the hotel, and they are all asleep; but I thought I'd hunt up Fred. I suppose he is with you and all right, isn't he?"

"Oh yes; all right now."

"Now?" repeated Sally. "Has anything happened?"

Mr. Heygood briefly related Fred's encounter with Merrick. Sally, though she laughed a little, looked very grave. "Cousin Dorrina must never know it," she said, decidedly.

"Are you Cousin Lewis Heygood?"

"It may not be possible to prevent her hearing of it," Mr. Heygood replied. "The story is all over town."

"Then we must be the first to tell her!" Sally declared. "We must not let her hear it any worse than it is, at least. And the silver?" she asked, suddenly.

"Ah," answered Mr. Heygood, "we are in much trouble about that silver."

"Has he been robbed?" gasped Sally, wildly.

"Not of all of it, luckily; but there are three pieces missing."

"Oh!" Sally uttered this exclamation with a great sigh of relief.

"We are making inquiries in a quiet way," pursued Mr. Heygood. "Fred is sure that he brought it all from home; nevertheless, I telegraphed his grandfather last night."

"Well, my father will get the message," said Sally, beginning to laugh, "and Arnold knows that Fred came away without the coffee-pot, the bowl and the cream-jug."

"Is that indeed true?" exclaimed Mr. Heygood, joyfully. "My dear child, I can't tell you what a relief this is, for Fred's suspicions fell upon those people at the ferry, who have always been esteemed thoroughly honest. It would have been a bitter thing to bring a false accusation against them."

The color flashed up into Sally's face, and then faded out, leaving her very pale. "The three pieces are in this carpet-bag," she said. "That is why I am so anxious to see Fred before Cousin Dorrina sees him. She must never know about the silver; it would worry her into an illness."

"She need never know it, surely. But if it is not too late, I must prevent Brent from going on that quest to the ferry. He said he would ride over before breakfast, but it is just possible he may not yet have started."

"Oh yes!" cried Sally, wildly. "Don't let them accuse any one wrongfully. Let us hurry! Let us run!"

Mr. Heygood had torn a slip of paper from his memorandum-book, and was writing upon it, while Sally stood wringing her hands in a fever of impatience.

"We will do all we can," he said, smiling at her as he put up his pencil. "Brent must pass this way to reach the ferry, and if he has not already gone, we cannot miss him. I'll send this message home to let them know that the silver is found, but I haven't said anything about you; that will do for a later surprise."

Sally was about to start at once, but Mr. Heygood reminded her that it was not considerate to steal away from her cousins at the hotel, and leave no account of herself.

"No, it isn't!" Sally admitted. "But I am always doing something I ought not to do."

Mr. Heygood hurried into the hotel to provide for the delivery of his message home, and leave word for Colonel Witheredge. He returned speedily, and set out homeward, past the Brent place, with Sally.

Fortunately, as it happened, young Brent was not an early riser, and he was but just mounting his horse when Mr. Heygood and Sally stopped at his gate. Their news was told in as few words as possible.

"Hurrah!" shouted Brent. "Dorina will be delighted. I'll gallop ahead and tell her."

"As if there were nobody but Dorina!" said Mr. Heygood. "I've already sent them word; but you may gallop ahead, if you will, and tell them to order the carriage at once."

"All right!" cried the young man, springing to the saddle again. "Suppose I relieve you of this satchel?"

Sally seemed to hesitate a moment, but finally consented.

Thus it came to pass that Dorina Heygood was enabled to announce that the silver had been found in Baybridge. She laughed when Fred said he was sorry.

"I am sure there can be nothing to distress us," said she, "for Mr. Brent is in such high spirits. I may not yet have started."

"Oh yes!" cried Sally, wildly. "Don't let them accuse any one wrongfully. Let us hurry! Let us run!"

Dorina snatched the carpet-sack from him, but it was locked.

"Tell us all about it!" demanded Mrs. Heygood and Fred in a breath.

"It's a good joke on you, Fred," said Brent, "but you must wait for Mr. Heygood. All I can tell you now is that there is a great surprise in store about that silver."

Presently the rattle of wheels was heard, and Dorina flew to the window to see the dingy "hack" which transported passengers to and from the depot stop at the gate.

Three persons got out: a gentleman and two ladies. "Why," cried Dorina, "who in the world are these people? A tall old gentleman, a tall old lady, so queerly dressed, and a short, little, oldish-young-ish person, with a rose in her bonnet as big as a cabbage."

"It must be the Witheredges!" cried young Brent, impulsively. "Fred, come and see!"

"See whom?" said Fred, indifferently. He was thinking of the silver, and he resented this interruption; nevertheless, he went to the window.

The three strangers were coming leisurely up the walk, the old lady leaning on the old gentleman's arm, the other lady tripping along behind.

Fred could not believe his eyes.

"My grandfather and *my Aunt Dorinda!*" he gasped. "And that red rose—that can be nobody on earth but Cousin Polly Piper! Am I dreaming?"

Mrs. Heygood and Dorina did not stay to debate this point. They hurried downstairs, and met the strangers at the door with the warmest of welcomes.

"Ah! Ah!" cried the old Colonel, rubbing his hands, "I said this was what we might count upon—a real Georgia welcome. We'd have been here fresh from the train, at four this morning, but Sally Holmes was for being so formal. However, I stole a march on her. I slipped out and ordered a conveyance to be in readiness at half-past seven; so here we are!

"And this is the little Dorina?" he went on; "give me a kiss, child. Why, upon my word, you are a pretty creature, as pretty as Sally Witheredge Holmes."

"Of course she is, Frederick; what else did you expect?" said Miss Dorina Witheredge, who had her arm around the girl she had always considered peculiarly her own. "I am so glad I came, my dear, so glad I came!" she sighed.

"Ah, it's so romantic!" whispered Miss Polly Piper, ecstatically. "We are all glad; I'm sure I am."

"Let me take you upstairs to my sitting-room," said Mrs. Heygood; "there you shall see Fred, while I have breakfast made ready for you."

"Is anything the matter with Fred?" asked Miss Dorina, with sudden misgiving.

"Oh dear, no," Mrs. Heygood reassured her; "only he had—a rather rough trip, and we are coddling him a little."

"Ah, yes; the blessed old stage-coach days were much more comfortable for travellers," sighed Miss Dorina, whose last trip had been made when she was twenty, and strong to endure.

At the head of the stairs they came upon Fred, not yet recovered from his surprise.

"You didn't expect me, of course, Fred," said Miss Dorina, placidly; "but I was so disturbed about you that I couldn't rest at home. O Fred, how careless of you to leave that pistol!"

"Don't say a word, Fred!" whispered the Colonel, on the other side of him.

"And the silver, Fred? Grandmother Heygood's silver? Is it all right?"

They were in the sitting-room, now, and Miss Dorina's eyes fell, at once, upon a table where the famous tea service was displayed. She went immediately to examine it.

Digitized by Google

"It's—it's all right," stammered Fred, at her elbow. "Don't bother now."

Miss Dorina would not listen; she was counting the pieces.

Young Mr. Brent strove desperately to fit a key to the red carpet-bag.

"I don't see the coffee-pot, nor the bowl, nor the little cream-jug!" said Miss Dorina, turning toward the company. Then, struck by their tell-tale faces, she exclaimed: "Fred, speak the truth! *You've been robbed?*"

Fred looked helplessly from his aunt to Mrs. Heygood, from Mrs. Heygood to Brent, who, despairing of a key to fit, had burst the lock of the red carpet-sack.

"No, no, no, Miss Witheredge!" said he, pulling out the missing pieces. "There has been a—a—a little *confusion*. But we have all the silver here, at last, you see; and—and—you shall hear the whole story, presently; it's a little—mystery."

"I should say 'mystery'!" shrieked Miss Polly Piper, "I'll never trust my eyes again, if that isn't the identical old red carpet-sack that Sally Witheredge Holmes brought with her, and insisted no one should touch but herself!"

"Ah!" interpolated Miss Dorina, nodding her head sagaciously.

"I did wonder what could make it bulge out so," Miss Polly rattled on; "but when I tried to feel of it, I surely thought she'd bite. It was that old coffee-pot —"

"It *is* old," said Miss Dorina, rebukingly, "and eminently respectable. They don't make such silver nowadays."

"No indeed!" Miss Polly assented, promptly.

"But where *is* Sally?" Miss Dorina inquired, looking around. "We were told that she had come here ahead of us."

"Oh, she will be here presently," said Brent.

Mrs. Heygood and her daughter and Fred exchanged bewildered glances that signified, "If we wait patiently, perhaps this mystery may be unravelled."

"You see," pursued Brent, "it is a long way round by our house, and they —"

In the midst of his words Sally Holmes burst into the room, unannounced; for when Mr. Heygood indicated where Fred might be found, she had rushed upstairs, leaving him to follow more leisurely.

"O Fred!" she exclaimed, with outstretched hands. Then her eyes fell upon Miss Dorina, and her hands dropped to her sides. "Cousin Dorina!" she faltered, and hung her head, and stood silent.

"Sally Witheredge Holmes," said Miss Dorina, with calm, but inexorable severity, "what prank is this you've played about your Great-great-grandmother Heygood's tea service?"

Sally covered her face with her hands and burst into tears.

"For," pursued Miss Dorina, unmoved, "from what I know of Sally Witheredge Holmes, whenever she has any connection with any trouble, a prank of some kind is a foregone conclusion."

"I'm sure you do her injustice," said young Brent, warmly. "Fred left these three pieces at home; therefore, Fred is the guilty party, don't you see?"

"No," said Sally, lifting her face; "no, Cousin Dorina! Fred is not to blame. It is I that am guilty, and no one else. I tried hard to manage so that you would never know anything about it; but since you must know, you shall hear the truth. I wasn't playing a prank on you; it was Fred I was trying to tease; he felt so important he could not help putting on a few airs!"

"Umph!" said Fred.

"Come, come, Sally; that's not true," said Miss Dorina, sharply. But the Colonel smiled shrewdly, and nodded.

"And," continued Sally, who had caught this little by-play out of the corner of her eye, and taken heart at it, "I thought it would be a good joke to have him miss a part of the silver. I did not once dream of bringing suspicion upon innocent persons; I thought it would be the easiest thing in the world to set it all right, for I meant to get Arnold to take the three pieces to Centreville and express them from there, with some baffling message.

"I found a key to fit the old trunk, and I took out the silver in the middle of the night, and hid it in the garret! I took the first pieces I came to—I was so scared—and I put everything back as if the packing had not been disturbed.

"I rode over home the next day on purpose to tell Arnold, and such a scolding as he gave me! He promised not to betray me, but only on condition that I would promise never to do the like again; and I never, never will!

"But when Martha told me you had started for Alabama, Cousin Dorina, oh, it was then my punishment began."

Sally wept afresh.

"Oh, oh!" said Dorina Heygood, "this is too bad. We haven't had a chance to kiss her and give her welcome!"

She went to Sally, and put her arms around her. Mrs. Heygood, too, tried to comfort her with the assurance that "all's well that ends well."

This gave Mr. Heygood an opportunity to greet Miss Dorina, and the Colonel, and Miss Polly Piper.

"Ah!" said Miss Dorina, when these greetings were over, "Sally Witheredge Holmes always was a wild thing, but she has no mother. Come here, Sally; you are not a bad girl, after all, my dear; you've a good heart, and many a pretty kindness have I received at your hands."

"Aren't you going to forgive me, too, Fred?" said Sally, on her knees at Miss Dorina's side.

"It was rough, Sally; it was rough!" Fred declared, frowning. "You made me make a fool of myself."

"No, Fred," said Sally, demurely; "I only furnished you an opportunity to exercise your natural talent."

A general shout followed this thrust, and Mr. Brent said:

"Come, Fred, there's nothing now for you to do, but be magnanimous."

"I suppose so," said Fred, ruefully, "Sally always contrives to come out ahead."

Just then a servant came in with a telegram for Mr. Heygood. It was from Arnold Holmes, in answer to the despatch sent the night before; and this was Arnold's message:

"*Hope all is right by this time. Please forgive Sally.*" ELIZABETH W. BELLAMY.

The End.

ECHO'S HOME.

In some mountain cave, methinks,
Where the white owl sits and blinks;
Or in deep sequestered dells,
Where the foxglove hangs its bells,
Echo dwells.

—*T. B. Aldrich.*

For the Companion.

THE GREAT CHESHIRE CHEESES.

The Masons, whose history I used to hear, were among the founders of New Providence, the vanished village of the autumnal Berkshire Hills. I well recall the stories of Elder Leland that I used to hear in my old Swanzey home, and especially the awful ghost-story that the courtly evangelist used to relate confidentially to a few friends. No Rhode Island farmer's boy of thirty years ago will ever forget that, and any allusion to it would make, in those days, young feet nimble in dark chambers and on lonesome roads.

Times have, indeed, changed. No ghost-story, however vivid, would be likely to make a Rhode Island boy nervous to-day.

I recall also the more cheerful story of the great Cheshire Cheese, as we used to hear it, and have often repeated, in my young churning days, the New Providence receipt for turning cream into butter under the miracle-working influence of the old-time dasher:

"Come, butter, come,
Peter stands at the gate
Waiting for the butter-cake,
Come, butter, come."

The rhyme of this persuasive ditty is not perfect, and I am unable to say who "Peter" was, though the name sounds Apostolic; but the Cheshire and Rhode Island farmers' wives could all declare that this brief invocation gave a wonderful efficacy to the churn-dasher.

I shall never forget my first excursion into Cheshire to visit the once famous farms of New Providence, and the graves of Elder Leland and the heroes of Bennington. It was a glimmering September day, such as brings the tourist of New York to Lenox, not far away.

The sky was an over-sea of gold. The Housatonic lay, here like a mirror of glass in the brown woodland pastures, there purling amid purple gentians over mossy dams.

The wrecks of old orchard trees dotted the landscape; fading beech-trees, with their bark perforated by the long bills of the golden-winged woodpeckers; aftermath in alluvial meadows; corn-fields with orange banners on the uplands, and over all Greylock, green-wooded and maple-tinted, looking down the valley.

Graveyards—like little villages of the dead—with mossy stones touched the heart and fancies, and the town at last came full in view, with its white spire and faded inn.

"Where is New Providence?" I asked of an old man who had stopped to rest on the cool russet sward under a leafy maple, where the locusts were singing in the bright air.

"There is no New Providence any more," said he. "It is all gone; the hotels, the stores, the churches, all—there is not a house left. There is where it *was*."

He pointed toward a sunny slope. How beautiful was the situation! But there was not so much as a house or an orchard. Shades of Oliver Goldsmith! Could it be possible that here in New England was a veritable Deserted Village?

"The inhabitants of New Providence all sleep in a little graveyard under the hill," said the stranger, filling his pipe. "That was once New Providence Purchase, and was settled from Providence Plantations. It is now called Stafford Hill.

"Old Captain Joab Stafford, the hero of Bennington, is buried in the old graveyard, near the road. You can see his grave as you pass by."

New Providence began in a pleasant joke. Old generous Captain Stafford, who was brought wounded at last from Bennington to his pleasant home and tavern, built his house in New Providence Purchase before he brought his wife from Rhode Island.

When his fine house was completed, he went after Mrs. Stafford, but refused to give her any description of his new place. Across the Connecticut on horseback they hastened toward the mountains.

"Now as we ride along," said he, "and notice the new settlements, tell me when we come to just such a house as you would like."

They rode through Cheshire, once called the Kitchen, and at last the good woman lifted her eyes to a bowery hill almost in the shadow of Greylock.

"How beautiful!" said she. "There is just such a home and place as I should like to have. If I could only live there, I would be perfectly satisfied."

"You shall live there," said her gallant husband. "That is our home."

Out of that vanished house he was borne down the hill to his last resting-place in the valley below, and poets and orators spoke his praise.

Elder John Leland, born in Grafton, Mass., in 1754, came to Cheshire when quite a young man. He was on one occasion called upon to speak from the pulpit, when the pastor was absent. There came to him a flow of words and ideas which astonished his hearers much and himself more, and he felt that he was allotted to be a preacher. He was a Baptist-Quaker, like Roger Williams.

It has been asserted that his influence made Madison President. He travelled to a distance of many thousand miles, preaching; crowds followed him everywhere, and queer stories of his eccentricities were repeated by every fireside.

Among the old Cheshire humorists and the old story-tellers of the tavern at New Providence, and the half-way inn at Cheshire on the old Boston and Albany stage-route, were gallant Captain Stafford, the Bennington hero, Freelove Mason, the jolly mistress of the first regular stage-route hostelry, William Brown, or "Sweet Billy,"—the "Artemus Ward" of Berkshire,—Elder John Leland, whose jokes were echoed ever by the sounding-board over his tall pulpit, and the rich old farmers by the name of Mason, Brown, Wood and Cole, and the stage-drivers.

The story of the great Cheshire cheese was once a New England wonder tale, but was seldom correctly told, in all of its essential details. The making of it furnishes a picture of the early humor of the village, than which few pastoral scenes can be more pleasing, or more widely in contrast with many of the grim Puritan legends. Cheshire has a cheese factory now; then every farm had a cheese-press. There was joy among the industrious dames of Cheshire, when the old stage-driver of the Berkshire Hills blew his horn, and swung his hat and shouted, "Hurrah for President Jefferson!" The buxom dairy-women had been well schooled in Democratic politics by Elder Leland, himself an intimate friend of Jefferson, and a disciple of the broad principles of the Declaration.

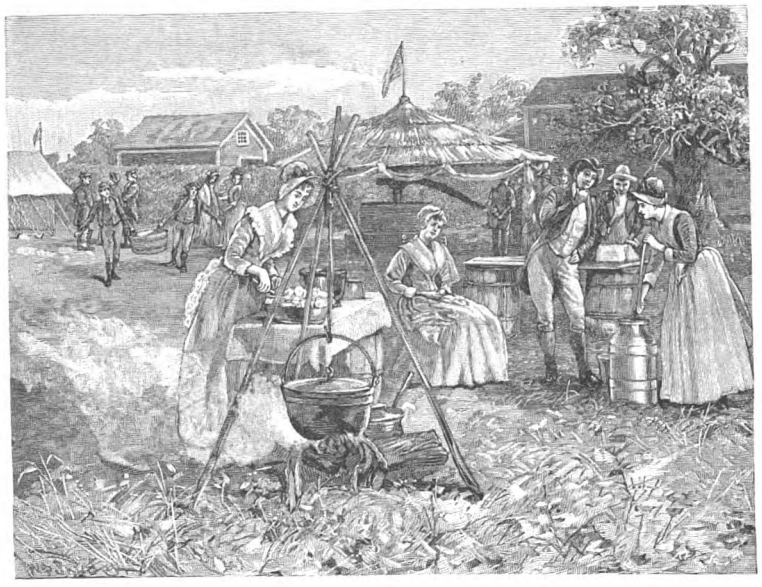
"Toot, toot for Jefferson!" rung out the horn and voice of Cameralsman, the lusty stage-driver, as he passed through the thrifty Mason farms.

"Jefferson it is!" said Freelove Mason, the ruddiest dame of the Berkshire Hills; "and how shall we celebrate our victory like free and honest people that we are?"

"How?" said the Cheshire dames. "We will make the biggest cheese ever pressed in America—such a one as the farmers have been joking about—and send it to the new President for a present. Every cow in Berkshire shall furnish the milk for the curd."

I need not say that the great cheese was made. All the Yankee world knows that. The summer of bobolinks and morning-glories that followed the political spring of happiness in Cheshire saw a great gathering of curds on a certain day, and all the kirtled dames met at Elisha Brown's and compounded the mammoth gift to the President.

It was pressed in a cider-mill, and if it did not require four horses to draw it, it is said that that number was harnessed to the vehicle that brought it from the press where it had been pressed for ten days. It weighed one thousand two hundred and thirty-five pounds, was carried to the Hudson and shipped to Washington. Elder Leland went with the great cheese, "preaching," as he said, "all the way."



The stately correspondence between Leland and Jefferson, in offering and accepting the gift, is still preserved. Those were the days when every voter supposed himself to be a born king by right of the Constitution, and it took the old formal style of writing to express the sentiments of the new monarchs. Jefferson's letter accepting the great cheese was worthy of the author of "When in the course of human events."

Elder Leland, tall and courtly, was well adapted to the dramatic part of the occasion. A grander commoner never entered the Republican court. Jefferson had often met the great revival preacher in Virginia, for Leland depopulated towns to listen to his fiery eloquence wherever he went. His calling to the ministry, like St. Paul's, had come, as he believed, in the form of a voice out of the skies, and his tongue, to use the old Hebrew simile, common in the old days, had been "touched by a burning coal from the altar."

There are few preachers like Leland to-day. Eloquent as the old Methodist field preachers, elegant and courtly as a Camille Desmoulins, witty as a Swift or Steele, and far in advance of his times in the liberality of his opinions, a theological disciple of Roger Williams and Samson Mason, and a political follower of Jefferson, he was not only a remarkable preacher, but one of the most noted men of his time. He labored as a winter revivalist in Virginia for many years, before he made his home in Cheshire.

It was one of the humors of the time to relate events of a pleasing character in the style of the Hebrew Chronicles, and the Chronicle of the Cheshire Cheese was once well-known in the story-telling town. It began:

"And Jacknips said unto the Cheshirites, 'Behold the Lord hath put a ruler over us that is after

Making the Great Cheese.

Digitized by Google

our own hearts. Now let us gather together our curds, and carry them into the valley of Elisha unto his wine-press, and there make a great cheese that we may make a thank-offering unto the great man.' Now this saying pleased the Cheshirites, so they did as Jacknips had commanded."

The great Cheshire cheese was shared by the President with the Governors of several States, to whom samples were sent. The story of it was a great advertisement of Berkshire County; and it was resolved to make a still larger cheese, which should weigh sixteen hundred pounds.

Elder Leland's church was famous for its psalmody. He himself wrote many hymns, among them the almost Ambrosian tone picture—

"The day is past and gone."

He used sometimes to ascend the pulpit singing.

There was one of the numerous Brown family of Cheshire who was a famous singer in his day, and to him we will assign a popular story of the time. His voice not only filled the church, but went out of the window. His bass notes were deep and full—"foot-notes," he called them—and it was his special pride to inform the people in the then masterpiece of country church choir music how

"The angel of
The angel of
The Lord came down,
And glory shone around,
And glory
And g-l-o-r-y, etc."

During the great winter revivals in Elder Leland's church, Singer Brown was all eyes, ears and voice. But the dairy-making season that produced the sweet butter and mammoth cheeses for which Cheshire became famous was very trying to his eyelids, during the long Sunday sermons, and the tithing-man often had a sore trial to keep his attention steady after the "sixthly" or "seventhly."

It was all so restful in the old church. The bobolinks singing in the clover outside, the red-breasted robins in the tall trees! The cool breezes came into the windows from the hay-fields, over which the cloud-shadows passed.

Then, too, even fiery Elder Leland's voice had a far-away sound when he came to the usual part of a New England sermon about the Jews in Jerusalem, and still more dreary was it when the Jews were in Babylon.

Singer Brown, on such occasions, would become oblivious of both the Jews and the Gentiles, and would have to be waked by the vigilant tithing-man.

Elder Leland himself had a genius for waking people on such restful and balmy days. Once, when a farmer under the gallery had fallen asleep and tipped back his head, with his mouth stretched open from ear to ear, some very imaginative boys in the gallery stuck a pin into a bean and lowered it down by a string to the open mouth, like a bucket into a well.

When the tall Elder saw it he didn't rebuke the boys, but seizing the Bible, slammed it down on the pulpit with a cannon shake, at the same time calling out to the poor man: "Wake up! wake up!"

The industrious farmer's slumbers were broken by these gentle circumstances, and he was enabled to follow the wanderings of the Jews during the rest of the sermon.

But Singer Brown on one Sunday fell asleep beside the old bass-viol amid such scandalous consequences that the tithing-man, the clerk and the venerable deacons never forgave him.

It all is supposed to have happened in the summer of 1803, the third year of the reign of the universal Kings under the good King Commoner, Thomas Jefferson, when ambitious people of Cheshire had put their heads together to make a bigger cheese than the one that had been made for their chosen President. The history of this cheese is often confused with the Jeffersonian present.

One Sunday morning in June, Goody Brown gave to her consort, Singer Billy, the long-necked pitcher, and sent him to the neighbors for milk. Billy went from house to house, but was refused.

"Not to-day, Billy," said every one; "we are saving our milk for the big cheese, you know."

After Billy had wandered about amid the dews to the Masons', the Waggoners', and others, without success although all the pantries were overflowing, he obtained a pint of milk at last from a Federalist, who was not in full sympathy even with the enterprises of the community.

It was now church time, and he was to sing bass to "The Lord descended from above" that day; in his view a stupendous performance. So he took his milk-pitcher along with him to the church, and up into the choir-loft.

A red curtain hung on rings ran before the singers in the choir. The music books were placed on racks, and the choir was directly over the high pulpit, the deacon's seat and the clerk's pew. A huge sounding-board hung over the pulpit, which was a kind of mahogany pen, with stairs on each side, and doors. The top of the pulpit reached almost to the choir.

Singer Billy sang well that morning the sonorous music of William Billings of Stoughton, and touched the "foot-notes" with impressive clearness.

Then he felt that his work was over, and began to be oblivious to the truth that was being proclaimed under the sounding-board. The old deacons, too, after all the excitements of mowing, milkings, and the preparations for making of the new cheese, were not in the most receptive mood, but felt the world gliding away from them in various ways.

The clerk fell quite asleep, and wandered away in the far regions of air beyond the solid continents of all theologies. Even the tithing-man had dropped his rod.

In this hour, when watchfulness had ceased, disaster came, and brought a scandal upon the descendants of the heroic Samson Mason and upon all.

A dog came trotting up the choir stairs. He, too, had found milk scarce that morning, and smelling Singer Billy's pitcher near the red curtain, looked around and found that Billy and most of the singers were quite indifferent to current events. He ran his head down the long neck of the pitcher towards the pint of milk in the great hollow below.

But while the descent of his head into the pitcher was easy, the withdrawing of it was otherwise. His head would not come out. He put up his inefficient paws and rubbed the outside of the pitcher; he moved to and fro, backward and forward. At last, not knowing where he was going, he passed quite under the red curtain and finally succeeded in pushing the pitcher over the balcony.

There was an alarming crash in the deacon's pew. Was ever anything so extraordinary? It was not a centaur that had come down, half horse and half man, but a yet more marvellous beast, half dog and half pitcher. The pitcher was broken to fragments; the dog howled pitifully; the clerk and the deacons all awoke at once, and the tithing-man leaped to his feet.

Singer Brown, too, suddenly came down from the blissful clover gardens of dreamland, and looking over the curtain on the scene of mystery and disaster below, comprehended at a glance all that had happened. He prophetically calculated the future, and quickly slipped down the stairs, and out of the church.

When questioned about the matter, he said, with unusual dignity:

"What but humiliation could you have expected from a people whose hearts had turned to the worship of cheeses?"

I stood recently in the old Cheshire churchyard by the grave of good Elder Leland, and read with a tender reverence the following simple inscription, on his tombstone, which had been prepared by himself:

"Here lies John Leland of Cheshire, who labored to promote piety and to vindicate the civil and religious rights of all men."

His "Evening Hymn" is his true monument, but he will long be a figure in the history of that quaint past.

HEZEKIAH BUTTERWORTH.

For the Companion.

MISS DILLOWAY.

Miss Dilloway locked the back door of her small house, and hung the key in plain sight near the kitchen window. How far the safety of her goods and chattels was ensured by this simple act she never stopped to consider; but nothing would have induced her to leave the door unlocked.

On her way down the narrow gravel walk she stopped to pull a weed here and there from the flower-bed, and to pick up an obnoxious piece of paper which had somehow found its way into the midst of the flowers. She straightened a young Balm of Gilead tree, and tied it more securely to the small stick which served as a prop; then, closing the gate carefully behind her, she walked briskly down the village street.

She had walked rather timidly along the platform of the little railroad station, and was about to enter the waiting-room when she was accosted by a man standing near, who was checking a solitary trunk.

"Wal, wal, Miss Dilloway! Goin' on a journey?"

"Not much of a one," she answered, curtly.

"Wal, go right in, and I'll be in in a minute."

He soon appeared at the ticket-office window, curiosity written all over his face. Miss Dilloway noted it.

"I want a ticket to Preston. How much is it?" she said.

"Oh, to Preston! Eighty-five cents. Let me see; got any relations up that way?"

"No. Can you change five dollars?"

"Oh yes—twenty-five, if you say so! Wal, didn't Ezry's folks move up Preston way, or nigh there?"

"No; they moved to Clar'mont. How soon'll the train go?"

Old Mr. McQuestion leaned forward and looked out through the office window at the clock on the wall.

"In 'bout fifteen minutes. Set down; set down over there in the rocking-chair, and make yourself comfortable. 'Taint every depot that's got a rocking-chair. Ahem! Goin' to be gone long?"

"No," answered Miss Dilloway, with a slight smile, rather enjoying the situation.

"No? H'm—h'm! Wal —"

But the good man's curiosity was not to be gratified that morning. A call from the baggage-room necessitated his hurrying away, and the ten o'clock accommodation soon bore little Miss Dilloway out of sight and hearing.

In two hours' time she was standing before a large brick building, over the massive door of which were the words, "Home for the Friendless." She trembled a little as she ascended the granite steps, and waited a little time before she rang the bell.

A white-capped servant showed her into a small reception-room. It seemed as if her nervousness increased with every moment's waiting, and when a tall, serious lady came slowly into the room, Miss Dilloway wished very much indeed that she were safe at home.

"You came to see our little ones?" said the lady, with a smile which drove all the stern lines from her face.

"Ye-es; I *did* come to get one—to adopt; but now't I'm here, I don't know that I'd ought to."

"Perhaps you can tell better after seeing."

"Yes, yes, I suppose I can. You see I made up my mind rather suddenly. Mr. Thornton, our minister,—I come from Rentham,—preached a most powerful sermon last Sunday from the text, 'Whoso shall receive one such little child,' and that sermon has been haunting me ever since. He had just come from a visit to Boston, where he saw an Orphan Asylum; and he said it made his heart ache to see so many little children who never knew what it was to have a mother's kiss on their foreheads."

Miss Dilloway wiped a tear from her eye, and went on:

"And then he said, if the Lord was going to ask us by and by what use we had made of the talents He had given us, he didn't see why He shouldn't ask us what use we'd made of our homes, especially those folks who had been given houses bigger than they needed. He asked them if the people didn't think it wasn't burying rooms, as the man buried the talent, to keep them shut up; and he urged them to open their hearts and homes—to be mothers and fathers to some little waif who didn't have any parents.

"Then he capped it all by saying that he and Mrs. Thornton had just adopted a five-year-old boy from that very Asylum. They've got seven already! But that's like Mr. Thornton; he always practises what he preaches.

"Well, when I sat down that afternoon with my Bible and hymn-book, I couldn't get my mind off that sermon. When I heard it, it didn't seem as if 'twas meant for me, but for married folks; but somehow the thought of Abby's chamber upstairs—Abby's my sister who died last year—kind of worked its way into my mind, and I wondered if the Lord would say to me, 'Cynthia Dilloway, have you kept that room of yours hid in a napkin?'

"Then I thought of the cellar full of provisions, and more than enough in the bank to take care of me if I lived to be a hundred; and before I knew it, I'd said aloud, 'I'll do it! I'll give one of those poor things a home, and I guess I can be a kind of a mother to it, if I am an old maid!'

"It's surprising how much company just the thought of having a little girl around has been, for I made up my mind, of course, it should be a girl. Since then I've been kind of getting ready—and—well, here I am!"

By this time little Miss Dilloway was wiping the perspiration from her face. She had talked an unusually long time for her.

"My friend," said the matron, who had been listening with interest to her story, "I am sure you will be blessed in sharing your home with one of God's unfortunate ones. Come with me and let me show you my 'family.'"

She led the way up a broad flight of stairs. Miss Dilloway soon found herself in a large room, which contained so many children that the first sight of them almost took her breath away. She had expected to see a dozen or twenty, perhaps, but here were surely a hundred. How could she choose from among so many?

Over in the corner one of the older girls was trotting a baby. Miss Dilloway was very fond of babies, and she stopped instinctively to speak to this one.

It looked up into her sweet face confidingly, and then held out its small arms toward her. She took it eagerly, and pressed the little form close.

"I do love babies so!" she said, half-apologetically, to the matron, who was looking on with a smile. "I often say to the folks at home that I don't envy them their husbands, their big houses, or their rick-rack, as they call their ornaments nowadays; but I do envy them their babies. They seem to think it's queer, but I don't see why old maids shouldn't love babies as well's married folks."

"Why not adopt a baby?"

Miss Dilloway had intended to adopt an older child, and the suggestion that she should take an infant took her so much by surprise that she hastily returned the baby to its young nurse, and sat down in a chair. Then a strange thing happened: the baby's lip began to quiver; tears gathered in its eyes, and its arms were held out again appealingly to Miss Dilloway.

She took it instantly, and asked the matron:

"She aint more'n six months old, is she?"

"He was just seven months old yesterday."

"He! is it a boy?" she almost screamed, looking at the child as if he were to blame for not being a girl.

The baby seemed to realize that an important moment in his young life had arrived. He patted Miss Dilloway's cheek with his fat palm, and then snuggled close to her side.

Miss Dilloway cleared her throat.

"Well, I never liked boys very much after they're grown up, but if I should take this one, I guess I should get used to his ways before that time. Do you know anything about his parents?"

"Yes. They were very nice people. The father died only eight months ago, and the mother was so affected by his death that she never rallied after the baby came. The little fellow seems to be wholly alone in the world."

Miss Dilloway's mind was made up from that moment, and early in the afternoon Mr. McQuestion, for the first time in his life, lost his voice as little Miss Dilloway got off the train with a baby in her arms.

Of course the people of Rentham were surprised. It seemed a very amusing thing to some of them that Miss Dilloway should adopt a baby, but those who knew her well and loved her, commended her worthy act and rejoiced in her new happiness—for happy she certainly was.

It was certainly a beautiful sight to see Miss Dilloway with the baby in her arms. The child crowed, cooed, and was unmistakably very fond of his foster-parent.

Donations of slips, stockings and sacks for baby's wear came in almost daily. One thoughtful neighbor sent in a cradle. Children came in with toys innumerable.

Miss Dilloway held council with the mothers in the neighborhood, as to the merits of anise, and the demerits of soothing syrups. Advice was freely given, but often of such a contradictory nature that poor Miss Dilloway was puzzled. Nevertheless, baby grew and prospered, and made sunshine in the little old lady's heart.

One day, about three months after baby's advent in Rentham, a very unusual sound rang through Miss Dilloway's dwelling. There were one, two, three clangs of the brass knocker, on the seldom used front door.

When, with baby in her arms, she opened the door, she faced a tall, square-built man of substantial appearance in more senses than one, with streaks of gray in his hair.

The man glanced at the baby and said, without ceremony:

"I guess I've struck the right place. This is Miss Dilloway, aint it?"

Tremulously, holding the baby very tight, and with an awful foreboding at her heart, she answered: "Ye—es. Will you walk in?"

"Well, yes, I reckon I will, seeing I've come all this distance to see the little fellow. There, now, don't get scared! I've no notion of taking him from you. I shouldn't know what to do with him if I had him."

Miss Dilloway's face continued to express astonishment.

"Well, well," said the man, "I guess I'd better introduce myself. I'm Reuben Russell, late of Minnesota, at present of nowhere in particular. I got to Preston three days ago, and went to work the first thing to hunt up my niece Clary. I didn't know she was dead until I reached the place where she used to board. I hadn't heard from her for over a year, and I was pretty well taken aback when they told me of her death and her husband's, so nigh together.

"But I was more taken aback, when I heard she'd left a baby, and that it had been sent to an asylum. Clary Dayton's baby, my nevvy—or grand-nevvy—in an asylum!

"I travelled pretty quick to the place, and I don't know whether I was glad or sorry when I heard it had been adopted. Anyway, what I came here for's to see the little chap—look round here, sonny!—and to make some arrangement with you about his—board—or whatever you call it. I don't want Clary's child to be living on charity."

"But it isn't charity, sir, it isn't charity! You see he belongs to me." Miss Dilloway said this with a half-vindicative air. "I had the papers regularly made out."

"Well, by and by, when he grows up, he'll have to be educated, and clothes bought for him. I'll start him a bank account. What's his name?"

"I—I've always called him 'Baby.' I haven't thought of any name yet," answered Miss Dilloway, not just liking this "look ahead," when this bit of humanity in her arms would need education and boy's clothes.

"Land o' liberty! Clary's baby without a name! Well, well. Ahem! Wh—what do you say to calling him after me—Reuben?"

"I don't know that there's any objection," said the little woman, somewhat meekly.

"Well, you think it over. I've got a little business down this way that needs looking after, so I shall probably be round here for a day or two, and I'll come in again."

Mr. Russell's business must have required more "looking after" than he at first supposed, for it detained him in Rentham more than a week. There seemed to be an hour or two in each day, however, when it did not require his attention, and these were spent in "looking in to see how Clary's baby was getting on."

It would not have got on at all if Miss Dilloway had not been present to interfere, when gingerbread horses and highly colored sugar-soldiers found their way from Mr. Russell's pockets to baby's mouth. Something was brought for baby's amusement at every visit—a jumping-jack, a rattle or a woolly sheep—until Mr. Russell and his small grand-nephew became very good

Digitized by Google

friends. Mr. Russell returned to Preston, and was gone just two weeks. At the end of that time he might have been seen one afternoon going toward Miss Dilloway's residence, boldly pushing a handsome baby-carriage before him.

He was hardly seated in Miss Dilloway's small sitting-room before he cleared his throat and began:

"I've been thinking a good deal since I left here a fortnight ago, Miss Dilloway, and I found I'd become a good deal attached to—to the baby; and—ahem!—it struck me that, as you're alone in the world, and as I'm alone, and as the baby seems to kind o' belong to both of us, it wouldn't be a bad idea to make one family. What do you say?"

Perhaps what one of the neighbors said a short time after may throw some light on Miss Dilloway's answer.

"She's sixty, and he's sixty-five if he's a day; and it's too ridiculous to see them together—with that baby!" CARRIE A. GRIFFIN.

For the Companion.

A NEW EARTH.

Some mystic hand unlocks the icy gates;
Once more through happy fields the blue veins run,
While with expectant hearts come one by one
The robins to make ready for their mates.
A momentary hush, as Spring awaits
A further signal from the watchful sun,
And from the old a new earth is begun.
A memory in each flower again creates
A likeness of itself. The same sweet thrill
Stirs in each bird-breast the desire to sing;
And heaven once more the cup of earth to fill
Bends lightly over with unwearied wing;
In shining companies by rock and rill
Rise up the lovely followers of the Spring.

MARY A. MASON.

For the Companion.

DOCTOR KOCH AND HIS REMEDY.

By Harold C. Ernst, M. D.,

Instructor in Bacteriology in the Harvard Medical School.

I have been requested to present to the readers of *The Companion* a short statement of the nature of the material which is exciting so much interest in the world at large in connection with the disease called tuberculosis, and to give some idea of the man who has presented it to the world, and the methods which are used in its preparation.

It is a difficult task to make the matter perfectly plain to those who are not accustomed to hear the terms commonly used in such discussions by men of science. But I shall try to exclude scientific terms as far as possible, and to give a plain statement of the facts.

Robert Koch.

In the first place, a word in regard to Doctor Koch. He is a man who now stands, at the age of forty-seven, at the head of the medical world of scientific experimenters. He began his medical life in the Franco-Prussian War as an assistant surgeon in the army, and served through that war. He established himself after peace had been restored in a small country town in North Germany, and there attempted to build up a practice.

While doing this, his interest was excited in the low forms of life which are known as bacteria; and he occupied all the leisure that came to him in the study of these forms. It was through work in this field that he first secured prominence in the scientific world, and it is scarcely fourteen years since his first work was published.

This work was printed in a journal called *Cohn's Beiträge zur Biologie der Pflanzen*. It was more a study of the general characteristics of the lower forms of life than an effort to connect them with special forms of disease; but these first papers were followed by the publication of a little book upon "Wundinfektions-Krankheiten," which attracted attention among all scientific medical men, and secured for its author a call to Berlin.

He was given a position there under the Imperial Board of Health, with all the facilities necessary for the prosecution of further work in the study of the cause of disease.

The work that Doctor Koch carried on before he went to Berlin was prosecuted under great difficulties, and he overcame obstacles that would have blocked an ordinary man's efforts and discouraged him entirely. But, animated by the same scientific enthusiasm and dogged spirit of persistence that he has shown ever since, he conquered all obstacles.

From the time of his removal to Berlin, and for a time before that, his main effort was toward the solution of certain problems in connection with the disease that is known by the scientific term "tuberculosis."

This is a disease which may attack any part of the body. It occurs very commonly in the lungs, and is there called "consumption." It may also occur upon the skin, and there are different forms there, the most common and terrible of which is that known as "lupus."

There is even a possibility that the dreaded disease called leprosy may be classed as a variety of tuberculosis. It occurs in the bones, in the joints and in the lymphatic glands of the body, and may also attack the various mucous membranes.

Inasmuch as tuberculosis is said to produce, in the form in which it appears in the lungs alone, one-seventh of all the deaths that occur among civilized people, it is plain how important must be anything that will permit of even a hope of its arrest or of its prevention.

There is hardly a family of which at least one member has not been attacked by this disease, and it is its wide-spread existence that accounts for the great interest and excitement that has attended the announcement of the probable discovery of a means of its arrest after it has attacked a victim.

My own acquaintance with Doctor Koch began in the fall of 1885, after his return from India, where he had been sent by the German Government at the head of a commission for the investigation of cholera.

At that time he had been made Professor of Hygiene in the University of Berlin, and had had placed at his disposal a building which occupied as much space as the whole of the Medical School building in Boston does, for purposes of general medical education.

At that time—and there was no change when I saw him last in December—he would impress one as a self-contained, thoroughly balanced man of science, modest and unassuming. Close contact with him confirmed this impression.

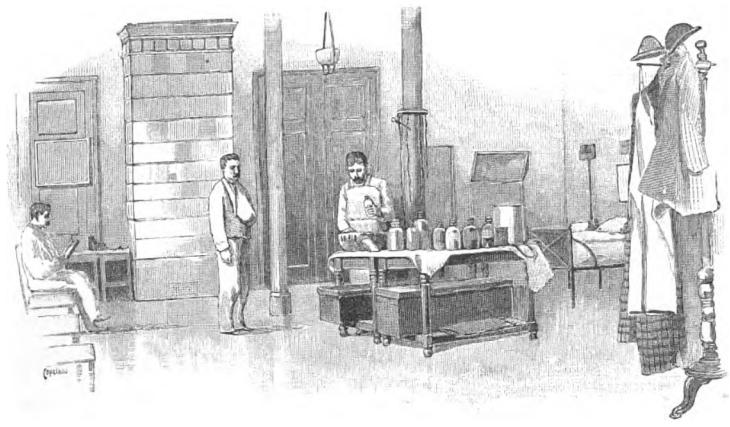
Two months ago, when he was surrounded by all sorts of men, all full of praise and excitement in connection with the announcements that he had made in regard to tuberculosis, these same characteristics were those which struck one first.

The great modesty and unassuming character of the man, in the face of one of the most tremendous and momentous discoveries that medical science had seen, and the fact that was borne in upon one, that all the work and all the sacrifices that he has made, have been done purely for the sake of humanity at large, and not for personal aggrandizement or pecuniary reward—this is the most striking thing at first sight in the character of the man; but it is not in the least surprising to one who has known him before.

So far as the experiment has gone, he has been perfectly justified in what he has claimed for his material, as employed against tuberculosis. But this is something very different from what newspaper accounts have led most people to believe.

The modesty of his announcement and the modesty of his claim are in accord with the character of the man, and have at no time meant that there has been a cure discovered for the most advanced form of the disease.

The implication and assertion that such has been the case have led to many painful scenes, and many fatal disappointments on the part of patients who have had false hopes aroused.



The claims that have been made by authority are that in the external forms of tuberculosis the process may be arrested by the employment of this material; that in the early stages of pulmonary tuberculosis the same thing may occur, and that by its use a means for discovery of unsuspected tuberculosis is furnished.

So far as our knowledge yet goes, these assertions are borne out by what has occurred in the hospitals.

The material which is used, and to which the name paratoloid has been given, is one of extreme power and activity; but the method of its action is very different from that of ordinary drugs.

The disease tuberculosis is produced by one form of the low plant life called bacteria. It is a special bacillus, a minute body having a rod shape, which is possessed of very great vitality, that is to say, which is difficult to destroy, and which grows in the different parts of the body where the disease is situated.

This organism was first discovered, studied and described by Koch, and it was the evidence furnished by him that this minute plant was actually the cause of tuberculosis, that furnished the possibility for the first great advance in the study of this human scourge.

In Dr. Koch's Hospital.

Having shown this, the next step was, of course, to attempt the solution of the problem, to wit: the discovery of something that would prevent the advance of the disease by preventing the growth of this minute plant in the body.

The difficulty of such a research is emphasized by a knowledge of the fact of the minute size of the organism with which we have to deal. It varies in length from one-half the diameter of a red blood corpuscle to the full diameter of the same object. It can be seen only with the very best microscope, and, in dealing with such minute bodies, the difficulties are almost insurmountable.

But the solution of this problem, with many others, has been becoming more and more clear, as work in the department of science called "bacteriology" has progressed in different parts of the world.

From the knowledge gained in laboratories devoted to this specialty, it was not difficult to determine very closely what this particular material, used against tuberculosis, is, even before the announcement by Koch of its composition.

In order to understand what it is, a few words in regard to the development of bacteria in general are necessary.

This "paratoloid" is not a chemical that can be made like other drugs by an ordinary chemist in an ordinary laboratory. Its chemical nature is not yet understood, and the probabilities are that it will be a long time before it is understood. It is not a compound that can be made by ordinary chemical reaction; but it is a result of the vital activity of the bacillus of tuberculosis when grown under artificial conditions in the laboratory.

It is only one of a great class of complex chemical compounds that have come into our knowledge within the last few years, as the study of the life history of bacteria has progressed.

A short account of what occurs in the test tubes used in the bacteriological laboratory for the cultivation of bacteria will serve better than anything else to make plain how these compounds are formed, and what this material in particular is supposed to do when it is introduced in the human body.

When one attempts to grow a pure culture of bacteria, it is done by transferring a minute quantity of the bacteria upon the point of a needle to the interior of a tube which contains a substance in which they will grow, and which will give them nourishment. The plants are sown by plunging the needle through this substance from top to bottom.

This being done, for a few days the bacteria go on developing into what is called a colony, a mass of them becoming large enough to be perfectly distinguishable by the naked eye.

After this development has gone on, however, for a short time, it ceases, and the colony does not enlarge at all, although the vitality of the bacteria contained in the colony is unaltered.

Now this cessation of growth is a constant occurrence, and is not due to the fact of the exhaustion of the nutrient material—of the elements proper for the growth of the bacteria. It is due to the formation of a new series of compounds on the edges of the colony, between it and the remainder of the nutrient medium, which compounds prohibit the further development of the bacteria themselves.

These compounds are made up of the chemical elements left behind in the substance which nourishes the bacteria after they have taken out the other chemical elements necessary for their own development. They are of extremely complex organization, and are exceedingly unstable, so that they cannot yet be studied by the ordinary means at the command of analytical chemistry. But they are of constant occurrence in all nutrient media in which bacteria are grown, and each bacterium,—not each individual, but each variety,—so far as our knowledge yet extends, produces a special form of compound which prohibits its own development, and may have no influence upon other bacteria at all.

Such compounds form parts of a new class, to which has been given the name of ptomaïnes. They are apt, when extracted in a pure state, to be extremely virulent poisons. They certainly do prevent the growth of the bacteria that produce them, and if introduced in sufficiently large quantities into nutrient media, will actually destroy the bacteria themselves.

They are easily destroyed by heat; at any rate, that has been supposed to be the case with all of them until recently; but there are now known to be a few which resist the temperature of boiling water—that is to say, are not destroyed or decomposed by it; and that is the case with this material of Koch's, which resists with more or less persistency the application of heat up to the temperature of boiling water.

Now, bearing in mind what has been said of the formation and action of these compounds in the experimental laboratory, that they prevent the further development of the bacteria about which they are formed, it is not difficult to understand what occurs in the body about tuberculous nodules when this same material is introduced.

It does not cure by destroying the bacilli, but, in a way, by erecting a wall of necrotic tissue about them, so that they spread no further in the body, and are deprived with greater or less certainty of means of nutrition. That is what is supposed to go on when this material is employed.

Certainly its action is as wonderful as anything that has been used in remedial medicine. It is used in extremely small doses; usually, to begin with, not more than one milligram of the original material, and it is not taken by the mouth, but is introduced directly into the lymphatic circulation by injections under the skin.

It produces no effect when taken by the mouth; nor when introduced under the skin even in exceedingly large doses, unless the person be affected with tuberculosis.

The results that have been obtained thus far are most encouraging in cases of external tuberculosis, as well as in the tuberculous affections of the bones and joints. One reason for this is that the results can be more easily seen, and another that the opportunity for getting rid of the diseased material is greater.

So far as the cases of tuberculosis of the lungs are concerned, the results are not yet definitely obtained. Certainly, in many cases, there has been a very marked improvement in the general condition, and equally an improvement in the local disease of the lungs; but sufficient time has not yet gone by to enable us to determine exactly how far these beneficial results will extend.

There is no question, however, that one of the greatest boons has been conferred upon suffering humanity, and that, while its benefits may not extend so far as our desires may at first have led us to hope, we nevertheless have reason to believe, that in the early stages of all forms of tuberculosis, pulmonary as well as others, we already have a means at our command for the prevention of their further development.

The especial lesson that this fact should teach, particularly to the medical profession, is the absolute importance of making an early diagnosis of the existence of the disease; or, as one of my own patients put it the other day, "that no cough or cold should be neglected," and that every case of the kind should be subjected to all the modern means for diagnosis that scientific resource has placed at our command.

NATIONAL NICKNAMES.

Most of the nations of Europe have nicknames, which willingly or unwillingly they have accepted. The appropriateness of some of them is evident, but to explain the origin of some others would be difficult. A writer in *Lippincott's Magazine* has collected some interesting facts on this point.

Englishmen have submitted to the name of John Bull, as suited to the national character. A Scotchman is Sandy; the Irishman derives his name, Paddy, from his national patron saint; while an ancient nursery rhyme records the fact that Taffy was a Welshman. English sailors call the Frenchman, in contempt, Johnny Crapaud; but in France he is Jacques Bonhomme, or as a bourgeois, Monsieur Prudhomme.

Cousin Michel is the name by which the German is known to the Continental nations. Mynheer Closh, an abbreviation of Nicholas, sums up the Hollanders, who are often known simply as the Mynheers; while the Switzer rejoices in the name of Colin Tampon.

Digitized by Google

Don Whiskerandos is almost a national nickname for the Spaniards, dating from Elizabethan times. Italians are known as Lazzaroni, and Danes as Danskers.

PSALM OF THE BROOK.

The brooklet answers to the calling river,
And singing slips away through arches dim;
Its heart runs over, and it must deliver
Unto the King of Kings its liquid hymn.

Religious Telescope. —*Alonzo Hilton Davis.*

For the Companion.

THE STORY OF MY BOYHOOD.

By Jules Verne.

Reminiscences of childhood and youth? You are well advised in asking them of men of my years. The things seen or done by us in childhood are more deeply impressed upon our memory than are those of maturer age.

When one has passed beyond the number of years usually allotted to man, the mind takes pleasure in reverting to early days. The images it evokes are of those that never fade. Like indelible sun-pictures, time only serves to bring them out into clearer relief.

Thus is justified that deep saying of a French writer, "Memory is far-sighted." It lengthens as it grows older, like a spy-glass when the tubes are drawn out, and discovers the most distant features of the past.

But are such reminiscences likely to be interesting? I cannot say. At any rate, perhaps the readers of *The Companion* may be curious to learn how the calling of a writer, which I still follow, although more than sixty years of age, first suggested itself to me.

So, at the request of the editor of that paper, I pull out the tubes of my memory, turn round and look back.

In the first place, have I always had a taste for stories wherein the imagination gives itself free scope? Yes, doubtless; and my family have always held arts and letters in honor; whence I conclude that inheritance accounts in a large measure for my instincts.

Then again, there is this further reason that I was born at Nantes, where I spent nearly the whole of my childhood. The son of a father who was half a Parisian, and of a mother who was quite a Bretonne, I lived in the maritime bustle of a big commercial city which is the starting-point and goal of many long voyages.

I still see the river Loire, whose numerous arms are connected by a league of bridges, its quays encumbered by freight in the shadow of huge elms, along which did not then run the double railway track and the tramway lines.

Ships two or three rows deep line the wharves. Others sail up or down the stream. No steamboats were to be seen in those days, or, at least, very few of them. But there were many of those sailing-vessels, the type of which Americans were shrewd enough to retain and improve into clippers and three-masted schooners.

In those days the only kind of sailing-vessels we had were the lubberly merchantmen. What souvenirs they recall! In fancy I climbed their shrouds, triced their maintops, and clung to their sky-rakers. How I longed to cross the swaying plank that connected them with the quay, and set foot on their deck!

But, childishly timid as I was, I did not dare. Timid? Aye, I was indeed; and yet I had already seen one revolution, the overthrow of a régime and a new royalty founded, although I was only two years old; and I still hear the rattle of the musketry of 1830 in the streets of the town, where, as in Paris, the people fought against the royal troops.

One day, however, I did venture to scale the netting of a three-master, while its watchman caroused in a neighboring wine shop.

I was soon on deck. My hand caught hold of a halyard that slid in its block. What joy was mine! The hatches were open, and I leaned over their sides. The strong odors that came from the hold went to my head; odors in which the pungent smell of tar mixes with the perfume of spices.

I rose, went back towards the poop and entered. The interior was filled with those marine scents which give to it an atmosphere like that of the ocean.

Yonder appear the cabins with their creaking partitions, where I should have wished to live for months, and those bunks, so hard and narrow, wherein I should have liked to sleep whole nights. Then there was the room occupied by the captain, a much more important personage in my opinion than any King's minister or lieutenant-general of the kingdom.

I came out, mounted the poop, and there actually made so bold as to turn the wheel a quarter round! I fancied the vessel was about to leave its moorings; that its hawsers had been cast off, that its masts were crowded with sail, and that I, an eight-year-old helmsman, was about to steer it out to sea!

The sea! Well, neither my brother, who became a sailor a few years later, nor I had yet seen it.

In summer all our family kept within the bounds of a large country place not far from the banks of the Loire, in the midst of vineyards, meadows and marshes.

It was the residence of an old uncle, formerly a ship-owner. He had been to Caracas and to Porto Bello. We used to call him "Uncle Prudent," and it was in remembrance of him that I gave the name to one of my personages in "Robur the Conqueror." But Caracas was in America—a country which fascinated me already.

Not being able to sail the sea, my brother and I drifted about the open fields and threaded the woods together. Not having any masts to climb, we spent whole days at the tops of the trees. He was the greater fellow who made his nest the higher in them. We chatted, read, or projected voyages, while the branches swayed by the breeze, gave us the illusion of the pitching and rolling on board ship. Ah, those delicious leisure hours!

Votre tout dévoué
Jules Verne

At that time people travelled little or not at all. Oil street-lamps, breeches, the National Guard and the flint and tinder-box were then quite the fashion. Yes, I have witnessed the genesis of phosphoric matches, detached collars, cuffs, letter paper, postage stamps, pantaloons, the overcoat, the opera hat, women's boots, the metric system, the steamboats of the Loire, which are said to be "inexplosive" because they blow up a little less often than the rest, the 'buses, railways, tramways, gas, electricity, the telegraph, the telephone, and the phonograph.

I belong to that generation which is comprised between those two geniuses, Stephenson and Edison. And I now witness those astonishing discoveries, at the head of which marches America, with its movable hotels, its sandwich-making machines, its movable pavement, its newspapers printed with chocolate ink, upon stiff, thin sheets of pastry, which are read first and eaten afterward!

I was not ten years old when my father bought a small place at the extremity of the town, at Chantenay—a pretty name that! It was situated on a hill which overlooks the right bank of the Loire. From my little room I could see the river winding over an extent of two or three leagues, between the meadows which it flooded when the waters overflowed in winter time.

Ah, the Loire! If it cannot be compared with the Hudson, the Mississippi, or the St. Lawrence, it is none the less one of the finest rivers of France. It would no doubt be looked upon as a small stream in America; but then, America is not simply a "country,"—it is a whole continent.

Nevertheless, at sight of so many passing ships, I felt an eager leaning toward the sea. I was well versed in the seaman's language, and understood naval manœuvres sufficiently to follow them out in the maritime novels of Fenimore Cooper, whom I never tired of reading, and still read with admiration.

Looking through a little telescope, I saw the ships, ready to tack about, hoist their jibs and gather in their sails, shifting first abaft, then at the bows.

At the farther end of the port there was a man who kept boats to let, at twenty cents for the day. This was a heavy sum for our purses. It was also imprudent to embark in the man's boats, for they leaked sadly.

The first one we took had but a single mast, but the second had two, and the third had three, like the coasting luggers and fishing-smacks. We went out with the ebb-tide, luffing against the west wind.

What a schooling was ours! The blunders we made in steering and in working the sails, the sheets let out at the wrong moment, and the shame of tacking with a back wind, when the waves ran high in the broad basin of the Loire, in front of our Chantenay!

Generally we went out with the ebb and came back with the flow, a few hours later. And, as our clumsy hired craft sailed heavily along between the banks, what a look of envy we cast on the pretty pleasure yachts that went lightly scudding over the bosom of the river!

One day I happened to be alone in a sorry yawl, which had no keel. I was some two leagues beyond Chantenay, when one of the planks was stove in, and the water came into the boat. There was no stopping the hole. The yawl went down head-foremost, and I had just time to save myself by swimming to an islet all covered with a thick growth of reeds, the tufted tops of which were swayed by the wind.

Now, of all the books I had read in my childhood, the one I liked best was "The Swiss Family Robinson;" I preferred it to "Robinson Crusoe." I know that Daniel Defoe's work is broader in its philosophical scope. It is man given up to himself alone, who one day discovers a footprint on the sand. But the work of Wyss, in rich facts and incidents, is perhaps more interesting to a youthful mind.

Meanwhile, I was enacting, on my little island, not the part of Wyss's hero, but that of Defoe's. I was already meditating the construction of a log-hut, the manufacture of a fishing-line with a reed, and of fish-hooks with thorns, and of obtaining fire as the savages do, by rubbing one dry stick against another.

Signals? I should decline to make any, for they would be answered too soon, and I should be saved quicker than I wished to be.

The first thing was to appease my hunger. But how? My provisions had gone down with the wreck. Go hunting birds? I had neither dog nor gun. Well, what about shell-fish? There were none.

Now, at last, I was made acquainted with all the agony of being shipwrecked on a desert island, and with horrors of privation such as the Selkirks and other personages mentioned in the "Noted Shipwrecks" had experienced—men who were not imaginary Robinsons! My stomach cried with hunger.

The thing lasted only a few hours, for, as soon as it was low tide, I had merely to wade ankle-deep through the water to reach what I called the mainland, namely, the right bank of the Loire.

I quietly came back home, where I had to put up with the family dinner instead of the Crusoe repast I had dreamed of—raw shell-fish, a slice of peccary, and bread made from the flour of manioc!

Such was this lively bit of navigation, with its head-winds, its foundering and disabled vessel—everything in fact that a shipwrecked mariner of my age could desire.

I have sometimes heard the reproach that my books excite young boys to quit their homes for adventurous travel. This, I am sure, has never been the case. But if boys should be brought to launch out into such enterprises, let them take example from the heroes of my "Extraordinary Voyages," and they are sure to come safe into harbor again.

At twelve years of age I had not yet set eyes on the sea. Except in thought, I had not hitherto set foot on the many sardine-boats, fishing-smacks, brigs, schooners, three-masters, or even steamboats—they were then styled *pyroscaphes*—which sailed toward the mouth of the Loire.

One day, however, my brother and I got permission to take passage on board Pyroscaphe No. Two. What joy was ours! It was enough to make us lose our wits.

Soon we were on our way. We passed Indret, the huge State establishment, all feathered in dark wreaths of smoke. We left behind the landing-places on either bank,—Coueron, Le Pellerin, Paimbœuf. Our pyroscaphe crossed obliquely the broad estuary of the river.

We reached St. Nazaire, with its incipient pier, its old church and slate-covered, slanting steeple, and the few houses or ramshackle tenements, which at that time made up the village that has so rapidly increased into a large town.

To rush off the boat and dash down the sea-weed-coated rocks, in order to take up some of the sea-water in the hollow of our hands and convey it to our lips, was for my brother and myself our first impulse.

"But it isn't salty!" said I, turning pale.

"Not a bit!" responded my brother.

"We have been hoaxed!" I exclaimed, in a tone which betrayed the liveliest disappointment.

Noodles that we were! It was low tide, and we had simply scooped up from the hollow of a rock some of the water of the Loire.

As the tide came in, however, we found it briny beyond our best hopes.

At last I had set eyes on the sea, or at least on the vast bay which opens on the ocean between the extreme points of the river.

I have since scudded over the Bay of Biscay, the Baltic, the North Sea and the Mediterranean.

With a smaller boat first, then with a sloop-yacht, and with a steam-yacht afterwards, I have been able to make some fine coasting pleasure-trips. I have even crossed the Atlantic on board the *Great Eastern*, and set foot on American soil, where—I am ashamed to have to confess it—I stayed only eight days.

What could I do? I had a ticket to go and come which was only good for a week!

After all, I saw New York, stopped at the Fifth Avenue Hotel, crossed East River before Brooklyn Bridge was built, sailed up the Hudson as far as Albany, visited Buffalo and Lake Erie, gazed on the Falls of Niagara from the top of the Terrapin Tower, while a lunar rainbow could be seen through the vapors of the mighty cataract, and finally, on the other side of the Suspension Bridge, sat down on the Canadian shore.

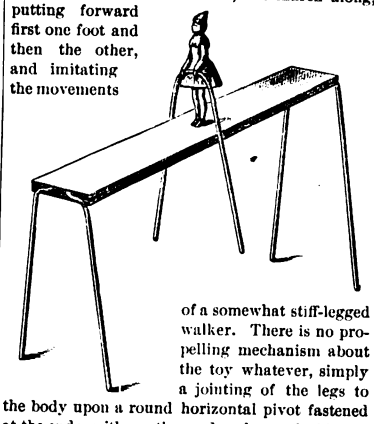
After which, I started back home. And one of my deepest regrets is to think that I shall never again see America—a country which I love, and which every Frenchman may love as a sister of France.

But these are no longer the reminiscences of childhood and youth; they are those of maturer years. My young readers are now made acquainted with the instincts and circumstances that led me to write a series of geographical novels.

I have made several voyages in the west, north and south of Europe—voyages, of course, much less extraordinary than those described in my stories, and I have now withdrawn into the provinces to terminate my task. That task is to paint the whole earth, the entire world, in novel-form, by imagining adventures peculiar to each people, and by creating personages specially belonging to the regions in which they act.

But the world is very big, and life very short. To leave behind a complete work, one should live a hundred years.

Well, I shall try to be a centenarian, like M. Chevreul. But, between you and me, it is very difficult.



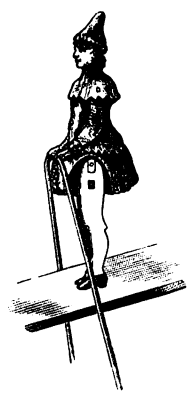
For the Companion.

THE PERPETUAL WALKER.

Quite often the ingenious makers of toys hit upon some contrivance intended to amuse children which possesses genuine interest for those who are interested in mechanical combinations. Such a toy has lately been invented in France, and is described by *La Nature*.

It consists of a puppet or small human figure in metal which holds in its hands, as a sort of balancing-pole, a metal rod bent in the form of an inverted V, or rather of a hair-pin with the ends somewhat opened apart.

By reason of the bringing of the centre of gravity *below* the figure by this rod or balancing-pole, the puppet is kept in an upright position on any support which is narrow enough to be spanned by the two arms of the pole. Placed on a raised board or strip, set at a slight inclination, this puppet, which the French call *le marcheur infatigable* or tireless walker, will march along, putting forward first one foot and then the other, and imitating the movements



of a somewhat stiff-legged walker. There is no propelling mechanism about the toy whatever, simply a jointing of the legs to the body upon a round horizontal pivot fastened at the ends, with another rod underneath this one and passing through two square holes made in the legs, as shown in the illustration. This second rod prevents the walker from taking too long steps.

The key to this toy's pedestrian talent is a simple mechanical principle. The walker rests the weight of his body upon one of his legs while he is putting the other forward. The axis of his body does not rest upon a vertical plane, and in

Digitized by Google

order to cause him to move forward on the inclined support, it is necessary to give him, in starting him, a very slight shake, sidewise. This shake, increased by the oscillation of the balancing-pole, causes the walker to lean first to the right side, and then to the left.

Suppose that he is, at a given moment, inclined to the right. All the weight of the body, that is to say, both of the figure and the balancing-pole, rests upon the right leg; whereupon the left foot, not being supported upon the board, is forced forward by the weight of the object, tending to take a vertical position.

At this moment the body oscillates the other way, and the figure leans to the left, bringing the left foot to the board. The right foot now being free, it in turn clears the board and takes a step forward.

This movement will continue as long as the board holds out at a sufficient incline, which, by the way, need be only slight.

There is no reason why the walker might not travel around the world, if the right sort of path were provided for him.

For the Companion.

THE ROGERS' BRONZE DOORS.

In the city of Rome, in the year 1858, an American sculptor, by name Randolph Rogers, designed and modelled the famous bronze doors placed in the main central entrance to the Capitol, which is a strong point of interest to all intelligent sight-seers in Washington.

Few finer or more enduring examples of the sculptor's art are to be found in any country, delineating as it does the life of the great discoverer to whom we, as a people, owe so much.

The doors are seventeen feet high, nine feet wide, and weigh twenty thousand pounds. They were designed when the sculptor was about thirty-three years of age, and after the execution of some of his most famous works. For these models he was paid eight thousand dollars, and the casting of the metal in 1861 by F. Von Müller, at Munich, cost seventeen thousand dollars.

The door in its entirety, as represented in the illustration, pleases the eye at once by the harmony of its dimensions, and the beauty and skill with which the panels are worked out. Of a rich golden brown, it stands sombre and unique, a silent historian of the most striking events in the life of one of the greatest explorers the world has ever known.

The casing, which is also of bronze, projects forward from the leaves of the door, and is filled with designs emblematic of conquestand navigation. The statues at each corner represent the four quarters of the world, Europe, Asia, Africa and America.

Including the semicircular picture at the top, there are nine panels in all, representing in *alto relievo* the most striking events in the career of the great navigator, his aspirations, perils, successes and disappointments, all carefully and lovingly delineated by the hand of genius.

Beginning on the lower left-hand side of the doors they interest the spectator at once by their life-like accuracy and power of expression. The first one is entitled, "Columbus Undergoing an Examination before the Council of Salamanca."

This panel represents Columbus showing his plans and charts, which confidence was meanly taken advantage of by his judges.

The figure in the left niche is Perez, a contemporary of the discoverer. Henry VII. of England stands on the right. The projecting heads in each panel are those of historians of the time of Columbus, with the exception of two. Those at the foot of the lower panels are presumably native Indians of America.

"The Departure of Columbus from the Convent of La Rabida" is the subject of the next picture above.

Wearied with fruitless exertions, and disgusted with the duplicity of crowned heads, Columbus is said to have left Lisbon in 1484. In the meantime, his wife had died, leaving one son, Diego.

Spain was now the goal of his hopes. He was seemingly friendless, and as he begged on his way it is to be supposed that he had no money. He had then reached Andalusia, dispirited, though not defeated, and there at the gates of an old convent in the town of Palos, he stopped to beg bread and water for his little son.

Antonio de Marchena was the superior of the convent. The grandeur of the man who had tarried by the wayside made itself apparent during a conversation held with him, and the ecclesiastic entered at once into correspondence with royalty, and used all his influence with the King and Queen in his behalf. In this panel Columbus appears to be leaving the old convent in good spirits, buoyed up with the hope of ultimate success.

The statue on the left is that of Cortez, conqueror of Mexico; on the right, lady Beatrice De Bobadilla in her court robes. The projecting head at the top is that of our own Washington Irving. Bancroft is also represented, elsewhere.

At last, seven years after his appeal to the good friars of La Rabida Convent, Columbus obtained an audience with Queen Isabella, which is pictured on the next panel.

In the niche on the left of this bronze picture is the navigator Alonzo De Ojeda. On the right stands Queen Isabella with the sceptre of royalty in her hand.

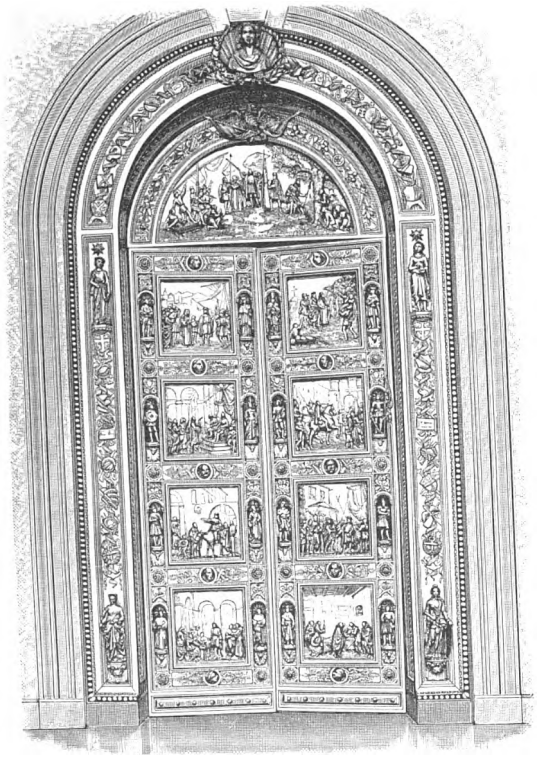
The Queen, who is said to have been very lovely, with fair hair and clear blue eyes, received him graciously, listened, was convinced by his eloquence, and standing up implored the blessing of Heaven upon him.

The "Starting of Columbus from Palos, on his First Voyage," is the next scene. Taking leave of his son, whom the good brotherhood of La Rabida pledged themselves to care for and educate, Columbus is about to embark on his first great voyage.

Vespucci stands at the left of this picture. He claimed to have been one of the discoverers of America, but history disputes the assertion. At the right is Gonzales De Mendoza, Archbishop of Toledo, at whose table Columbus solved the problem of standing an egg on one end, by crushing the shell.

Then comes the "First Landing of the Spanish at San Salvador."

This is the transom panel, and occupies the semicircular sweep over the whole door.



After innumerable perils, and misgivings even in his own mind, Columbus finally sighted land which proved to be one of the Bahama Islands, on which he joyfully landed, and in pursuance of his own intentions and the promise of his sovereign King and Queen, he planted the cross and proclaimed his new conquest San Salvador.

Over the picture in this panel the grand, calm face of Columbus looks out, yet even in its casing of bronze wears an expression of profound sadness. Beneath is the eagle with outspread wings, and still lower on either side are two female heads.

We come now to the "First Encounter of the Discoverers with the Indians."

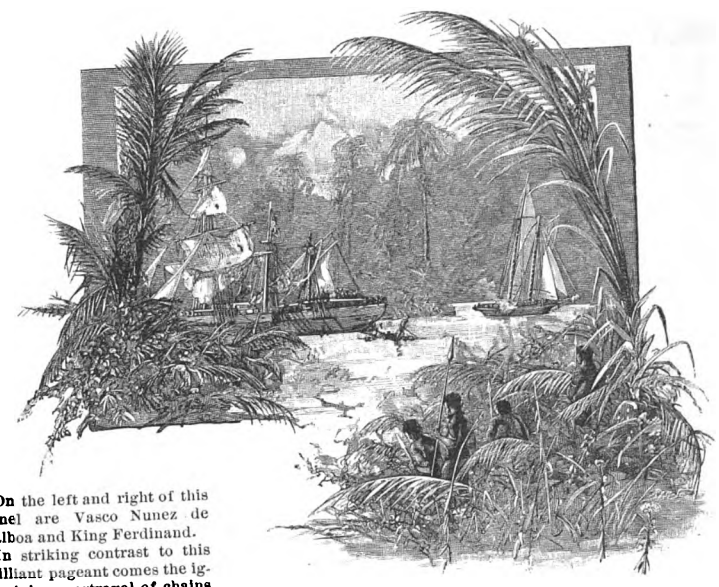
At first the natives hid themselves, looking with distrust, as well they might, at these powerful white men, and the sacred symbol they planted with all the imposing ceremony of worship.

Columbus himself appeared in a suit of scarlet and gold, and his followers had arrayed themselves with like splendor.

The sailors at once set out on an exploring expedition. The frightened natives ran before them; but by dint of brute force, and not unlikely by recourse to firearms, they succeeded in capturing a young Indian girl, and brought her in triumph to the men in command, expecting to receive their thanks for this cowardly deed.

Instead of that, Columbus sternly rebuked the men, and ordered that the captive be set at liberty at once, which was accordingly done.

This is one of the most forcible pictures, and tells the story at once. The cross shines on the heights in the distance, and the grouping is excellent.



The statue in the niche at the left of this panel is that of Francisco Pizarro, conqueror of Peru. Alexander VI. occupies the niche at the right.

The next panel shows the "Triumphant Entry into Barcelona," and is considered the finest in the portrayal of the story.

The whole scene wears a triumphant aspect. Columbus, richly dressed, is mounted on a spirited steed. Everything that can inspire a man lends interest to the procession. He is a conqueror who has not bought his glory by war and carnage.

Following him come the dusky natives who have been willing to enter his train, brilliant with plumes and jewels and gold from that far new country. Preceding him go the courtiers and priests with banners, music and incense. His crews march in the rear, laden with palm-branches, all kinds of lovely birds, and tropical wonders.

Against the blue sky floats the white banner of the Admiral, bearing the words, "For Castile and for Leon Columbus has discovered a New World."

On the left and right of this panel are Vasco Nunez de Balboa and King Ferdinand.

In striking contrast to this brilliant pageant comes the ignominious portrayal of chains and captivity: "Columbus in Chains."

His enemies had turned the King against him, and Columbus was superseded as Governor by an officer in the royal service named Bobadilla, who had the audacity to send the great discoverer home in chains. His guards, men of power and standing, would have removed his fetters.

"No," said Columbus, proudly, "their Majesties commanded me by letter to submit to whatever Bobadilla should order in their name. I will wear these fetters until they order them to be taken off, and I will preserve them afterward as relics and memorials of the reward of my services."

He kept his word, and the chains were buried with him.

The last panel, "The Death of Columbus," has for its left and right support the brother of Columbus and Charles VIII. of France.

Pinzon, a rich merchant and mariner, who aided Columbus with service and money, stands on the right. On the left is John II. of Portugal.

It is an affecting picture, and calculated to teach an enduring lesson of the world's ingratitude. The old priest holds up the cross, and implores him to turn his dying eyes upon it. A friend or two weep at his bedside.

Some good woman, of kin to him, it may be, holds the head that has thought so wisely upon her bosom. Almost a martyr at the time of his death, now he is held by a grateful people in equal respect with our own Washington.

The one discovered a continent on which were planted the germs of a mighty nation. The other was the father and saviour of that nation, which owes its existence to the life, faith and suffering of Christopher Columbus.

MARY A. DENISON.

For the Companion.

BETWEEN TWO ENEMIES.

During the second war with England, an American privateer cruised along the western coast of Africa, touching at different points to take in water or provisions, or chasing English vessels into rivers, bays and inlets. At that time American privateers were to be found in nearly every quarter of the globe. The American merchants had large interests at stake on the ocean, and they fitted out many fast-sailing privateers.

When one of these swift craft captured an English brig off Cape St. Vincent, the captain of the British ship exclaimed, "What? a Yankee privateer in this part of the world!"

"Ay, ay, sir, and they'll soon be found in the Thames," politely replied the Yankee captain. To this rejoinder the Englishman could only mutter aloud, "Extro'nary, extro'nary!"

The *Yankee*, a small privateer, in an eventful cruise of one hundred and fifty days had explored more of the western coast of Africa than any other American vessel. She had cruised all through the South Atlantic, threatening the British commerce with Cape Colony, and then, following the shore, she sailed through the Gulf of Guinea, passed the Cape Verde Islands, the Canaries and Azores, and finally recrossed the ocean and entered Newport harbor.

During this eventful trip in little explored waters, she had captured eight prizes, numerous prisoners, sixty-two cannon, and about three hundred thousand dollars' worth of property.

She had also accomplished a great deal in exploring a coast that was as yet but poorly mapped out for mariners, and in bringing back to this country accounts of a land that is now exciting the interest and wonder of the world. Some strange specimens of plants and vines were also brought to America by the crew of the *Yankee*.

One intensely hot day the privateer was moving slowly before a light breeze, not far from the mouth of the Kongo river. The decks were scorching to the touch, and the awnings stretched across seemed to have no effect in intercepting the heat of the sun's rays.

The *Yankee* had not seen a sail of any kind for several days, and the monotony of the voyage was becoming unbearable.

About this time an English ship hove in sight, and a general stir among the crew denoted the interest they took in the discovery. Every sail of the privateer was set, and a chase began at once.

The Englishman soon discovered that he was pursued, and quickened his speed. But the craft was an old merchantman, rigged with clumsy and ill-fitting sails, and heavily laden with ivory, rare woods, shells and hides.

A Fight on a River.

Her progress was slow compared with that of the free and buoyant craft that was pursuing her.

At first the English ship headed seaward, with the evident intention of attempting an escape on the wide seas. But the *Yankee* overhauled her so rapidly that this plan was abandoned.

Suddenly she hauled around, and changed her course, heading directly for the coast, a few miles ahead.

The captain of the *Yankee* was not acquainted with the rivers, bays and inlets along the shore. Very likely the captain of the English merchantman knew the place well. It was good policy to capture her before she could enter the mouth of some river.

The chase became exciting. The sails were crowded on the *Yankee*, while the captain paced her deck excitedly. The crew stood at their posts. Every effort was made to increase the speed of the vessel; but it soon became apparent that the merchantman had a lead sufficient to enable her to reach the shore first.

"We're creeping along like a snail," said the captain of the *Yankee*, looking critically at the rigging.

"We're doing the best we can, sir," replied the first mate. "We have every sail set, and everything in order. It is the wind, sir, that is to blame."

The captain walked to the bow of his vessel and scanned the escaping merchantman. She was within half a mile of a densely wooded promontory, which seemed to jut far out into the water.

The English vessel was losing ground, but she was also approaching the wooded promontory.

"Is there a river behind that point of land?" asked the captain.

No one knew, for no one had sailed that coast before.

"Well, if it isn't too late we may cripple her. Get the forward guns ready, and aim high. Don't injure the hull, for I fancy she has a valuable cargo. But give it to the rigging hot and heavy."

Two long-range cannon were pointed over the bow of the privateer. In a minute or two they opened fire.

The top of the Englishman's mizzen-mast came crashing down, carrying with it the heavy upper sails. Then the forward mast received two heavy shots, which tore it from its position, and carried it against the stout mizzen-mast, where it hung swinging in the breeze.

The sails were tattered and torn; but the merchantman continued on her course, the English flag flying from the mast's stump.

The captain of the *Yankee* signalled for a surrender, but no answer was returned.

The firing was renewed, the shots this time being aimed at the big black hull, which loomed up as a conspicuous mark.

"Sink her, sink her! Anything but let her escape," shouted the captain, aiming one of the guns himself.

But the merchantman continued on her course, and a few minutes later she rounded the head of the promontory and disappeared from sight.

Although crippled and badly injured, she was still able to stem the current and direct her course up stream.

The firing had to cease, but the anger of the *Yankee's* captain increased. His prize was out of sight, but it had not yet escaped.

"I'll chase them across the whole continent," he said; "but I'll have them!"

Presently the *Yankee* rounded the same promontory. A black, muddy river discharged itself into the ocean on the opposite side of the headland, all along the banks of which the clustering trees and dark, coiling, spiky undergrowth formed such an impenetrable mass that it did not seem possible for man to enter it.

The river had several small mouths; it was like a series of small lakes or ponds, separated here and there by dense lines of trees, bushes and

Digitized by Google

grass. It was a place in which a vessel might readily escape an enemy, for she could run up one branch of the stream and be out of sight while her pursuer was searching near by.

When the *Yankee* rounded the headland no signs of the merchantman could be discovered. The captain studied the problem before him, and lost some time in coming to a conclusion. If he sailed up the river the merchantman might lie concealed near the mouth, ready to escape to the ocean when the coast was clear.

On the other hand, the prize might go straight up the river, and find some hiding-place under the dense, overhanging banks, where discovery would be impossible. The captain weighed the chances well before attempting anything definite. He cruised back and forth near the mouth of the stream, keeping the ocean well in sight.

"We must leave a watch behind here to signal if she comes back while we are going up the river," the captain said to his first mate. "We can leave several men on the headland, with a small howitzer to warn us. They can ——"

The captain's words were cut short by a peculiar sound. From out of the woods a series of savage yells blended with the sharp reports of fire-arms in an indistinct roar.

The chattering of the monkeys and the cries of birds were suddenly hushed by these sounds. Every sailor on board the *Yankee* looked in astonishment toward the wall of trees.

The shouts and yells continued, but the firing gradually dwindled down to a few stray shots.

"Follow up the sounds," shouted the captain of the *Yankee*. "Let every man prepare for action. Keep the guns loaded and in position."

The prow of the privateer cut through the muddy waters of the river gallantly. A stiff breeze had sprung up from the ocean, and the heavy canvas was filled so that very good speed was possible.

As the boat proceeded the banks of the river closed in upon it. The river wound and twisted about so that the view ahead and behind was entirely cut off. On both sides was a dense African forest.

It was not difficult to fix the direction from whence the sounds came. As the *Yankee* proceeded they became louder and fiercer.

Suddenly, in turning a curve in the stream, the cause of the tumult became apparent.

The English merchantman, in her endeavor to escape, had tried to conceal herself in a deep creek that ran into the river. The interlacing boughs overhead, and the twining mass of leaves and vines on each side, afforded excellent opportunity for this; but unfortunately another circumstance had not been well considered.

A large band of African savages had been concealed behind the leafy wall. They had followed the ship up to her hiding-place, and as she approached the land, they had rushed out of the bushes in a body, boarded the ship, and attacked the small crew.

The Englishmen resisted the onslaught of the savages bravely, but on account of the suddenness of the attack and the numbers of the savages, they had been driven to the stern of their vessel, where they were unable to use their two cannon.

The battle was sadly one-sided, and the crew were anticipating horrible torture from their savage captors, when the *Yankee* suddenly hove in sight.

Although the vessel was an enemy, the hard-pressed crew of Englishmen gave a cheer, and shouted for help. The savages were swarming all over the prize, but they hesitated a moment when the reinforcement appeared.

Then with one accord the blacks hurled a shower of arrows and spears at the *Yankee*.

The two heavy cannon upon the forward deck of the privateer were aimed at the crowd of savages, and when they were discharged dozens of blacks were swept into the river.

Again and again the guns were fired, carrying death and destruction with them.

The merchantman was finally cleared of most of the savages, and several sailors sprang from the deck of the *Yankee* and fastened a line to her stern.

The vessel was gradually hauled out into midstream, and the few savages remaining on board, becoming frightened, plunged into the water. Meanwhile, hundreds of other savages had collected on both banks, and showers of arrows and spears whizzed over the decks of the two vessels.

But the prize was secured, and the Englishmen saved from a horrible death at the hands of a race whom they believed to be cannibals.

The work of getting out of the river was a long, tedious and dangerous one. The savages, chagrined at their repulse, appeared determined to redeem their honor. They followed the two vessels, and at every turn in the river made a desperate stand; but the heavy cannon of the *Yankee* put them to flight.

Two or three large boats, propelled by oars and poles, and loaded down with black warriors, put out into the stream, and attempted to board the privateer; but again the cannon dispersed them.

Not until the mouth of the river was reached did the crews of the two vessels feel that all danger had passed. Then the wounded and dying were cared for. All the Englishmen were transferred to the deck of the *Yankee*, where they received medical aid.

The captain of the merchantman was only too ready to surrender to the *Yankee's* captain, and in so doing he said that he considered him a friend rather than an enemy. The common danger from the black savages had made the two enemies friends. The cargo of the merchantman was either transferred to the hold of the *Yankee* or thrown overboard, and the ill-fated vessel then scuttled.

GEORGE ETHELBERT WALSH.

For the Companion.

AN EXCITING EXPERIENCE.

Several years ago I was employed by a lumber company on one of the streams that flow from the north into the St. Lawrence, first as assistant surveyor, and afterward, when the logs had been floated out to the mouth of the stream, in helping to construct the immense raft train, preparatory to its being "tugged" down the river.

We had a million and a half feet of lumber, which was put into several small rafts, each containing one hundred thousand feet and upward, in order that it might the more readily pass through the rapids.

On each end of each raft, fore and aft, were high row-locks with immense oars secured to them to prevent their being lost overboard when shooting the rapids. A crew of sturdy river-men manipulated the oars when needful. There were upon each raft, in addition to these men, a cook, a pilot, and one or two spare men for cases of emergency.

I had never gone down the St. Lawrence on a timber-raft. I was curious to experience the excitement and dangerous pleasure of shooting the rapids, and engaged to go as a spare man.

The first four days after we started were exceedingly monotonous. We were towed smoothly along. Three times a day the cook served out to us rude meals from his ever-seething pot, hung over a fire built on the raft. We ate hungrily, sitting in various attitudes about the raft.

Between meals we lounged about, at times lying flat on the logs in dreamy content.

At dawn on the fourth morning, we heard a far-off murmur of waters, which soon deepened to a sullen roar. Every man was at once upon the alert.

The pilot gave orders; the tug cast off, and left us to our own pluck and skill. The cables and chains were drawn in and secured with a great rattling and shouting, and each raft was left to battle with the waters for itself.

The men were at the oars with strong hand and keen eyes. On we went; the water began to swirl and growl around us. Swifter, faster we darted on, until, on the brink of the first rapid, the men suddenly dropped their oars to escape the blinding spray that dashed over the forward part of the raft.

We were fairly into the midst of the boiling, whirling Coteau Rapid; but we were soon out of it. This was nothing to what would follow, the pilot told us.

We had scarcely recovered our breath, in the stretch of comparatively calm water at the foot of the Coteau, when the roar of Cedar Rapids greeted us, and we prepared to run its hazardous length.

Bounding forward, we were tossed hither and thither in the mad flood, with every joint and timber in the raft creaking and shrieking.

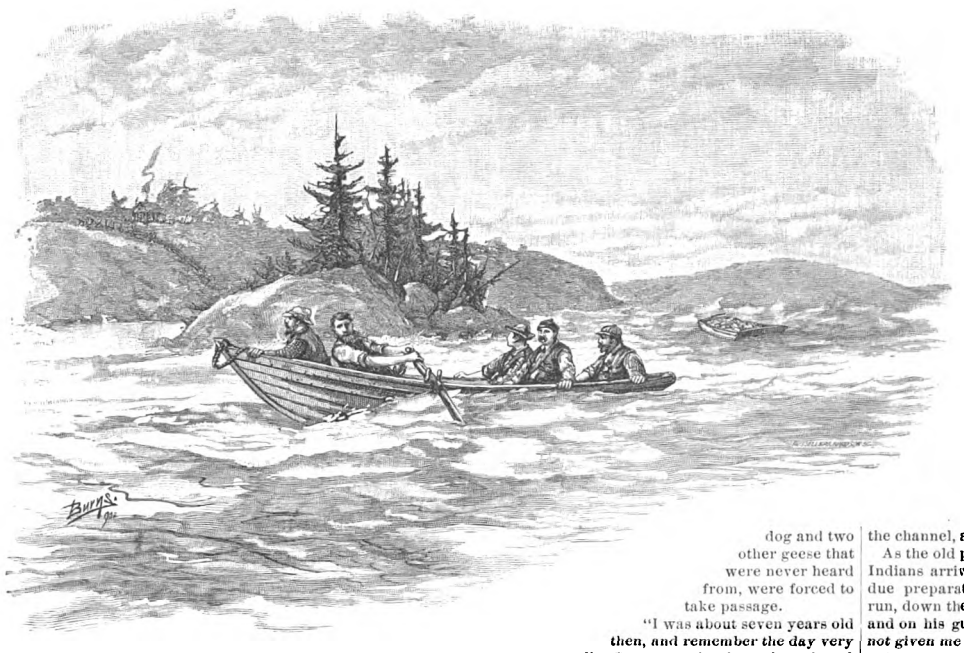
As each "shoot" was safely taken, we drew a long breath, our tense muscles relaxed, and I, at least, was quite limp.

Another rapid lay just beyond us, "Old Split-Rock," it is called, because, in the midst of the boiling current, here contracted to a narrow channel, a huge jagged rock disputes the river-man's advance, threatening to wreck and crush his craft.

The rafts rushed on, bounding and rocking seemingly to destruction. Every man grasped the thing nearest at hand, and held his breath while the raft lurched beneath him, careened, bounded almost out of the water, and then dashed on as if to its doom. It struck, indeed, and was swung half-way round by the shock, but rebounded, and raked the whole length of its side against the jagged rock, splintering the great pines from stem to stern. But good, honest work was put into that raft. It held together, as the mad current swept us past and out of another danger. Half the crew had been thrown flat on the raft by the sudden shock, and I looked them over anxiously, expecting to find some man missing.

The raft-master who descends the next rapid, the famous Lachine, adds to his already full corps of men a cautious and vigilant Indian pilot.

Our rafts were not expected so soon, and it took time to find a sufficient number of red helmsmen. While we were anchored there, waiting for their arrival, we lay down in the sun and tried to recover our nerve.



The regular pilot—an old, weather-beaten woodsman, who had worked on the rivers and canals many years of his life—took matters serenely.

"That last run was about the closest shave I ever had at that place, and no mistake!" he muttered, looking back to where the spray and foam of Old Split-Rock glittered in the strong sunlight. "A little more, and we'd have gone to Guinea. I reckon, though, that we didn't fare much worse than some of the rest of them," he added, as the sounds of repairing came from the other rafts, and many detached logs floated past.

"I never come down these rapids," the pilot went on, "but I think of the scowful of men that were rescued from going over Niagara some years ago."

"A raft couldn't go over Niagara with a chance of a whole log being found afterward, to say nothing of the fate of the crew," I suggested.

"That's very true what you say, and, before that time I speak of, nothing had ever gone over Niagara alive, I believe, but a pair of geese on the old schooner *Michigan*, that was sent over the Falls a good many years ago for an experiment. It was a rather cruel one, too, for on that voyage three bears, two foxes, a buffalo, a raccoon, a cat and a dog and two other geese that were never heard from, were forced to take passage.

Saved from the Falls.

"I was about seven years old then, and remember the day very well. Great crowds of people gathered to see the experiment.

"An old Lake captain towed the schooner as near the first rapid as he dared, and then cut her off to her fate. Just as she was about entering the current, the poor dumb passengers began to suspect danger. Two of the bears instantly plunged overboard and swam ashore, in spite of the current. The other bear was seen climbing the mast as the schooner plunged into the rapids; but at the same moment the masts went by the board, and that was the last of that bear.

"The other animals ran about in great distress. The schooner now whirled around in the terrible commotion, and went stern on into the third rapid. The next moment she shot like a flash over Horse-shoe.

"Nothing survived but two geese, and every timber in the old craft was smashed to atoms.

"But the incident I first spoke of happened when I worked up the Lakes. I was born near Chippewa, and I've worked about there a great deal. At the time some business was carried on between Chippewa and the towns above, and all kinds of craft plied on the river.

"This day a large, clumsy old scow loaded heavily was on its way up to Buffalo. It had two horses in the tow, and four men to manage her. Where the natural channel of Chippewa Creek makes into the Niagara, there was a big bend; and to shorten the distance a cut was made on the upper side through which all the boats and rafts ply. It took them farther away from the swift current that even here feels the terrible power of the Falls.

"Well, as the scow's bow was going around the bend out into the Niagara, it ran into a timber-raft that was on the point of turning into the cut. The raft was hugging the shore closely, and being too unwieldy to change its course, it forced the scow to the outside.

"The horses on the tow were whipped to keep the line taut and above contact, but it became entangled on some snag in the raft and parted, and the scow was adrift with nothing to stop her.

"Horror-stricken, the crew shouted to the raftsmen to get a boat and pull for their rescue. In a moment one of them was racing toward the town near by, shouting the terrible news.

"Almost quicker than it takes to tell it, every one that could run was racing down the Creek toward the cut, some shouting 'Get a boat!' while others, more practical, were hurriedly hunting for one.

"Meanwhile, the scow could not wait for any one. It had been caught by the current on the outside of the island between the cut and the main channel, and was speeding along toward the rapids at a terrible rate.

"Some of the men on the scow were shouting and beckoning wildly to us for rescue. One knelt in the bottom, and with white, set face, was trying to prepare for death.

"By this time the shores were lined with agonized people, shouting, crying and wringing their hands in excitement. There was no rescuing boat as yet in sight; it was at a time of day when the most of them were in use.

"We had about given up hope. The scow was rapidly driving to destruction, with the poor fellows helpless and desperate, shrieking for succor.

"Suddenly a boat shot into sight on the Creek and on into the Niagara.

"'It's Louis Gilbert! He'll save 'em! Don't give up! Help is coming!' They sent one cheering shout after another out to the hopeless men.

"It looked desperate enough, but Gilbert was a bold, powerful river-man, and if any one on earth could save them we felt that he could do it.

"Away he sped with the current, on, on, nearer and nearer, till only a few yards of black water lay between them.

"He strained every muscle. The deafening roar of the rapids close ahead almost drowned his voice, as he shouted to the imperilled men to jump for their lives as he came up with them.

"They did not need urging. The moment he came alongside they jumped; and instantly the little boat, now low in the water from its heavy load, was turned with mighty strokes toward shore, fighting every inch as the merciless current dragged it down toward the rapids.

"'He'll never make it!' 'They're lost!' was what every one said on shore. The women covered their faces with their aprons, and some fell on their knees to pray. None but the stoutest of us could watch the brave fellow's struggles.

"Now he seemed to be gaining; then a wave would catch his little craft and toss it off its course into the powerful current. He went rapidly down stream, and yet he drew slowly toward the shore. It did not seem possible that he could make it before the full force of the rapids caught him.

"But Gilbert kept his head through it all, and made his calculations as coolly as an old general. We could see now that he was making for the upper end of an island just at the brink of the rapids, and not far from the Canada shore. If he could get behind its sheltering sides, where the channel was comparatively quiet, there was hope yet of deliverance.

"Gilbert bent all his strength, not only for the sake of the rest, but for his own life. I'm not ashamed to say that I could not stand the sight, and turned away.

"But the next moment a ringing cheer went up that could be heard a mile. I knew that he had made the channel, and the crew was saved."

As the old pilot ended his story, the boat-load of Indians arrived. Anchor was weighed, and after due preparation we started on our last perilous run, down the Lachine, with every man at his post and on his guard. The old Canadian's story had *not given me* an increased sense of security.

On we went in the swift current with the speed of a race-horse, every oarsman bending to his work at the gruff commands of the dusky pilot.

Now we meet the dash and foam of Lachine. Down we go, head on. We feel for just a second that the bottom has dropped out of everything. We toss, lurch, bound this way and that. The water and foam fly over us, drenching us to the skin.

Such a roar is in our ears that the wild shouts of the pilot can scarcely be heard. Now we grind and pound over a jagged rock, lying low below the foam. The raft groans, trembles, reels and whirls around. Its every timber is working and striving to break free. We cling to it with a desperate grip, commending our unworthy selves to the Power that controls even the Niagaras.

The next moment we were through. All perils lie behind us. The sun was shining brightly, and we thank our lucky star for safety—vowing mentally that our rash experiment shall never be repeated.

JAMES HALLECK.

For the Companion.

THE APACHE INDIANS IN ALABAMA.

Nothing could be more novel and picturesque than the village of Apache Indians just outside the walls of the barracks at Mt. Vernon, Alabama. The military post is occupied by the Nineteenth United States Infantry. The force of contrast is here illustrated. Within the walls are the highest refinement and courtesy, represented by the army officers and their families; without, the utmost barbarism, typified by the Apache, his squaw or squaws, and their domestic belongings.

The huts of the Apaches are dotted about without regard to regularity, and their architecture is peculiar to themselves. Many Indians still prefer to live in tents, where they sleep on the earth, or simply raised therefrom by a few pieces of wood and straw. But most of them have log-houses, which are built with two bedrooms, one at each end of the structure, and a square open space between the two. This space serves for hall, parlor, kitchen and pantry.

The cooking is done in the centre of this space, over a wood fire, and the smoke blows where it likes. After a little observation of this method of cooking one feels as he fancies a smoked herring might feel.

The squaws, as a rule, are unsociable and little disposed to make friends with white women who visit them, probably on account of long suppression of the social instincts. They sit most of the

Digitized by Google

time on a piece of cloth spread on the ground, and make fancy bead-work.

This work is quite pretty and often artistic, and is done with mathematical precision. The women count the beads, and are so intent on their work that they seldom raise their heads when visitors stand over them. Like Diogenes, their only desire seems to be that you get out of their sunshine, for they glare savagely when their light is obstructed.

That redoubtable old savage, Geronimo, who carried fire and destruction along his path through Arizona and Northern Mexico, now goes to and fro as peacefully as a lamb.

He condescended to shake hands with me, and we exchanged the compliments of the season; but for all his meekness I felt better for the knowledge that ever-vigilant soldiers, with guns in their hands, had their eyes upon him and all the band.

Daisy, the Apache Girl.

Geronimo has lately been awarded a medal for services in the school at Mt. Vernon. He sits in a large red chair and holds a long stick, with which he ever and anon "pokes" a misbehaving boy, and reduces him to silence.

The teacher uses every means to thank and flatter Geronimo for this, since she would, without his assistance, be quite powerless to enforce obedience. Giles, another Apache, who had learned some English at the school in Carlisle, confided to me that "Geronimo no like white man clothes, he like Injun clothes." Nevertheless, he was buttoned up to the throat in a military coat with brass buttons.

Recently the commanding officer at Mt. Vernon distributed among the Indians some military clothing which had become a little obsolete in pattern, but was warm and well-made. The suits were trimmed, according to the branch of the service for whose use they were intended, with three colors. The Indians invariably selected the garments which were trimmed with red.

The women and children are given flannel, calico, and all things needful for garments, but it is next to impossible to make them keep their clothing. On the first warm day they sell it for a very little money, with which they often purchase whiskey. They even exchange their garments for a dog, for scraps of sugar-cane, or any article that suits their whim.

All of them seem averse to too much clothing. Two boys were promenading up and down, arm in arm, who had divided one suit between them. One urchin wore the coat and the other the trousers. Their red skins formed a striking contrast above and below.

Natchey, the hereditary chief, is by all odds the handsomest and most warrior-like Apache in the band. His tall, straight figure, clear-cut features and long black hair approach most nearly to our romantic conception of the aboriginal kings of the forest.

Since General Crook's recent visit to the Apaches, Natchey has looked very dogged and crestfallen. General Crook told him, through the cowboy interpreter, that his want of faith and honor in failing to keep his compact had brought much suffering and humiliation on his people.

It is earnestly to be hoped that the government will soon give these poor pent-up people their promised farms, and let them make the experiment of leading lives of more activity. Their enforced idleness and hampered existence are destroying them, physically and morally.

The most attractive feature of the Apache village is the new school-house, made in New York, and recently erected with the Indians' help. The teachers are earnest Christian women, sent by a society composed of humane and wealthy ladies of Boston. The boys and girls are taught in the morning, the men and women in the afternoon.

On Sundays religious services are held in the same building, and Bible stories are taught the Indians, with the aid of large, brightly colored charts. The singing, with melodeon accompaniment, is entered into with the greatest zest by all the Indians. They know many hymns, and the joyous voices of the children rise in jubilant strains.

One little Apache girl, named Daisy, in whom I felt great interest, was always singing in and out of school. She was neat and clean-faced, and in many instances showed as much innate and natural refinement as any child of her age I have ever seen.

The hymns seemed to impress her young mind deeply. I asked her where her father was, desiring to know something of her parents and home influences. She hung her head, and looked confused and embarrassed. It happened that her father had abandoned his family. At last she looked up, and pointing straight above, said, "Jesus my Father."

I spoke to her of Hulda, one of the Carlisle students, who had been brought to Mt. Vernon recently, and was dying of consumption.

"Where will poor Hulda go when she dies?" I asked.

Without a word, Daisy stooped quickly down and dug a grave with her little red fingers. Then, rising, she pointed to the blue sky overhead. I felt, in seeing this little gesture, that this ignorant child had as much hope as the most enlightened. The most learned would not better express their faith. Through the dark and gloom of the grave, her friend would rise to peace and rest and worlds unknown.

G. R.

THE RIVER.

Through solemn woods and meadows gay
With flowers, by many a happy home
I roam.
I part
The mighty city's restless heart.
Into the ocean's endless deep
I sweep
And sleep.

—*Chicago Post.*

GERMAN POLITICS.

For twenty years Berlin, the capital of the German Empire, has been often the centre of interesting and exciting political events. This has been even more true perhaps of the past two years, since the beginning of the present reign, which has been one of many and sometimes startling surprises.

It is now a little more than a year since Prince Bismarck, who had been the leading spirit of the German Empire ever since its establishment in 1871, resigned the Chancellorship, and retired to private life at Friedrichsruhe; but while the Prince has not been in office, he has been very often heard from.

It seems as if, not having expected his resignation to be taken seriously, he has been embittered by discovering that the young Emperor could get along without him, and has been so free in his criticisms on the conduct of the government as to call forth on at least one occasion a public rebuke from the Emperor.

Meanwhile Bismarck's successor, General Von Caprivi, made a good impression on assuming the Chancellorship, especially by the conciliatory and liberal tone of his first speeches in the Reichstag, or Parliament. His administration since, moreover, seems to have been a prudent and capable one.

Recently, however, it has been stated that Bismarck, weary of the monotony of a private station after so many years of great power and unceasing activity, intends to be a candidate for the Reichstag, and reappear in that old arena of his triumphs as an independent member. It has been rumored, also, that the Emperor desires Bismarck to return to his old post; but this has not thus far been confirmed.

It is certain that Bismarck, holding an independent seat in the Reichstag, with all his high prestige and his still surviving influence over vast numbers of German minds, would be a constant source of embarrassment, if not worse, to his successor and the imperial government.

The death of the veteran Doctor Windthorst, the very able and vigorous leader of the Centre, or Catholic, party of Prussia, is an event of considerable importance in German politics.

Windthorst was by far the ablest leader of the Catholic party, and has for many years occupied a unique position in the politics of Prussia.

He was a native of Hanover, and prior to the absorption of that kingdom by Prussia, was for a long time one of the most prominent men in the government. But since Hanover became a part of Prussia he has never held office. He has been always in opposition.

Yet, although leading a group of members very rarely numerous, by his talents and parliamentary skill he made the Centre party a compact force. More than once Prince Bismarck found it necessary to purchase the support of Windthorst to carry measures which he deemed necessary, by relaxing the laws against the Roman Catholics, which he had himself proposed. Thus Windthorst himself long wielded a power hardly inferior to that of a minister of the crown.

He was a man of great tact and prudence as well as of uncompromising truth to his own convictions, and by his high character as well as by his personal and intellectual qualities, inspired universal respect.

Is is not improbable that the inability to find a chief who will be able to fill his place may result in lessening appreciably the influence of the Centre.

The young Emperor shows as yet no disposition to pause in his career of political activity and change. He is said to be still zealously at work upon his schemes for bettering the condition of the German workingmen; and he has not yet returned to Bismarck's severe policy of repressing the Socialist agitators.

The German army has not only recently been increased, but the Emperor has introduced some reforms into it; one being, to better the position of soldiers of humble birth who rise to be officers.

The Emperor, in short, continues to absorb himself in the affairs and problems of the mighty Empire and people he has been called on to rule over, and to be conspicuous in the eyes of the world. It remains to be seen whether his political ideas will turn out in the end to be wise ones.

DEAREST NOT COSTLIEST.

Those are vulgar things we pay for, be they stones for crowns of kings;
While the precious and the peerless are unpriced, symbolic things.
Lovers do not speak with jewels—flowers alone can plead for them,
And one fragrant memory cherished is far dearer than a gem.

—*John Boyle O'Reilly.*

THE TORNADO SEASON.

During the last thirteen years the weather bureau at Washington has paid particular attention to cyclones and tornadoes, with a view to ascertaining their nature, force, direction, and the best means of escaping from them.

Lieutenant Finley, of the United States Army, who gave the readers of *The Companion* last year an admirably clear idea of "the birth of a blizzard," has been for many years in charge of this subject, and has elicited several facts important for all people to know and remember—among them the following:

1. Tornadoes occur in the United States during every month of the year, but are most frequent in April, May, June and July, when the air nearest the earth may be exceedingly hot while the upper air is cold. They may and do occur in every part of the country, but are more common in the great central plain than elsewhere; and are least frequent—indeed they are extremely uncommon—in the mountainous regions.

2. Tornadoes almost always occur in the afternoon, between half-past three and five o'clock.

3. The average number of these storms in the United States is one hundred and forty-six a year.

4. The signs of an approaching tornado are similar to those which indicate a coming thunderstorm, namely, a low and falling barometer, an intense, oppressive heat, an absence of wind and an accumulation of threatening clouds.

5. The clouds which indicate a tornado gather in the west or southwest, and move toward the east or northeast. If there is danger in them, there is soon observed a violent commotion in the mass of black clouds, a rushing toward the centre, while at the point where the observer stands the air is hot and almost motionless. Soon there is heard a great roaring noise, and then is seen the onward rush of the funnel-shaped cloud.

6. The line of safety at such a moment is toward the northwest. If the observer faces the storm, let him turn directly to the right, and make the best time he can. The strength of the tornado is near its southern edge. The thing to do is to get out of its path, or to seek some refuge below the surface of the ground.

7. Lieutenant Finley remarks that sufficient time is usually afforded for escape if people will keep cool and make no false steps.

If they run to the east they must soon be overtaken by a tornado moving from fifty to a hundred miles an hour. If they run into the woods they greatly increase their danger. If within a house or cellar, they should avoid the easterly side, because if the building is destroyed it is that side which receives the mass of crushing material.

8. In a wooden house the cellar is the safest place; in a house of brick or stone the cellar is the most dangerous. The best preparation in a country much devastated by tornadoes is to make an excavation in the west side of the cellar, and make it sufficiently large to provide room for every member of the family. But even this is not safe unless the overhanging earth is supported by heavy timbers and well-constructed masonry.

9. It is well to bear in mind that no building whatever can be made strong enough to resist the tornado at the point where its force is greatest; nor is it possible to change the course of a tornado by discharging cannon-balls into it, nor by exploding dynamite in any quantity. Still less can the fatal cloud be dispersed by the use of any electrical contrivance.

Lieutenant Finley's advice to families living in the Southwest, where these disturbances oftenest occur, is to make a tornado-cave for themselves, and effect a special tornado-insurance upon their buildings.

HIS MOTHER.

A pathetic story is on the police record of New Orleans, which has a meaning and lesson for every young man and woman.

A grave, middle-aged man, whose appearance indicated refinement and culture, appeared one morning at the Central Police Station of New Orleans, handed his card to the officer in charge, and asked leave to inspect the prisoners in the woman's ward. The Sergeant recognizing his name as that of a Western merchant, granted the request.

Among the wretched women awaiting trial was one over sixty years of age, arrested for drunkenness and vagrancy. Her rags and squalor, and the bloated face peering out of white, uncombed hair could not hide the traces of a certain dignity of bearing.

The stranger went up to her, looked her in the face and took her hand in his, but she stared at him without recognition, and mumbled drunkenly. He turned away abruptly, unable to speak for a time. Then he said to the Sergeant:

"This is my mother. I will look out for her. She shall never trouble you again."

After the necessary formalities she was released, and he took her away. Her story was a sad and painful one.

Her husband had died when her child was an infant. She had made no effort to support it, but putting it into a Home for friendless children had given herself up to a profligate life. The boy was adopted by a stranger and taken to California. There he grew up, received a good education, went into business and was successful; but through all these comfortable happy years he felt a restless longing to find his mother, to save her from misery and shame, and make her old age pure and honorable.

He came to the East, and employed agents to find her. It was after long-continued search that he had discovered her, on this morning, among the drunken outcasts of a police court.

The next day, sober and clothed, though not in her right mind, she was taken by her son to his distant home. Whether or not in the little remnant of life that was left to her she reformed her habits, and rewarded his long years of pious self-sacrifice with one gleam of mother's love, there is no record to tell.

But surely each one of us when we read this unfinished story, and think of the love which impelled this man to seek out and care for this degraded woman, simply because she had given him birth, must turn back to our own homes, and ask ourselves how we deal with the woman sitting there, to whom we owe not only life but motherly care and devotion.

Do we repay her in love like to hers?

UNUSUALLY SEVERE.

Spring comes with a peculiar welcome this year, particularly in Europe, because of the severity of the winter that preceded it. The American winter was not unfavorable to either health or enjoyment, but in most of the European countries the cold was of extraordinary continuance and severity.

Even in the south of Italy, as far as Naples, they had what would pass for a winter in New Jersey, for there were deep snows, freezing nights, and many of them.

Southern France fared no better. At Autun, two hundred and thirty miles southeast of Paris, it froze during fifty-eight successive nights, and a deep snow remained on the ground as long. Many leagues of country roads were abandoned, country streams were frozen and lost to view, and the horse-cars were generally laid up.

Strangest of all, wolves came down from the mountains, and were seen on several nights in the streets of the city prowling about in quest of something to eat.

At Nancy, also, wolves were seen in the suburbs, where thirteen of them were killed. Marseilles was without water for several days, and a supply had to be brought in with great difficulty from the country.

The people suffered the more because in the south of Europe little preparation is made for cold weather, so that American travellers find even ordinary winter weather uncomfortable.

The French Government, as usual, came promptly to the relief of the people who were driven from their ordinary shelters by the excessive cold.

President Carnot had the happy idea of converting to this use some of the large vacant edifices of the recent Exhibition, particularly the Palace of the Fine Arts, which presented so brilliant a scene during the summer of 1889. The immense interior was divided into two portions by a plank partition, one for men, and the other for women. A large number of stoves and extemporized fireplaces were set up, which sufficed to render the temperature something more than endurable.

The President himself made nocturnal visits to the building, when the inmates were sound asleep upon their straw beds, and enveloped in rough but sufficient coverings.

The scene, dimly lighted by twenty lamps, was described as being peculiarly impressive, the whole of the vast floor being covered by sleeping men and women, the silence broken only by an occasional cough. In a corner of the building were two enormous soup caldrons, and two or three cart-loads of soup-bowls made of galvanized iron.

Digitized by Google

Before lying down, every one was served with a bowl of vegetable soup with a piece of bread, and in the morning with a very good bean soup with bread. The French are great believers in soup, especially if there goes with it a good solid chunk of well-made bread.

But the long winter has passed, and the spring is smiling upon both continents. It brings the joy and relief which a holiday affords to the school-boy, and for the same reason—the hard and troublesome days that went before it.

ABSORBED IN WORK.

Jean Corot, the famous painter, was a patriotic Frenchman, but one who by no means kept pace with the times. So occupied was he with his work that he did not even hear of the *coup d'état* of 1851 until two months after the new government was established. Then a friend found him painting a moonlit forest, with nymphs dancing.

"You are happy," said the visitor. "You paint things gay and smiling, and we have just changed the government. We have strangled the Republic."

"My dear friend," answered Corot, "I have been so busy in making my nymphs dance that it is three months since I have opened a paper."

During the Revolution of 1848 he remained in his studio, working quietly, and after there had been three days of firing, he came down from his room and said to the *concierge*:

"Ah, it appears that they are not content!"

What news the *concierge* had to give in reply, Corot did not hear, for he mounted the stairs again, and seated himself before his easel. Even then he was beloved and respected by the lower classes. The Duke of Orleans had bought some of his pictures, and hung them in the Tuileries, and during the Revolution the doors of the Duke's cabinet were forced open by the mob.

A young painter, recognizing the works of Corot which decorated the wall, sprang before the intruders and barred their passage.

"Respect to art!" he exclaimed. "These are Corot's!"

The mob contented itself with admiring them, and passed on.

But though Corot did not concern himself with political strife, he often took an interest in the peaceful affairs going on about him. When Haussmann, Prefect of the Seine under Napoleon III., was remodelling Paris, Corot one day said to Alphand, a landscape gardener engaged on the improvements:

"You are killing landscape work on canvas. How can you expect the painter, who has only his palette, to contend against artists who make terraces, prepare gardens, and fix points of view so that people may see their beauties? Why, you manufacture nature!"

"Ah, master," replied Alphand, "these are your pictures that I try to copy!"

FRESH-WATER COMMERCE.

Probably there are few people whose attention has not been specially directed to the subject, who are aware of the magnitude of the commerce upon the Great Lakes.

It has been asserted that more tons of freight pass through the Detroit River in a year than the total imports and exports of the United States for the same period.

The commerce of the Great Lakes is carried upon more than two thousand vessels, of which more than half are propelled by steam.

About six hundred schooners, some of them great four-masted craft, ply on the lakes during the five or six months when the straits and ports are not closed by ice. Many more are small schooners; and of these a large number, on the upper lakes, are owned and manned by hardy Norwegian sailors who have emigrated to this country.

Steam is gradually displacing the wind as the motive power of the lake traffic, and steel is displacing wood as a material. The steam vessels, too, are constantly increasing in size. In 1886, there were but six steel vessels on the Great Lakes; in 1890 there were sixty-eight.

At the same time that these changes in the size and material of vessels are taking place, a change is going on in their ownership. There is a smaller proportion of vessels owned by individuals or small partnerships. The traffic of the lakes is rapidly coming under the control of corporations possessing large capital.

The two great items of freight in the vast traffic of the Great Lakes are ore and grain. Many millions of tons of ore are yearly brought through the Sault Ste. Marie canal down the lakes. Seventy million bushels of wheat and four million bushels of flour go annually by water to Buffalo. The corn tonnage is still larger.

Yet the Great Lakes are closed to navigation during at least six months of the year, and winters have been known when Lakes Superior and Michigan were frozen from shore to shore.

READING THE JOURNAL.

They had much trouble in the Fifty-first Congress over the business known as reading the journal, and it recalls an amusing incident which occurred in 1867 in the Kentucky Legislature, illustrating the superior docility of the ordinary legislator as compared with the contentious Congressman.

At the time referred to, George D. Prentice, the wit, poet and journalist, was still the editor of the *Journal* newspaper at Louisville, Ky. Other daily papers published at Louisville at the time were the *Courier* and the *Democrat*.

One morning in the Kentucky House of Representatives the usual motion was made to "dispense with the reading of the journal."

It had been observed that every morning when this motion was made a certain member from one of the mountain counties, who was very fond of reading Mr. Prentice's pungent paragraphs, and who bought a copy of the *Journal* every day, would lay down his paper unread. On this particular morning the mountain member could contain himself no longer.

When the motion to dispense with the reading of the journal was made, he arose from his seat like a vision of wrath, newspaper in hand, and addressed the Speaker in angry and peremptory tones.

"Mr. Speaker," he said, "I've sat here for more'n a week and submitted to the tyranny of this House, but I can't stand it any longer without a solemn protest, sir.

"Somebody, sir, has moved every morning to dispense with the reading of the *Journal*, and I've lost every paper I've bought for a week by it. Nobody has ever moved to dispense with the reading of the *Democrat* or the *Courier*. It aint fair, Mr. Speaker; it aint just, and —"

The remainder of the gentleman's protest for fair play to the *Journal* was lost in a general burst of laughter such as rarely lightened the gravity of a border State legislator in those troublesome days.

SOUTHERN WIT IN WAR.

As we are reminded by the author of "Four Years in Rebel Capitals," the South, as well as the North, needed to exercise its sense of humor, whenever that was possible, to carry it through the terrible strain of the war. Some of the puns, burlesques and repartee of that dreadful time have become locally historic. Colonel Tom August, of the First Virginia, was the Charles Lamb of Confederate war wits, genial and ever gay.

Early in secession days a bombastic friend approached him with the question, "Well, sir, I presume your voice is still for war?"

"Oh yes," replied the wit, "perfectly still!"

Always to be remembered is General Zebulon Vance's apostrophe to the rabbit, flying by him from a heavy rifle fire: "Go it, cotton-tail! If I hadn't a reputation, I'd be with you!"

Equally forcible was the protest of the Western recruit, ordered on picket at Munson's Hill:

"Go yander ter keep 'em off! W'y, we-uns kem hyah ter fight th' Yanks, an' ef you-uns skeer 'em off, how'n thunder ez thar goan' ter be a scrimmage, nohow?"

City Point, on the James River, was the landing for transports, with soldiers released from Northern prisons on parole. One day a most woebegone and emaciated "Johnny" sat swinging his shoeless feet from a barrel, awaiting his turn, when a pompous Federal major remarked, to no one in particular: "It isn't far to Richmond."

"Reck'n et's near onto three thousin' mile," drawled Johnny, weakly.

"Nonsense! You must be crazy!" retorted the officer, staring.

"Wal, I ent a-reck'nin' edzact," was the slow reply. "Jest thought so, kinder."

"Oh, you did? And why, pray?"

"'Cause it's took'n you-uns nigh onto foore year to git thar from Wash'n'ton," was the settling retort.

WHY GIRLS CANNOT THROW.

Boys from time immemorial have made all manner of sport on the subject of the inability of girls to throw a stone. They suppose, of course, that it is a matter of knack and practice, and that a girl could really throw a stone with as much force as a boy if she "knew how," and threw as many. A medical authority suggests another reason:

The difference between a girl's throwing and a boy's is substantially this: The boy crooks his elbow and reaches back with the upper part of his arm about at right angles with his body, and the forearm at an angle of forty-five degrees. The direct act of throwing is accomplished by bringing the arm back with a sort of snap, working every joint from shoulder to wrist.

The girl throws with her whole arm rigid, the boy with his whole arm relaxed. Why this marked and unmistakable difference exists may be explained by the fact that the clavicle or collar-bone in the feminine anatomy is some inches longer, and set some degrees lower down than in the masculine frame.

The long, crooked, awkward bone interferes with the full and free use of the arm. This is the reason why a girl cannot throw a stone.

MISSED HIS CALLING.

The world is full of people who, if we take their word for it, would now be rich or famous only that they are so unfortunate as to have missed their true vocation.

Baron Rothschild one day entered an old curiosity shop to buy some paintings. The dealer was all attention. He brought out all his rare old pictures, dusted them, and set them in the best light.

"Look at this Rembrandt; quite authentic, Monsieur le Baron."

"Authentic, you say? You have got there a Raphael of the first style, which is a good deal more authentic."

"Oh! oh!" said the dealer; "why, you are a connoisseur, Monsieur le Baron."

"I?" observed Rothschild with a sigh; "if I had gone into the old curiosity business I should have made a fortune."—*London Journal.*

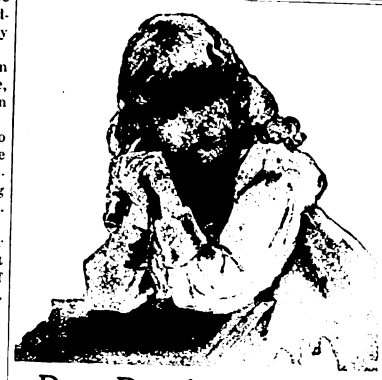
IN THE MINORITY.

An African traveller was recounting to a company his hair-breadth escapes in the jungles and savannas about the great equatorial lake region. He had encountered there, he said, the most savage and bloodthirsty race of men in the world.

"As we were marching," the traveller related, "from Nmgosji to Gohangbo, we suddenly found ourselves in the midst of a most terrible and desperate combat. And what odds! Ten to one!"

"Were you one of the ten?" asked a bystander.

"Sir," said the explorer, grandiloquently, "I wish you to understand that I was one of the one!"



ESS.

The feminine termination has fallen into disuse of recent years, so that poetesses and authoresses are now seldom mentioned; but the Chicago *Mail* calls attention to some new *esses*.

A reporter sess on a St. Paul paper speaks of a lady "who is well-known as a real estate speculatress." A Pittsburg paper alludes to "the presidentress of the board of managers of the world's fair;" and an Indianapolis paper chronicles the elopement of a "dime museum freakess."

If this matter is to go on, it is time the school teacheresses were heard from.

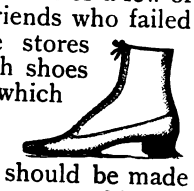
Deserving Confidence.—Sufferers from Bronchial Troubles, Coughs, Hoarseness and Sore Throat should try "*Brown's Bronchial Troches.*" They are universally considered superior to all other articles used for similar purposes, and can be freely used with safety. Sold only in boxes. Price, 25 cents. [*Adv.*

Dear Daughter Dorothy.
By Miss A. G. PLYMPTON.
With illustrations. Small 4to. Cloth. Price, $1.00.
ROBERTS BROS., BOSTON.

Dear Madam:--

Have you used Diamond Dyes? No?
Would you if you felt sure of success?
Perhaps our book, "Successful Home Dyeing," will convince you. We would like to send it, and will, if you ask for it by letter or postal; you will also be interested in the forty cloth samples we will send with it, showing just what colors the dyes give.
If you don't wish to take our word, ask your neighbor. Ten chances to one she has used them and can tell you all about them. There are actually more than twenty thousand women using them every day. We have some days over a thousand letters asking for sample cards and Dye Books, and would like to hear from you. "Home Art" is another valuable book on the use of the Dyes, which we send for a stamp. The other is free.
WELLS, RICHARDSON & Co., Burlington, Vt.

The picture means light—ballooning, sand-bag, anchor, telescope—light. The "Pittsburgh" is full of it. What is of more account, no trouble to get it out. The central-draft lamps heretofore have been extremely troublesome. We send primer.
Pittsburgh, Pa. PITTSBURGH BRASS Co.



IF your roofs need repainting, please remember that Dixon's Graphite Paint will cover 2 or 3 times more surface and last 4 or 5 times longer than any lead or mineral paint. A tin roof, well painted, will not need repainting for 10 or 15 years. It will pay you to send for circular.
JOS. DIXON CRUCIBLE CO.,
Jersey City, N. J.

"For this relief much thanks."
Hamlet, Act 1, Sc. 1.
TRADE MARK.
Anaglypta
REGISTERED.
Is superior to other relief materials, because it is durable, indestructible and sanitary. It does not lose any of its relief when hung upon the wall. It is softer in its lines than any of the plastic materials.
The designs are made by competent artists, and faithfully represent designs of nearly every school and period, and in every case are correct and elegant. It is inexpensive, practical and useful in the decoration of residences as well as public buildings and places of amusement. Also suitable for use in railway cars, but is primarily adapted for home decoration.
Send for Illustrated Pamphlet.

Sole American Agents. 406 Broadway, N. Y.

HEYWOOD SHOE TRADE MARK

For Boys

This shoe was first made by us for use in families of a few of our personal friends who failed to find in the stores neat and stylish shoes for the boys, which would stand hard wear.

A boy's shoe should be made to stand rough usage; this can be done, and at the same time its style may be preserved, but it costs a little extra.
Isn't it worth something?
Ask your retailer for a pair of the Heywood Shoes for Boys—if he doesn't keep them, we will send them to you—Button or Lace—Sizes 13 to 1½, $2.75; 2 to 5½, $3. Three widths.
Send a 2-cent stamp for our circular, telling you how to secure a pair for yourself **FREE.**
HEYWOOD BOOT & SHOE CO.,
WORCESTER, MASS.
REFERENCE—Any National Bank. [133]

DRIES LIKE A TOWEL.
"Spiral" Cotton Garden Hose.
Because there is no rubber covering to hold moisture. It does not mould, decay nor crack, and will last for years.
INSIST on getting the "Spiral," which has a BLACK LINE running through Covering.

Sample Free if you mention THE COMPANION.
BOSTON WOVEN HOSE CO.,
Rubber Belting and Packing,
BOSTON, CHICAGO, SAN FRANCISCO.

CARLSBAD SPRUDEL SALT
is not a mere purgative, it is an alterative and a constitutional remedy. Obtain the genuine imported article. Do not be imposed upon by unscrupulous dealers. The genuine must have the signature of Eisner and Mendelson Co., Sole Agents 6 Barclay St., N.Y." on every bottle.

The $3.00 A. T. CROSS FOUNTAIN PEN For $1.50.

Each pen is stamped with the Manufacturer's name, and is fully warranted by him. The reputation of Fountain Pens produced by this house is unsurpassed. The ink-holder is full-size, and made of best vulcanized rubber. The pen is iridium-pointed and is solid 16-carat gold, sizes 4 and 5. It is as smooth and easy writing a pen as good workmanship can produce.
The Cross Pen Co. have never asked less than $3.00 each for these pens. Our purchase of the entire stock of the factory enables us to offer them at a great reduction.
Our supply is limited, and until it is exhausted we shall sell these Fountain Pens to our subscribers for $1.50 each. Or we will give one to any old subscriber who will send us a new subscriber and 50 cents additional. Postage and packing, 6 cents additional in all cases. We have a few with EXTRA HEAVY barrels, for use of professional men, that we will supply at same price.
Order at once if you wish to secure one on these terms.
Publishers Youth's Companion. PERRY MASON & CO., 41 Temple Place, Boston, Mass.

SUGGESTIONS

WATER IN THE AIR.

Why does moisture gather on cold objects which are placed in a warm room?

Why does dew collect at night?

What is "the dew-point"?

Why do clouds often form in a clear sky?

Distinguish between clouds and fog.

How does water get into the air? How get out of it?

For the Companion.

THE CAPITOL BY MOONLIGHT.

Last night I stood
Beneath the shadows of those silver walls,
Those epopœias of the States that lift
Their airy porticos above the seas
Of cool magnolias, oaks and ivied halls.
I heard no step of sentinel or guard,
Janus had closed the doors and stolen away
And left the marble heroes to their shrines,
Immortal Congresses of deathless forms,
The eternal delegates of men to Heaven,
The final Senate of immortal truth.

Across the trees
The Monument's tapering finger touched the sky,
And o'er the still Potomac's marshy tides
The lights of Arlington gleamed like the stars
In sheltered clouds, and called to thought
The flame-tipped thunders of eventful days
When wheeled the blue brigades in fiery air.

The marble dome
Hung like an outline in the dusky air.
The form of Liberty, that dropped her flag
When boomed the sunset gun, majestic stood,
Her high brow dark with never-varying stars,
Her bronze feet rising from her hemisphere,
As though her mission yet was unfulfilled.

The leafy squares
Were voiceless as the latticed balconies
Where love's last whisper passed upon the breeze.
Perchance some wanderer walked the idle streets,
If so the white shaft followed him from far
And watched him like a jealous sentinel—
All feet are haunted by the Monument—
And dim the dome, where'er he raised his eye,
Stood peering down 'neath the great form of Liberty.
It was the midnight hour.

The east grew light,
And through the path of ebon corridors
The smoky moon came up on wheels of gold,
Resplendent burning as she left the hills
And swung her priestly censers free in air.

There rose a vision—
A picture glorious every eye should see
On such a night as this. All things were changed.
The Capitol whitened like the immortal Taj,
And seemed to wear the garmenture of God.
The light became a clear epiphany,
The shaded river melted into light,
The ivied walls and tenantless arcades
Caught the preludian fire, then thrilled and burned—

And, lo, the Capitol!—
Transfigured stood the Nation's silent throne
And spread her serried wings of porticos
Above the mute and radiating streets,
And high in heaven, all glorious, shone the dome;
And Liberty, on her triumphal arch,
Stood like a guardian in her robe of bronze.

The wonder grew.
The winged portals seemed to open now,
And all the Congresses of colonnades
And marble Senates of immortal men
Stood listening as for the mellow horns
And silver lutes that herald queenly feet.
And Dian now as to Endymion came;
To peristyle and corridors and halls
The full moon came in unveiled beauty down,
And kissed the loveliest structure on the earth,
And she herself became the Capitol.

No palace porches of Persepolis,
With winged bulls and scrolls cruciform,
Or burning tombs of old Golconda's gold
'Mid moonlight chalices of floating flowers,
Or Boro-Budor, Pallas Athene,
Or singing Memnons, or the Acropolis
Was ever visited by night like this,
Beneath the victor feet of Liberty.

I stand and dream.
I would beside that mantled form in air
The form of Peace triumphant spread her hand
And the two sisters held aloof the clouds
That threaten blood and flame and broken homes.

O silent gates that Dian turns to pearl!
O halls commemorate with deeds of war!
Thy greatest hour yet awaits to come.—
And who is he whom only wait the halls
That crown the world's last march of final things?
'Tis He who, teaching that all war is wrong,
Conquers, and falls a martyr to the lance,
And leaves to endless peace the course of State,
And so fulfils the lucent prophecies
Selene brings her new Endymion.

A cloud descends,
The silver Capitol vanishes. Dian
Is gone, and stands a pile of shadows cold and lone,
The pallid altar of Night's silver fire.

H. BUTTERWORTH.

For the Companion.

GOOD SEED.

A physician, whose life had been made beautiful with good deeds and a high faith, said once:

"If I have been happy or useful in the world, it is due largely to the effect on my mind of a chance question from a stranger.

"I was a poor boy and a cripple. One day, standing on a ball-field, I was watching the other boys with bitterness and envy. They were strong, healthy, well-clothed and well-fed. Some of the mothers of the players sat in carriages, waiting to see the game, intending to drive their sons home when it was over. I looked at them with an angry scowl, sick at heart. A young man standing beside me, and seeing, no doubt, the discontent in my face, touched my arm.

"'Say, bub! You wish you were in the place of those boys, eh?' he said.

"'Yes, I do!' I broke out. 'Why should they have everything, and I nothing?'

"He nodded gravely. 'I reckon God gave them money and education and health to help them to be of some account in the world. Did it never strike you that He gave you your lame leg for the same reason—to make a man of you?'

"I did not answer, and he turned away. I never saw him again. But I couldn't get his words out of my mind. My crippled leg—God's gift? To teach me patience and strength?

"I did not believe it. But I was a thoughtful boy, taught to reverence God, and the more I thought of it the more it seemed to me the stranger had told the truth. I did believe that God pitied me—and at last came to feel that it would please Him if I rose above my deformity, and by it was made more manly and true. It worked on my temper, my thoughts, and at last upon my actions. Gradually it influenced my whole life. Whatever came to me, I looked upon as God's gift for some especial purpose. If it were a difficulty He gave it for me to struggle with, to strengthen my mind and faith; if it were a helpless invalid cast on me for support, or even a beggar, I thought,—God has given me another chance to do His work.

"The idea has sweetened and helped all of my life. I wish I could find the man who gave me this password which has lifted my life to a higher plane, and has led me constantly to the Source of all good."

ADMIRABLY DONE.

Bettina Walker tells in her "Musical Experiences" the story of a poor and talented pupil of the great Sgambati, who broke down in playing a piece at an afternoon concert. The poor girl rose from the piano in a nervous panic, wrung her hands, and looked appealingly at the audience. One of the professors led her back to her seat, and gently, but with authority, bade her resume her playing. She succeeded in finishing, by a great effort of will.

I said the next morning that I wondered at her self-control in recovering from her previous fright, and a fellow-pupil replied:

"O signorina, had you but seen her in class this morning, how she wept as she begged Sgambati's pardon, and deplored having given way to such an unreasonable panic! And the professor was so kind to her! He told her she must not cry any more, but think of retrieving herself. He would give her the chance of doing so by having her play at the next pupils' concert, four weeks later."

My sister and I felt very anxious for Signorina G—— as that time approached; we feared she would brood over what had happened, and so mar her future prospects. We finally decided that the best way of helping her a little would be to give her some agreeable surprise during the hours of suspense, and thus divert her thoughts into another channel.

Finally we wrote a letter to the young lady, praising her talent, and begged her not to let her thoughts revert to what was no real discredit to her, the piece that she attempted having been one of enormous difficulty. We did not sign our names to the letter, but concluded by telling her we should be at the concert, and that we fully expected she would play admirably.

I took the letter to her house, and wore a thick veil to avoid recognition.

At the concert Signorina G—— looked very happy, and played with energy and fire. Signor Sgambati seemed all pleasure and satisfaction as he shook hands with his pupil at the conclusion of the piece.

Then he descended from the platform and hurried down the room, glancing to the right and left as he moved along. He came nearer, and I perceived that his eyes were beaming with irrepressible amusement, and even before he addressed me, I feared that all was discovered, and knew I was reddening in a very tell tale manner.

"The family want, of course, to know you," he said to me, with a meaning smile.

"What family?" was my rejoinder.

"Ah, signorina, it is of no use! If I did not know as much as I do, your color would be quite enough to excite suspicion. Come, come, there is no use in fencing! The letter! I have not only heard of it, but I have seen it. Don't blame me if I convey to you the thanks of the whole family, and their wish to be at once presented to you."

As I afterward learned, a fellow-pupil to whom the letter was shown had recognized my handwriting, and made his discovery public.

This incident began for me a most interesting acquaintance, and the following year, and to my delight, as well as her own, she passed an excellent examination, and received her diploma.

INDIAN SHELL-HEAPS.

"All along the eastern coast of the United States," says Mr. E. F. Holden, "are found great heaps of shells containing broken bones of fish and animals, together with many pieces of flint, bone, horn, or other material evidently shaped by human skill. That these shells are the remains of savage feasts, there is not the slightest doubt. Every new heap that is explored gives fresh evidence concerning its dusky builders, and throws new light upon the domestic life of the departed red man.

"Nowhere are these shell-heaps more numerous, and nowhere do they better repay the student, than among the islands which dot the bays and inlets of the Pine-Tree State. The actual number of such deposits within the State is, of course, unknown, but it must be several thousands, at least.

"They are to be found on islands or projecting points near clam-flats or mussel-beds, and extend as far up the rivers as the head of tide-water. But wherever found, they are always on a bank considerably higher than the beach; they are on or very near the extreme edge of the bank, and have a southerly or easterly exposure.

"In area they range from a few square feet to half an acre; in depth, from an inch or two to five or six feet. I purposely omit all account of the enormous heaps of oyster-shells at Damariscotta and Newcastle.

"The heaps are composed mostly of clam-shells, but always contain shells of various snails, of mussels, and in some places, of oysters or of quahogs.

"Let us now in imagination make a short visit to one of these heaps to see what we can find in it. We notice first, as we approach, that the shells have rattled down over the face of the bank on which the deposit lies, giving it a grayish appearance visible at a great distance. The beach below the bank is also strewn with broken shells, and a little search here will be sure to reveal some token of the former inhabitants.

"Yes, here is the first sign, a little sharp-edged splinter of gray flint, which has plainly been split artificially; besides, it cannot have been long on the beach, else the action of the waves would have ground it smooth. No! it came down, not long ago, from the shells on the bank. Now you have found something far better—part of a flint arrow-point; and here, right before us, lies another.

"But you want to see the inside of the shell-heap, now. Well, we will dig a little here on the edge of the bank so that the refuse will slide out of our way. We get down on hands and knees, and with a little digger, made for the purpose, we pull the debris over very slowly and carefully so as not to miss any of the treasures that we unearth.

"What's that? only a rock. But look, it is blackened with smoke and it crumbles easily; it is part of an old fireplace. See! there are ashes and charcoal as fresh-looking as though burned yesterday instead of two hundred or more years ago. Now we find another stone, and then another, all laid so as to form a rude fireplace.

"What now? Ah, this is something like! Bones, teeth, something flat and thin! Why, that is Indian pottery. A fine piece, too; notice the little ornamental marks made in the clay before it was baked.

"And those bones, surely they are thick enough to be those of the moose or bear; notice that every one has been split lengthwise so as to obtain the rich marrow. The teeth! ah! they settle the question; they are bear's teeth beyond a doubt. Here is one with a hole bored through the end; it's part of some big brave's necklace. But what's this? part of a beautiful bone fish-spear; and now you have found a perfect arrow-point of milky quartz.

"And so the digging goes on indefinitely; always something new, something of interest, something to tell us of the rude life that employed it. We get more real knowledge of how the Indians lived from one half-day of such work than from a whole library of books. And this principle holds good in other matters as well; if we want real knowledge of anything, we must dig for it ourselves."

For the Companion.

WITHOUT THE GATE.

This is the day of small things. While I wait
In the cold shades obscure without the Gate,
Keep my life lovable and white my name,
That if I come into the House of Fame,
The glare of envy nothing may extort
That is not lovely and of good report.
Teach me Great Father, so to live my days
That, if the portals ope with sudden blaze,
Each fresh glimpse of my life, that fronts the light,
May make me stand more human in men's sight.
Give me no lightning radiance, but to ray
In every home like hearth shine, when the day
Is toned to twilight, and the lamps, unlit,
Our fight with time a breathing's space remit.

DOUGLAS SLADEN.

HIS MESSAGE.

Every one who has used a telephone knows that there are times when it gives sounds so confused that the hearer can make from them almost any message whatever. An experience of this sort fell, not long since, to the lot of a Boston man. He was just getting ready to go to Rye Beach to spend Sunday with a friend, when the bell of his telephone began to ring. What followed is told in his own words:

I went to the telephone, and asked who was there and what was wanted. The answer was nothing but a confused buzzing and jumble of sounds, amid which I caught only the words, "Portsmouth, New Hampshire."

"Well, Portsmouth, what do you want?" I asked.

"Buzz-z-z-z, rattle-tle, buzz z-z, I know a fool, I know a fool!" came from the wire.

"What's that?" I said. "I don't understand you."

"Rattle-le-le-le, buzz-z-z-z, creak, buzz, buzz, I know a fool, know a fool!" said the instrument again.

Now I am rather a patient man, but I must confess that I began to get "riled" at this stranger who took so much pains to tell me that he knew a fool. However, I told him again, as calmly as I could, that I didn't understand, and that I wished he would speak louder.

This time I could barely hear the buzzing and creaking of the first part of the message, but the last came out clear and loud: "I know a fool! I know a fool!"

Well, I fear I lost my temper then, for I know I told him that I knew a good many fools, but that I was sure the biggest one of the lot lived in Portsmouth. Then I hung up the receiver and left the telephone.

When I reached the Beach, my friend said, "I suppose you brought the music I sent for?"

"Brought your music!" I cried. "I never heard of it till now."

It appeared that he had telephoned to Portsmouth, asking the central office there to telephone me to bring the song, "I Fear No Foe in Shining Armor."

COOL.

In a Confederate soldier's "Diary of the War," we find an anecdote of the retreat from Gettysburg, which illustrates amusingly the value of coolness in time of danger. While passing through a thick body of woods, he came suddenly into another road, where he saw before him a hard-looking specimen of a Union soldier. He was seated composedly in the middle of the road, gnawing an old beef hoof.

"What regiment do you belong to?" said I.

"Seexty-third."

"Sixty-third what?"

"Seexty-third Bensylvany."

"Sixty-third Pennsylvania! Where's your regiment, and what are you doing here? You are my prisoner."

"My reg'ment is dah," pointing to the woods in front of him. The road was literally strewn with muskets, for some of Meade's men had evidently stood not upon the order of their going.

I sprang from my horse, seized a loaded musket, cocked it, and presented it at the fellow's head.

"Come on, sir," said I. "Come on, or I will blow your brains out."

He paid no more attention to me than if I had been a fly upon the wall. He coolly went on gnawing his beef heel, and quietly remarked:

"Nein, I don't go already. I hash feets (fits)!"

I couldn't kill an unarmed man, and I couldn't *tote* him, and his regiment was too close for me to make a very long speech; so I bade him "good day," and rode on.

INTRUSIVE AND BELLIGERENT.

A gentleman travelling in a part of Russia where there were no railways was forced to resort to post-horses. It was during the summer, when the roads were heavy with mud, and progress was very slow. After being forced to spend two days in his cart, dragged through morasses and often stuck fast in the mud, it is not to be wondered at that he found his temper somewhat tried.

While in this mood he was astonished one morning, as he lay huddled up in the narrow space which the post-cart afforded, by the intrusion of a man, who jumped into the cart, pushed him to one side, and calmly seated himself without ceremony or apology.

"On my inquiring what he meant, and explaining that the post-cart was hired by me, paid for by me, and intended only to be tenanted by me and mine, the intruder just deigned to tell me that he was a 'tchapar;' that as such he had a right to travel in any cart he chose, and meant to travel in mine, whether I liked it or not.

"Now if this had been true, it would not have made his presence the more desirable; but I fancied it was not true, so I requested my would-be fellow-traveller to make himself scarce at once, and as he persisted in refusing, I hoisted him into the mud over the wheel.

"As soon as he recovered an upright position, he clapped his old flintlock rifle to his shoulder, and putting the muzzle almost into my face, deliberately pulled the trigger. Luckily for me, in his fall all the powder which should have formed the train to the charge had been spilled. Moreover, his barrel was choked with good holding clay, so that, taken altogether, had the piece not missed fire, the danger would have been greater to him than to me.

"After this display of rage and impotence, he turned to the people of the station, and so worked upon them by his arguments that had I not taken the reins out of my *yemestchek's* hands and driven off, I should have been detained under most unpleasant circumstances."

PET LIONS.

An amusing sketch of two lion whelps which were adopted as pets during the writer's residence in South Africa, is given by a contributor to *Forest and Stream*. The lioness appeared to amuse herself by playing pranks on human strangers of her own sex, lying in ambush for them under the dining table.

Fearing that something serious might occur if I allowed my pets their liberty any longer, I had a large cage constructed, and for the first week or two was obliged to spend much time in it with them. The lioness fretted a great deal, and the only way I had of quieting her was to go in and lie down, using the lion as a pillow, while she stretched herself beside me with her head on my chest.

One day the sheriff informed me that he had a summons in his office for me to serve as a juryman. I begged off, but he was inexorable. A few days afterward he rode up to my gate, and I called my servant to open it for him while I hurried to the lions' cage.

Presently I heard him calling me, and on my answering he gradually found his way to the den, in which I was seated on the lion's recumbent body, while the lioness sat behind me with her chin resting on my shoulder. As soon as he saw me he sprang back, and cried:

"Come out of there!"

"Hand that summons in here, and I will do so."

"Do you want my arm torn off?"

"No, but I want you to make a legal service of that paper by handing it to me."

"I shall not take any such risk, but I will tear up the paper if you will only come out and save me from seeing you torn into pieces."

"All right, do so, and I will try to get out alive."

The paper was torn up, and I stepped out of the cage, much to my friend's relief. A short time after I met the judge in the street, who wished to know if my mode of dodging jury duty was the one commonly practised in my own country.

HE PAID IT.

Of all the new ways for collecting old debts which have been devised by "Collection Agencies," it is doubtful if any was ever more ingenious or successful than one reported by a Maine correspondent of "old Jim Johnson," an eccentric character in a sea-shore town.

Ned Stone, a neighboring farmer, owed Jim a few dollars on some cow or pig trade, and after dunning him several times, Jim determined to have "satisfaction."

He notified Ned to pay at once, or "take the consequences." This having no effect, Jim proceeded to act.

He lived on the main road between Ned's house and the city, and thereafter, whenever Ned went to market, he was saluted, as soon as he came in sight of Jim's house, by a blast from a large dinner-horn. The din continued as long as he remained in sight, and woke the echoes for several miles around.

The neighbors were soon in the secret, and many were the comments and grins that greeted Ned as he travelled along the road, where the sound that heralded his coming had preceded him by several minutes.

More than once he made overtures to settle the account, but Jim would accept no compromise. He had decided to "collect it in satisfaction," and for some weeks Ned's going and coming continued to be heralded far and wide by the reverberations of that dreadful dinner-horn.

At last the neighbors persuaded Jim to accept the amount due him. Ned was glad enough to pay it, and is said to have been less dilatory in his habits from that time forward.

WANTED TO KNOW.

Few men were ever fonder of news and gossip than was old Jerry Clishen. Despite this fondness, however, Jerry was not a talker, and rarely took part in conversation other than to ask an occasional question about some point of special interest. One day, Jerry's brother William, who lived some miles away, came to visit him.

William had his right hand heavily bandaged, and this fact, of course, required an early explanation.

"Burnt it 'most off 't the fire t' other night," said William. "Ye see, old 'Square Dean's barn got afire 'n' I went with the rest; but 'twan't any use, 'bout everything was burnt. If I wuz the 'Square, I'd give that boy sech a lickin' 't he couldn't stan'."

"What for?" asked the interested Jerry.

"Why, fur settin' the barn afire," was the reply; "but there! I furgot ter tell ye 'bout that part of it. Ye see the 'Square's boy, great dough-head, he found an owl settin' on the ridge-pole, and so, of course, he had ter shoot at it.

"Wal, the barn winder was open, 'n' the gunwad went right inter the haymow, 'n' 'twan't five minutes afore 'twas all a-blazin'. Everybody turned out, and we got out the old hoss 'n' then Bill Treat said—" and so the old man went on with a long story, giving every detail of what was done, said and thought by each one who was present at the fire.

When at last the story was ended, old Jerry remained for several minutes silently meditating on what he had heard; then he suddenly looked up and gravely asked: "Did ye say whether the boy killed the owl?"

READY ANSWER.

A prudent man has an eye to the future, and provides against contingencies. As a sailor would say, he casts an anchor to windward.

"I have no thought of meddling with your affairs, Mr. Dashaway," said Miss Summit, with a facetious air, "but as I was driving by a well-known pawnbroker's establishment ye-terday, I saw a gentleman inside who, I must confess, bore a strong resemblance to you."

"Indeed!" replied Mr. Dashaway. "Did you see his face?"

"I'm afraid that I did!"

"Then it couldn't have been me. I had my back turned."—*Tid Bits.*

"How many visitors do you have, a day, on an average?" asked a lady of the custodian at a public resort. "Aint no average," he replied. "Some days there's more and some less."

DOLLY'S POCKET.

My dolly is so happy,
Her eyes are very bright,
And when there's no one looking
She laughs with all her might.

She's perfeckly ridic'lus,
I'm sure you'd never guess,
It's 'cause I put a pocket
In her pretty gingham dress.

But I've told her that a pocket
Isn't made for peanut shells,
And she mustn't get it sticky
With dates and caramels.

And if she's not partic'lar
To 'member what I say,
She'll find on some bright morning
Her pocket's flown away.

A GREAT PROCESSION.

"What a procession that was!" said auntie, as she finished binding the heel of a soft little stocking for baby, and stuck the extra knitting-needles into the ball.

And the twins left the cold, dripping window — where they had flattened their noses on the pane and nearly stared themselves cross-eyed trying to find "a piece of clear sky, big enough to make a pair of blue breeches" — and before you could say "Scat!" they had turned the twin kitties out of their twin rockers and were close each side of auntie, asking "When?" "Where?" "What for?" and "How many?" And though brother Fred went on covering his new reader, he was listening to every word just the same.

"Why, 'twas last month," said auntie, "when I was out at the farm. It was a very long procession. It began to pass our house after dark one night, and it was all night and all day going by."

"O my!" said Gertie; and "O my!" said Gracie. "Did you ever!"

"Of course, we couldn't see anything that night," said auntie, "for there was no moon, and the procession did not carry any lights."

"No lanterns!" said Gracie; "And no torches!" said Gertie. "Why, how funny!"

"But we heard it going by," said auntie; "march, march, march, all night. It wasn't just like the sound of feet, either;—more like a great river rushing along. And sometimes it shook the doors and windows. And sometimes we could hear strange moaning sounds. What a procession it was!"

"What a procession!" said Gertie. "Was it ghosts, auntie?" said Gracie. And they hitched the twin rockers very close to auntie's chair.

"It did seem something like ghosts," said auntie, "for when it came daylight we could hear the march, march, march, just as plain as ever, but we couldn't see the procession any more than we could when 'twas pitch dark. And some that were standing by the road shook and trembled as if they were 'most scared to death. And whoever got in the way had their coats and dresses pulled, and sometimes their hats were snatched off, and their hair was tousled into their eyes."

"Must have been funny ghosts," said Gracie. "I should think so," said Gertie. "What else did they do?"

"Oh, sometimes an armful of straw was caught up from the barnyard and carried along," said auntie; "and some towels we had spread on the grass to dry were snatched and hidden away in the weeds and fence-corners. If a farmer tried to work in the field he was pelted with dirt till he could hardly see. And yet in spite of all this mischief along the way, you never saw a procession move so fast;—faster than any horse can trot; about as fast as most railroad trains. And it didn't stop for anything. It went over the highest walls without a ladder. It went over the water without a boat or a bridge. Did you ever see a procession ten miles long? You didn't? Well, this procession was more than a hundred miles long. Yes, it was more than five hundred miles long. What do you think of that?"

"I guess you're telling a riddle-story," said Gracie. "Course 'tis," said Gertie. "And it's a hard one, too."

"What a dust there was!" said auntie. "How tired we were of hearing the noise! for all day long it was march, march, march!"

"Why, of course, girls," spoke up Fred, as he finished his book-cover and looked at auntie with a knowing smile. "Of course, girls, last month was *march* every day, don't you see? If it had been April, you know, auntie's procession might not have been so long or done so much mischief." And he tossed a big apple to auntie, who caught it nicely and divided it with the twins.

"Well, but I *don't* see," said Gertie. "And *I* don't see," said Gracie.

"No wonder," said auntie. "Who *could* see the wind? 'Twas a princely procession of brisk breezes on their way to a colder climate."

"Why o' course!" said Gracie. "That was what kept going by all night and all day, and rattled the windows and stole the towels!"

"But then," said Gertie, "who were the ones that were so scared they just shook all over?"

"Oh," said auntie, "that was Miss Willow, and Mr. Maple and the Apple-tree family!"

IRVING was of a very adventuresome turn of mind, and one day his mother found that he had climbed to the top of a pile of boxes in the store-room. Frightened, she cried, "Irving, come down, or you'll fall and break your head." To which he calmly replied, "Then Irvie see what in it."

LITTLE Eddie had never tasted sassafras-tea until he went to visit his aunt in the country. Then he liked it so much that he passed his cup back, saying, solemnly, "Thank you for more satisfy tea."

1.

DOUBLE ACROSTIC.

Cross words of unequal length. The primals spell the name of a poet of whom it was said, "So much piety was never married to so much wit." He was born April 3, 1593. The finals spell the name of a great painter, born April 6, 1483, died April 6, 1520.

Homefaring from long months at sea,
The sailor smiles at sight of me.

I tell of gods and heroes bold,
In poems by Norsemen sung of old.

I inform you, o'er and o'er,
That some one waits without the door.

Down on the beach the children play,
Then plunge and take me in the spray.

I plainly hint of something more,
Concerning things you've had before.

A city famed in art and story,
I ruled the world in days of glory.

I wave and bloom in summer days,
And crown with grace the yellow maize.

3.

ACROSTICS.

The first seven letters, read downward, show a precious stone, superstitiously supposed to affect the month of April. The second full row shows the sentiment of the stone.

Across—1. A gem that consists of pure carbon. 2. Perfume exhaled by fire. 3. Pertaining to a ring. 4. A small quantity. 5. The back of the head. 6. The introduction of new words into a language. 7. A large river of Europe. 8. A poisonous plant. 9. An English parsonage home.

E. L. E.

4.

BURIED DISCOVERERS.

There will be a great disturbance if the Dukes of Ripon cede Leo Ninth's property to the Grand Mogul without his children's consent.

During Victoria's reign no bishop has been allowed to give eleven livings to nine curates, for none can have more than one.

Joe said if Bob would use the lawn-mower, he would rake the grass for him.

When Captain Tubal boarded the pirate ship, he was thrown from the deck into the sea.

He made so toothsome a dish we pronounced him a chef.

Sambo keeps a little shop and sells persimmons, tobacco, okra, bandannas, and other necessaries.

I am not certain if Rob is her brother or her cousin.

I should like to pick a new flower every day for a year.

Just as the sailor was rigging the capstan, Leyden came into view.

5.

DELETIONS.

1. Take a letter from complete and leave to the end; another, and leave however; again, and leave tenacious.

2. Take a letter from to attend and leave a large monastic, collegiate or cathedral church; another, and leave a masculine title; another, and leave a person excessively penurious.

3. Take a letter from an old kingdom of Spain and leave a fortress; another, and leave a distinct hereditary order or class of people among the Hindoos, the members of which are of the same rank, profession or occupation; another, and leave condition.

4. Take a letter from to grope and leave to chatter; another, and leave noting the triangular end of a house among the eaves.

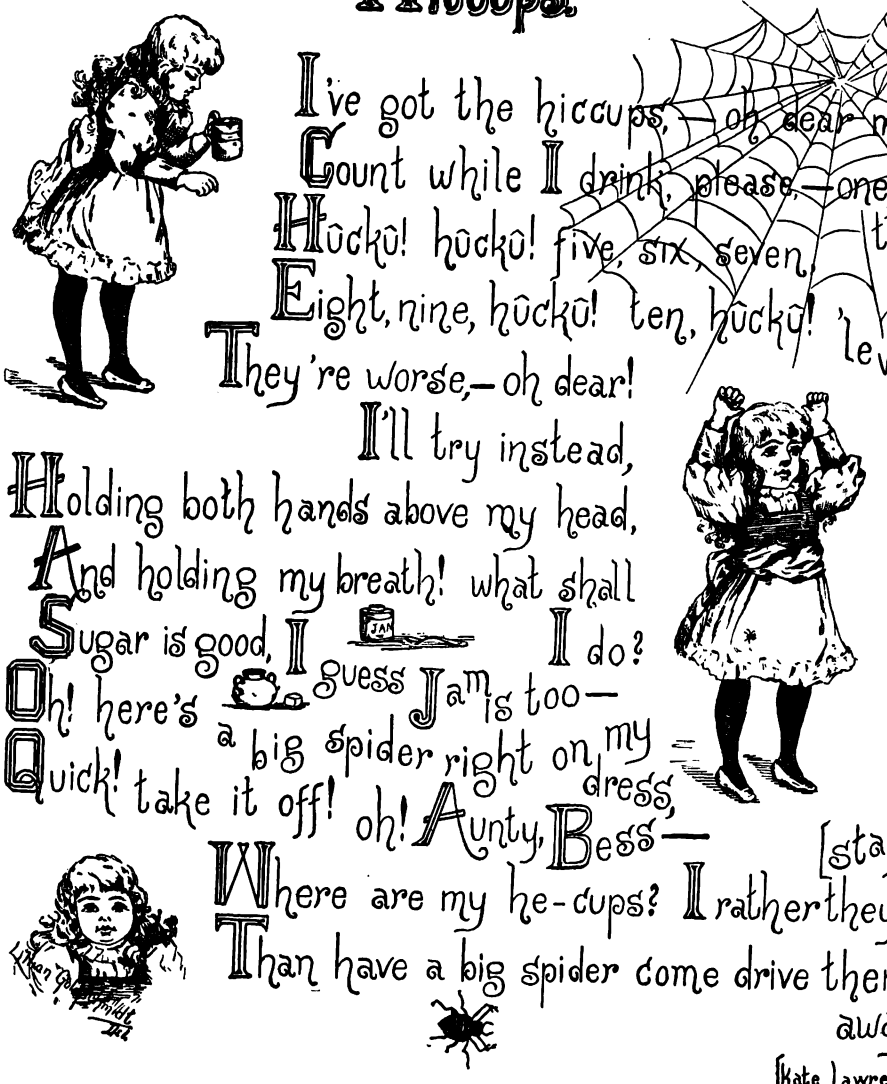
6.

CHARADE.

Though I've delicate wings,
Ready poised as for flight,
Yet I stay by the ship,
With its colors bright,
Where I first saw the light,
And never take flight!

I often hold threads,
But no shuttle can trace
By any of them
A pattern of grace.
And though I do well, I truly confess,
That I often am found in a very tight place.
Now, if by my riddle you have not been beaten,
My whole, from the ground, you quite often have eaten.

Conundrums.



Why is a blacksmith like a safe steed? Because one is a horse-shoer, and the other is a sure horse.

Why should we associate a faithful lover with lard? One is tried and the other is true.

Answers to Puzzles in Last Number.

1. 1st stanza = hail, fall.
2d stanza = hill, fill.
3d stanza = April fish.

2. 2d line = custom of making April Fools. 3d line = its origin, long ago. 5th line = looking from, ark. 7th line = cooing. 9th line = roam. 10th line = again unto. 13th line = April First. 14th line = as all. 16th line = all. 17th line = upon. 18th line = at last. *Key-words in second line.*

QUEER PETS.

Jake and Jerry were tiny lobsters, fresh-water ones, but just like the ones you see in the markets, only they were of a dirty green color, instead of being red, and they were not much more than two inches long.

Brother Will told us that they would be red, too, if we put them into boiling water, but we wouldn't do it.

I asked him if it wouldn't kill them, but he just laughed and told us to try it and see.

Ray let Jake pinch his ear, because, he said, Brother Will wanted us to kill them.

I saw a big lobster pinch a little boy's foot once, but I don't think that Jake hurt Brother Will very much, because he was so small.

We filled a tight box with water, and put stones and sods in the bottom of it, with a shingle on the top of the water for a raft. Sometimes they would climb upon the raft and have a nice sail all about the box.

They would eat bread crumbs from our hands, but it was funny to see them run backwards when a stranger tried to feed them.

I don't see how they knew the difference, do you?

We kept them all summer, but we didn't know what to do with them in the winter, so we had to put them in the river again.

This spring we found lots of tiny lobsters, under the stones, by the river bank, but I don't think that any of them were Jake or Jerry, because they were so afraid.

Ray says that when we can have a glass tank in the sitting-room, he will tame some more, but I guess that time will never come, for mamma don't like lobsters, live ones, I mean.

ELLA H. STRATTON.

NELLIE, who is a little over three years old, was watching with great interest her mamma making pies; and when the upper crust was being placed in position, she called to her little brother, "O Roy, Roy, come quick, and see mamma put a roof on her pie!"

LITTLE Edie, who had never eaten strawberries, saw some strawberry shortcake for the first time, and exclaimed, "Oh, ma, see the emery cake!"

NOTHING BUT A MAKESHIFT.

Mrs. Granger made a week's visit to a niece who had married and gone to live in "the city," and on her return to Slowville, brought with her a dozen finger-bowls, and a surplus fund of new ideas. People never gave dinner parties or luncheons in Slowville, and Mrs. Granger did not feel quite ready to start the fashion, but those finger-bowls must be displayed as soon as possible, in some way or other.

Mrs. Granger invited a few friends to her house one warm June evening, and treated them to ice-cream, for the making of which she was famous in the neighborhood.

After the ice-cream had been eaten, there was a little pause, broken by the appearance of Mrs. Granger's stalwart maid-of-all-work, who entered the room with a large tray on which proudly reposed the entire dozen finger-bowls, with a good-sized dinner napkin under each one. Mrs. Granger endeavored to assume an easy manner, through which her sense of the importance of the occasion was plainly visible, however.

"Will each one please be helped to a finger-bowl and napkin," she said, as the tray was borne around the circle to her eight guests. And as the tray reached her, she set the example to her astounded neighbors, by dipping her fingers well into the bowl, and drying them thoroughly on the napkin; in which proceeding she was followed with due solemnity by the others.

Then the finger-bowls were collected by the maid-of-all-work, who had stood, bearing the tray with the three unused finger-bowls, while these lavatory exercises were going on.

With true New England grit no guest displayed her ignorance by any question, and it was not until the advent of some "summer boarders," fully six weeks later, that the least doubt of the propriety of using finger-bowls after eating ice-cream entered the minds of the "first people" of Slowville.

"An' after all," said Miss Malvina Slocum, when the matter was mentioned to her, "what odds did it make, anyway? The main thing with Sarah Granger was to show them finger-bowls, an' she done it, certain sure! Of course, I s'pose they may be useful in the city where folks are always in a racin' hurry from one thing to another, an' can't really take time as they'd oughter for anything; but for my part I want a real good hand-washin' when I've finished my meals, an' finger-bowls, after sticky fruit, wouldn't seem much more'n a makeshift to my mind!"

CLIMATE OF THE BRITISH EMPIRE.

The British Empire covers so large a proportion of the surface of the globe that its reports upon climate may be taken as a report for the whole world. The recently published table of returns for the year 1889 shows interesting results. One of the most important facts brought to light is this, that the same stations year after year monopolize the extremes of heat and of cold, of dryness and of humidity. No other inference can be drawn from this fact than that climate is far more regular and unvarying than we are apt to suppose.

The highest temperature in the shade, noted by the British observers, was at Adelaide. The point reached was one hundred and nine degrees, and this was on January Thirteenth. The reader will bear in mind that Adelaide is situated in the southern hemisphere, and that it is midsummer there when it is midwinter with us.

For the last five years Adelaide has recorded the highest temperature in the shade. The record for 1886 shows a temperature of one hundred and twelve and four-tenths degrees. Last year it had the highest temperature of any place in the sun—one hundred and seventy and seven-tenths degrees. It was also the driest station, having a mean humidity of sixty-three per cent.

The lowest shade temperature in the Empire was recorded at Winnipeg, on February Twenty-third, forty-two and six-tenths degrees below zero. This station had also the greatest range in the year, the greatest mean daily range, the lowest mean temperature, and the least rainfall, fourteen and ninety-five-hundredths inches. It does not appear as though the precipitation in the form of snow could have been reckoned in with the reported rainfall.

The highest mean temperature for the year 1889 was reported from Bombay, and the greatest rainfall was observed at Trinidad. It is curious to find that London was the cloudiest of all the stations in the Empire, and that it was also the dampest, its humidity averaging eighty-one per cent. The brightest of all stations was Malta. This had only a little more than half the cloud of London.

MATTER OF OPINION.

There is an old, but ever good story, of a man who did not play the violin, but "thought he could if he tried." He was not alone in his density of self-appreciation. One little boy, at least, is fitted to bear him company.

He belongs to a very musical family, but is himself entirely destitute of appreciation or "ear." Knowing so little of music, however, he is ignorant of what he has missed. One day, a visitor was present when the other children were singing delightfully at the piano, while Frank sat at a distance, in aggrieved silence.

"Why don't you sing, too?" asked the guest, during a pause in the music.

"They won't let me," was the injured response.

"Don't you sing?"

"Sometimes, but *they* say I sing out of tune."

"Oh, then you're not musical, like the others?"

"I don't know about that," retorted Frank, still more aggrieved. "The trouble is, nobody thinks I am!"

EXAGGERATED.

It is fashionable just now to say that women are wanting in politeness in public places, and true also. Mr. Jones was discussing this subject the other day, says the Washington *Star*.

"You may talk as much as you please about the impoliteness of women in street-cars," he declared, "but I've been riding on this line for ten years now, twice a day, and I've never given up my seat yet that I haven't been thanked for it."

"How many times have you given it up, do you suppose?" inquired his interested auditor.

"Once."

Yes, Vanilla is expensive, and when one buys an Extract at a low price, do not be disappointed if it is poor or disagreeable in flavor. For absolute purity, we recommend Burnett's Extract of Vanilla. [*Adv.*

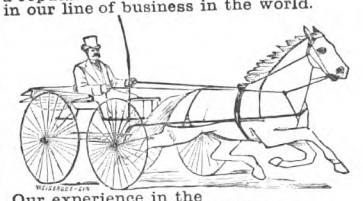
Our Fine Illustrated Catalogue
of the World Renowned "Murray"
$5.95 Harness
and $55.95 Buggies, and all
our other
"Murray" Vehicles & Harness, also a book containing words of praise from People in all parts of the United States who have bought, tried and tested our Celebrated Buggies and Harness. Our



"MURRAY"

Buggies and Harness have stood the severest test for years, and have to-day no competition whatever when Quality and Price is considered together. We do
the largest business direct with the consumer of any house in the country, shipping not only to every state in the Union and Canada, but to Java, the West Indies and all foreign countries wherever vehicles and harness are used. Our

$55.95 BUGGIES

$5.95 HARNESS

Have gained for us
a reputation second to none
in our line of business in the world.

Our experience in the
Buggy and Harness business,
together with our facilities and
modern business methods
make it
not only possible, but easy for you or any other man to buy the best
Buggies and Harness,
(which are the "Murray,")
for one-half their
real worth and for
less than one-half
what you
have paid for goods
not equal to
them in any respect.
If your "time is money,"
you can't spend
a few minutes of it
to better advantage than in
reading a Catalogue of
the "Murray" Buggies and Harness,
and this book.
A postal card
to our address will
secure you both
of these valuable books free,
and educate you
up to the way business is
done in the nineteenth century.
From the fact
that we deal direct
with the consumer, and
belong to neither of the
so-called
"Buggy and Harness Pool" or "Trust,"
ought to be enough
to convince any
educated person that we
are the people
to deal with.
We know
we will hear from you
by the next mail
along with the thousands
who "know a good thing when they see it."
Very kindly yours,

SPRING DRESSMAKING.

"Old clothes in winter are not as nice as new ones," sighs Rosabella; "but they are not an affliction. It is old clothes in summer that are the worst! Summer is different. You want everything new. You want everything fresh and dainty. You don't want to have to think and plan and worry about letting things out and taking things in and mending things up. You hate the idea of a made-over dress.

"It is all out of harmony with the season to stew in a close room, ripping and hemming and running a tiresome sewing-machine; and then go and steam in the kitchen, pressing out seams with a horrid, hot, heavy flatiron; and then very likely have shabby spots in your gown that can't be hidden after all. How can anybody ever feel cool or fully satisfied in such a dress when it's done? If only clothes grew ready-made without a price-tag, what a blessing it would be!"

Most ladies have at one time or another shared poor Rosabella's mood of despair. Nevertheless, there are compensations to be found for the toil and wear of temper consequent on spring-dressmaking, even when it is done in the house and by the household.

Perhaps when the dresses are finished they are less stylish than if a professional dressmaker had produced them, but there is an equal chance that they are better adapted to the individual tastes and peculiarities of the wearers.

Perhaps some of them cannot by any degree of skill and careful planning be so made that a keen eye may not discover a shabby spot, or guess at one from the arrangement of the trimming which conceals it. But how great the triumph if the effect is so tasteful and becoming that none mind the shabby spot, even when they know it is there!

Some people may recognize the reappearance of a long-enduring fabric for another season's wear. Perhaps a malicious one among them will really say,—though it is infinitely less likely than the owner of the garment imagines,—"Dear me! There is that same old pongee again! Let me see—is this the fourth summer she has worn it?"

But then how happy she feels when a friend remarks admiringly, "My dear, I do hope that pongee of yours will never wear out. You will never have anything else quite so becoming."

Variety has its charm in costume, but it is far less important than suitability, taste, becomingness, and in fact any of the other attractive qualities which clothes may possess. It is hardly possible for a dress that is truly beautiful and becoming to weary the eye, and the less it is changed to accord with the whim of fashion the better.

Indeed, to the persons who care most for the wearer, and whose opinion she should most value, time often lends an added charm, making it seem almost a part of herself, like her hair or the color of her eyes. They hate to have it finally discarded, and require time and coaxing to become reconciled to a new garment, which afterwards they may perhaps like better than the first.

Besides, after the heavy fabrics and soberer hues of winter, any summer dress is a variety, and needs no other charm than grace of line and pleasing color. We do not say when the violets and roses come, "There are those same old purple flowers again! And the roses pink another year! Why can't they blossom blue or scarlet, for a change?"

ACHIEVEMENTS OF INDUSTRY.

The real dignity of labor is well symbolized and set forth in those single acts at the beginning or end of a great work which represent to the imagination the whole enterprise.

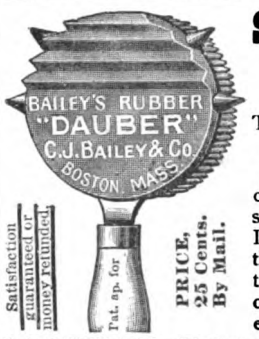
The corner-stone of a great building is generally laid by some official dignitary, who, in an unaccustomed apron, and with a trowel which he uses clumsily, makes a pretence of doing the actual work of putting the stone in place. Crowds stand about to witness the work, and orations are made and hymns sung.

The knocking away of the prop which sends a vessel off the ways and into the water is an event of equal consequence and interest, because it represents the noble task of constructing a great ship.

When one of the greatest engineering works of all time was completed—the construction of the Pacific railroad—it was regarded as a great honor to drive the last spike that bound the last rail to the earth; and the spike which served, at least temporarily, for the work, was made of silver.

Emperors, Kings and Presidents start with their own hands the machinery of great industrial exhibitions, themselves typical in a high degree of the importance of manual labor.

In a certain sense it would be more fitting that these ceremonies, which concentrate into a single instant's act long periods of hard labor, should be performed by one of the real workingmen who are engaged upon the enterprise. It is they who do the work, and they might well claim that the honor of the key ceremony belongs to them.



This was what was done, indeed, when the first blow of the pick was struck recently in the construction of the buildings for the World's Fair of 1893 at Chicago.

In a cold winter wind some five thousand people assembled to see a workman strike, with his pick, a blow into the frozen ground on the shore of Lake Michigan, where will be the office of the superintendent of construction of the exhibition.

In a certain sense, however, and perhaps in a more important one than the other, it is fitting that such typical acts as the laying of corner-stones and the launching of ships shall be performed by the highest of dignitaries, as representing the fact that it is really the whole people who build and use great enterprises.

AFTER SHAVING BATHE THE FACE WITH POND'S EXTRACT

Does not smart nor sting. Reduces redness. Checks bleeding. Just as it reduces any inflammation, it sends back the blood which the rasping of the razor has drawn near the surface, so leaves the face white, soft and smooth, without the shininess caused by other lotions. For this purpose far superior to bay rum, cologne, or perfumed water. Best barbers use it.
YOU HAVE A BOTTLE. WHY DON'T YOU TRY IT?
When purchasing accept Pond's Extract only. Refuse substitutes; probably worthless. POND'S EXTRACT CO., New York and London.

JACOB.

If any one is desirous of having for a pet an embodied joke, he should import a secretary-bird, or take up his residence in Africa, where these strange creatures dwell. The author of "Home Life on an Ostrich Farm" describes one such pet, named Jacob, who proved to be a most amusing companion. His personal appearance was decidedly comical. He always reminded the author of the book of a little old-fashioned man, in a gray coat and tight black knee-breeches, with pale, flesh-colored stockings clothing the thinnest and most angular of legs, the joints of which might have been stiff with chronic rheumatism, so slowly and cautiously did Jacob bend them.

Not by any means a nice old man did Jacob resemble, but an old reprobate, with evil-looking eye, yellow parchment complexion, bald head, hooked nose and fiendish grin; with his shoulders shrugged up, his hands tucked away under his coat-tails, and several pens stuck behind his ear.

His objectionable noises were very numerous, and some of them unpleasantly suggestive of a hospital. He would begin with what seemed a frightful attack of asthma; then, for ten minutes, he would have violent and alarming hiccoughs, and the performance would conclude with a repulsively realistic imitation of a consumptive cough. His favorite noise was a harsh rasping croak, supposed to be a gentle intimation that he was hungry, though the old impostor had probably had a substantial meal before coming to pose as a starving beggar beneath our windows.

When it seemed impossible to get rid of him, we would fling toward him a large dried puff-adder's skin, which always threw him into a state of abject terror. He seemed quite to lose his wits, and would dance wildly about, jumping several feet from the ground, in the most grotesque manner. At last, grunting his loudest, and with the pen-like feathers on his head bristling with excitement, he would clear the fence, and rush, at railway speed, across the common, and only return at dusk to squat solemnly for the night in his accustomed corner of the garden.

Though friendly enough with us, Jacob was very spiteful and malicious towards all the other creatures on the place. At one time, we found that he had been systematically inflicting a cruel course of ill-treatment on one unfortunate fowl, which was enclosed, with a view to fattening, in an old packing-case, which had wooden bars nailed across the front.

Somehow, in spite of abundant mealies and much soaked bread, that fowl never would get fat, nor had his predecessor become so. We had grown weary of feeding the latter for weeks with no result, and had at last killed and eaten him, a poor bag of bones.

One day, however, the mystery was solved. Jacob had devised an ingenious way of persecuting the poor prisoner, and on witnessing it, we no longer wondered at the fowl's careworn look.

Jacob would approach his box, and make defiant and insulting noises at him, until the imbecile curiosity of fowls prompted the victim to protrude his head and neck through the bars; then, before he had time to draw back, Jacob's foot would come down with a vicious dab on his head.

The foolish creature never seemed to learn wisdom by experience, though he must, many times, have been nearly stunned, and his head all but knocked off by Jacob's powerful foot and leg; yet, as often as the foe challenged him, his poor, simple face would look inquiringly out, only to meet another buffet. As he would not take care of himself, we removed him to a safe place, where he fulfilled his destiny by becoming respectably fat.

POWERFUL HEAT.

We hear much in these days about "solar energy," and it is not long since Professor Young enlightened the readers of *The Companion* as to the more recent discoveries of astronomers in relation to it. Here is an illustration, borrowed from an exchange, of a sort which the Professor did not mention.

A young newspaper man found himself stranded in Whitman County, Washington, five hundred miles from his base of supplies, and destitute of money. In this predicament he hired out to a farmer, who set him to plowing with a pair of horses.

Both man and beasts were new to the business, and as a natural result, the furrows looked as if they had been run by accident rather than design.

At the close of the day the farmer came to look at them, and expressed his mind somewhat freely. The newspaper man listened as meekly as he could, and finally said:

"Yes, the rows are rather crooked, there's no denying it; but you see, sir, the sun was exceedingly hot to-day, and it must have warped them."

The answer turned away the farmer's wrath, and kept him from turning away the new hand, who, since then, according to the story, has become his employer's son-in-law.

IGNORED.

Prince Bismarck declares that he wishes it might be possible for him to travel about Germany without attracting attention. "My ideal is," he one day said, "to be able to walk about Hamburg without seeing a single head turned to look at me."

Such a declaration is full of a simple and sweet humility, but it is a question whether the Prince would not regret the incense of public recognition if he were really deprived of it.

A natural wish to avoid being mobbed by the vulgar herd has almost become a monomania with the poet Tennyson. Yet even he is capable of a pang when the annoyance is denied him.

One day he was taking a country walk with a friend, when a man was espied in the distance.

"We must turn back," said the poet. "That fellow means to waylay us."

His companion, however, persuaded him to continue his walk. They overtook the enemy, and passed him; he took not the least notice of them.

"What an extraordinary thing!" cried the irate poet. "The fellow seems to have no idea who I am!"

HORSE-CAR HUMOR.

A shrewd guess is sometimes almost as valuable as exact knowledge.

"Why do you suppose they put hay in the bottom of these horse-cars?" asked a young woman of her escort.

"I don't know," he answered. "Probably to keep the passengers' feet from getting warm. You know they pack ice in that way."—*Lowell Citizen.*

For an ache, pain or cramp, internal or external, use "*Brown's Household Panacea.*" A superior remedy. [*Adv.*

463 Washington St., Boston, Mass.

CATARRH ASTHMA, BRONCHITIS and LUNG TROUBLES.
I have a new treatment by means of a patented instrument that is effecting remarkable cures in all the above diseases. Several thousands have been sold with most gratifying results in all the cases heard from. To tell my whole story in the newspapers, would cost a fortune. I hope to get a hearing in this way. If people interested will kindly send me their address I will send them a pamphlet giving description, full particulars, and price, which is very low. If, after full information, it is desired, it will be sent on trial. Address,
DR. W. F. SEMPLE, Mt. Vernon, Ohio.

A Perfect Fountain Pen, sent to any address, for 25 cents. Agents and canvassers wanted. Send for circular. THE STOFFORD FOUNTAIN PEN CO., Boston, Mass.

REVOLUTION In Children's Wear.
THE SIGSBEE UNDERWAIST.

Just the waist for boys, because they cannot tear off the buttons, nor tear out the buttonholes. The most desirable for girls, being void of cords and useless seams. The simple and novel device for attaching the elastics is the best for the purpose ever invented. Being supported from the shoulders, the weight is divided equally. Box plaits over the hips allow ample fullness to insure a perfect fit, preventing all pressure, and allowing the vital organs to develop naturally. Easily laundered. Wears longer. Sold by Dry Goods Dealers everywhere.

Sizes 20 to 24 in., 55 cts. } Ages 1 to
" 25 " 30 " 60 cts. } 12 years.

Mailed to any part of the United States on receipt of 5c. additional for postage.

SNOW STATUES.

Boys and girls who make "snow men" may not be aware that they are artists, but in a humble way they are, and many stories have been told of sculptors who have obtained the inspiration of their career from the making of figures in snow. Thorwaldsen, the great Danish sculptor, was one of these. He was instinctively an artist in snow before he became an artist in clay and marble. Furthermore, trained sculptors have condescended to make statues in snow.

Pietro de Medicis, a great patron of art in Italy, employed Michael Angelo, during a particularly severe winter in Northern Italy, to make snow statues, and the sculptor executed these singular commissions with fidelity.

Under the reign of Louis XIII. of France, a splendid statue in snow was erected at the crossing of several streets in Paris with verses in neat raised letters upon it which may be translated thus:

"Remember, you who pass, the day
When you, like me, must melt away;
And pray that winter rule the sky,
For when it thaws, alas! I die."

During the severe winter of 1784, King Louis XVI. of France ordered his finance minister to use the public moneys to alleviate the condition of the poor of Paris; and in return the Parisians raised to the King a fine statue of snow in one of the most public places of the city. The pedestal bore some very ordinary and perfunctory verses, somewhat like the following:

"Great Louis, the poor, whom thy bounties protect,
To thee but a statue of snow may erect;
But to thy generous heart it is pleasanter, sure,
That the marble should pay for the bread of the poor."

Six years afterward another very cold winter came, and the people then cared very little for the benefactions of King Louis. Snow statues were again the order of the day, and one of them, a representation of the goddess of Liberty, was said to have borne this somewhat ironical but prophetic inscription:

"This is Liberty! Worship her, for to-morrow she will be gone."

LETTER OF RECOMMENDATION.

A letter of introduction is usually supposed to be a sure passport for the bearer to the favor of the person to whom it is addressed. But according to the experience of Anton Rubinstein, the pianist and composer, it is sometimes well to investigate the contents of such a letter.

When Rubinstein went to Vienna, in 1846, full of talent and hope, he took a dozen letters of introduction to prominent people in that city, from the Russian ambassador and his wife, in Berlin. Vienna was the residence of Liszt and one of the great musical centres of Europe, and young Rubinstein anticipated making many warm friends.

He made his calls and left his letters at the houses of the people to whom they were addressed, and then waited for replies and invitations, but none came. After five or six letters had met this response of absolute silence, he was utterly at a loss to understand the meaning of such treatment.

"I will see," he said, at last, "what is said about me in these letters." Accordingly he opened one, and this is what he read:

"MY DEAR COUNTESS: To the position which we, the ambassador and his wife, occupy, is attached the tedious duty of patronizing and recommending our various compatriots in order to satisfy their oftentimes clamorous requests. We, therefore, recommend to you the bearer of this, one Rubinstein."

The riddle was solved. The enraged pianist flung the remaining letters in the fire, and resolved to rely on his own unaided efforts to procure friends in the future.

AFTER A MATCH.

The average person notices the arrangement of a room surprisingly little, says the Albany *Argus*. Its dimensions and the relative positions of the furniture may seem to be familiar to him, but in reality they seldom are. The way to become convinced of this is to hunt for something, a match for instance, in the dark.

You have the mantel, and make a grab where you imagine the match-safe stands. Down goes a piece of bric-a-brac to the floor.

More care is used. You find the end of the mantel, and run your hand along the marble slab. Off goes a vase or two. You strike the clock; you've got it. No, it's on the other side. Not there! Ah, then it's on the table.

After running against the stove and tripping over the chair, you find—the sofa. Keep cool and take your bearings. The table is north of the sofa, and the sofa runs east and west; north, therefore, is in front of you. Now you have it. That article that dropped to the floor sounded like the match-safe. But it's the ink-well, and your fingers are dyed with a color warranted not to fade.

A bright idea—the stove! You burn your fingers, and warp your patience, but you secure a light. And the match-safe? It is on the mantel-piece in front of the clock—the only place you didn't search.

WELL SATISFIED.

When the late Archbishop Tait was passing some time in a little village of Perthshire, he received an unexpected and no doubt a pleasing expression of appreciation. As far as it went, the tribute to his ability as a preacher was sincere. He had given instructions for his letters to be sent to the local post-office, to be called for.

The day that he arrived in the village he walked down to the general shop, which also did duty for the post-office, and asked, "Are there any letters for the Archbishop of Canterbury?"

The storekeeper had something to say before he answered the question. "Maybe you'll be that yersen yersel'?"

"Well," said the Archbishop, "as a matter of fact, I am."

"Well," the postmaster continued, earnestly, "I have a son, and he is in a shop in London, and he told me that he aince gaed to St. Paul's Cathedral to hear ye preach, and he was verra weel satisfied wi' ye."

For sale by druggists or sent by mail from **56 West 25th Street, New York.**
See that this signature is printed on the label. *F. Crosby Co.*

BUNION IS A SUBCUTANEOUS swelling seated on the inner side of the ball of the great toe. In its early stage it is a thin-walled sac filled with clear fluid and then causes very little uneasiness, but subsequently, in consequence of constant pressure and friction, becomes hard and tender. Sometimes, particularly after active exercise, the swelling becomes very painful and inflamed, and forms an abscess. The treatment should be immediate, and consist in the application of ALLCOCK'S BUNION SHIELDS. They will always give relief, and in most cases, if continued, effect a cure.

CORNS IF A PORTION OF THE cuticle or scarf skin becomes greatly thickened, and penetrates into the true skin, causing great pain and annoyance, it is called a corn. Corns are commonly spoken of as *hard* and *soft*; the hard are those situated on the more exposed surfaces of the foot, where the cuticle gets dry and hard, and the soft, where the cuticle is moist, generally between the toes.

For treatment apply ALLCOCK'S CORN SHIELDS. Absolute comfort will be obtained while wearing them, and if continued a final cure effected.

A pack ge of the CORN SHIELDS or a sample of the BUNION SHIELDS will be mailed on receipt of 10 cents. POROUS PLASTER CO., 274 Canal Street, New York

DONALD KENNEDY of Roxbury, Mass., says
My Medical Discovery seldom takes hold of two people alike! Why? Because no two people have the same weak spot. Beginning at the stomach, it goes searching through the body for any hidden humor. Nine times out of ten, inward humor makes the weak spot. Perhaps it's only a little sediment left on a nerve or in a gland; the Medical Discovery slides it right along, and you find quick happiness from the first bottle. Perhaps it's a big sediment or open sore, well settled somewhere, ready to fight. The Medical Discovery begins the fight, and you think it pretty hard; but soon you thank me for making something that has reached your weak spot. Price, $1.50. Sold by every druggist in United States and Canada.

Spring Humors
Spring Humors, whether itching, burning, bleeding, scaly, crusted, pimply, or blotchy, whether of the skin, scalp, or blood, whether simple, scrofulous, or hereditary, are now speedily, permanently, and economically cured by the **Cuticura Remedies** when the best physicians and all other remedies fail. The almost miraculous cures daily effected by them prove this. No statement is made regarding them not warranted by the strongest evidence.

They are, in truth, the greatest skin cures, blood purifiers, and humor remedies of modern times. They are absolutely pure, and agreeable to the most sensitive, and may be used on the youngest infant and most delicate invalid with gratifying and unfailing success. CUTICURA, the great skin cure, instantly allays the most intense itching, burning, and inflammation, permits rest and sleep, soothes and heals raw and irritated surfaces, clears the skin and scalp of crusts and scales, and restores the hair. CUTICURA SOAP, the only medicated toilet soap, is indispensable in cleansing diseased surfaces. CUTICURA RESOLVENT, the new blood and skin purifier, and greatest of humor remedies, cleanses the blood of all impurities, and thus removes the cause. Hence, the **Cuticura Remedies** cure every humor of the Spring, from the simplest facial blemishes to the worst case of scrofula. Sale greater than the combined sales of all other blood and skin remedies.

☞ "HOW TO CURE DISEASES OF THE SKIN AND BLOOD" mailed free to any address, 64 pages, 300 Diseases, 50 Illustrations, 100 testimonials. A book of priceless value to every sufferer.

CUTICURA REMEDIES are sold everywhere. Price, CUTICURA, 50c. CUTICURA SOAP, 25c.; CUTICURA RESOLVENT, $1. Prepared by POTTER DRUG AND CHEMICAL CORPORATION, Boston.

Pimply, Blotchy Skin, red, rough, and oily skin and hands, painful finger-ends with shapeless nails, are prevented and cured by Cuticura Soap, incomparably the greatest of skin purifiers and beautifiers, while rivalling in delicacy and surpassing in purity the most expensive of toilet and nursery soaps. *The only medicated toilet soap, and the only preventive and cure* of inflammation and clogging of the pores, the cause of pimples, blackheads, rough, red, and oily skin, and simple humors of infants and children. Sale greater than the combined sale of all other skin soaps. Sold everywhere.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

THE ADULT AGE.

The adult age is the period of physical and mental maturity; the ripe fruit for which blade and stock, bud and flower have been the preparation. It is the period of achievement. The bodily tissues are consolidated, and the different organs fully developed in size and function.

But the adult age has its own peculiar drawbacks and perils. Even of those persons who come to it with the best of prospects,—their native vigor preserved by a virtuous and well-guarded youth,—there are many who do not live out half their days, or who prepare for themselves a feeble and painful old age.

One peril which besets adult life is inordinate or misdirected ambition. The resulting unwholesome feverishness is well exemplified in the case of the professional politician. The mental and physical strain incident to hotly contested elections, the alternate hope and despair, the unseasonable labor and exposure, all tend to break down those who engage in them. Those who have watched public events for any considerable length of time have seen many strong men killed by such excitements, labors and disappointments.

Still more dangerous, because more generally engaged in, are the undue ambitions of the business world. Men who are eager to be rich take upon themselves incessant anxieties, and submit to ruinously close confinement. At the same time they have many temptations to high living, and the results are seen in the great number of the picked men of the race who die suddenly of apoplexy or heart failure.

In short, the danger of the adult age, especially in the highly artificial conditions under which a large part of the race now live, is excess. This excess, or over-stimulation, it may be of the brain, the stomach, the animal passions; or it may run to amusements, or even to gymnastic sports. Whatever direction it takes, the end is nearly the same—premature enfeeblement or death.

Something should be said, also, of those whose lives are shortened by domestic labors and worries. The rearing of children, the care of the sick, the conduct of the household, the pressure of social duties, the demands of fashion, the endless attempt to make a scanty income go as far as possible—these are among the causes which bring naturally strong women too early to the grave.

The moral is obvious. Hard work is not to be avoided; perhaps it is best that it cannot be; but those who wish for health and long life should aim to live as far as possible simply and naturally, and especially to avoid rivalry and worry.

DOGS AND LANGUAGES.

Certain experiments are gravely proposed, among French and English men of science, which have for their object to determine whether man cannot, by persistent training through several generations and by selection, introduce a totally new faculty into the brain of an animal. It is proposed to make the experiment with dogs, and ascertain if it is possible to produce a dog which will utter articulate sounds, like those of human speech.

There is already, in France, a dog which makes a sound not unlike "*ma manima.*" It is little more than a howl, but the dog appears to be striving to "talk," and it is proposed to begin the series of experiments with him.

M. Paul Bert, a French man of science, who died five years ago, has left on record a statement, which, if demonstrated to be true, seems to prove that dogs sometimes understand ordinary spoken conversation.

An old woman, to test her dog's devotion, feigned to be engaged in selling him to a friend. "In an ordinary tone of voice, and without gestures, without resting upon any particular word, she agreed upon a price for the dog, and concluded the bargain; whereupon the dog came up to her, whining and rolling at her feet in a supplicating way."

Stories have been told of dogs which understood the same command in two different languages. A companion to this story is one related, on very good authority, of an English dog which was taken to France and left among people who spoke only French.

For a considerable time the dog appeared confused, disconcerted, ill at ease and even melancholy. It was plain that he understood nothing of what was said about him. Everything was new and strange.

After a time, and little by little, he recovered his gaiety, self-possession and intelligence. He was himself again; he seemed, indeed, to have "learned French."

BEATING A WOLF.

It is not often that a wolf story is told in a way to show the cowardly nature of the animal. For this reason the following account, given by the author of "Twenty-seven Years in Canada West," has its own value and interest.

My wife's youngest sister had a pet sheep that she had brought up from a lamb, and to which she was much attached. One afternoon she was going down to the spring for a pitcher of water, when she saw a large dog, as she thought, worrying her sheep, upon which she picked up a large stick, and struck the beast two or three strokes with all her strength, thus compelling him to drop his prey.

This, however, he did very reluctantly, turning his head at the same time, and showing his teeth with a most diabolical snarl. She saw at once when he faced her, by his pricked ears, high cheek-bones, long, bushy tail and gaunt figure, that her antagonist was a wolf. Nothing daunted, she again bravely attacked him, for he seemed determined, in spite of her valiant opposition, to have her pet lamb, which he again attacked.

She boldly beat him off the second time, following him down the creek, thrashing him and calling for aid with all her might, when, fortunately, one of her brothers, attracted by her cries, ran down with the dogs and his gun. But he was too late for a shot, for when the wolf saw the reinforcement, he scampered off with all his speed.

HIS CRITICS!

"What it takes to make a Paradise," some one has said, "depends upon the person who is going there." There was once an artist who painted a picture of Adam and Eve in the Garden of Eden. It was exhibited publicly. One day the painter, entering the hall, saw two men, who appeared to be farmers, standing before the picture.

"Now," said the artist to himself, "I can hear an unprejudiced opinion of my work."

He drew near, and listened to what the farmers were saying.

"Well, John," said one, "what do you think of it?"

"It's pretty good," said the other, "but there's one thing about it that strikes me as a little mite queer."

"What's that?"

"Why, he's got Eve with a Rhode Island greening in her hand."

"Well, what of it?"

"Hum! Seeing that the first Rhode Island greening was raised in this century, I don't quite see how they could have had them in Paradise!"

"No greenings!" exclaimed the other, contemptuously; "how do you suppose they could have got along in the Garden of Eden without Rhode Island greenings?"

MARCH!

Even an extremely aggressive enemy can be easily conquered by strategy; it is only a question of employing the stratagem exactly fitted to the case. An open-air preacher of East London understood this very well, and his stratagem fitted to a charm. He was addressing a crowd, when a soldier who had been drinking came up, and loudly ridiculed the service.

Finding that it was useless to ignore the man, the preacher said, "Ah, my friend, you're no soldier; you've only borrowed those gay red clothes! No servant of the Queen would get drunk and interrupt a peaceful service."

The man warmly protested that he was a soldier, and invited the preacher to test him.

"Very well," was the reply, "I will. Now then, stand at ease!"

This the soldier did as well as his condition allowed. "Right about face!" This order was also obeyed, though with some trouble.

"Now, quick march!" and off went the valiant soldier, marching down the Mile-end Road at a vigorous pace, while the preacher resumed his discourse.

NOT TO BE BORNE.

"Oh, it must be dreadful to be poor," said a fastidious little girl. "You have to be so dirty!" The state of uncleanness is, nevertheless, not always necessary, as many a poor person can testify, but it is often a condition of choice rather than destiny. Says the *Philadelphia Record:*

A "poor white trash" girl from the mountains of North Carolina was received into the house of a lady in Raleigh, for training. She was taught to be orderly and clean, but suddenly discipline ceased, for she fled to her mountain home. Thither the lady went to find her.

"Why did you leave me?" she asked.

"Well, Mis' Blank," was the reply, "I couldn't stay. I was just *cloyed* with neatness!"

NOT FRESH.

The "tramp" nuisance is largely abated, at least in some parts of the country, but it has left its mark upon literature.

"Where is your wood-pile, lady?" inquired a tramp, to whom the kind-hearted housekeeper had given "a bite of something to eat."

"It's out in the shed. How thoughtful of you to offer to split some wood."

"Oh, I'm not going to split any wood. I want the axe to split this biscuit."—*Boston Herald.*

UNDESERVED.

Trouble begins early with some people, as says the New York *Herald.*

"Why, Clarence," remarked a visitor, pleasantly, to a precocious four-year-old, "how much you look like your father!"

"Yes, sir," answered Clarence, with an air of resignation. "Everybody says that, but I don't think I deserve it."

For the teeth use "Brown's Camphorated Saponaceous Dentifrice." This preparation gives the best results obtainable. Soap destroys the animal and vegetable parasites on the teeth, and camphor hardens the gums. Price, 25 cents a bottle. Sold by druggists. [*Adv.*

CRIPPLE JIM.

The hour was late, but Cripple Jim had hardly slept at all, and now he was fully aroused by hearing his father's voice, somewhat hushed but still heavy, through the thin board partition.

"I tell you, boys, it's got to be done to-morrow night!" said the voice. "There'll be nobody there but Wash and his wife and that young preacher. Wasn't it Wash Magee that sent word to the revenoos and had our stills broke up? Didn't Wash and his boys run your son off to Texas, Jack Hardy, on a charge of cuttin' Mike Woodsell, which you know was all an accident? Haint Wash into every sort of meanness, fust one way and then t'other? I've 'lowed to get even with him for a good while, and I say now, the time has come."

After this Jim heard a clinking of tin cups, and he knew the men were drinking. He shivered with fear. They were desperate men, yet Huse Turley, their leader, was his own father.

One of the mountain feuds had long divided the Magees and the Turleys. Its influence had extended until friends and relatives had been drawn into it. It had sacrificed life and ruined good names; it had made men fugitives, and women and children homeless.

At this period Huse Turley and Wash Magee were looked on as the leaders of their factions. A recent affray with the revenue officers and some reckless testimony at the county court had intensified the ancient hatred, and occasioned the plotting which was partially overheard by Cripple Jim.

"That preacher, Lamb, is some kin to the Magees," said Jack Hardy, "and that 'minds me 't I see your Jim and him together down by the gap this very day."

"My Jim?"

Turley brought his fist heavily down upon the table before them. "'Long o' that preacher Lamb, was he? I'll whip him if I ketch him runnin' atter his father's enemies! But like enough he's a-listenin' now! I'd forgot he was sleepin' in yander."

Jim had risen to a sitting posture on the bed. He made an agitated movement, and his crutch, which had been leaning against the bed, fell to the floor.

The talk had stopped. Then Jim heard his father rise, open the door, and approach his bedside. A heavy hand was laid upon him, and he was dragged out into the next room.

"Were you a-listenin'?" his father asked.

"I couldn't help hearin', when ye talked so loud," replied Jim.

"Had you any idee of tellin' any one what you heard—your preacher man, for instance?'

"Why—why, no, father! I'd skasely thought—of that—yet —"

Turley struck the table with impatience as he noticed Jim's hesitancy.

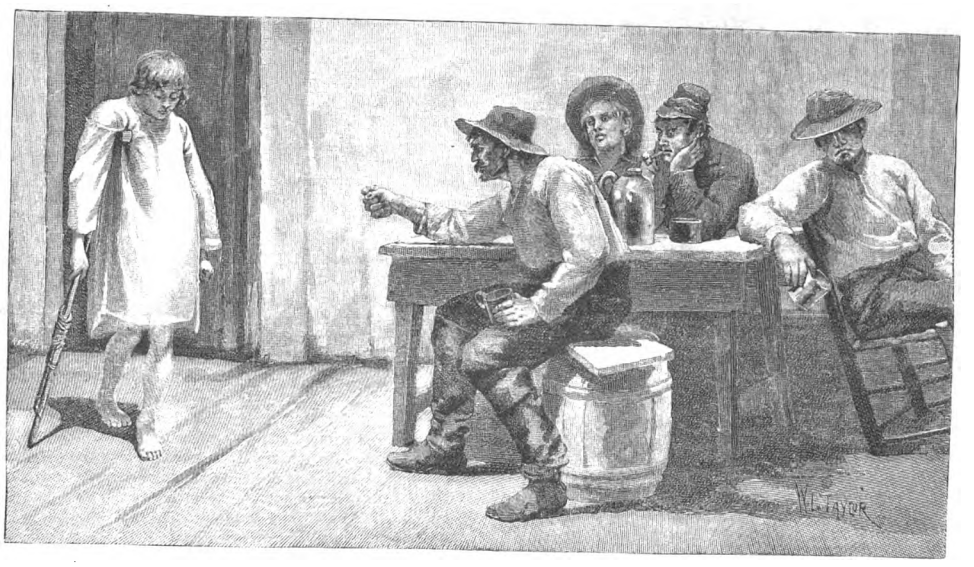
"See here, son," he said, "I'm a man of not many words, nor do I chew 'em over more'n once. You've heard, and likely you know something of what we're up to. If you cheep a word to any one, I'll find it out—mind that! And then the punishment you'll git from me you'll never forgit the longest day *you* live!"

Jim's silence, his very fear of his father, seemed to exasperate Turley the more.

"Why don't you hold up your head?" he roared. "You look like a son o' mine, don't you?"

Jim still did not reply. Then, as the father gazed, the son's infirmity began to plead for him. Turley saw two large tears upon the lad's cheeks, and something stirred him to remember that this poor boy was, after all, his own son.

"Come, now," he said, more gently, "I only wanted to warn you what you might expect if you was fool enough to be tattlin'. Get back to bed, and—here's a dram to settle your narves."



Jim, disregarding the cup that was offered him, fixed his eyes appealingly upon his father.

"Father," he said, "you know I only wish you well. Who else have I got to keer for since mother was buried? But I want you to give up this plan. You and Wash have been a-jowerin' fer months, and what good do it do?"

"Git to bed, I say!" exclaimed Turley, his anger rising again.

"I must speak, if you strike me!" cried Jim, excitedly. "What good do all this swearing and drinking and fighting do? Father, don't do this thing!"

"What thing? Is the boy crazy?" Turley gazed at the others in pretended surprise.

"Why don't you hold up your head?"

"Why—why —" Jim hesitated. He had heard nothing definite, yet he felt that some revengeful deed was contemplated. "You know what, father!"

"Listen at him! He'll be makin' out next that his pap wants to hurt some one. See here, Jim, don't you bother your head. I want to be good to you, if you'll let me, but you mustn't meddle. Now git to bed, and when you feel like listenin' agin, wrop up your head in the blanket; hit'll be safest for you."

The boy gave his father one haunting look and hobbled away. After that the men conversed in low tones for a while. Then the visitors rose to depart.

"Mind now—to-morrow—about moon-rise —"

That was all Jim heard. It did not still his fears that some wicked thing was on foot to injure the Magees.

Jim's infirmity had left him almost alone since his mother's death. He had neither brothers nor sisters, and his father was absent much of the time. Moreover, there was not much in common between him and his father. The boy loved him in a dumb, dependent way, and the father repaid this love with pity rather than with affection.

Jim spent much of his time wandering in the mountains. With his one steel-pointed crutch he was singularly active, and his solitary life had bred in him an unreasoning love of nature.

The next morning after the scene in his cabin, Huse Turley shouldered his long rifle and went away. He had hardly spoken to his son, who, feeling lonely, wandered off, after he had eaten his midday meal, into the woods. He took an out-of-the-way course, fearing that he should meet Mr. Lamb or some one of the Magee family.

He was tortured by a conflicting sense of desire and duty. He felt that some one should be warned of what his father and the others were about to do, and yet what did he know of it? Was it right to go against his father, or to assume that he was worse than he knew him to be?

He was still debating this when the crack of a rifle rang out near by. Then a gentle-faced, tall young man came over the ridge with two squirrels at his belt and a gun on his shoulder.

"There," thought Jim, "it'll all come out now! I came this way on purpose not to meet him, and here he is."

"Why, Jim," said Parson Lamb, pleasantly, "I didn't expect to meet you here!"

"Neither did I you," replied Jim.

They spent some time together, while Mr. Lamb talked without seeming to care to hunt any more; but all the while Jim thought, "Shall I tell him? shall I tell him?"

The young minister found Jim rather absent-minded, and this, perhaps, inclined him to leave the boy. When he had gone, Jim, more distressed and undecided than ever, wandered still further, dreading to go home. Loitering on thus, farther and farther, he found himself at sundown within a mile of Wash Magee's cabin.

"How did I get 'way here?" he asked himself. "Looks like I must have felt I ought to come this way, seeing as I didn't tell the parson. I'm master tired. Seems like I'll have to rest."

Instead of making his way homeward, Jim lay down at a spot whence, in the gathering twilight, he could see through the open door of Magee's cabin. The trail passed just below him.

His long mental struggle was growing painful, yet he could not decide what to do. Meantime the stars appeared, the night wind sighed, and many weird sounds rose fitfully, adding to his depression and increasing his sense of helplessness.

"Father'll wonder what has 'come of me," he thought. "Maybe he'll think I've gone to let 'em know!"

He still waited wearily, fearing now either to return home or to go forward. The moon rose. Jim could soon find his way—but whither?

After a while the silvery light whitened the opposite mountain-side, so that the course of the trail was visible. Looking back once, he noticed a line of dark objects crawling around a bare shoulder of white cliff, which he knew the road leading from his father's cabin must cross.

Turley and his friends were evidently coming, and Jim understood that their mysterious threats were soon to be put in force. Violence of some kind—perhaps murder—was intended!

Jim hesitated no longer, but set out for Magee's cabin. He had nearly a mile the start of them, and he had but a mile to go. His excitement was so great that he did not notice rocks and thickets. He scrambled down the glen and onward along the trail.

Inside the cabin Wash Magee and his wife, two small grandchildren, and the young preacher Lamb were sitting by the fire, when there came a sharp rapping upon the door. Before any one could rise, Cripple Jim hobbled into the room, his pale face paler than ever, his bare head wet with dew, and in his eyes a strange, eager light. He turned to the young preacher.

"They're comin'! they've got their guns! I wanted to tell you to-day, but—I couldn't!"

Wash seized his rifle, and hastily sent his wife and the children to the loft. Mr. Lamb led Jim to the fire.

Soon there was a sound of rapid footsteps without; then the door was violently burst open, and in rushed Huse Turley and three others, fully armed.

In such encounters no time is lost, and Wash Magee, having his rifle ready in his hands, would doubtless have fired at once upon Turley if the young preacher had not stepped between them, leaving Jim crouching in the corner.

"Stranger," said Turley, "this yer is a family matter. If you are for Magee, say the word."

"Father!" cried Jim, hobbling to the front and grasping his father's arm.

"You here, eh?" said the father. "I'll mind this, boy, when I get you home!"

"O father!" cried the boy, "have you forgot the man that nursed you through the small-pox, winter before last, down at the log camps? 'Cause, if you have, I have not. Look at him! You shall not —"

Turley and his companions had covered the two men in the cabin with their rifles, but now Turley fell back a step, staring at the young preacher.

"What?" he exclaimed, "it can't be the same—and yet you favor him mightily."

"Jim is right," said Lamb. "I should have visited you, but I am Magee's cousin, and seeing the state of feeling between you all, I waited to see what could be done."

Turley turned to his companions.

"He's right, boys," said he. "I know him now. If he wasn't kin to the Magees, I'd fight for him anywhere in the world. I reckon I owe him my life, for he stood by me when every one else run from me. I can't touch Wash, with him standing by. So our job's up—for to-night, boys."

The men grumbled, yet seemed to assent. Wash Magee stood silent, watching Turley, with his finger upon the trigger of his rifle.

Suddenly Cripple Jim sprang forward on his crutch.

"Father," he said, "now you and Wash must shake hands. I know ye both —"

"Here you are again!" Turley interrupted, not sorry to find some one on whom to vent the disappointment he really felt. "Always a-meddlin'!"

He pushed the boy away so savagely that Jim dropped his crutch, and was caught by Lamb, who whispered in his ear, "Stay with me until your father gets over this."

Turley and his friends were now leaving, and Jim seized his crutch.

"No—no;" he said, "I must go. I can't leave father! He'll be sorry for this, when he gets sober—for they've been drinking! all of 'em."

"But you are worn out. You can't walk so far. You look feverish."

"I'll make out to get home, I reckon."

The last the parson saw of him he was hobbling hurriedly down the trail after the others.

In the morning, when Turley called his son, Cripple Jim did not answer. The father had made the fire. Jim's usual task was to "put on" the breakfast. In the night Huse thought he had heard the boy moaning, as if in pain, but half-stupefied himself, he had paid no attention.

Jack Hardy was with them, though the other men had gone to their homes.

Turley walked over to Jim's bed and shook him, but the lad's arm fell back limp, and his flesh felt cold and clammy. His eyes were half closed, and the pupils unnaturally set and staring.

The father uttered an exclamation. Was his feeble, derided, sensitive, yet always loving boy, his only child, was he leaving him forever?

He felt a sudden horror, as if he had found

Digitized by Google

himself his son's murderer. He sank on his knees beside the bed.

"Go," he said to Hardy, "fetch some one here! Jim's taken bad. Don't stand there! Don't ye see my poor boy is a-dyin' ?"

The man left the cabin at a run. Turley raised the boy in his arms, and rocked him to and fro. He had never realized the strong ties of nature until now—now when to feel them was agony.

Minutes that seemed hours passed before Hardy returned with two men, Parson Lamb and Wash Magee.

"They was the fust I seed," Hardy said, apologetically, to Huse, who looked at them entreatingly. There was no enmity in his heart then against any living man.

"Can't you do suthin' for him ?" he asked, as Mr. Lamb felt the lad's pulse and carefully examined him.

"He has had a congestive chill, I think," said Lamb. "It was probably brought on by overexertion and exposure. They are dangerous, but not always fatal."

Then he busied himself like one who knew what he was about, while the father watched him as if life hung upon his every movement. Magee surveyed his old enemy with softening features.

At last Jim's breathing grew regular, his lips lost their purplish hue, his skin grew warmer, and his eyes opened.

When he saw, not only his father, but Magee bending over him, he smiled feebly and made a motion as if to join their hands. Turley looked puzzled at first; then, seeing Jim's meaning, compressed his lips and held out his hand.

"Wash," he said, "I've only just found out what it is to have a son, by seein' what it might be to lose one. Jim wants us to be friends, and what he says now, I say, too. If that aint enough, I'll ast your pardon—eh, Jim ? and if that aint enough, I might make out to git plum down on my knees—eh, Jim ?"

Here Wash struck his large hand into Turley's.

"Don't say any more," he exclaimed. "We haint been neighborin' for a good bit, Huse, but it won't be my fault if we don't in futur'."

After this, Huse turned to his son for his approval.

"There, Jim," he said, "me and Wash have shook hands. But if there's anything more a-bearin' on your mind, your poor pap 'll get down on his all fours yet, but what you shall be satisfied."

Thus, while Cripple Jim hovered between life and death, peace was made. Perhaps it had a curative effect, for Jim did not die. Perhaps he was spared in order that his presence might soothe the after irritations that would occasionally rise.

"I don't begrudge anybody anythin' now," said Huse, long afterward, "and I'd as soon fight a cirkylar saw as to raise a disturbance with that thar boy a-settin' by. Therefore, me and Wash stays friendly—but it's mostly owin' to Jim."

WILLIAM PERRY BROWN.

BETHY.

IN THREE CHAPTERS.—CHAPTER I.

Wayfarers.

"Aint that a person up there, Ezry, or aint it ?"

"I guess most likely it's a sheep, Esther," said Mr. Dudley, hardly glancing up from his paper; but the woman continued to peer over her spectacles through the window, and up the high hill.

The house was very large, and gray from lack of paint.

A few feet from its narrow piazza stood a half-dead buttonwood-tree. From the tree there swung a faded tavern sign, upon which, however, could still be made out the words, "Entertainment for Man and Beast."

At the left stretched a long line of deserted sheds, and behind them was a barn.

This building stood on what was once a stage-road; but it was forty years since a stage-coach had been there.

Ezra Dudley would not take down the sign; he said it would bring bad luck to touch the old thing. "Aunt Esther," as every one called his wife, used to declare that a nervous person could not stay there, the sign creaked so in a southerly wind.

It was while Mr. Dudley was milking the first of his nine cows that his wife heard a knock at the open door of the porch.

She was just in the act of putting some biscuits into the oven. She shut the stove door and hurried to the porch.

"Please, ma'am, I'd like 'entertainment for man and beast,'" said a tired voice.

At first Aunt Esther's surprise was so great that she could not speak. Then she exclaimed:

"The land! You don't call yourself a man, do you ?"

"I mean for girl and beast. You see, I've been reading your sign."

"Where's your beast ?"

"Here. He'd just as lief run, but I'd rather carry him sometimes. He's such a comfort! Just to feel him cuddling under my arm makes me forget to be tired."

The girl opened her thin shawl far enough to show the bright eyes and frowsy head of a Yorkshire terrier, which gazed sharply at the woman, and then insisted upon getting down and attempting a closer acquaintance.

"But he isn't really any more a beast than you or I," added the girl.

She now leaned heavily against the door-post, and looked hopefully at Mrs. Dudley. "I suppose this is a tavern, aint it ?"

"Law, no! It hasn't been a tavern since long before you was born." The woman gave another glance at the young and weary face before her, and continued: "But you can come in just the same. Sit right down. The biscuit'll be done in fifteen minutes. I hope you aint going far ?"

She pushed a small calico-covered rocking-chair toward the girl, who sank quickly into it.

"I hope I aint going far, too," she said, tremulously. Then she fought away the tremor.

After a few moments, during which the terrier sniffed at everything in the kitchen, and appeared perfectly satisfied, his mistress said that she had been so glad when she saw the tavern sign, for she would like to stay over Sunday.

"But if 'taint a tavern, I suppose I can't stay. I've got money to pay for what I eat. I'm not a beggar. My dog isn't a beggar, either."

"I guess I shall let you stay over Sunday, even if I don't keep a tavern," said Mrs. Dudley. "I sha'n't charge you very heavy, either. Have you got much money ?"

"Eight dollars and twenty-five cents," she said, as if she were mentioning millions. "I had ten dollars, but I had to spend some of it for my ticket on the cars, you know. I mean to get work and earn more before this is gone. But I'm kind of tired now."

She suddenly sank back in her chair and felt as if she should cry, in spite of all her efforts to be brave.

"I guess you're hungry, too."

Mrs. Dudley brought a bowl of milk and a plate of crackers for the girl, and some pieces of cold meat and johnny-cake for the terrier, who broke his fast eagerly but daintily.

As the two wayfarers ate, their hostess thought rapidly. Although the sum the child had spoken of was not a large one with which a girl and a Yorkshire might begin the world, it seemed to Mrs. Dudley that to have been without a penny would have suited better the appearance of the two strangers.

Where did she get the money ? She couldn't be a thief. There were never more honest eyes in a child's head. She would ask her, and see what she said.

"Where'd you get the money ?"

The question was asked suddenly, just as the girl had finished her crackers and milk, and had begun to look refreshed. It seemed, however,

perfectly natural to the girl that any one should wish to know where such an enormous amount came from.

"Uncle Henry gave me five dollars once, and I earned the rest picking huckleberries last summer. I kept it secret, and I saved it, for I felt every day as if I couldn't stand it another minute. But I did stand it all for almost a year."

"Where'd you come from here ?"

There was silence.

Mrs. Dudley looked at the girl almost sharply as she repeated the question.

"I'd rather not tell that."

The girl picked up the terrier, who took a position as if he were used to being carried. The two looked ready to start again at a moment's notice.

Mrs. Dudley was curious. She was somewhat offended, too.

The girl stood up very straight, and flung her head back.

"I haven't done anything wrong, if you're thinking that!" she cried. "Unless it's wrong to run away from the cruellest folks that ever were!"

The woman could not help believing these words, which were uttered in a ringing young voice. It was in vain that she told herself that she ought to be suspicious; that appearances were against her guest. There was something in the worn young face, in the attitude, that went straight to Mrs. Dudley's heart.

"You needn't get so angry," she said. "Sit down again. You aint going to leave this house till you've had a good rest. Perhaps you haven't any objections to telling me your name."

The girl's breath came quickly, but she sat down and hugged her dog close to her.

"My name's Bethia," she answered, "but they always call me Bethy."

"Bethy what ?"

Again there was a pause. When it had lasted two or three minutes, the girl rose and went to the door. She was almost sobbing.

"Dear little sweetheart," she said to the dog, holding him up to her face, "I guess we've got to go. I can't tell my last name, for I'm afraid somebody'll find me out and take us back."

Mrs. Dudley's hand was put on her arm, and she was gently pulled back to her chair.

"No matter," said she. "I aint obliged to know all about you. 'Taint as if I was going to adopt you for my own. What's your dog's name ?"

"Nip-'n'-Tuck."

"Nip *and* Tuck! He's got more names than you have."

Bethy became suddenly animated.

"You see, ma'am," she said, "he was given to me and my brother; and I wanted him named Nip, and he wanted him named Tuck, and we were both real set about it. Finally Uncle Henry, who gave us the puppy, said there wasn't any reason why we shouldn't call him Nip-'n'-Tuck, and then we should both be satisfied. So we did."

"Where is your brother now ?"

Bethy's lip quivered, and then she began to cry violently. Poor thing! She was worn out with fatigue.

It was at this moment that Mr. Dudley came in from the barn with his pail of foaming milk. He set the pail down suddenly, and stared in silence.

"She's just used up," cried his wife, "and no mortal knows how far she's travelled! I'm going to put her right to bed."

Mr. Dudley lifted the pail and began to strain the milk.

"When you've done it, maybe you'll tell me if she dropped down from the sky, or sprung out of the earth," he said, in his slow, good-natured way.

Mrs. Dudley put her arm around Bethy, and helped her into the small bedroom which led from one end of the kitchen. She brought a basin of warm water and a towel. The hot, dusty face was bathed. Bethy did not resist, nor speak, except to say in a whisper:

"You'll let my dog stay with me, won't you ?"

Mrs. Dudley nodded her head. The tears were not very far from her own eyes. She was thinking of the baby girl she had lost one summer fourteen years ago.

Perhaps the thought made her touch more tender.

In a few moments Bethy and the dog were in the profound sleep of exhaustion.

When Mrs. Dudley returned to the kitchen she closed the door behind her, and sat down quickly. The tears were now running undisguisedly down her cheeks.

"I declare," she said, "I do' know when I've felt so sorry for anything."

Mr. Dudley had been waiting before going out again to his milking. His wife hurriedly told him every particular of the arrival. When she had finished, she rose and came to his side.

"Ezry," she said, solemnly, "do you know what I've a great mind to do ?"

"Give 'em both a good breakfast in the morning," he said, smiling.

"Keep 'em!" said his wife.

He looked grave. "Keep a girl that won't even tell her name, nor where she came from ?" he asked.

"She could have made up a name glib enough if she'd been used to lying. She could have had a story all ready. I tell you, she's no liar! She is honest. I suppose she's got faults enough, but I like her."

Mr. Dudley advised his wife not to decide the matter that night. The girl might not like to stay, or things might look very different in the morning. Then he went to finish his chores.

Mrs. Dudley bethought herself of the biscuit in the oven. They were burned black, and were put in the "pig-pail." The Dudleys supped on bread and milk, as Bethy had done.

That evening, after Mr. Dudley and his wife had sat nodding in weariness from their hard day's work for about two hours, they went softly into the bedroom where their two guests were sleeping.

Nip-'n'-Tuck opened his eyes and looked at them brightly through his soft hair; he did not think it necessary to growl. But his mistress did not stir at all. She lay as she had fallen down from Mrs. Dudley's hands upon the pillow.

She had a great deal of light-brown hair, which Mrs. Dudley had pulled out over the pillow. The face was thin, and the youthful mouth almost pinched. It was not a very pretty face, but even now, with the frank, blue eyes shut, there was an expression of honesty not to be mistaken.

"Poor thing!" whispered Mr. Dudley.

The terrier slightly wagged the end of his tail.

Mrs. Dudley pushed her husband noiselessly out of the room, holding the lamp so that its rays should not fall on Bethy's face.

When they were in the kitchen again they looked questioningly at each other.

"Ezry," she said, "now don't you tell me you're going to put anything in my way."

"No, no," he replied, "I sha'n't. But don't say anything to her before Monday. Let's watch and see what kind of a child she appears to be."

The lovely summer Sunday morning looked in through the small panes of the window where Bethy and her dog lay. The terrier stood up and stretched. Then he gazed intently at his mistress, and licked her face and punched her with his cold nose until she woke.

Several minutes passed before she could remember where she was. When she did remember she lay back on the pillow, saying to herself:

"Now I know. I'm safe! Oh, wasn't she kind to me! And I forgot to thank the Lord before I went to sleep. But I can thank Him now, though."

She began to say a few words of prayer, then dressed herself hurriedly and opened the door. The terrier dashed gaily into the empty kitchen, and at the same moment Mr. Dudley came in from the porch.

The girl looked so bright and eager, after her long rest, that Mr. Dudley did precisely what he had warned his wife against doing. He asked Bethy if she would like to stay with them.

The child clasped her hands with enthusiasm.

"Just live here ?" she cried.

"Exactly; and help us, you know. We shouldn't make you work too hard."

"Would you take Nip-'n'-Tuck, too ?"

"I guess so."

Bethy stood silent a moment, her hands still clasped. But there was no mistaking that silence, and the man felt his heart warmed by it.

"It would be just blessed to live with you and her," at last said Bethy, in a low voice.

"I hope it would be," said Mr. Dudley, almost reverently.

Soon he bethought himself of what he had done, and added, "You see, Bethy, how we're trusting you, when we don't know anything about you. Remember, we trust you."

"You and she sha'n't be sorry," Bethy said. Her voice began to tremble. She appeared to wish to say something more, but could not.

"I guess it'll be all right," said Mr. Dudley, turning away, as his wife came in from the back yard. "We've just ben fixing it all up, Esther," he said, cheerfully. "She's going to stay here and make us young again, she and that clipper of a puppy. I guess, if it isn't too near noon, she wants some breakfast."

"I can generally risk you to do a kind act, Ezry," said Mrs. Dudley.

The long, warm hours of that Sunday passed in a state of blissful quiet to Bethy, who sat on the grass with Nip. She helped with the dishes, and expressed a wish to milk some of the cows. It was plain that she had been used to work, and to hard work, too.

But there was only the absolutely necessary work done on a Sunday at the old "tavern stand."

Bethy sat on the ricketty piazza and saw three open carriages, drawn slowly by heavy farm-horses, go by to church. The occupants of the carriages stared hard at her and at the terrier, disporting himself on the grass.

"To-morrow I've got a big wash, and you can be real useful," said Mrs. Dudley, when Bethy went to bed that night.

After she had gone, the woman told her husband that it did seem as if she must find out what the child's last name was. She must call her something when folks asked about her.

"Perhaps folks 'll have to put up with knowing no more than we do," said Mr. Dudley.

That night the weather was very sultry. Bethy saw distant lightning, and was dreaming that the thunder was crashing in the sky, when Nip barked shrilly. She started from the bed. The sound had been a violent knocking at the back door, nearest to her.

With a vague fear in her mind that people would track her from whence she came, she flung on her clothes swiftly.

By the time Mr. Dudley had come downstairs, and gone to unbar the door, she was dressed, and

Digitized by Google

had caught the dog in her arms and put her hand over his mouth.

She listened, much frightened. She could not hear at first; but then a voice said, "I hear you've got a girl and a dog here."

Bethy did not listen any longer. She let herself down from the window, which was open and near the ground.

With her precious friend held close in her arms, she ran with all the fleetness of youth and fear.

Ten minutes later Mr. Dudley came in from the barn with a lantern. He had been harnessing his colt into the gig.

He paused an instant before the closed door of the kitchen bedroom.

"I hope she hasn't been disturbed," he said to himself. "She was tired enough. But young folks can sleep through anything."

Then he went upstairs.

For the Companion.

A BEAR-HUNT REVERSED.

"Jack, Davy and I went out for bear once," said my friend Bob Arcaster, as we reclined on a bed of boughs watching the stars through the light cloud which rose from the camp-fire. "Never told you about it, did I?"

We had been talking about our two young friends, who had a day or two before left home to take places in the East Indian Civil Service. Bob had seen more of them of late years than I, and had been amusing me with stories of their adventures together. So it was with the expectation that he had something to tell worth listening to that I replied, "No, what about it?"

"Well, we went out for bear once," he repeated, and began in his peculiar, slow way to poke the fire.

"You said that once. Did you get any bear?"

He had an annoying way of beginning a story, and breaking off without the slightest warning. He paid no attention to my question, but went on with his occupation with provoking slowness.

When he had completed this performance to his satisfaction, he lay back upon the boughs, closed his eyes, and remained silent so long that I had almost forgotten that I had asked him anything. After a long interval he answered, "Oh yes, we got one," and relapsed into silence.

There was no use in trying to get him to tell a story except when he was in the mood for it, and then he could not be stopped. So I held my peace until such time as it might please him to go on with his story. It came at last.

"Jack, Davy and I went out for bear once. You remember what Jack was like when he left college. Green! He knew everything about Greece, Rome and such places, but about real things, such as salmon, trout and bear, he knew no more than a baby.

"Why, he was greener than Davy, and *he* had never been out of sight of a clearing until we went out for bear. And conceited!—there's no use in denying it! He was a thoroughly good fellow, but he had not had the experience that has since made him manly, strong and modest.

"Well, we were up in Madawaska, and a Frenchman told us that bears were as plenty as blackberries up Green River. Jack, who had a beautiful Winchester with him,—we were just loitering through the country, you know, fishing here and there in the streams, and had brought our guns along more for their company than for any other reason,—Jack, I say, was impatient to get where he could shoot a bear.

"Davy was not quite so eager. In fact, the little fellow seemed more than half-afraid; but when I chimed in with Jack, he made no further objection, and we got a Frenchman to pole us up the stream in his canoe. Ever been on Green River?"

"Yes."

"Well, then, I need not tell you what a splendid stream it is, and what trout-fishing we had. At the close of the second day we reached the ground where the bears were said to be waiting to be shot. Selecting a nice, grassy spot, we built a lean-to hut with poles and bark, made a fire, and had supper.

"We were a jolly party, although I noticed that Jack did not seem to care about going far from the fire, and he questioned the Frenchman very closely about the habits of bears in general, and Green River bears in particular.

"The Frenchman did not know much more than Jack, but taking it for granted that I knew as little as the others, he bestowed upon us a marvellous mass of misinformation. According to our genial guide, we were in imminent danger of being charged upon at any moment by a dozen or so of ferocious bears of assorted sizes and patterns, and the boys were about half-frightened out of their wits.

"I interrupted Jean Baptiste's flow of horrors with a vehement denial of the state of things which he pictured.

"'Ah!' said he. 'I only mak' de little fun.'

"Reassured, the boys consented at last to turn in, but, as you will understand, it being their first night in camp, they did not go to sleep very readily. There was an owl somewhere near us, and it kept up an unceasing hooting. Of course, when its dismal notes first came out of the darkness, the boys were startled. Jack's teeth chattered, and little Davy, looking as pale as a ghost in the firelight, got up and seized his gun.

"'Come back to bed, Davy,' I said. 'It's only an owl.'

"'Yes, that's all, Davy,' said Jack; but his voice had its tremolo stop on, whereat the Frenchman laughed.

"You know the thousand and one unaccountable noises you hear when you are in a strange place and can't get to sleep, especially if it is your first night in a camp.

"The boys heard them all, and kept up a constant fire of, 'What's that? What's that?' until after midnight, when they fell asleep.

"Next morning they were up bright and early, feeling like old campaigners. It is wonderful how one night in camp seasons you, isn't it?

"The Frenchman started off down river after we had breakfasted, promising to come back in two days, and we set out to look for bear.

"We did not see any, though we found some tracks, some of them quite fresh. The fresher the tracks, the less anxious were the boys to go on. This was especially the case with Davy, who frankly owned that he should much prefer fishing to bear-hunting.

"I knew perfectly well that we might tramp about for a week without coming in sight of a bear, unless by pure accident, for one seldom sees bears when he is looking for them; so I readily agreed to Davy's suggestion that we should return to camp.

"It was quite early in the afternoon when we got back, but the boys were tired and lay down to rest, while I went down alone to the river, seated myself on the root of a great birch-tree, and dropped my flies over a little pool just below.

"I had not been there long, and had just hooked a fine fish, when I heard a shout. Being busy landing my trout, I did not look to see what was the matter, and it was only when I turned to find a place to put my fish

Treed by a Bear.

that I noticed Jack climbing a small maple-tree as if for his life.

"'What is it, Jack?' I shouted. 'Where's Davy?'

"He made no reply.

"'Davy!' I called, without getting an answer.

"Springing up the bank, I saw what at first seemed very amusing.

"Before the camp was a small fire, and within the hut, at one corner, was our bag of provisions. The front of the hut was not more than four feet wide; and across the entrance, busily engaged in testing the quality of our larder, was a huge black bear!

"Jack was, as I have said, well up the branches of the maple; but Davy was nowhere to be seen.

"'Where's Davy, Jack?' I cried.

"Jack had by this time recovered his presence of mind and answered, in a tone of horror:

"'In the hut!'

"Then the brave fellow began to descend from his perch. He was somewhat given to boasting, perhaps, and was very excitable, but he was full of real pluck. The way he came down the tree showed the stuff that was in him.

"Looking within the hut, I saw that Davy was there, and likely for the present to stay there. The only place where the roof was high enough for a person to stand up was now occupied by the bear, who had forced himself part way into the hut. Davy was crouched at the back part, with a look upon his face that I shall never forget.

"He was badly frightened, but the look was not one of fright only. He told us afterward that although he expected every moment to be engaged in a life and death struggle with the bear, he could hardly keep from laughing at the way Jack had disappeared when the brute poked his nose around the corner of the tent.

"It seems that the boys had been talking about what they would do if they saw a bear, and Jack, with his Winchester in his hand, was telling just how he should bring him down with a shot.

"'Under the ear, Davy,' he said, 'is the vital spot.'

"At that moment the bear's head had appeared. A better chance to try the effect of a bullet behind the ear would probably never occur again; but Jack was better in theory than in practice.

"Dropping his rifle, he gave a scream, sprang over the fire and took to the tree, while the bear, without so much as a glance toward him, stalked slowly across the front of the hut and began helping himself to our pork.

"But Davy was really in danger, and we must help him. I called to him to crawl out under the back of the hut. But that was more easily said than done, for the poles were very close together, and must be moved before he could get through. Moreover, there was no telling what our four-footed visitor might do if his attention was especially drawn to Davy, as it would be if the latter began to move about the hut.

"'Tell you what, Bob,' said Jack, who had joined me, 'you go behind the camp and move the poles, while I occupy the brute's attention in front.'

"The suggestion was as good as any that could be made, and I ran around to the back of the camp, while Jack went off to one side and stood directly in front of the bear, not more than twenty feet from him. The bear eyed him, but went on eating the pork.

"I was not long in moving the poles so that Davy could get through, and had told him to hurry and come out, when to my utter amazement he reached for my hunting-knife, which was sticking in the top of the hut, and seizing it firmly, gave the bear a fierce thrust in the side. Then he sprang out through the hole I had made.

"The bear gave a frightful growl, and seeing Jack straight before him, leaped directly upon him. Jack was watching Davy so intently that he did not think of running until it was too late. When we came from behind the hut, poor Jack and the bear were lying in a struggling heap together.

"'He has killed Jack,' cried Davy, 'and it's my fault!'

"Before I could stop him, Davy sprang toward the struggling pair and began to kick Jack's antagonist. I ran into the hut, picked up the Winchester, and made toward the group.

"The bear was lying upon its left side, and endeavoring to tear Jack with his hind feet, but the boy was too close to him for that. The expression upon Jack's face was no longer one of fear. He had a firm grip upon his huge antagonist, and kept his head well below the terrible jaws.

"'Shoot him, Bob!' he cried. 'I'll take the chances.'

"As Davy still continued his kicking, and consequently was in the way, I told him to get to one side, and drew near so as to make my aim certain, when suddenly the bear's struggles ceased. His hold on Jack relaxed, and he rolled over, dead.

"Jack was on his feet in an instant, little the worse for his tussle. There was amazement in every line of his countenance; but he was no more astounded than the rest of us.

"What had killed the bear? Could it have been Davy's thrust with the knife? It did not seem possible, yet it might be so. Before proceeding to investigate, to make assurance doubly sure—or as Jack put it, to show him that there was a punishment after death for stealing pork—I placed the muzzle of the Winchester close to the beast's forehead, and sent a bullet into his brain.

"Clearly it was a cartridge wasted, for there was no sign, in even the slightest tremor, that there had been a spark of life remaining.

"'Where did you stab him, Davy?' asked Jack.

"'Just behind the fore-leg.'

"'What did you do with the knife?' I asked.

"'Left it sticking in the wound. I did not think he'd appreciate an effort to remove it as a favor.'

"'Here, boys!' I said, 'let's turn him over.'

"We seized the legs, turned the body over from the left side to the right, and found the knife buried to the handle in the animal's body.

"Here was the explanation of the sudden collapse of the enemy. What Davy's arm had not been strong enough to do, the struggles of the beast had completed; and the knife, left in the wound, had, by the animal's own weight, been pressed into his heart.

"So it was Davy's bear, without a doubt. We did not give the Frenchman more particulars than were necessary. Jack, looking at the maple-tree, said there were certain features of the adventure which possessed no special interest to the public at large.

"When we returned to the settlement, the Frenchman told the story in his own way, and spread the fame of little Davy's achievement far and wide, with sundry embellishments."

CHAS. H. LUGRIN.

HIS FIRST BOAR.

A Russian officer at one of the military stations in the Caucasus, hearing of the presence in his neighborhood of two gentlemen in pursuit of boar, sent to them an invitation to join him on the following day, when he would give them a taste of real sport. With many thanks they accepted the kindness, and at the appointed time set off.

During the day many shots were fired at one thing and another, though at least one of the party had seen no boar. As the afternoon wore on and the daylight began to disappear, one of the Russian's guests, who had wandered away from his friends, found himself rather fagged, and felt that it was time to stop.

Just then he heard the dogs baying something not far from him, and after creeping up to within about thirty yards of them, he crouched behind the bole of a huge oak, and waited for his eyes to get used to the darkness. He was soon able to make out the dogs' tails waving to and fro, and then, under a leaning tree-stump, the indistinct outline of their enemy. Meantime, the boar kept up a half-grunting, half-growling noise, while the dogs barked their loudest.

"Suddenly," says the gentleman, "the mass moved, and a dog went flying belly uppermost, and his yells were added to the discord. But this movement of the boar's was fatal to him; it brought him into a more open position, and I rolled him over with my 'express.' He rose and tried to charge, but though I fired again, I believe it was unnecessary, as he was too hard hit ever to have reached me.

"This was the first really large game I had killed, and I rushed up to him with the delight of a boy. I had never seen a wild boar before this morning, and now, as I contemplated my fallen foe, a strange uneasiness beset me. There was something so homely in the innocent face of that dead pig that my heart for a moment misgave me; but I banished my foolish qualms, the reaction after my triumph, probably, and as I heard the tootle of my friend's horn approach, I sat down on the broad side of my game, and indulged in a victorious whoo-oop.

"The bushes parted asunder, and my host burst into a cheer and loaded me with praise. But, alas! What is this? As my friend approaches nearer, slowly the gay smile fades; the applauding voice is still; the horn drops from his nerveless grasp, and the merry little visage lengthens out in a telescopic fashion truly uncomfortable to behold.

"'*Moe domaschne habân!*' Those were his fatal words. 'My own house-pig!'

"The blow was too painful and sudden. My pride fell, and gradually the fact was borne in on my already half-awakened mind that wild boars are black, but this beast was white. The fact was, this wretched animal had broken out of his sty some time before, and gone to the forest to take his fill of chestnuts and other pleasant things, and at the time of being shot had been battling with one of his black-skinned brethren."

IN ITS OWN TIME.

'Tis vain o'er next year's drought to pine,
The wise will never borrow;
The gold now hidden in the mine
May be a crown to-morrow.
—*Selected.*

For the Companion.

ARTESIAN WELLS.

An artesian well, properly speaking, is a well like those in the Province of Artois, in France, which are narrow, tubular openings into deep, water-bearing strata, reaching water which is under sufficient pressure to be forced through the tube to or above the surface of the ground. The name is often applied to deep bores in which the water rises to a point more or less below the surface, and from which it has to be pumped.

In any case, where water rises into the bore to a height greater than that at which it is struck, the rise is due either to pressure from a higher fountain-head, or to the expansive power of gas contained in the water. Sometimes it is due to both forces.

The pressure which causes the rise is the pressure of water confined under an impervious stratum of rock or earth having a certain inclination or pitch from the horizontal line. The impervious stratum may pass down the hill at one side of a valley and turn up at the other side, so that a positive head is produced at any point below where the stratum begins to dip.

In other cases, the impervious stratum may pass on down a steep, long incline, the flow of water through it being greatly impeded by friction against the sand, gravel, or other loose material of which the water-bearing stratum is composed.

In this case, without the more positive head that exists in the first instance, water finds a freer exit through the open bore than through the sand and gravel, and rises in the well.

Whatever the conditions may be, the rule applies that water, under a head or pressure, seeks the easiest outlet, and, if confined, will rise as high, or nearly as high, as the head at the higher part of the inclined water-bearing stratum or distant elevated reservoir.

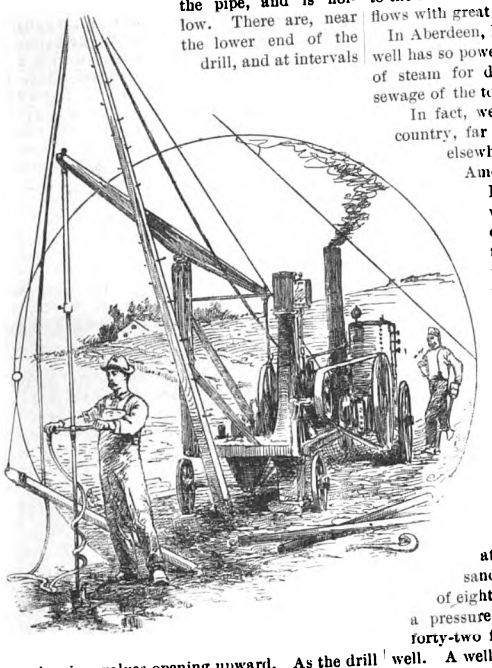
The action of confined air in causing water to flow from a well, is the same as that which is developed when a bottle of soda-water is uncorked, the expansion of the gas blowing the water out of the mouth of the bottle.

The "blowing wells" of the oil and salt regions are wells discharging by the pressure of natural gas—either of gas confined in the water or oil, or of gas confined in chambers, bringing pressure to bear on the surface of the liquid.

The elements of the work of boring the hole to reach the water are illustrated in the use of the post-hole auger and the rock-drill. A hole may be bored through earth or soft, disintegrated rock by the use of a revolving auger-like tool, and it may be continued through the rock by the use of a chisel-drill worked up and down like the "jumper" drill of a stone quarry.

The oldest bores of this character were probably made in China more than two thousand years ago. These wells were probably sunk after rock was reached, by the use of a chisel-drill suspended by a rope of bamboo fibres, and supported by a spring-pole of bamboo strong enough to hold the drill some distance above the point of working.

With ropes connected to the end of the spring-pole, by which it is pulled down, or by the jumping of a man on a platform on the spring-pole, the drill is made to strike its blow, recoiling with the aid of the spring-pole when tension is released.



This is substantially the principle of modern drilling with the chisel-drill and its various modifications, and is the one used in the Pennsylvania oil regions, where the churning movement is imparted to the drill by a working beam attached to the shaft of a steam-engine by a crank and pitman.

After the completion of the well, the same appliances are used for pumping the oil. In the artesian wells now bored, it has the great drawback that it becomes necessary at frequent intervals to withdraw the drill, and sink what is called a sand-pump. This is a long, metal bucket, having at its bottom a valve opening inward. This is worked up and down in the bore until it becomes sufficiently

Digitized by Google

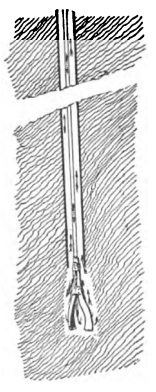
filled with the powdered rock and water, when it is drawn to the surface.

An important improvement was made when the combined drill and sand-pump was introduced. The drill in this apparatus is suspended, not by a rope, but by a series of iron pipes screwed together at their ends. The drill itself is screwed fast to the lower end of the pipe, and is hollow. There are, near the lower end of the drill, and at intervals

up the pipe, valves opening upward. As the drill is dropped, "sludge"—that is, water and crushed rock—enters the lower valve, and little by little works its way upward. Each valve in turn helps to raise the mass without bringing so much pressure on that at the bottom as to compact it immovably in the tube.

As the drill and tube are much heavier than the sludge, they drop faster in the descending movement, and the sludge, caught by the valves, gradually works toward the top, where it overflows. The well is thus self-cleansing in its construction, and the drill need be removed only so often as is necessary for sharpening, the interval depending on the hardness of the rock.

If the necessary water to form a movable sludge has not been developed in sinking the well, water for that purpose is poured in from the surface.



Another very successful method of drilling with a tool supported by hollow pipes is by the use of the water-jet. In this case, the water is forced down, under more or less pressure, through the rods and through the tool nearly to its point, so as to create a strong upward current in the bore

outside of the tool. The flow in this case is necessarily of sufficient velocity to carry up the crushed rock with it, the sludge flowing off at the surface of the ground as in the former case. Here, also, it becomes necessary to withdraw the tools only for sharpening.

Another very important improvement in well-boring lies in the use of the casing as a means for carrying and working the tool. For this process, the lower end of the casing is furnished with cutting teeth, or for work in very hard rock, with cutting diamonds. The casing is revolved by steam-power. Its whole weight is borne on the cutting edge, and the working is rapid and true. The boring of five hundred and eighty feet in ten hours has been effected by this appliance.

The casing, whether used for revolving the tool, or only as a casing, has its bottom length perforated like a sieve, so that when the final water-bearing stratum is penetrated, the water flows freely into the pipe.

In all well-sinking with any form of chisel-drill it is necessary that the tool shall be turned constantly, so that it shall not strike twice in the same place, and so that it shall secure the boring of a round hole. This rotating movement is applied either to the rope suspending the common jumper, or to the pipe used in drilling with a water-jet.

One of the most useful forms of the drill is made in two parts, which are hinged within the drill-rod, and which are so formed that when they strike an obstruction they spread out, making a fan-shaped bit of a diameter wider than the outer diameter of the casing, which may thus be lowered without resistance.

When the tool is raised against the lower edge of the casing, its hinged wings are closed together with a sheer movement, and become narrow enough to be drawn out for sharpening.

When, in using the revolving process, a very hard formation is reached, a chisel-drill may be used in connection with the revolving process, both working together, but independently.

The use of artesian wells is increasing enormously as population spreads over the comparatively arid regions of the West. Generally water may be found and brought at least near enough to the surface for economical pumping. It often flows with great force.

In Aberdeen, Nebraska, the flow of an artesian well has so powerful a head that it is used instead of steam for driving the engine by which the sewage of the town is pumped to irrigation fields.

In fact, we are, in our recent work in this country, far surpassing all that has been done elsewhere.

Among the most famous wells in Europe is one at Aire, in Artois, which has been flowing steadily for over a century at the rate of fifteen thousand gallons per hour, and the water rises eleven feet above the mouth of the well.

At Lilliers, in the Pas-de-Calais, France, there is a well which has been flowing since the year 1126. The famous Grenelle well of Paris is almost eighteen hundred feet deep, and flows at the rate of twenty thousand gallons an hour, with a maximum temperature of eighty-two degrees Fahrenheit.

A well at St. Augustine, Florida, is fourteen hundred feet deep and twelve inches in diameter. It flows at the rate of over four hundred thousand gallons per hour, at a temperature of eighty-two degrees Fahrenheit, and with a pressure sufficient to form a jet fountain forty-two feet high above the mouth of the well. A well at Louisville, Kentucky, over three thousand feet deep and only three inches in diameter, flows at the rate of nearly fourteen thousand gallons per hour.

THE FOOL'S TIME.

The happy have whole days, and those they use;
The unhappy have but hours, and those they lose.
—*Dryden.*

NEWFOUNDLAND'S TROUBLES.

In *The Companion* of June Twenty-sixth last were explained the causes of the differences between the English dwellers in Newfoundland and the French fishermen who use a certain portion of the coast of the island for the drying and curing of their fish.

It was stated, moreover, that a temporary agreement had been made between Great Britain and France by which things should remain as they were until some permanent settlement of the dispute could be reached.

The question of Newfoundland, during the past two months, has acquired yet larger importance, and the situation in regard to it has become a critical one.

While the subject of the rights of the French fishermen was pending, the Newfoundland colony made an attempt to conclude a reciprocity convention with the United States. They desired that their fish should be admitted into the United States free of duty, in return for which they were willing to give the privilege of getting bait and other supplies in Newfoundland to American fishermen.

At first Great Britain, of which Newfoundland is a colony, seemed willing that such a convention should be made; but the Dominion of Canada protested against the making of a convention with us by Newfoundland alone, and declared that it ought to be included in the arrangement.

On this subject the British Government has so far supported the Dominion of Canada that it has not yet ratified the convention.

Meanwhile the other subject relating to Newfoundland—the permanent settlement of the dispute as to the rights of French fishermen on the coast—became a matter of negotiation between the British and French Governments, and it was finally announced that those governments had agreed to leave the question out to arbitration.

But the subject to be arbitrated was to be confined to the question, not whether the French had the exclusive right to occupy the coast, but whether the treaties under which they held it admitted of their using it for the building of lobster factories and the canning of lobsters.

Against the conduct of Great Britain, both in delaying the convention with the United States, and in agreeing to a limited arbitration as to the rights of French fishermen, the Newfoundlanders have vehemently protested. Resolutions condemning the former action have passed the Newfoundland legislature by a large majority, and the people have openly talked of seeking the protection of the United States, and even of annexation to our republic.

Great Britain is in the dilemma that she must either disappoint and enrage her island colony, or run the risk of a grave misunderstanding, perhaps even a war, with France. The result seems to prove that between the two alternatives, Great Britain prefers to adopt the former.

Although the Newfoundlanders are divided into two political parties, both these parties are agreed in opposing the claims of French fishermen to the coast they occupy. They declare that the French occupation of the coast obstructs the development of the island, and especially the completion of railways which are of the highest necessity to the prosperity of the inhabitants.

They have demanded of Great Britain that by some means the French in Newfoundland be got rid of altogether; that Great Britain make concessions to France in some other part of the world, in return for the departure of the French fishermen from their coast.

Thus Newfoundland has really become a pawn on the chess-board of European politics, and is not unlikely to be a victim of that complicated game. The outcome of the trouble will be watched with eager interest; for no American can look with indifference upon the destiny of a colony so near our shores, which is, moreover, in some sort identified with our maritime industries.

THE CROCUS.

By the light of a glowworm's friendly spark,
She softly crept up the stairway dark,
Out through the portal of frozen mold
Into the wide world, bleak and cold;
But somehow a sunbeam found the place
Where the snow made room for her lifted face.

Ladies' Home Journal. —*Madeline S. Bridges.*

FOREIGN COMMERCE.

Although the internal commerce of the United States—that is, the trading within the country between its inhabitants—is greatly in excess of that of any other country of the globe, yet it is quite natural that an enterprising people should wish to extend their trade relations to the remotest corners of the earth.

That has been done, for during the year 1890 the imports and exports amounted in value to more than sixteen hundred and eighty million dollars, which represented goods brought from and sent to every continent and almost every island of the sea.

But there is one feature of the foreign trade of this country that is not satisfactory to any one. Of the whole value of nearly eight hundred and twenty-five millions of dollars representing imports, six hundred and fifty-eight millions' worth came in foreign vessels, and only one hundred and twenty-four millions' worth in American vessels. The rest was imported overland by railroad.

The facts regarding domestic exports were even more humiliating, for while the value of American goods sent abroad in foreign ships was seven hundred and forty-one million dollars, the value of such goods exported in American ships was only seventy-five millions.

The truth is that the condition of the American carrying trade has been going from bad to worse for many years. There is not a single line of passenger steamships flying the Stars and Stripes sailing between this country and Europe. There are British, German, French, Italian and other steamers, but not one American.

There are various theories of the cause of this sorry condition of affairs, and of the remedies to be applied. Every one admits that American shipping labors under disadvantages as compared with that of other countries, and all are agreed that if there is a way to restore the prosperity the carrying trade enjoyed forty years ago, the means should be adopted to restore it.

It has become almost a party question what shall be done to this end. Most of the Democrats hold that the chief cause of the trouble is that merchants are not permitted by the navigation laws to buy ships built abroad and register them as American, and that the proper course is to change these laws.

Republicans, on the other hand, for the most part maintain that the permission to buy ships and register them under the United States flag would close all our ship-yards; and they have advocated the encouragement of ship-building for the foreign trade by a system which involves "subsidies" or "subventions" to steamships engaged in such trade.

At the late session of Congress an act was passed in which there is a provision for payments to American steamships in the form of liberal compensation for carrying the mails. This is one of the ways in which some of the governments of Europe keep their flags flying over steamships in foreign commerce.

Heretofore the United States has paid to ocean mail-carriers only the "ocean postage," that is, the difference between the two cents that carries a letter within the country, and the five cents that takes it to an address beyond the seas. By the new law the government may contract with American steamship-owners for the carriage of the mails, and pay them certain amounts to be agreed upon, more than the ocean postage.

Of course the effect of this is to give to such steamships a bounty in consideration of their continuing in the foreign trade; and the idea is that the bounty will equalize the conditions, and offset the disadvantages under which Americans labor. The measure was in general supported by Republicans and opposed by Democrats; but not all the members of either party voted with the majority of their associates.

While there is this diversity of opinion as to the means of restoring American shipping, all men are agreed that the restoration is a most desirable object, and probably all will rejoice if the method adopted is successful, however objectionable it seems to them as a matter of national policy and of public economy.

TWO KINDS OF SUCCESS.

In the story of David Lloyd's life many of the young men who read *The Companion* may trace the outlines of their own, and perhaps gain a useful hint or two.

David's father was a successful lawyer, and was resolved that his son should inherit his practice. He never doubted that the boy had inherited his ability and energy. While David was still a child he had French and German nurses and teachers. But at fifteen he spoke only his own language, and that not fluently.

Bob Dawes, Mr. Lloyd's errand-boy, used to pore over French books at night, and by day incessantly tried his phrases on the French barber and the cook at the hotel. After a year or two he chattered to them, not with a Parisian accent, but well enough to express himself clearly and with ease.

David was sent to the academy of the town. He was fond of literature, and pored over books of history and travel. But he was at the foot of every class. Mr. Lloyd protested loudly against the inefficiency of the teachers, their bad system of instruction, and the injustice of the methods of grading the pupils.

Bob Dawes had saved up money enough to pay for a year's tuition, and in that time he absorbed knowledge marvellously, in spite of many drawbacks.

When David was admitted to the bar, his father took him into partnership. But clients did not care to put their cases into the hands of the gentle, dull young fellow.

Mr. Lloyd then declared that it was a drawback to a beginner to be overshadowed by his father's reputation; besides, the East now afforded no opening for professional men; the West was their field. Young Dawes, a fellow without money, with but little education or influence, had gone out to Wisconsin, and had already secured a lucrative practice.

David was sent to one of the growing towns in a new Western State. He opened an office, and patiently waited for clients. None came. Men of energy with half of his natural ability pushed past him. He was like a weed washed on the shore while the merciless current swept by.

After two or three years he came home.

"I shall always be an unsuccessful man," he said to his father. "Look at Dawes, with half of my chances, influential and successful. I will give up. Let me, at least, be happy in my own way."

He settled on a little farm, married, and led a quiet, obscure life. He did not gain money, power or reputation; but his wife and children loved him. His friends honored him, and the number of the poor and needy whom he helped was known only to God, who was his friend.

In the hot struggle for place and wealth in this American life, success can be gained only by men who have energy and a certain swift decision in seizing the occasion as it passes, and compelling it to give up to them its possibilities.

The boy or man without these qualities will probably be thrust aside by the crowd in school, in a profession, or a trade, at the East or at the West. But there are higher successes in life than that of making money, or a business or a professional reputation. These are within his grasp.

HER FIRST READING OF "IVANHOE."

As soon as she has swallowed her breakfast, she snatches the precious volume and curls up in the most sequestered nook she can find for a half-hour's eager reading before school.

When the clock warns her that she has stayed until the very last possible minute, if she does not mean to be late, she draws a long sigh, looks regretfully at the title of the next chapter, pushes her hair out of her eyes, gives herself a little shake, claps the covers together with an air of desperate resolution, and tears herself away.

Coming home at noon, she flings her hat and sack upon the nearest chair and rushes once more to her corner, where she remains, oblivious even of the dinner-bell, till her little brother is sent to find her.

She does not hear him the first time he speaks, and when he shouts "Dinner!" at her ear, she jumps as if she were shot, calls him a mean thing, and insists on finishing the paragraph before she will accompany him to the table. During the meal she appears preoccupied and dreamy, and is occasionally observed to sit gazing at the ceiling, with a piece of potato growing cold upon her fork, which she forgets to lift to her mouth.

She plays out of doors for a while after the afternoon session, but before tea-time she is once more in the house, with the book on her knee. She is too deeply absorbed to notice the arrival of callers to see her mother until they are on the very threshold of the parlor, when, blushing and breathless, she dashes out of one door just as they enter at the other, and retires to the stairs to sit, bent double and in a bad light, but happy, on the top step in everybody's way.

In the evening she hurries through her lessons and reads till bedtime and later, having begged so piteously to be allowed to finish the chapter—assuring her family that she could not possibly get to sleep unless she knew whether or not the hero escapes and the heroine is rescued—that she is allowed an extra half-hour, which she coaxes hard but vainly to have prolonged to a whole one.

Her views on English history at this time undergo some curious changes, and she is quite sure that Richard Cœur de Lion was the best and most delightful monarch who ever wielded a battle-axe and neglected more useful occupations.

She names the family of the household cat Rowena, Rebecca and Black Knight, and wishes that her unromantic parents could be persuaded to change the appellation of the family horse from

Digitized by Google

Billy to Ivanhoe. They refuse, on the ground that Billy himself would not like it; but she thinks better of him, and believes privately that it would increase his spirit.

During this romantic period her friends and relatives laugh at her, of course, but most of them have a clear enough remembrance of their own youth to sympathize. They hope, too, that while the glamor of ancient chivalry will soon wear away, the taste for literature that is breezy, wholesome and excellent may remain, to her lifelong pleasure and advantage.

IDLE TEARS.

Self-control among women has fortunately come into fashion, and a heroine cannot expect to add to her charms, either in novels or real life, by giving way to a "sweet sensibility."

Mrs. Thrale, Doctor Samuel Johnson's friend, often had, as a visitor at her house, a young woman named Sophy Streatfield, who was universally acknowledged to be a most fascinating young woman. She was, moreover, one of those who, even in that tearful age, proved decidedly amusing from her habit of unnecessary weeping. One day Mrs. Thrale promised Fanny Burney, who had never witnessed the phenomenon, that she should "see Miss Streatfield cry." As Sophy was taking her leave, Mrs. Thrale urged her to stay, adding: "If you go, I shall know you don't love me as well as Lady Gresham."

Then, indeed, the tears came into Miss Streatfield's eyes, and rolled down her pretty cheeks.

"Come here, Miss Burney!" called Mrs. Thrale, in triumph. "Come and see Miss Streatfield cry!"

The young lady did not seem to be in the least offended by this, but gently wiped her eyes, and became composed again.

At another time, as Madame D'Arblay's "Diary" relates, Doctor Johnson and another gentleman had a dispute, upon which Miss Streatfield, who was present, began to cry.

"Well," said a bystander, "I have heard so much of those tears that I would have given the universe to have a sight of them."

"Oh," put in Mrs. Thrale, "she shall cry again if you like."

"Oh, pray do," said the gentleman, "let me see a little more of it!"

"Yes, do cry a little, Sophy!" said Mrs. Thrale, in a wheedling voice. "Pray, do! Consider now, you are going to-day, and it's very hard if you won't cry a little. Indeed, Sophy, you ought to cry."

Now for the wonder of wonders! When Mrs. Thrale, in the coaxing voice of a nurse soothing a baby, had run on for some time, two crystal tears came into Sophy's eyes, and rolled gently down her cheeks. She did not offer to conceal them, and, indeed, she was smiling all the time.

CONSULTATION AT SEA.

A certain physician in a large New England town had acquired an unenviable reputation for making his bills as large as possible without much regard to the state of his patients' purses. There were people who furthermore said that it really seemed as if there were "visits" on his bills which had never had existence anywhere else.

But he was a skilful physician, and his tendency to overrate his services only served to amuse some of his patients who had plenty of money, and were not especially sharp in looking after it.

"Why," said one man to another, speaking of the doctor, "he brought my daughter Jennie up from her attack of pneumonia, when two other physicians had said there was no hope for her; but when she was quite well again he charged me for three calls he made, to 'inquire in a friendly way how she was getting on!'"

"That seems a little forced," admitted the other man, "but it's nothing compared to an experience I had with him, at the seashore a year ago.

"We happened to be in bathing at the same time one day, and I swam up to him, and inquired for his wife.

"'She's very well,' said the doctor.

"'And your daughters?' I asked.

"'They're perfectly well, both of them,' replied he, rather shortly, I thought. So I said, 'I'm delighted to hear it; remember me to them,' and swam away.

"And what do you think I received from him a week or two later? An itemized bill—one item.

"'To consultation at sea, five dollars!'"

Although no one has ever seen that bill, the story clings to the doctor's name to this day, after a lapse of many years.

POPULATION AND CLIMATE.

In former ages, when men were more at the mercy of the elements than they now are, the great masses of population were located in warm countries. They swarmed in the lands where they needed little shelter and little clothing, while the cold northern countries were thinly populated.

In the present age, when men may make a tropical climate for themselves within four walls, when warm clothing is abundant and easily obtained, the centres of population are found in what may be called the colder half of the temperate zone.

Some figures recently issued by the superintendent of the census show in an interesting way the distribution of the people of the United States with regard to temperature.

The mean annual temperature of the whole United States, excepting Alaska, is fifty-three degrees Fahrenheit, and the figures show that the part of the country where this is the actual mean temperature is the centre of the greatest density of population.

In other words, the greatest density of population centres between the line where the mean annual temperature is fifty degrees and the line where it is fifty-five degrees; and as one goes north or south of this line, to a colder or a warmer average, the density of population rapidly diminishes.

More than half the population of the country lives under a mean annual temperature between forty-five and fifty-five degrees.

At the same time that the mass of population has sought a moderately cool climate as best meeting the needs of life under present conditions, it has sought a region of abundant but not excessive rainfall. Figures put forth by the superintendent of the census show that three-fourths of the people of the United States inhabit the districts where the annual rainfall is between thirty and fifty inches.

The greatest density of population is in the area which has from forty to fifty inches of yearly rainfall. On either side, as the rainfall increases or decreases,—the maximum of the country being above seventy inches and the minimum below ten inches,—the population diminishes.

"BABOO" NEWSPAPER ENGLISH.

In India, the native writer for an English paper accomplishes curious results with the idioms and metaphors of which he believes himself to be master. He proudly makes use of them on every possible occasion, and now and then he composes a truly remarkable phrase, according to the author of "Baboo English as 'Tis Writ." One paper, referring to the death of a distinguished Englishman who had taken great interest in Indian affairs, expressed a hope that the Almighty would "pour his mantle" on some other member of Parliament. Another journal commented thus on a critical political situation in Europe:

"We cannot from this distance realize the intensity of the crisis; but it is certain that many crowned heads must be trembling in their shoes."

Ignorance of the double meaning of some words causes ludicrous mistakes. During the Franco-Chinese war-news came that the Shanghai Chamber of Commerce had appealed to the British Government to prevent the blocking of the Woosung bar by the Chinese—the bar, of course, being the natural barrier at the mouth of the Woosung River.

A native editor concluded that an attempt was being made against the liberties of the Chinaman, and wrote:

"Woosung, we suppose, is a Chinese town, and to prevent the overcrowding of the local Bar by Chinese lawyers is a monstrous proposal."

In an animated description of a fire, a reporter wrote, "He ordered his shop-coolies to hasten to the wells, and in an instant water was on hand's end. Several gentlemen, with their lives at frequent stake, stood on the burning huts amid constant boomings, and loosened away the blazing roofs with mighty strength and Herculean labor that astound the natives to behold from afar. They were also simultaneously busy to pump water to the tops of houses with extraordinary agility and bravity that makes our hair stand on end, and our senses on their standstill."

"TO BE CONTINUED."

A continued story is rendered the more readable by "leaving off in an interesting place," but this very common literary procedure may be overdone. One instalment of a story recently published in a French newspaper, for instance, ended in the following startling way:

"Upon hearing this, the young girl, rendered hopeless and indifferent to the world, allowed herself to fall negligently from the fifth-story window.

"(To be continued next week.)"

This situation was evidently borrowed from a continued story once written by Artemus Ward, entitled, "The Fair Inez." In it the heroine was left, at the end of one instalment of the story, falling from the top of a tall tower to the earth. She had dropped about one-half the distance when the story was interrupted, "To be continued in our next."

In the next number a farmer very opportunely passed beneath the tower with a load of hay, upon which the fair Inez fell without injury.

Still another way of continuing a story is to break it off just where it happens to come, without reference to what the situation may be. This method has been satirized by another humorist, who asserts that a story in a German periodical was broken off in the middle of one of the long German verbs. Not all the verb could be got into the first number. The interest of the foreign reader, at any rate, was heightened by his desire to know in what combination of letters the word could possibly bring up.

LINCOLN'S POLICY.

President Lincoln's humor was of the genuine sort, the sort which is associated with a habit of true seriousness. The New York *Tribune* credits General Palmer with telling a story in point. He was in Washington in 1865, and called to see Mr. Lincoln on a matter of business.

I was shown into an anteroom, and waited for some time. Senators and others went in and out, and finally I was called. Mr. Lincoln was being shaved. I was "home folks," he said, and he could shave before me. I said:

"Mr. Lincoln, if I had supposed at the Chicago Convention that we were to have this terrible war, I should never have thought of going down to a one-horse town and getting a one-horse lawyer for President."

I didn't know just how he would take it, but rather expected some answer that I could laugh at; but he brushed the barber aside, and with a solemn face turned to me and said:

"Neither would I, Palmer. I don't believe any great man with a policy could have saved the country. If I have contributed to that end, it has been because I have attended to the duties of each day with the hope that when to-morrow came I should be equal to its duties also."

Then he settled back into his chair, and the barber resumed his work.

WORKS BOTH WAYS.

To honor one's ancestors is an excellent and praiseworthy thing, but pride of ancestry is a very poor basis upon which to build one's whole life. A man who had never done anything for himself, was boasting, one day, in the presence of a self-made man, of the distinction of his ancestors.

"There is nothing," he said, "like having respect for one's ancestors to keep one out of degenerate ways."

"It is a very good motive," said the self-made man, "and you do well to be proud of your ancestors; but I think that my respect for my descendants is about as good a motive."

"Respect for your descendants! What do you mean?"

"Why, you see I want them to be proud of *their* ancestor!"

Cleanse the teeth and sweeten the breath by using "*Brown's Camphorated Saponaceous Dentifrice.*" [*Adv.*

LADIES, we want a reliable woman in every County, to establish a Corset Parlor for the sale of DR. NICHOLS' CELEBRATED SPIRAL SPRING CLASPS AND CORSETS. Wages, $40 to $75 per month and expenses. We furnish complete stock on consignment. $3 Sample Corset free, conditionally (see terms). Send 18 cents postage for sample and terms. **Nichols & Co.,** 25 E. 14th St., New York.

BEST FOULARD CRAVATS. Black, Navy, Napoleon, Light Blue, Dark Red, Plumbago and White Grounds. Four in Hands, $1. Flat Scarfs, $1. Ascots, $1.50. Sashes, $3.75. By mail on receipt of price. **HEWINS & HOLLIS, 4 Hamilton Place, Boston, Mass.**

DO YOU WRITE? If so, and desire fashionable writing paper at reasonable prices, *ask your stationer* for **Boston Linen, Boston Bond, or Bunker Hill Linen.** If he does not keep them and will not get them for you, send us your address, mentioning paper, and we will forward you our complete samples. **SAMUEL WARD CO.,** 49-51 Franklin Street, Boston.

EDUCATION in CITIZENSHIP Reader's Guide to Political, Social and Economic Science. R. R. Bowker, George Iles, editors. Names every important book, article and report, with notes descriptive and critical by eminent specialists. Reading courses are recommended. Courses in politics and economics in leading colleges for women set forth. **170 pages. Cloth, $1.00. Paper, 50 cents.** Questions for Debate in Politics and Economics with hints for Debating Clubs, **25 cents.** Society for Political Education. **G. P. PUTNAM'S SONS,** Pub. For the Companion.

THE ST. CLAIR TUNNEL.

Almost every civilized boy thinks at some time in his life, that he would like to be a civil engineer. He would not be a boy if he were not attracted by the manly, out-door life and the chances of doing hard and bold things, and being a "boss." Indeed, civil engineering is a noble business; but a boy cannot understand, and few grown up people do understand, what a dangerous, anxious and wearing business it is.

An engineer's greatest triumphs and his hardest fights are hidden away where they are never seen. Only other engineers know much about them or understand them.

No other profession is so much like war as civil engineering. The chief engineer, like the general, must make his plans with the greatest patience and care. He must know the exact facts and guess at nothing. When he cannot avoid guessing, he must weigh all the chances with careful judgment; and when he has done his best he may meet sudden and unlooked for emergencies, in which all his care will not save his work from ruin.

Then, if he lacks courage and skill and swift and clear judgment, he may lose in an hour the honorable reputation made by a lifetime of good work.

The unexpected dangers do not often come in building structures in the open air and above ground. The difficulties that cannot be foreseen come more frequently in tunnels and deep foundations, and in building works in swift rivers and on exposed coasts.

Of all engineering work that which is least certain is what is called subaqueous tunnelling—that is, driving tunnels under rivers or other bodies of water. Usually the tunnel must be driven in clay or river silt or sand and gravel, with, in any case, more or less loose rock and boulders. The trouble is to keep a tight roof, and, if the material is very soft, to keep the tunnel itself in shape.

There is great danger that the water will break through the roof and flood the work, or that the sides of the tunnel may be crushed in by the pressure of the water and the half-fluid material beneath it. The St. Clair Tunnel is the latest subaqueous tunnel completed, and is one of the most remarkable in the world. The tunnel is six thousand feet long, about a mile and one-seventh. Including the open cuttings on each end, the work is eleven thousand six hundred feet long.

It was driven through blue clay. Above the tunnel flows a swift river, forty feet deep. Between the tunnel and the water is from fifteen to twenty feet of clay, sand and gravel.

The work was done by an almost untried method. When it is complete it will have cost about three million dollars.

The novelty and magnitude of this work, the difficulties met, and the boldness and speed with which it was done, have made it a matter of great interest to engineers all over the world, and perhaps the boy who intends to be a civil engineer will also be interested in a short account of it.

The Grand Trunk Railway crosses the St. Clair River from Sarnia, Ontario, to Port Huron, Michigan. About sixty trains cross there now by ferry, and at least seventy will go through the tunnel every day when it is completed. On the St. Clair River there is a shipping commerce five times as great as that which passes through the Suez Canal.

The river is from half to three-quarters of a mile wide, and the current flows at from six to eight miles an hour.

For many years trains have been taken across on great ferry-boats. This is comfortable enough for passengers, but it takes up precious time; the boats are expensive to keep up and to operate, and in winter, when the river is full of floating ice, the delays and cost are serious.

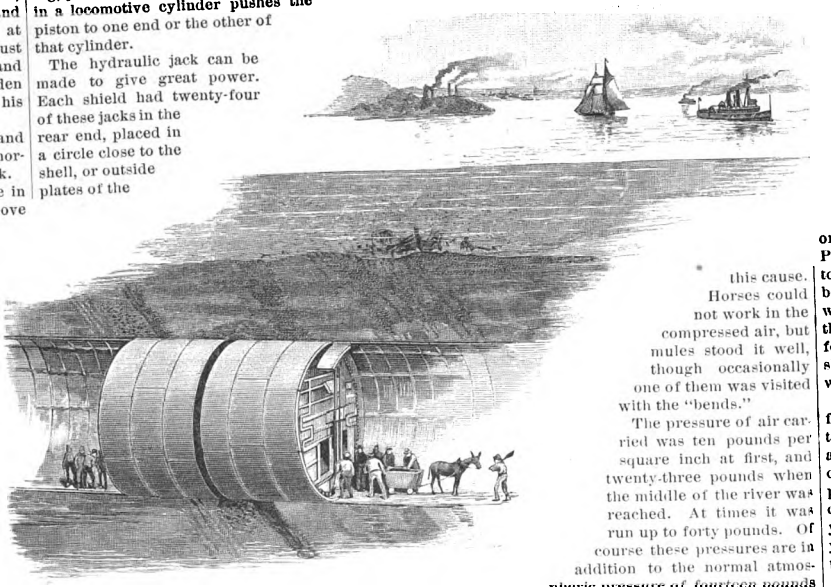
To carry the tunnel, which it was decided to build here, through clay, with occasional pockets of gravel and quicksand, and with a great river flowing only fifteen feet overhead, was a difficult problem.

Let the civil engineering boy stop here and think how he would do it. How would he keep out the water always pressing down on the roof, and how would he keep the roof, sides and even the bottom of his tunnel from collapsing when he struck the quicksands?

The collapse of his tunnel would not mean merely running away to begin in another place, but it would mean burying in the bottom of the river two or three million dollars of money, and the bodies of scores, or perhaps hundreds, of men, and his own professional reputation.

It was decided to do the work inside of steel tubes, called shields, which should be pushed ahead as the work advanced, and to line the tunnel with rings of cast iron as fast as the shields went forward. In this way the danger of collapse of the tunnel would be avoided, and it would be practically finished as fast as it was dug.

But to keep the water or soft material from flowing in at the open front of the tube was another thing. How that was done will be told later.



One shield was started in from the Michigan side and one from the Canadian side. Each of them was a tube twenty-one feet and six inches in diameter, and fifteen feet, three inches long. It was made of steel plates one inch thick. The plates at the forward end of the tube were sharpened to a cutting edge all around the circumference.

This tube was stiffened by steel plates put in up and down and crosswise, dividing the inside into square cells. Five feet from the back end of the tube was a partition, also of steel plates, in which were two square doors near the bottom. The men worked in the front part of the tube, cutting down the clay and throwing it back through the doors. Then it was loaded into small cars, and hauled away to the rear on a narrow railroad track, by mules or horses. There was a second track to bring in the empty cars.

As fast as the shield went forward the tunnel was lined with rings of cast iron. Each of these rings was twenty-one feet in diameter and eighteen inches long, measured in the direction of the length of the tunnel. The ring, being of less diameter than the shield, could enter the rear of it; and so there was always a complete tube of steel and iron from the face of the clay where the men were digging, to the entrance of the tunnel.

Each of the iron rings is made of thirteen pieces of cast iron, each of which weighs about half a ton. The pieces are bolted together, and each completed ring is bolted to the one behind it so that the tunnel is lined with a continuous tube of iron two inches thick and water-tight. The cast-iron lining weighs about twenty-seven thousand tons. The shields were pushed forward by hydraulic jacks. The hydraulic jack is a cylinder into which water is forced; and the water, entering, pushes a piston just as the steam in a locomotive cylinder pushes the piston to one end or the other of that cylinder.

The hydraulic jack can be made to give great power. Each shield had twenty-four of these jacks in the rear end, placed in a circle close to the shell, or outside plates of the tube, and also so placed that when their pistons were thrust out they would push against the cast-iron ring forming the lining of the tunnel.

The Hydraulic Shield.

They could push with a force of three thousand tons—a power sufficient to lift up bodily a large ocean steamship. This tremendous power was found to be twice as much as was needed to force the shield forward into the clay.

At each step the shield was pushed along eighteen or twenty inches. Then a new ring was added to the tunnel lining; the clay was cut down as far as it could be done safely, and carried away. Then the shield was pushed forward another step.

This was all very simple so long as the work was under the dry land; but when it reached out under the river it was necessary to find some way to keep the water out. Otherwise, when seams of loose material were struck, water would have poured in and flooded the tunnel, and that would have ended the matter. To prevent this, compressed air was used.

Profile of the Tunnel.

Every one knows that he can hold up a column of water with a column of air. Let him fill a U-shaped glass tube half full of water, hold it upright, with the open ends upward, and blow into one end of it.

The water will rise in the other leg of the tube, and the harder he blows the higher the water will rise, and the longer will be the part of the tube free from water.

Now, if one could put a fly in the dry leg of the tube and stop the end of it, the water would be held in the other leg, and the fly could move about at his pleasure, dry-shod.

This is the principle on which compressed air has long been used in deep foundations and other subaqueous work. At the St. Clair Tunnel the dry leg of the tube was the tunnel; the wet leg was the river, and the workmen were the flies.

It must be remembered that in all of this description I speak of one-half of the tunnel. It was built from the United States side and from the Canadian side, simultaneously, and the work at each end was entirely independent of that at the other, until the headings met under the middle of the river.

A brick partition, eight feet thick, was built in the tunnel just where it passed below the edge of the river. This was to hold the air in the tunnel. The air was pumped in through tubes built in the brick partition, and the pressure was always kept up to the point where it balanced the weight of the water overhead.

It will be understood that the deeper one goes, and the higher the column of water, the greater the air pressure that must be carried.

The men, mules and clay cars went in and out of that part of the tunnel which was filled with compressed air by means of an air lock in the brick partition. This was a big tube extending through the partition with a door at each end, both doors opening against the air pressure—that is, toward the working end of the tunnel.

To get into the tunnel from without, the air in the lock was allowed to escape until the outer door could be opened. Then one entered the air lock, shut the door and opened a valve by which compressed air from the tunnel ahead was let into the lock. When the pressure there was equal with that in the tunnel ahead, the inner door could be opened and one could pass into the tunnel. To get out the process was reversed.

The painful part of the journey is in the air lock, at the time when the pressure is changing. There people often suffer severe pain in the ears from unequal pressure on the two sides of the ear drum, and sometimes the suffering is so great that they cannot go on.

After one has been a little while in the compressed air the pain ceases; but there is a trouble which is peculiar to working in compressed air, and which disables a good many men and kills a few. The men call it "the bends." It is a paralysis, more or less complete, of the muscles, and especially of the muscles of the legs.

Sometimes it is not painful, but more often it is so; and sometimes it is very painful indeed. At the St. Clair Tunnel there were three deaths from this cause. Horses could not work in the compressed air, but mules stood it well, though occasionally one of them was visited with the "bends."

The pressure of air carried was ten pounds per square inch at first, and twenty-three pounds when the middle of the river was reached. At times it was run up to forty pounds. Of course these pressures are in addition to the normal atmospheric pressure of *fourteen pounds* per square inch, which is always present on every body and every surface in the open air.

The air pressure was kept up by pumps, and to guard against accident there were two sets of air compressors at each end of the tunnel. If the supply of air had failed for a moment the water would have rushed in and drowned the men.

Besides the air-compressing plant, machinery had to be provided for pumping out any water that drained into the tunnel during the work, and other machinery for lighting it by electricity. There were hoisting engines and derricks with which to lift to the surface the dump cars as they came out loaded with clay.

It happened repeatedly that the shields, as they were forced forward, entered pockets of gravel or quicksand going deep down into the blue clay.

Then the air would escape through the loose material, and the water would begin to flow in.

Generally this could be stopped soon by increasing the quantity of air pumped in, but not always. Sometimes the air blew out through the bottom of the river so fast that the air pumps could not keep up pressure enough to stop the flow of water.

More than once it seemed as if the tunnel would be flooded in spite of all that could be done, but luckily the engineers were always able, by plastering over the face of the gravel with clay, and by working the air-compressors up to a pressure of as much as forty pounds to the square inch, to hold back the water long enough to get the shield through the loose gravel into the clay beyond.

On the thirtieth day of August, 1890, the shield from the United States shore met that from Canada, under the middle of the river. This was just one year after they started on their strange journeys; and I do not believe that Meade, on the Fourth of July, 1863, was happier or more thankful than was the chief engineer of the St. Clair Tunnel on this August day.

H. G. PROUT.

HE RAISED THE BID.

"I wonder why it is," asked a physician, the other day, "that nothing so surely provokes a laugh as a fall? I have noticed it on the stage as well as the street. Now there is nothing intrinsically funny about a person falling down, since it is certain to inflict a jar on the nervous system and may result in permanent injury."

"I will explain the mystery," said his friend. "A fall arouses laughter because it is unexpected and therefore ludicrous. If a man could descend to the pavement slowly, as a feather floats downward, there would be time for the mind to prepare for the shock, and the element of the ludicrous would disappear."

This is true of all humor; unpremeditated or unconscious wit being always most keenly enjoyed. An apt illustration of this principle occurred during an auction sale in one of our large cities.

The room was crowded and the collection of furniture, art and bric-à-brac being unusually choice the bidding had been very spirited. During an interval of the sale, a man with a pale and agitated countenance pushed his way to the auctioneer's side and engaged him in a whispered conversation.

Presently he stood aside, and the auctioneer rapped attention with his little hammer.

"Ladies and gentlemen," he said, in a loud voice, "I have to inform you that a gentleman present has lost his pocket-book, containing three hundred dollars. He offers fifty dollars for its return."

Instantly a small man in the background sprang upon a chair, and cried, excitedly, "I'll give one hundred!"

ROMAN STATIONERY.

Do the boys and girls of to-day, who use "Irish linen," smooth white paper, tablets, pens of the finest make, and jet-black ink, know what kind of paper and pens were in vogue nearly two thousand years ago?

At this time, when the youth of our land are forming clubs and circles for the purpose of studying the events of the present, when "current topics" are becoming a feature in school life, it may not be amiss to ask the readers of *The Companion* to look for a little while into the far-off past, to compare the writing materials of the ancient Romans with the elegant stationery of our time, to learn on what Cæsar wrote his warlike "Commentaries," Cicero his eloquent speeches and charming letters, and Virgil his story of the trials of Æneas.

The materials used as paper were of three kinds: the rind of a plant or tree called *papyrus*, parchment made of skins, and wooden tablets covered with wax.

The papyrus plant grew in swampy places, and was especially common in the valley of the Nile. The Romans called the inner rind or coat of the stem of this plant *liber*, "book." Pieces of the thin rind were wetted and then joined together; a layer of the pieces was placed on a board and a cross layer put over it; these layers were pressed together and afterwards exposed to the hot Egyptian sun. The paper was then ready for use, but when a finer style was desired, the sheet was rubbed with the tooth of some animal, which rendered it smooth and glossy.

Their sheets were about ten inches long and from three to twelve inches wide. At first an author or scribe of any kind wrote upon the sheets and pasted them together at the sides in regular order, but after a time long rolls of sheets already pasted together were sold. Sometimes a book occupied sheets pasted together which stretched fifty yards. Some rolls of papyrus sheets nearly fifty yards in length are now preserved in one or two museums in Europe.

When a book was finished, a stick was fastened to the last sheet and all the sheets were rolled together in a way similar to that in which we roll our maps. The name of the book was written in red ink on a piece of papyrus which was attached to the roll. Sometimes the author's portrait was placed on the first sheet.

To give some idea of the antiquity of this kind of paper, it may be added that it was in use long before the year 484 B. C.

Belonging to a period quite as ancient was the second kind of paper, that made from the skins of sheep and goats and called *membrana*, parchment. The hair was taken off and the skin was made smooth by the use of pumice. A remarkable fact in connection with writing on parchment was that the ancients often used the same piece twice or even three times. They did this by rubbing or washing the writing off. Such parchment was called *palimpsest*, which means "scraped again."

In 1816, a famous scholar, Niebuhr, found a manuscript containing the writings of St. Jerome. His practised eye detected evidences of an older writing, and by the use of some chemical preparation, he brought out the work of a celebrated Roman author. Writings of well-known ancient authors were found under portions of the Old Testament.

The third kind of writing material was the waxen tablet, which the Romans used for almost any purpose, but chiefly in writing letters and making notes, and by school-boys for writing exercises or working out problems. The writer once saw a photograph of a terra-cotta figure representing a Roman lad with a tablet in hand, looking mournfully upward, as if appealing to his heathen gods to help him with his knotty "sum."

The tablets were made of wood, generally beech or fir, sometimes citron-wood, covered with wax. There were several sizes, none of them very large, one kind, called *pugillares*, small enough to be held in a partly-closed hand.

The Romans took the wood, cut and polished it a little and then smeared wax on one side. In order to prevent the wax of one piece from rubbing against that of the other when they fastened two pieces together with wire, they left a rim around the wood. The wire fastening the backs of the tablets served as a hinge.

When a writer had finished his letter, he placed the tablets together, bound them with a strong string, tied this into a knot, placed wax upon the knot and stamped it with his signet ring. Here a curious fact may be mentioned. Many of the Romans were either too lazy or else too industriously occupied in war or speech-making to write their own letters; so their secretaries, who were nearly always slaves or freedmen, wrote for them, and as it was not the custom to sign names to letters, the only signature that letters had was this stamp of the signet ring.

Letters began in this way: "M. Tullius Cicero to C. Julius Cæsar, greeting." The shortest letter perhaps of ancient times was the one written by Cæsar to his lieutenant Cicero, brother of the orator, when Cicero was besieged by the Gauls. It was written in Greek, and the translation is, "Cæsar to Cicero: Expect help."

Now, as you have learned what the Romans used as paper, the next matter is to tell you what kind

Digitized by Google

of ink they had. When they used paper made from papyrus, they wrote with ink composed of lampblack and gum. With parchment, they used a mixture of gum and oak-galls. Sometimes they made an ink by boiling and straining the dregs of wine. It is said that occasionally they used as ink the black fluid emitted by the cuttle-fish.

That the ink was of excellent quality and very lasting we know from the fact that even to this day on certain fragments of ancient Egyptian *papyri* the writing is legible. In addition to the commonly used black ink, the Romans had red, green and purple ink. The emperors wrote their names with a costly red ink which all others were forbidden to use. There was also invisible or sympathetic ink which would appear only when heat was applied or some chemical preparation was poured upon the paper.

A Roman author (Ovid) tells us that people occasionally wrote with fresh milk, and that the characters could be seen only when coal-dust was sprinkled upon the paper. Single and double inkstands, the latter for ink of two kinds, some round in shape, others hexagonal, with covers, were found at Pompeii.

All the stationery needed by a writer has now been mentioned except the pen and pencil. With the papyrus and with parchment the pen used was called *calamus*, a reed of nearly the same shape as our old-time quill pen. It was split like our pens, and so had the name "cloven-footed." Certain Asiatic peoples use this reed even now.

With the waxen tablets a sharp iron instrument called *stilus* was in use. One end was sharpened for scratching on the wax; the other end was flat, and was used as an eraser. Erasing was performed by smoothing the wax and thus rendering it capable of receiving new impressions.

When a writer desired to draw lines on parchment, he used a leaden plummet, made out of a small round plate. This served as a pencil and ruler.

It may be interesting next to consider how the ancients sent their letters and other mail-matter. There were no post-offices or post-routes. Under the Empire there was a system of couriers, but they carried only state despatches. When a person wrote to a friend, he had to send his letter by a special messenger or by some friend who happened to be going in the desired direction. In the former case, when a man in Rome wished to write to a friend in Greece, he had of course to pay his messenger's expenses. Naturally, therefore, only the well-to-do could afford the luxury of letter-writing. Poor people wrote no letters at all if they had to be sent to a distance.

On the walls of a house in Pompeii, Doctor Rich tells us, was found the picture of a letter folded and sealed, with the directions. Near this picture were representations of the pens and pencils of the old times. These pictures and others found there have thrown a wonderful light upon the subject of Roman stationery.

A. P. MONTAGUE.

For the Companion.

LOST AMONG BUBBLES.

While spending a few weeks shooting in Labrador early in a recent autumn, I had an adventure which was so singular that I am sure the like of it has never come within the experience of any one else.

I was living at the house of a fisherman who had a little hut among the rocks at the foot of a great cliff. From this place I could pass, at low tide, to the east or west of the cottage for a considerable distance along the coast.

The coast was a series of bights or coves, all open to the ocean, but nearly every one sheltered at the sides by a long reef of rocks which ran far out into the sea. The point always protected the cove, and made it smooth when the wind blew up or down the coast.

During such a gale myriads of sea-birds seek the sheltered side of the reef and dive for small univalves which cling to the rocks.

One morning I took my dog to a cove which I knew would contain many sea-birds. It was surrounded, save for the front, by high cliffs, and at one side a high ridge of rock ran out into the sea. It was blowing a gale, and throngs of ducks floated under the lee side of this point, as the water there was smooth.

As I lay on one of the shelves of this reef, I noticed that a constant stream of foam passed across from the windward side of the point, where the sea was chafing and churning against the rocks, to the little cup-shaped cove beyond.

Great masses of this foam, lighter than thistle-down, had already gathered in the shelter; and as a flaw from the gale touched it, the mass quivered from end to end.

What a mass it was! I could hardly believe my eyes as I stood among the rocks and looked across at it. It was probably about an acre and a half in area and how deep I could not tell, though I was sure that it must have been forty feet deep well back in the cove, and not less than ten feet anywhere.

The mass was not white, but yellowish, though whenever the sun burst through the scudding clouds the bubbles all along the top gleamed in rainbow colors. Still more foam came drifting across the reef, settling on the top and rolling along to find a level.

Great masses of foam like this are very common in the far north. They disappear in a few hours after the storm which causes them, leaving nothing but a soft, greasy paste on the rocks. It was pretty generally believed at one time that meerschaum or sea-foam pipes were made from this matter.

This great, unstable, quivering mass had an unaccountable fascination for me. I was seized with a strong desire to go down and into it; and that was just what I did, leaving my dog beside my gun on a small patch of sand.

Now as I have said, the cove into which this froth was heaped was closed round with straight cliffs except for a little opening in front through which the sea ran gurgling in a narrow channel. I had to jump across this channel; and then I found eight or ten square feet of bare beach, from which the foam rose slantingly backward. The bubbles were of all sizes, some of them being no larger than a grain of shot, some of them more than an inch in diameter.

The dog jumped across to where I stood and looked into my face, wondering what I was about. I ordered him back, and he turned away very unwillingly.

I first thrust my hands and arms into the heap, and it became nothing in my grasp. Of course all the bubbles had air in them, and I was sure that I ran no risk of suffocation in plunging into the mass.

Ducking my head I went in, under a mass fully forty feet high, advancing carefully lest there

A Great Mass of Bubbles.

should be holes or rocks in the way. It seemed to me as if I was moving the whole mass in the cove, and very likely I was.

I put the bubbles away from my face, and opened my eyes; before the foam closed down again I noticed a faint light. But my attempt at breathing was not comfortable. When I inhaled, a number of bubbles went into my mouth and broke there, but the air they contained was pure, and went into my lungs.

I then found it best to hold my hand across my mouth, straining the air between my fingers. As I drew in my breath many bubbles pressed against my hand, and I could feel the tiny, soft explosions.

I had walked thirty or forty paces when I shouted again and again. My voice seemed very low, but I could hear a million bubbles quivering round me and above me. Wherever I was sure the ground was level, I walked on rapidly, flinging my arms about me.

But in spite of the air in the bubbles, the sensations I experienced were not agreeable, and a dull pain came into my head. The light I had noticed on opening my eyes was dimmer, and I supposed I was near the cliff at the back of the cove. So I turned about to go back, having had my very novel experience, and taking, as near as I could judge, the way by which I had come. Walking as rapidly as possible for three or four minutes, I supposed that I must be close to the spot where I had entered. But evidently I was not, for the hard face of the cliff stopped me.

Then I turned and walked along the edge of the cliff towards the opening; but presently a great rock rose in my way. In my confusion and groping to feel for the cliff I inhaled numerous bubbles, so that a salt, slimy paste began to form in my mouth. It did not take me long to realize that I had lost my way, and that my predicament was one not to be envied.

So, with my left hand over my mouth and my right extended, I crossed and moved in every direction that I thought likely to bring me out. Several times I fell by stumbling against large stones, and my knees and arms were badly bruised. The pain in my head, meantime, grew worse, and there was a strange buzzing in my ears.

After I had been in the place about fifteen minutes, the weariness grew so great that I was obliged to sit upon a stone. I now thrashed the pressing bubbles from my face with both my hands and found some relief in the larger quantity of air that I was able to inhale.

But how was I to get out of it? It was only too certain that if I found the place of egress it could only be by accident.

What were they saying, all those thousands of bubbles, that pressed around and above me, so soft, so evasive, but so persistent and so numerous? For there came into my ears the strangest din of small sounds that the ear of mortal ever heard.

Sometimes it was like the crying music that you hear in a sea-shell; again, it seemed as if a myriad voices were whispering mockeries in resentment of my intrusion upon their domain. I flung up my hands and dispersed the crowding tormentors, but they settled down upon me immediately.

Though my senses were becoming dull and benumbed, it was very clear to me that my situation was serious. It occurred to me that some of the coast people might have dropped around this way and that, having seen my dog and gun, they would make search for me. So once more I cried out.

As before, the sound seemed nothing, though it made the mass all about me quiver and tremble violently. There was no human voice in response; but once I thought I heard the faint barking of my dog. I nerved myself for another trial, counting my chances of success. Alas, they were small!

The thought came burning through me, Would it not be awful to die in this way? After a time the storm would cease and the foam would not drift across. My body would be found there, and the people never could guess the cause of my death.

I stumbled on and on, and, as usual, went against the cliff. Turning again, I set out in the opposite direction, becoming more confused all the while.

My heart was beginning to sink and I longed to lie down, with this vast covering above me, and go to sleep. Nevertheless I stumbled on and on, not knowing whither. Then my foot touched something soft, which moved. Then the thing, whatever it was, rose and touched me upon the body. Then it barked. It was my dog.

The dear brute jumped about in the wildest excitement, continually darting away from me and then returning. Stooping, I laid my hand upon the dog's neck, and said as loudly as I could, "Home, Jack! On, boy!"

This was just what he needed. He set off at once at a rapid walk, I still feeling him with my hand. He led me, as it seemed, by the most devious ways, around great rocks, gently across great holes, over level places, till it seemed to me as if I had travelled miles.

Then a great flash came upon my eyes. It was the honest light of day, and I was saved.

EDMUND COLLINS.

For the Companion.

GENERAL VON MOLTKE.

Count Hellmuth Carl Bernhard von Moltke was born at Parchim, in Mecklenburg, Germany, on the twenty-sixth of October, 1800. He is now, therefore, in his ninety-first year.

His parents having removed in his early boyhood to the province, then Danish, of Holstein, he studied military tactics at Copenhagen. In 1822 he entered the Prussian Army. He soon became

prominent as an officer, but was not famous until the series of wars which began with the campaign of Prussia and Austria against Denmark, growing out of the Schleswig-Holstein dispute in 1864.

There, as chief of staff of the Prussian Army, he proposed a plan for the capture of the bastions of Alsen, which was so daring that not even his own staff would at first support him. However, the plan was tried, and succeeded, and it virtually ended the war.

The Prussian victories in the war of 1866 with Austria and Bavaria, and in the war with France in 1870-71, were the result of Von Moltke's strategy. He formed the plans and saw them carried out, and to him, more than to any other one man, belongs the credit for the success of the military operations.

He is a singular personality, unconsciously attracting attention wherever he goes. Large and tall, with a smooth, intellectual, unsoldierlike face, he looks what he is—a student.

That has been his work in the army always—the student part. He has not troubled himself with details of execution. He has never given much attention to discipline or routine; but after considering how many men, how many divisions, how many guns he had, and after examining the strength and position of the enemy and the nature of the ground before him, has formed his plan of battle and left the rest to his officers.

The plan is always flexible, and ends with the one sentence that embodies the policy of his lifetime: "Here is the plan for to-morrow; but in case the enemy is not there, seek him and fight him where you find him."

It is this quality in his character that has brought him his success—the faculty of making his plans according to the best military strategic rules, but never letting them bind him down to his harm.

Often it is a cruel policy; for Count Moltke plays at war as one plays at chess, throwing away a thousand men to open a passage for a charge, as carelessly as one throws away a pawn to open the way for a queen.

Though the aged general lives now alone, a widower, in the beautiful building erected for the superior officers at Berlin, his life is as simple as it was when he was a lieutenant.

Such a life, lived in the midst of all the etiquette and form of the imperial court, could not fail to give rise to many anecdotes. He seldom thinks of driving in anything but a cab, unless some one puts im into an imperial carriage; and he often walks in preference to driving at all.

Each morning of his life he makes his own coffee, as he has done for nearly three-quarters of a century; and for him there is no greater pleasure than to have some congenial spirit come in to breakfast and praise the flavor of the coffee.

The night before the battle of Sedan—perhaps the most momentous fight of modern times—he played his regular game of whist as he did on the night before that, and has practically done every evening since. All that afternoon he had been planning something that was to demolish one army or the other on the morrow.

To-day the coffee is not as good as it used to be; and were it not that Count Moltke makes it, the congenial friend might privately express the opinion that he had had better. In like manner the game of whist lags of an evening now, because the old general sometimes goes off into a nap.

People say "he is growing old," and yet he walked a year ago, in the middle of winter, among the generals and noblemen who followed the Empress Augusta to her grave, and stood out one of the tallest and almost the straightest of them all.

All his active military positions have been given up within the last two or three years—the command of the German Army among them—and he now employs his time in writing his memoirs and in attending to his duties as a member of the Reichstag, or Imperial Parliament.

Day after day one may see him in a public cab on his way to his seat in the Chamber. At the closing of the session a year ago, after cheering the Emperor, the three hundred and ninety-seven Representatives of the German Empire gave Count Moltke three long cheers as their "oldest and most respected member."

J. H. SEARS.

BAD WORDS.

Boys alone can put a stop to the practice of using bad language out of school; the teacher cannot know what his scholars say in the ball-field or the streets. Parents cannot know for the same reason, and least of all mothers, who would be most shocked by improper words, and could do most to prevent their utterance.

There is one power only that can put down low talk in a playground, and that is the public opinion of the school.

But that can do it! There is nothing boys fear so much as the disapproval of their school-mates, particularly if it is expressed in a mode which conveys contempt.

It is a curious thing that the boys who are most likely to use bad words are most susceptible to this kind of influence. They are pretty sure to be weak characters, with much vanity in their composition, and therefore more likely to be afraid of the opinion of others than of falling in their own esteem.

Unfortunately, many boys, otherwise pretty good, are slow to perceive either the evil or the disgrace of using bad language, and are apt to regard the practice as a sign of a sort of courage that takes no note of trifles. Others feel the need of eking out their short supply of words by exclamations more or less violent or indecorous.

An Eton boy, in describing recently the ideal Etonian, remarks that he must have courage, truth, self-reliance, tact and resolution, but need not make his conversation at all times "fit for the *Ladies' Pictorial*."

Eton is not the only school where a notion of this kind prevails. No matter what inexperienced boys may think about it, all reflective men, accustomed to trace effects to causes, know that bad words are most closely related to bad conduct.

It is surprising how easily and quickly the custom of using bad language can fall into disuse, if there are only a few boys who hate and despise it. A single boy has brought it about in a large school.

The reform does not take place in a day, nor in a month, but one after another the boys catch the better feeling, perceive the beauty of decorum, and soon he who uses vulgar words is either exceptionally reckless or a new scholar.

We are very well aware that boys do not like to be preached to on this subject, and therefore make our sermon short. We merely remark, in conclusion, that the use of language either violent or improper is not a sign of strength, courage, or independence. On the contrary, it is an unmistakable sign of weakness, ignorance and vulgarity.

SUGGESTIONS.

MOSS.

Observe the moss clinging to old boards. What does it feed upon?

Is the same moss found on trees?

Do its roots reach the tree's sap?

Does it have flowers and seeds?

Note its changed appearance after a shower.

Does it serve any purpose in Nature?

For the Companion.

THE MILKY WAY.

Over the Milky Way,
The ancient Hindoos said,
Unseen by light of day,
To Swarga go the dead.
Along its gleaming reach,
Between th' ethereal poles,
When Yama calls them, each
Must tread the Bridge of Souls.

Over the Milky Way,
Sang Grecian poets old,
Once, driven far astray,
The Sun's red chariot rolled.
And each Olympian god
That same wild path above
With winged sandals trod
Up to the throne of Jove.

Over the Milky Way,
The Northmen tell with pride,
As ray meets answering ray
Sulahmid met his bride.
Lonely in heaven afar,
His love's resistless might
Built out, with star on star,
That viaduct of light.

Over the Milky Way
Our later fancy runs
With Science' self at play
Among its maze of suns,
Where reason can divine,
As sages wisely guess,
Those thicker orbs outline
The cosmic wilderness.

Remoteness infinite,
Where sight its course may urge,
Where thought may fearless flit,
And touch creation's verge!
But swifter faith o'erleaps
The farness of the spheres
To where God's splendor sweeps
Thro' all th' eternal years.

His love yon pathway high
Built to life's summit land,
And bade this emblem sky
Tell us, who longing stand,
As stars in countless sum
One stream of light prolong
There joys so frequent come
They make one all-day song.

Ah, not in vain for hope,
And not in vain for me,
That lane up heaven's blue cope
Trails its white nebulæ:
I see the same eyes glow
That looked where Jacob lay,
And the same glad wings go
Over the Milky Way.

THERON BROWN.

For the Companion.

GONE.

Seth Smith was a tall, slender lad, son of the Widow Smith who did the washing for any strangers that might stop at the village hotel. Ten minutes earlier on that pleasant morning Seth went down the street, whooping and calling to people whom he knew, but no one turned to listen, or to answer him.

Now he was quite still and silent, but the passers-by gathered about him, awe-struck.

His eyes were closed and his lips were white, but it was the same hungry, poor boy whom they had always known. There were the worn, patched clothes, the bare feet, frostbitten and bleeding. The innkeeper's wife, a stout old woman, suddenly stooped and covered them tenderly.

"I might often have given him old shoes easily enough," she said to herself, turning away.

"He was a willing, kind boy," said another woman. "He worked hard for his mother. Many's the time, too, he brought my little Peter safe home." She remembered that she had often thought of giving him some decent clothes, but had put it off.

The village teacher passed, on his way from school, and stopped where Seth lay on the porch of the inn.

"Who is it? *Seth!*" he said, peering down at the quiet boyish face. It was full of accusations against him.

His heart seemed to stand still for a moment. He had noticed for years that this boy was quick-witted and eager to learn, but he worked all day, and could not come to the school. The master, in a vague way, had intended some time to give him lessons at night, to make a man of him.

He never had done it. He never would do it now. So he thought as he walked home with a heavy sickness at heart.

The young minister came hurrying down the street. He, too, stopped.

"Seth?" he said. "The Widow Smith's boy?"

The minister was always a busy man, with all of his flock to look after. He had noticed this lad only as a merry fellow who never came to church, probably for lack of decent clothes and a little kindly encouragement. He had meant to speak to him as he met him, to tell him of the one Friend who is better than all others, and to give the lad a word of kindness and of help.

He had not done it. A great horror seized on the young man as he stood looking down at the boy's pale face.

Did he know of Jesus? Where was he now?

Wherever Seth had gone, these old friends who had known and neglected him so long, could not follow. Whatever his need, they could not call to him, nor touch him, nor help him.

They were the same. The same sunshine fell upon the dusty village street along which he ran noisily a minute ago. In an instant he had passed out of their reach forever.

There is not a friend nor a servant nor an acquaintance whom we neglect to-day, who sometime may not turn to us Seth's white, accusing face. The pale lips will be silent. But a voice will speak for them. Some of the words of the Master will make themselves felt. "Inasmuch as ye did it not to one of the least of these, ye did it not to Me."

TAMING A TARTAR.

A gentleman who was travelling in Russia upon scientific pursuits found himself obliged to subsist almost entirely upon what he could shoot. One morning he had been out early in search of game, and not having found anything, was about returning to his camp, when he heard some one calling to him in Russian. The speaker turned out to be a rather smart-looking Tartar, who was standing in a big flat cart, with a *troika* of capital horses before him. He was asking the gentleman to take a seat in his cart, assuring him that he, too, was a sportsman, and would take him to a place where game abounded, and bring him back safely before nightfall. Rather doubtingly the gentleman finally got into the cart, and was driven rapidly away.

"After a verst or two," he says, "I began to find that my friend was no braggart, for in a short time we had bagged several hares and a few quail. His sight was marvellous. He pointed far in advance, and said, 'Lo, a hare!' We hastened in that direction, and after a tramp of one or two hundred yards, sure enough, up started a hare from the very spot.

"And now the object of the Tartar's morning drive was revealed. On a hillside near us was a mighty flock of sheep. Dismounting and removing his shoes, the man plunged in among them, and after much labor secured four or five fat animals, and got them into his cart. These he carried with us to a neighboring village, where they were peddled out piecemeal to the natives, the whole operation of slaughtering, skinning and cutting up being carried out at a stone trench hard by.

"Much time was consumed by this work. Anxious to get back to my quarters, I suggested as much to the Tartar, when he coolly informed me that I had better make up my mind to pass the night at his house at J——, naming a village of some half-dozen houses, at which a horrible murder had occurred some months previously.

"It may have been the memory of this murder, or it may have been his ghastly handiness with the butcher's knife, that made me resolve I would not go there. I reminded him of his promise. All the satisfaction I could get was that if I wanted to go back I must walk.

"Did I know in which direction my camp lay? Yes, out yonder, over that low line of hills. A grim laugh, and the assurance that the camp was in an exactly opposite direction increased my suspicions of my quondam friend, as I knew he must be lying.

"A moment's consideration showed me that a walk at this hour would end probably in a night on the steppe, at the mercy of this man or any other who chose to stalk me. So I changed my tactics. He had no firearms, and sat on the edge of the cart. I had my gun, and sat behind.

"I mustered what little Russian I knew, and let him understand that he must keep his promise; that on no account would I go to J——; that our home-track was the one on our right, and if he refused to take it, I would blow him off his cart with a charge of No. 5.

"This was a rough argument, and he seemed nonplussed. He tried to argue me into going another way, and to laugh me out of my suspicions. He even began to bully. I simply watched him, repeated my proposals, and sat still. Meanwhile the horses were pulled up.

"Then my friend tried to slip off his seat, and so get out of his awkward position in front of my gun's muzzle. I cocked my gun with a click, and brought it in line with his back. There was a moment's hesitation, and then with a curse he took the right road at a sulky pace.

"All that drive I never took my eyes off him, and never let go my gun. Gradually he became better-tempered, and when we were within half a mile of camp he turned and spoke to me, saying that nothing should make him go further.

"So, satisfied that I could now get home in safety, and taking with me the small amount of game which I had shot, I took leave of the Tartar, glad indeed to get off so well."

EDIBLE DOGS.

Almost at the same time that the Sioux braves were partaking of a dog feast not far from Pine Ridge, certain English *bon vivants* were testing the merits of the flesh of the Chinese edible dog, and pronouncing him a very good dog indeed. Their verdict was quite different from that of the French people who were forced to eat the flesh of dogs during the siege of Paris, and who all agreed that it was thoroughly detestable.

The difference, however, is easily explained by the culinary authorities who have taken the matter up. It lies wholly in the character of the food upon which the dog has subsisted.

The Chinese edible dog is destined from the beginning for the table. Like the edible "rat" of the same country, he is fed mainly upon vegetable food, which is often delicately prepared and specially devised in order to give the dog's flesh a peculiar flavor and aroma.

The result is something quite different from the flesh of the ordinary dog of the Western world, which feeds generally in a very miscellaneous way, and never with a view to the suitability of his flesh for human consumption.

The genuine Chinese edible dog is known by his bluish-black tongue, which is a peculiar mark of his variety. In his infancy and early youth the dog's tongue is red; and upon reaching maturity and the edible age it suddenly becomes black, sometimes within a single fortnight.

Another peculiarity of this dog is his lack of the barking faculty. It is said that the dog can bark, and on occasions does so; but these occasions are rare. Ordinarily he is entirely taciturn.

Many experiments, most of them unwilling, were made with the flesh of dogs during the Paris siege. Newfoundlands and St. Bernards were preferred, under a mistaken impression that they would prove more eatable than other varieties. They proved to be detestable in all cases.

It is related by several persons who passed through this siege that the dogs seemed to be aware that they were being considered for culinary uses.

"My dog Marius," says M. Fulbert-Dumonteil, a writer who has described the events of the siege, "was perfectly aware that the sword or the cleaver of Damocles was suspended above him. He continually crouched down before me, made himself appear as little and as emaciated as he could, and regarded me with a supplicating air which seemed to say:

"'O master! Can't you see how lean I am? If you only knew how terribly tough I am!'

"I spared him; but toward the end of the siege he was stolen from me, and undoubtedly eaten up. And that was the way my poor Marius died for his country."

For the Companion.

"MY GOOD FRIEND DEATH."

[*Inscribed to the honored memory of David A. Wasson.*]

A touching incident occurred on the day preceding Mr. D. A. Wasson's death. The patient old man had been growing weaker and weaker, the vigorous constitution he inherited from sturdy ancestors with difficulty relaxing its tenacious grasp upon life even after years of illness, and with a sigh of ineffable weariness he said to his wife: "Have you seen my good friend Death anywhere about here? If you see him tell him he will be very welcome." The next day his "good friend" came.—*Boston Letter.*

"See you his face, dear Wife, the good, old friend
Who helps the weary on their journeying way?
His quiet steps draw near, I think, to-day,
And this, indeed, shall be of pain the end.
When his strong arm he graciously shall lend
Through what vast wonder-regions shall we stray,
Where he is King, and none can say him nay!
Shall I his triumph share as on we wend?"

So spake he. Night bent low to watch his bed
With starry eyes. Sad winds called round the place
For that "good friend" whose coming seemed so slow
To him who waited. But when morning shed
On him the glory of her radiant face
From light to light Death led him, glad to go.

LOUISE CHANDLER MOULTON.

LINCOLN AND HIS CRITIC.

The language used by President Lincoln has, in some cases, become classic and memorable, chiefly for the reason that he conveyed his meaning in the simplest and most direct way. That he knew what would appeal to the multitude rather than scholars, is plain from an incident described in an account of life at the White House, by William O. Stoddard, one of his private secretaries.

The President had been writing something, and had in his hand several sheets of foolscap paper.

"Sit down," he said. "I can always tell more about a thing after I've heard it read aloud, and know how it sounds. Just the reading of it to myself doesn't answer as well."

"Do you wish me to read it to you?"

"No, no; I'll read it myself. What I want is an audience. Nothing sounds the same when there isn't anybody to hear it, and find fault with it."

"I don't know, Mr. President, that I should care to criticise anything you had written."

"Yes, you will. Everybody else will. It's just what I want you to do. Sit still, now, and you'll make as much of an audience as I care for."

The manuscript was long—a letter nominally addressed to some gentleman in Illinois, but really to the country, and to the world. He was satisfied that it was about what he intended it should be, and laughed silently, when, at last, he put it down on the table.

"Now! Is there any criticism that you wanted to make?"

"Well, I was thinking, of course, it's as nearly beyond criticism as it well could be—but there's one place —"

"What's that? Take the paper, and show it to me."

"Why, Mr. Lincoln, some people will find fault with this: 'Nor must Uncle Sam's web-feet be forgotten. At all the watery margins they have been present, not only on the deep sea, the broad bay, the rapid river, but also up the narrow, muddy bayou, and wherever the ground was a little damp, they have been and made their tracks.'"

The silent laugh of the President became heartily audible, as he listened to that bit of criticism.

"I reckoned it would be some such place as that. I'll leave it in, just as it is. I reckon the people'll know what it means."

"That's about the only fault I can find, but I never saw a web-footed gunboat in my life. They're a queer kind of duck."

"Some of 'em did get ashore, though," and the silent laugh came in again, this time. "I'll leave it in, now I know how it's going to sound."

Lincoln knew just how that paragraph would ring in the ears of millions on millions all over the country, and he didn't care for the literary critics, here or in Europe.

PROVOKING.

Country servants have been the theme of more than one humorist, but there are many still undescribed. One of these said she was willing "to oblige" a Boston woman last summer, when the second girl was ill, and the distance from the city to the country house where the family were staying was so great as to render it difficult to get servants. The new-comer was a tall and gaunt widow, who called herself "Mis' Gere," and lived, as she said, "to Snowfield Corner."

She was not very satisfactory in her new position, and she had a haphazard way of doing things which made it unsafe to trust her. She would lay the table so imperfectly that it would be necessary to call for dishes throughout the meal, and if she was remonstrated with, and asked to see that everything was on the table before summoning the family, her invariable reply was:

"Wal, I did look before I rung the bell, an' I didn't see anythin' that wa'n't there."

At last it was decided that Mis' Gere was worse than no maid, and she was accordingly told that her services would be dispensed with, a communication which she received with the remark, insolently delivered:

"Wal, I dunno's I blame ye fer sendin' me off. I shouldn't want a girl in the house myself that I thought was too good for me to eat with."

The lady of the house smiled, but made no reply. Mis' Gere waited a moment, and then, in a reproachful voice, continued:

"I sh'd think you might 't least have said somethin' to that, so's I could 'a' had an excuse to sarse yer some!"

WOODPECKER'S JUSTICE.

"A year ago last spring," writes a correspondent, "a pair of red-headed woodpeckers determined to peck a hole in the boarding under the eaves of a house, as woodpeckers often do. The owner of the house, not liking such mutilation, after repeated efforts succeeded in driving them away, and they went to work at once and dug a hole in the nearest tree.

"When the birds' home was finished and housekeeping had begun, the farmer's boys captured the female as she sat in the nest, and kept her in a cage, hoping in that way to catch the male also, which had flown away when his mate was seized.

"Two days later he returned with another wife. The boys relented at the sight. They gave Mrs. Woodpecker number one her liberty, and awaited results.

"To their surprise the male woodpecker, after a relentless pursuit of about six hours, killed her. Then he destroyed the one egg which she had laid, and continued housekeeping with wife number two as if nothing had happened."

The tragical story leads our correspondent to ask several questions: Have birds a language, by means of which they communicate one with another? If so, did the woodpecker give his wife time to explain her absence before rendering judgment and proceeding to execution?

Was not Mrs. Woodpecker at a great disadvantage for want of a vocabulary with which to describe the unheard of experience of captivity?

Is it possible that she was punished for criminal carelessness in permitting herself to be captured?

HE MEANT WELL.

Some weeks ago, writes a Wisconsin correspondent of *The Companion*, a young temperance lecturer, in his travels from town to town, fell in with an Indian, who made signs for a ride. He was allowed to get into the buggy, and pretty soon it appeared that he was intoxicated.

The lecturer, who believed in being instant in season and out of season, began forthwith to labor with his passenger. He dwelt upon the disgrace and death which follow the use of liquors, and wound up by entreating him to forsake his cups.

The Indian did not understand a word of the exhortation, but judging the lecturer by himself, thought from his pleading eyes and earnest manner that he wanted a drink. Accordingly he drew a large, black bottle from under his blanket and offered it to the white man.

The lecturer was elated. He had made a convert, he thought. He took the bottle and dashed it to the ground, where it flew into a thousand pieces.

The Indian could not have been angrier if his scalp had been threatened. He sprang from his seat with a tremendous war-whoop, seized the white man by the arms, dragged him to the ground, beat him in the face, and was reaching for his knife, when the lecturer managed to break away, and ran at his best speed for the next town, where his wounds were dressed.

According to his own version of the affair, he meant well, but showed a lack of judgment.

SPECTACLES.

The period of putting on spectacles is often long deferred by middle-aged people, who "hate to seem old," or dislike confessing to themselves that they have reached one of the significant turning points of life. People have, however, different ways of accepting the inevitable. One charming woman, who has passed this visual limit, declares that her comfort is thereby daily increased.

"I was always so lazy!" she says. "Nevertheless, I had to do a thousand things I hated. Now when I go out for an afternoon, I can leave my glasses at home, and so, when I am asked to look at photographs, try a new crochet stitch, or read 'dear Mary Ann's last letter,' I can refuse with a clear conscience. And it is such a rest of mind and saving of tissue!"

Another woman, and a very pretty one, owns to a bit of tacit deception in wearing her cross.

"I try to put my glasses on with the air of having always worn them," she confesses. "I can't help hoping that people will think me near-sighted from childhood."

But a dear old gentleman, who can't see without glasses, actually goes to the length of declaring that he doesn't need them at all. He proves his case by standing at a distance from print, and reading it without difficulty.

"There's nothing the matter with my *eyes*," he then explains, humorously. "The only trouble is, my arms aren't long enough!"

SHE SAID IT.

The modern system of advertising makes the public familiar with the names, and in some cases, with the countenances of inventors and manufacturers; and so strong is the power of association that, on meeting one of these much-advertised persons as a private individual, it is difficult for some persons to refrain from asking him instantly about the article to which his features seem to be only a sort of trade-mark.

A lady who was making an evening call met a man by the name of Brown, who had invented an improved buttonhole-making attachment for a well-known sewing-machine, and whose name, preceded by a hideous caricature of his face, had been omnipresent in the advertisements for some time. He had two charming daughters whom the lady had been greatly pleased.

During the entire call, she had succeeded in addressing Mr. Brown by his rightful name only by great mental exertions, as another word was constantly trembling on her lips.

At last he rose to go, and with a sigh of relief she heard his "good evening;" to which she responded with her sweetest smile, and added, "Please remember me kindly to the Misses Buttonhole!"

RESPECTFUL.

If any reader stands in need of a vacation, and doesn't know exactly how to ask for it, he is advised to study the following model, said to have been written by a young Hindoo to his employer:

MOST EXALTED SIR: It is with the most habitually devout expressions of my sensitive respect that I approach the clemency of your masterful position with the self-dispraising utterance of my esteem, and the also forgotten-by-myself assurance that in my own mind I shall be freed from the assumption that I am asking unpardonable donations if I assert that I desire a short respite from my exertions; indeed, a fortnight holiday, as I am suffering from three boils, as per margin. I have the honorable delight of subscribing myself your exalted reverence's servitor.

JANJANBOL PANJAMJAUB.

FOR THE WORSE.

When a cook begins to experiment with new rules things are sometimes likely to be "worse before they are better," as the common saying goes. At all events, the man below had his joke about it.

"Hello, old boy!" said Mr. Wicks. "Where 're you going now?"

"I'm going to the hotel to get my dinner," answered Mr. Hicks.

"Indeed! Why don't you dine at home? I always heard that Mrs. Hicks was an excellent cook."

"Ah! my dear fellow, that was before she bought a cook-book."—Boston *Transcript.*

A DISCOVERY.

Bertha, in the field, one morning,
Found a tiny stranger maid,
All among the dandelions,
Sobbing, trembling, and afraid.

Whence, we asked, had lassie wandered?
But she could not tell her name,
So I kissed away the tear-drops,
Till the smiles and dimples came.

"I guess who she is!" cried Bertha,
"O mamma dear, don't you see,
You said April cried and laughed so,
And I'm sure it must be she!"

For the Companion.

HOW THE COUNTERPANE GOT SMUTTY.

"Lyddy Jane, have you been in the 'fore room'?" That was what Grandma Higgins sternly demanded of Aunt Lyddy Jane ever so many years ago, when she was a little girl.

The Higginses lived in a low log-house with two rooms.

There was the great kitchen where the brick oven was that was large enough for a man to crawl into, and a cunning tin baker set up before a roaring fire in the deep fire-place, in both of which Grandma Higgins did all her cooking. That was before stoves came in fashion. One corner of this kitchen was given up to the big loom, with its stout frame, its great yarn beam and cloth-beam and treadles and pulleys and harnesses and sleys. In this grandmother used to sit on a high seat, and *click-clack! thump-thump!* all day, weaving long webs of linen and woollen for gowns and jackets and trousers.

There were a cunning pair of cards, too, in this corner, with which in the long evenings she used to card wool into "bats" for spinning, sitting in the firelight.

Then there were the "swifts," the mother-wheel with a deep grum voice for spinning wool and tow, and the baby-wheel with a hum like that of a bumble-bee for spinning the soft flax into linen.

These filled that corner full.

The big round table and the "dresser" for the pewter dishes, little chairs and big chairs, all with bottoms of "basket-stuff," with a "turn-up" bed in another corner and the cradle—there was *always* a cradle in the kitchen in those days—made even that great room so full that Grandpa Higgins used to declare that there wasn't room enough "to swing a cat around by the tail."

And I don't believe there was—without hurting the cat.

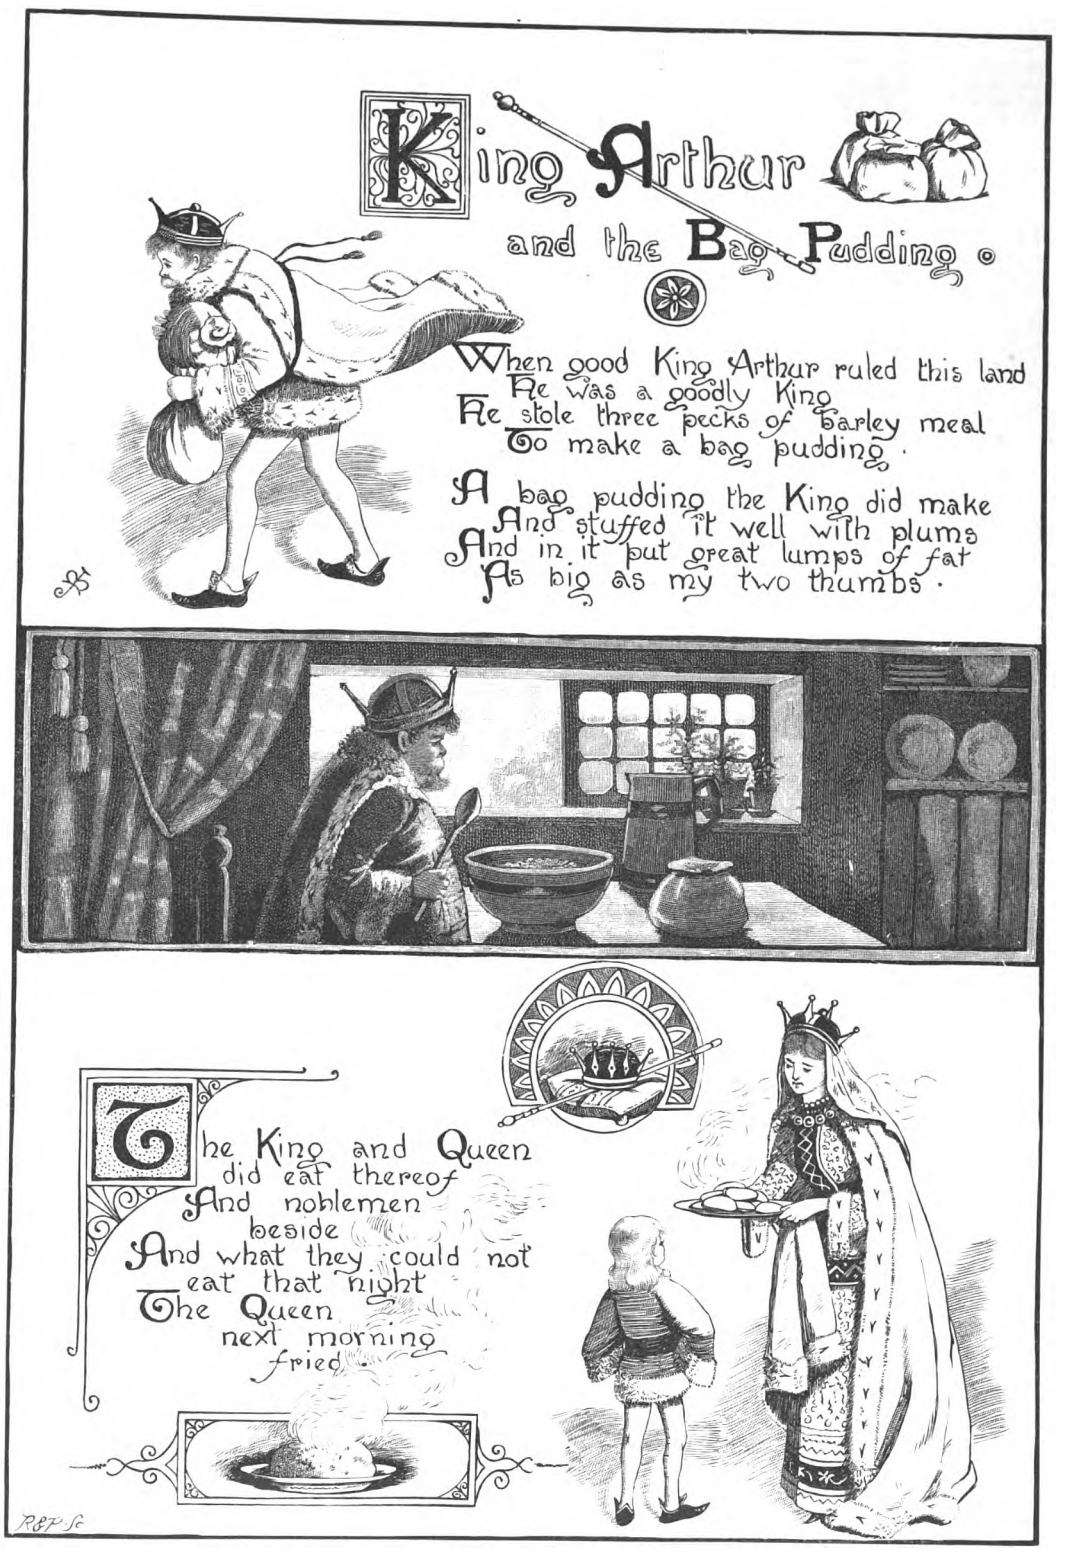
In the "fore room" was the high bedstead with its white netted canopy and dimity counterpane. This was the company bed.

Lyddy Jane nor Sam nor Amaziah nor any of the other little Higginses were allowed to go into this room alone, to even peep into the great mahogany bureau drawers or to tilt one of the spindle-legged chairs.

So it was with horror and astonishment that grandma one day discovered great blotches of smut upon her snow-white counterpane.

Lyddy Jane stoutly denied any knowledge of it, so did Sam and so did Amaziah, but that didn't save them from being sent to bed in the low chamber without their suppers of mush and milk, and threatened with having their mischievous act made known to Parson Whipple, a worthy travelling preacher and family counsellor who was expected to sleep under the netted canopy the next night, and to preach in Squire Brown's new frame barn on Sabbath day.

It took grandma all the next day to remove the spots and get the quilt ready.



Parson Whipple came, and Lyddy Jane and Amaziah and Sam, with their hearts ready to jump out of their mouths, sat primly in their little chairs all in a row, while the baby Higginses hid in the great loom.

But grandma didn't tell him then.

Well, when Parson Whipple went to hop in under the netted canopy that night, after he had *snuffed out* the candle-light and rubbed his fingers on grandma's big braided hearth-rug, what should he do but hop right on to Dib—the old white cat—and her great family of brand-new kittens. He was a stranger, and Dib flew at him in a rage. It is safe to say that Parson Whipple hopped out from under the canopy much quicker even than he had hopped in. And didn't he shout!

Grandpa ran in, and there was old Dib, covered with soot as a chimney-swallow, standing on the edge of the bed and spitting at Parson Whipple with all her might, her hair standing up every which way. She had come down the big low chimney to find a soft bed for her family.

That was how the counterpane got smutty.

A LAUGHABLE MISTAKE.

Little Lou's Primary Geography was made up of questions and answers.

In the lesson on Brazil they ran thus: "For what are the wild cattle on the plains caught?" Ans.—"For their tallow, hides and horns." "For what are the ladies of Brazil noted?" Ans. "For their beauty."

Lou learned readily by rote, and recited correctly when the questions were put in the order of the book.

Sometimes the teacher "skipped about" and Lou made funny mistakes.

"What are the ladies of Brazil noted for?" asked the teacher.

"For their tallow, hides, and horns," answered Lou.

Little Hazel was permitted to go to the city with her mother for the first time, and on entering a street-car she gazed eagerly up, down and around, and then whispered, "*Mamma*, is this an *Excursion?*"

Little Lena was watching Cousin May getting ready for a walk, and as she put on her hat, Lena, looking at the cluster of forget-me-nots with which it was trimmed, exclaimed, "Aren't those remember-me's very pretty?"

BIOGRAPHICAL CRYPTOGRAM.

The name of this man is buried, one letter in each fourth word, beginning with *learned*,—his pseudonym in each fourth word, beginning with *printing*.

He early learned printing,—loved to read books, and to publish, also,—also established first library in our American country,—made discoveries regarding electricity. At Albany Congressional Commissioner,—in Europe seeking help,—everywhere his practical character aided America desiring freedom. Died April seventeenth, seventeen-hundred ninety.

LILIAN PAYSON.

4.

DEFINITIONS.

The words here defined form a sentence, uttered by one whom we honor, April 15, 1865.

1. An article. 2. An institution designed to secure the rights of men. It was discovered in 1785 to be inefficient in the United States. 3. A preposition. 4. The name of an American officer to whom a King of France sent a commission, appointing him Lieutenant-General of the armies of France. 5. Nevertheless. 6. Actively remains.

5.

ENIGMA.

Take one-eighth of sunshine, two-fifths of storm, two-sixths of warmth, one-eighth of a moonbeam, one-fifth of shade, two-tenths of spring rain, one-fourth of acid, one-third of red, and one-fifth of sugar, and make something delicious to eat.

6.

ANAGRAM.

Beth led in crime.

You've sung the story of our woe,
Our thoughtless race, our cruel foe,
And found the song beguiling;
A luckless band of brethren three,
'Tis plain not one of us could see
The reason of your smiling.

For the Companion.

AN EPISODE AT WEST POINT.

Several years ago, when I was at the Military Academy at West Point, I had an opportunity to witness as brave a deed as was ever performed by the heroes of antiquity.

In the corps of cadets, at that time, there was a young man about twenty years old, named William Bradford. He and I were members of the same class, and consequently often drilled together.

During the months of August, November and April, the cadets of the second class at the Academy are exercised at what is known as the seacoast battery. This consists of one eleven-inch smooth-bore and four eight-inch rifled guns, all of which, I may say, are pieces of an obsolete type, very old, and more or less dangerous to fire.

The mechanical part of this drill is considered quite important, and occupies the first two of the months mentioned. The actual practice at the target takes place during the latter part of April.

On the day to which I refer, we had a new instructor, as the officer of artillery who usually drilled us was absent on leave. Owing to the danger of firing these great guns, it had always been customary for the gun detachment—with the exception of No. 4, who fired the piece—to get back on the terrace directly in rear of the battery, and from there observe the fire and its result at the target on Cro' Nest Mountain, about two thousand feet away.

This day, however, for some reason, the lieutenant in command directed us to retain our posts at the pieces until they were discharged.

The practice was begun with the big smooth-bore. After "calling off," I found myself No. 1, at this piece, with Tom Hitchcock No. 2, and Billy Bradford as gunner. The duties of Nos. 1 and 2 were to "sponge out," insert the charge and projectile, and immediately after firing to jump upon the parapet in front of the muzzle and sponge out again with the huge sponge and rammer staff.

All being ready, the instructor gave the command, "No. 1, ready. Fire!" The huge gun sent forth a flash as large as the side of a house, and the roar which followed rendered us almost deaf for several minutes. Then No. 2 was fired, and so on down the battery.

After all the pieces had been fired singly, the command, "Fire by platoon," was given. This meant that the guns were to be discharged two at a time.

Finally came the command, "Fire by battery! Battery, ready!"

Every No. 4 grasped his lanyard firmly, and, facing to the left and rear, waited for the command to fire. Billy stood at his post directly in rear of his piece, facing the same way as the battery. The rest of us, expecting to be more or less deafened by the shock, listened for the word.

"Fire!"

A sheet of flame and a tremendous concussion shook the very earth under our feet, while the smoke filled the battery until it was impossible to see anything. "Sponge out!" was the order, however, and all the Nos. 1 and 2 jumped upon the smoking parapet to execute it.

Hardly had I reached my post when I saw Billy, who should have been at the breech, come leaping through the sulphury haze right in front of the muzzle.

"Down for your lives!" he yelled; and seizing each of us with a hand, he hurled us over the parapet.

As I went down I heard a terrific report, and felt the clods of torn earth strike my face. Then I reached the bottom, and knew no more.

When I recovered consciousness, several cadets were standing over me. Close by another group surrounded Tom Hitchcock, who was still insensible.

"What's the matter?" I asked, feeling rather giddy, but experiencing little pain.

"The old piece hung fire," said McLeod, the chief of section. "If it hadn't been for Billy Bradford, you two men would have been blown to bits. He was the only one that saw it."

Then I realized what had happened. The gun had "hung fire," as it is called when the discharge is delayed, and owing to the noise and smoke of the other guns, no one but Billy had noticed it. His only chance of saving us was to hurl us down the embankment at the risk of his own life.

"Was he hurt?" I asked, as we slowly started to climb the parapet.

"Pretty well blackened, and a little burnt by the flash, but he got out of the way of the shot with about one differential of a second to spare," answered McLeod.

When we got into the battery again, we saw Billy lying on the grass with his shell jacket off and his face and arms black with powder. The lieutenant was bending over him with a can of water.

"Tom," said I to Hitchcock, who had regained consciousness, "we owe our lives to Bradford there. Let's shake hands with him."

The next evening, after parade, we heard this report on the "skin book":

"Bradford—gunner at sea-coast battery drill. Leaving post without authority 5.05 and 5.10 P. M."

"Discipline or no discipline, I think I shall take this report off," said the old commandant, after hearing the particulars. Then he made a note in a little book he kept for a certain purpose.

Bradford never referred to the episode during the remainder of second-class year, but the rest of us understood a thing or two when in June he was promoted to first captain over the heads of no less than eight others who ranked him.

"SEATED BULL'S" EXPLOIT.

The notion that the United States is a country principally inhabited by people of Indian race still clings to a great many Europeans, and even to some of those who are educated. The most singular misapprehensions concerning the Indians and the part of the country they occupy are continually appearing in the newspapers of Europe. A French periodical called *Science Pour Tous* (Science For All), which declares its aim to be the enlightenment of the public, recently published the following absurd article:

"We have received some interesting information concerning the incidents which preceded the recent rising in arms of the Indians in the West, and one of the first engagements.

"The Seated Bull, their chieftain, having resolved to make known the fact that the Indians had not received their annuities and certain promised munitions, betook himself to the Capitol at Washington.

"There he laid before the president of the Legislative Body his complaints of the governmental agents, who, he declared, had stolen what was the Indians' due.

"He was informed that his declarations would be taken under consideration, and he departed. But the promise having remained without performance, the Seated Bull once more came to the Capitol.

"This time, in the midst of the assemblage, the Seated Bull did not utter a word, but drew his tomahawk and dealt with it a terrible blow upon the marble table which was before him. The table was broken in two, and the chief's tomahawk buried itself in the floor beneath.

"It was the token of the chief's declaration of war.

"The Seated Bull then left the Capitol without any one daring to lay a hand upon him. Returning to his canoe, which he had tied to one of the piers of the great bridge across the Potomac River, he paddled rapidly back to his own territory."

NOVELTIES IN SPELLING.

Editors, who of necessity spend much time over other men's manuscripts, soon come to the opinion that spelling is an art by itself, having no very close connection with what is called education. Some of their nicest and most acceptable contributors are found not to be above writing "inflamation," "frivilous," "nickle" and the like. It is not surprising, therefore, that sign-painters and placard printers should sometimes be uncertain in their orthography.

A correspondent of the Detroit *News* reports that he saw an Irishman standing before this sign:

WASHING AND CAIN CHARES SEATED.

"Sure, now," said Pat, "I guess that's where I'd better get some o' me washin' seated."

In another street the reporter came upon this legend, printed in chalk before an eating-saloon:

DINNER ALL READY.
SIRLON STAKE.
TEA AND COFFIE.
ALL MELS 25 C.

In the foregoing cases the artists probably made no attempt at originality; but the man who conceived the following advertisement must be given credit for a high degree of ingenuity.

The Grand Army of southeastern Michigan was holding an encampment in Detroit, and a saloon displayed a sign appropriate to the occasion:

FRESH LA—G.A.R.

GEOMETRY.

Three elderly gentlemen, all college graduates, were discussing the effects of time in obliterating early training at school. One of them, Mr. A., asserted that they had all forgotten nearly everything they learned at school, and this the second gentleman, Mr. B., as strenuously denied.

"For instance," said Mr. A. to Mr. B., "what do you know about Geometry now? Anything at all?"

"Certainly," said B., "a good deal."

"Well," said the third man, Mr. C., breaking in, "let's have a little examination. A., what is the shortest distance between two points called?"

"A railroad," said Mr. A., promptly.

Mr. B. laughed heartily.

"Well, B.," said C., "perhaps you can tell me what the shortest distance between two points is?"

"A telegraph line, of course," said Mr. B., triumphantly.

INCOMPETENT.

The doctor in the following little story, from the Chicago *Times*, was in a position somewhat like that of the colored minister whose church sent him his resignation.

"I have sent for you, doctor," said a lady, anxiously, "to see if you can tell me what to do for my poor little canary. He mopes, and—"

"I am not a bird doctor, madam," interposed the physician, with proper professional dignity.

"Don't you know anything about the diseases of canaries?"

"Most emphatically I do not."

"Well, you really must excuse me then, doctor," she said, "if I call in a more experienced physician. I think a great deal of my bird, and must do the very best I can for him."

UNREASONABLE ANGER.

The value of compliments depends in great part upon their seasonableness.

"I've got a bone to pick with Watts," said Mr. Briggs. "I intend to find out what he meant by calling me 'small potatoes.'"

"Why, man, there was no harm in that," replied his friend. "It is really a compliment this year to be called any kind of potatoes."—*Indianapolis Journal.*

"Now, ma'am," said the English servant, "'ow will you 'ave the duck to-day? Will you heat it cold, or shall I 'eat it for you?"

Itching Piles.

Burnett's Kalliston is a sure relief. A sample will be mailed on receipt of ten cents by Jos. Burnett & Co., 27 Central Street, Boston, Mass. [Adv.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,

For the Companion.

THE AGE OF DECAY.

Birth, growth, maturity, decay, death—such is the normal history of man. The three periods of life should sustain a certain proportion to each other: twenty years of growth, sixty years of maturity, twenty years of decay. This is what might be counted upon as the ordinary course of human life, but for the fact that we labor under a load of ancestral transgression of physical and moral law, supplemented and intensified by our own personal delinquencies and follies.

How pleasant is the picture! Twenty years of happy childhood and youth, sixty years of intellectual progress and achievement, with domestic and social joys, and then twenty years of slow, almost unconscious decay, characterized by serenity of mind, pleasing memories, and joyous anticipations of a grander life beyond the grave.

Sadly different is human existence as we see it. We look with wonder upon Gladstone, past eighty, still vigorous in body and mind, still strong and wise to lead the great Liberal party of England. We accept threescore and ten as life's natural limit, and expect only labor and sorrow if this limit is passed.

We are doomed, we think, by our inheritance; and to some extent this is true. But we should remember the law of recuperation. The torn flesh heals; the broken bone reunites. Diseases tend toward recovery. The weary toiler rises from sleep strong for new labors. The wise physician bases his hopes upon this law.

And this tendency of nature to heal herself may be greatly assisted by careful and intelligent living, so that it is always possible that the man of unfortunate ancestry may secure for himself a good old age, and start his posterity upon an ascending plane.

Do what we will, however, life must have its end. When the age of decay is reached, hidden changes are going on, the culmination of which is the last great change. The muscles shrink; the brain shrivels; the nerves lose their sensibility and active power; the arteries, perhaps, become chalky or fatty; the heart is weakened; the circulation enfeebled; and at last the end comes.

During this final period, then, we must take things calmly; avoid excesses of all kinds; guard against exposures to cold; keep up a degree of mental activity; cultivate cheerfulness, and look forward with hope.

For the Companion.

WILD GEESE.

Thousands of wild geese go to solitary places on the Labrador coast, and I know that hundreds upon hundreds of thousands go to silent spots in the interior of Newfoundland, building their nests around the gravelly shores of the ponds and lakes.

Think of this flight from the mainland out over the stormy waters of the Gulf of St. Lawrence, where the birds have often to make their way through leagues of fog with nothing to guide them!

They usually leave the mainland with a southwest wind, rising slowly into the air, and ascending very high. They wheel this way and that, as if establishing their bearings, and then slowly begin their way toward the distant island of Newfoundland.

They fly by night and day, and often there is not so much as a star by night to guide them. As far as I can learn, the wild goose will not take rest, under any stress, on the sea.

I have watched them in the autumn take their departure from Newfoundland for the continent. They gather from the interior in large flocks, feeding about the uplands till a steady northeaster begins to blow. Then I have seen them float up, up, till they appeared as small as mosquitoes; but no captain that ever sailed the seas can lay out his course with greater accuracy than these birds. The land is not visible to them when they leave, nor for many hours afterward.

The captain of a schooner trading between Charlottetown, Prince Edward's Island, and St. Johns, Newfoundland, tells a curious story. He says that he was lying to in a storm in the Gulf late in the fall, during one of his usual trips, and was awakened in the morning by the mate, who said, "Come on deck and see what we've got here."

"Judge my astonishment," he said, "to find perched all about the deck between twenty and thirty wild geese, as tame as chickens."

The birds, it appears, left the coast with a northeaster after them, but when they were midway across the Gulf the wind chopped round and it became foggy.

They became bewildered but would not alight in the sea, preferring rather to perch on the schooner's deck. This is all the stranger because the wild goose is one of the wariest of birds, and one of those most afraid of man. E. C.

FIGHT WITH A LEOPARD.

A wounded leopard is an ugly antagonist, as two unfortunate African farmers recently found. They were returning from a hunt, when they roused a leopard in a mountain ravine, and immediately gave chase. The leopard at first endeavored to escape by clambering up a precipice; but the hunters pressed hard upon him, and wounded him by a musket-ball.

Frantic with rage, the animal turned and sprung upon the nearest man. He fastened upon the hunter's shoulder with his teeth, and tore open a cheek with his claws.

The other hunter, seeing his comrade's danger, ran up and attempted to shoot the brute through the head, but missed his aim. While he stood a few feet away, reloading his gun, the maddened leopard abandoned his first victim, and darted upon hunter number two.

So fierce and sudden was the beast's onset that the man had no time to act in defence. He managed to get out his hunting-knife, but before he could use it the leopard struck him over the head with his paw, the sharp claws tearing the scalp and leaving it hanging over the man's eyes.

The hunter grappled with the beast, which fought with tooth and claw, and they rolled together down a steep declivity. Before the farmer who had been first attacked could start to his feet and seize his gun, they had rolled to the foot of the bank. As speedily as possible he reloaded his gun, and rushed forward to save the life of his friend. He was too late! The man was dead.

His comrade had only the satisfaction of completing the destruction of the beast, which was already dying from the wounds it had received.

ENGLISH SPELLING.

Some compositor, disgusted with the inconsistencies of English orthography, has been at the pains to construct the following elaborate travesty, which appears in the *Printer's Album*. The ingenious reader can lengthen it at his own pleasure. Know won knead weight two bee tolled thee weigh too dew sew.

A rite suite little buoy, thee sun of a grate kernel, with a rough around his neck, flue up thee rode as quick as a dear. After a thyme he stopped at a gnu house and wrung the belle. His tow hurt hymn, and he kneaded wrest. He was two tired to raze his fare, pall face. A feint mown of pane rows from his lips.

The made who herd the belle was about to pair a pare, but she through it down and ran with awl her mite, for fear her guessed wood knot weight. Butt when she saw the little won, tiers stood in her ayes at the site.

"Ewe poor deer! Why dew you lye hear? Are yew dyeing?"

"Know," he said, "I am feint."

She boar hymn inn her alms, as she aught, two a rheum where he mite bee quiet, gave him bred and meet, held a cent bottle under his knows, untide his choler, rapped hymn up warmly, gave hymn a suite drachm from a viol, till at last he went fourth as hail as a young hoarse.

NOT RIGHT.

Those who undertake to correct the speech of their fellow-mortals sometimes get unexpected results.

"Bridget," said a young housekeeper, who was somewhat fresh from college, "it would be useless for me to disguise the fact that your ignorance of grammar is very marked. Let me try to correct you. For instance, does it sound right for me to say, 'Bridget, you've been a-settin' in the drawin'-room?'"

"No, ma'am," said Bridget, frankly, but with evident surprise; "no, ma'am, it don't sound right, but I were only a-settin' there the mather of a half-hour or so wid my cousin Terence, who is just over. I s'pose that second girl has been a-tattlin'."
—*Exchange.*

WHICH WAS CORRECT?

Two young girls who were considered bright scholars in the high school were looking over a birthday book, which was arranged alphabetically, a handsome, illuminated letter forming the heading for each page.

"I wonder," said one of the girls, "if there are just as many pages as there are letters in the alphabet, or whether there are some duplicates? Count the pages and see, Maud."

Maud turned the leaves rapidly, and announced, "There are no duplicates; only thirty pages, just as there are letters!"

"Why, you goose!" said Alice. "You'd better go back to primary school. Don't you know there are only twenty-four letters in the alphabet?"

MUSIC.

In the class in physiology, a bright boy was being questioned to bring out his general knowledge of the subject.

"What is the nose?" asked the teacher.

"The nose," said the boy, "is an organ."

"What is an organ?"

"An organ is an instrument of music."

"Ha! And what leads you to suppose that the nose is an instrument of music?"

"When Mr. Dash snores, in meetin', sir!"

A YOUNG lady says she has been so carefully taught to reverence the aged that she doesn't even dare to laugh at an old joke.

For Coughs, Colds, etc., effectual relief is found in the use of "*Brown's Bronchial Troches.*" Price, 25 cts. Sold everywhere, and only in boxes. [*Adv.*

The Human Hair.—How many persons abuse this delicate and beautiful ornament by burning it with *alcoholic washes*, and plastering it with grease, which has no affinity for the skin and is not absorbed. Burnett's Cocoaine, a compound of Cocoa-nut Oil, etc., is unrivalled as a dressing for the hair—is readily absorbed, and is peculiarly adapted to its various conditions, preventing its falling off and promoting its healthy growth. THE "TOWER OF BABEL."

Half a mile from the little town of Kelton, California, the steep hillside rose with rugged abruptness from the valley of the San Lorenzo into a high ridge. It was furrowed with deep gullies, and studded with the blackened stumps of great trees.

Among these stumps the monarch of all the trees upon the hillside remained untouched. On a bold point, twenty rods up the steep slope, stood a gigantic redwood-tree. Twenty-four feet in diameter at the ground, and scored with deep corrugations like niches, the enormous trunk contracted until, at a height of twelve feet, its diameter was lessened to eighteen feet. Thence it rose, like a huge column, to an altitude of nearly three hundred feet, and for two-thirds of that distance it hardly seemed to decrease in bulk.

More than one hundred feet from the ground the first gaunt limbs were extended, and above loomed the drooping branches of the vast top, not shapely and graceful, but irregular and contorted, and clothed in scant, dark-green foliage.

The pinnacle was a gnarled spire of dead wood, bleached to a gray whiteness, and punctured in a thousand places by the bills of many generations of woodpeckers. A multitude of these birds made their home in the lofty top, and morning and evening filled the air with querulous clamors as they flitted about, or beat loud rolls on the resonant wood.

Some imaginative person, listening to this discordant chorus of the woodpeckers, had called the great tree the "Tower of Babel," and by that name it was known in the country roundabout.

The Tower of Babel had not been spared from sentimental motives. The ground was so rough and broken that it seemed impossible to fell it without breaking it into fragments, so it was left unmolested until a more favorable time. Not far above the "Tower" three other large trees in a group had been spared for the same reason.

Edward North, who had come to California to engage in ranching and fruit-growing, had admired the Tower of Babel from afar when he first stepped from the train at Kelton. After looking about, he bought a tract of land at the foot of the mountain, almost in the shadow of the great tree; and there he built a pretty and picturesque cottage, and surrounded it with lawns and flower-gardens.

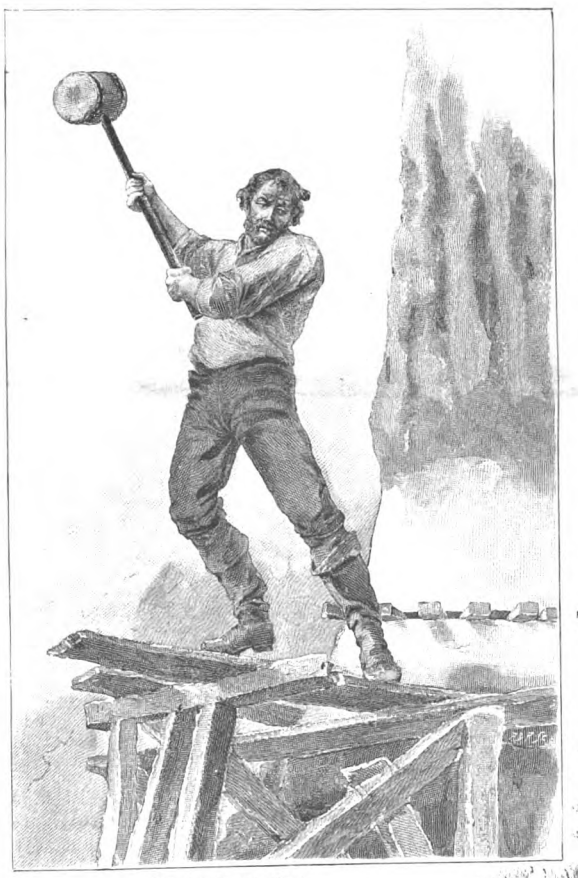
Ralph Kepler, a poor boy who lived with his mother in a shanty on the road to Higgins & Foley's mill, never forgot Mr. North's arrival in Kelton. Ralph was honest and faithful, but he was rude and unmannerly.

A deformed man, employed at the sawmill, occasionally passed his mother's house. He was a hunchback, with long, powerful arms, and swarthy features deeply pitted with smallpox. Ralph called after him one day, "How are you, 'Humpty-Dumpty?'" The dwarf suddenly turned and rushed upon him.

The boy tried to escape, but the man clutched his collar, and he was dragged into the road and shaken violently.

This happened at the moment of Mr. North's arrival in the place. He had separated the two, and told Ralph to apologize to the dwarf; but the boy had taken to his heels.

The dwarf gazed after Mr. North as he walked on with a look of perplexity, and at last shambled slowly away, muttering to himself: "He seems to be a gentleman. I know I've seen him before somewhere, but I don't know where."



Mr. North was unmarried, and though he employed a man and his wife constantly at Mount Hope, he had occasion now and then for Mrs. Kepler's assistance in keeping the house in order. Ralph worked in the garden. Mr. North gave him books to read, and, seemingly without intention, gave him many manly lessons.

Ralph tried one day to find the dwarf in order to apologize to him for his rudeness, but the sawmill had been moved twelve miles away, and the dwarf could not be found.

A few months after his house was completed, Mr. North announced that he was going East, and that he should be absent about six months. The two servants were dismissed, and the charge of the place was given to Mrs. Kepler and Ralph.

Three months after Mr. North's departure, Mrs. Kepler was taken ill and died. She charged Ralph to take care of the place faithfully, and gave him a purse containing the money which Mr. North had left with her. Thirty dollars of the amount, she said, belonged to Ralph, but the rest must be given back to Mr. North.

One day, as the boy was working quietly in the garden, an old man who gathered herbs on the mountains told him that the Tower of Babel was slowly but surely going down.

Big Jim Strikes Hard

"It's going down, sure, right down onto this gimcrack of a house!" said the old man. "It leans downhill, anyhow, and the top's gone over a foot since week before last. Get some timber-fallers to look at it; but no mortal man can wedge that tree uphill. And Higgins won't let it be cut, unless it can be kept from breaking."

The old man went away, leaving upon Ralph's mind a weight of anxiety and terror. Three good timber-cutters whom he brought from Kelton agreed that the Tower would certainly "turn up by the roots" within a short time, and that it was impossible to cut it and wedge it so as to cause it to fall uphill. In any case, it would be shattered to fragments on the rough ground.

But each one of the men said, in conclusion, "You go and see Nick Mar, at Higgins & Foley's. He can do it if any man can. He's the best timber-faller in California. You get him and Big Jim to try it—if you can catch Jim sober."

Ralph went to see Mar, as they advised, but was overwhelmed with confusion when he recognized in him the dwarf whom he had insulted. His intended apology came to his mind, but he saw the impossibility of making it now. He stammered: "I'd like to have you come and cut a big tree that's going to fall on a house."

"What?" growled the dwarf.

Ralph repeated his errand timidly, but added, with fortunate wit, "The men at Kelton daren't try it. They said you were the only man that could do it."

"No," said the dwarf, still angrily. "I guess Humpty-Dumpty couldn't do it!"

He took a long-handled axe from the door and shambled away.

After trying unsuccessfully to find some one else who would cut the tree, Ralph started homeward sorrowfully. At a turn in the road, a quarter of a mile from the mill, a voice saluted him from the hillside above.

"Well, young fellow, you're down in the mouth now, I guess."

Looking up he saw the dwarf. Behind him stood a powerful man, whose face bore the marks left by strong drink. This was Big Jim—a quiet and well-bred man while he was sober, but a terrible ruin when drunk. Ralph could hardly keep back his tears as he saw the mocking face of the hunchback. He turned away and hurried on, but the man called to him again, and he paused, hopelessly.

"I'm a humpback," began the dwarf, slowly, "but I may not be as mean as you think. What tree do you want cut? I reckon I'll be over that way day after to-morrow."

"It's the Tower of Babel!" cried Ralph.

"What!" The dwarf whistled in amazement. "I reckon I'll be over there to-morrow.

"Let's go, Jim," he said, turning to his companion, "and we'll get Higgins to go over, too; but I'm afraid he won't let us cut it."

"Very well, let's go," said Jim, hoarsely.

Nick Mar, Big Jim and Mr. Higgins arrived at the Tower of Babel early in the afternoon. Higgins pretended to scoff at the idea of imminent danger from the tree, and refused to allow it to be cut unless Nick Mar could save at least ninety feet of the trunk unbroken. This seemed impossible, for the steep hillside was not even for more than forty or fifty feet in any direction; but Nick Mar examined the tree carefully, and declared that he could fell it and save the required length.

His plan was a daring one, requiring great skill, but he explained it to no one but Big Jim.

Higgins then refused to allow the tree to be cut unless one hundred and fifty dollars were deposited with him, to be forfeited if it were broken.

Ralph still had the money which his mother had left him, but she had told him to return all but thirty dollars of it to Mr. North. He could risk but thirty dollars—his own wages—for this purpose.

He was about to give up the plan when the dwarf said, kindly: "Haint you got the money, my boy? Never mind. I'll put up what you can't. Nick Mar aint afraid to back up his figuring with coin."

Ralph gladly accepted the proposition, and having deposited his thirty dollars with Mr. Higgins, Nick Mar became responsible for the rest, and the work of felling the Tower of Babel began.

In felling a large redwood-tree, a deep notch, called the under-cut, is chopped in the trunk, facing the direction in which it is to fall. Then a ring of the thick, tough bark is removed entirely around the tree, and two men saw into the other side horizontally, with a long cross-cut saw, until the tree breaks off and falls. If a tree begins to lean the wrong way, long steel wedges are driven into the saw-cut to force it over.

Nick Mar and Big Jim first erected a staging, so that they could cut the tree at the height of twelve feet. But even there the diameter was so great that they were obliged to cut two notches, each four and one-half feet deep, at right angles with the under-cut. This reduced the diameter from side to side to nine feet, and barely enabled them to saw the tree with a ten-foot saw.

Then they reversed the usual order, and began the saw-cut before chopping the under-cut on the uphill side. They sawed into the tree about six feet, and Big Jim, with ponderous blows, drove twenty long steel wedges into the saw-cut. This was to wedge the tree up firmly, so that when the under-cut was made it would not swing.

Then Nick Mar chopped the under-cut. Standing first on the staging, and afterward in the cut itself, he swung his axe for two days, till the great, yawning notch was completed.

An interested crowd watched the work from day to day. Some woodmen suggested to Nick Mar that he was aiming the tree so that it would strike the clump of trees on the hill. He replied that "it might come pretty close."

The time came when the saw-cut was to be completed, and the great tree wedged over. In the early morning Nick Mar sat on the staging, and Ralph stood below, waiting for Big Jim.

He did not come. Nick Mar sent Ralph to Kelton to search for him. He found Jim in a saloon, intoxicated and worthless, declaiming in hoarse tones to a crowd of loafers. He refused to come and finish his work; but Ralph succeeded in engaging two other woodmen to help the dwarf.

The loss of Big Jim was severely felt that day, and for the first time Nick Mar seemed nervous. He worked fiercely and tirelessly. The saw sank deeper and deeper into the tree, and all day long the hills echoed with the sharp blows of the mauls on the wedges.

When the evening train came in the station was deserted. The men and boys were all gathered where they could see the big tree fall.

Night had fallen, but the wind was beginning to rise, and the work must be finished now. The tree had been sawed as far as it was safe. Nick Mar was striking furiously upon the wedges when he happened to turn toward the house. There was a light in it!

"Who's in that house?" he shouted. "Run quick, Ralph, and tell them to get out of it."

Ralph ran down the hill toward the house. As he came near he saw a man peering in at the window. It was Big Jim. Within the house, at a glance, he saw people who had evidently just arrived from a journey.

He shook Jim's arm roughly.

"Jim! The tree's going back on 'em! Go help 'em! Run!"

Jim turned on him with a strange look, like a man awakening from a beautiful dream. Then he flung Ralph to one side and was gone.

Ralph rushed in. Mr. North stood in the centre of the room beside a young lady. She was looking with pleasure at a picture on the wall, of

Digitized by Google

Edward U Dunfield Jan92

which Mr. North was evidently speaking, for he had a hand extended toward it, although he was looking at her. On the other side stood an aged lady, with a very kindly though sad face.

It took but a moment to warn them of the danger, and they hurried from the house.

Meanwhile, Jim had hurried to the tree. Nick appealed to him fiercely:

"Jim! Brace up! She's trying to go back! Jump up and hit the wedges while I cut out the centre! *Hit* 'em! Hit 'em hard, Jim, and never stop!"

Nick sprang up and leaped into the under-cut. He raised his axe, and at that instant the Tower quivered to its heart with the blows which Big Jim was showering upon the wedges on the other side. Swiftly and carefully Nick Mar began to chop out the centre of the tree.

Suddenly a deep, hollow, stunning *crack* sounded as the wood broke. Nick Mar, tingling as if with an electric shock, threw up his hand. The great slanting bevel of the under-cut was closing down upon him. The tree was falling.

He sprang out on the staging and then to the ground, ran swiftly two or three rods to one side, and looked up. The majestic top of the Tower was slowly and grandly describing its tremendous arc in mid-air, and Big Jim stood on the staging, at the gaping saw-cut, still striking the wedges, which now flew from under the blows far into the heart of the tree.

"Look out, Jim!" screamed Nick Mar.

He had time for only one cry, for then the descending mass struck the largest tree of the clump above squarely. It bent far back, but perceptibly checked the momentum of the fall; and the recoil whirled the great butt of the Tower off the stump and projected it down the steep declivity, filling the air with flying rocks and earth.

This was the successful consummation of the dwarf's plan, for the Tower of Babel lay with the butt forty feet below the stump, and one hundred and fifteen feet of the trunk unbroken.

Nick Mar was not thinking of his triumph. He called for Jim, but there was no answer in the stillness that followed the downfall. Lanterns were brought, and after a time Ralph and the dwarf found poor Jim, hurled down the hill, with the pallor of death on his face.

The men bore him down to Mr. North's house, and at the door they met the aged lady whom Ralph had seen. Her face turned white, and she threw herself down beside him with a moaning cry, "Jamie!"

Jim opened his eyes, and his face lighted up with a smile.

"Mother," he sighed, faintly. She kissed him and wept, and smoothed his damp hair, and spoke to him tenderly as she had done when he was a little boy. His head drooped, and he died in her arms, with the light still lingering on his face.

Mr. North came and knelt beside her, and said, "We have found him at last, mother."

CHARLES E. BRIMBLECOM.

BETHY.

In Three Chapters.—Chapter II.

A Waif's History.

When Mrs. Dudley came into the kitchen early Monday morning, she hesitated a moment, with her hand on the latch of Bethy's door. She was wondering if she should call the child to help her. It was washing-day, and there was much to do.

She decided that she would not "make company" of her. Bethy might as well begin to work. She pushed open the door.

The room was empty. Child and dog were gone.

Mrs. Dudley was surprised at the keenness of her disappointment. Not until this moment had she felt how unreservedly she had trusted the girl, and she was no more than a common tramp! It was hard to believe it. Perhaps she was a thief, too.

With a very sober face, Mrs. Dudley went to an old desk. She opened the small drawer where she and her husband kept their small amount of ready money. She counted it tremblingly. It was all there. Then she counted the silver spoons. Not one was gone.

She went back to the bedroom, and found that Bethy had not taken her hat. This seemed strange.

"It's just as if she's been frightened away," said Mrs. Dudley to herself.

She was too greatly depressed to go about her work with her usual activity.

"I was 'lotting too much on having a bright young thing about the house," she said aloud.

She sat down in a chair, and leaned her elbows on her knees.

"Oh, what will become of her, wandering 'round so?"

She rose and went toward the barn, where Mr. Dudley had already gone. Half-way along the path she paused, and looked vacantly down into the little valley at the foot of the mountain. It was on that mountain that she had seen Bethy the Saturday before.

As she looked a figure detached itself from a clump of savin-trees and came toward her rapidly—a bareheaded, girlish figure, which seemed to fly between the bushes. Then some very small creature came bounding to her feet. It was Nip-'n'-Tuck!

Bethy paused, and seemed to be in doubt. Then, when it was plain that there was no one else at the house but Mrs. Dudley, she came faster and faster.

Mrs. Dudley caught her in her arms. She could not help it, though she told herself that it was not prudent to show such affection before she even knew the child's name.

"You gave me a terrible start," she said. "I thought you had run away!"

"I did run away," replied Bethy, panting, "but I couldn't stay! I kept thinking how good you and he had ben to me, and I just had to come back."

She paused and looked uneasily about her.

"They aint here, are they?" she asked. "I've watched as sharp as I could. They came after me, didn't they?"

"Nobody's been after you, child! I don't know what you're talking about."

Bethy told what she had heard in the night, and Mrs. Dudley explained that it was Deacon Swift, who had come for Mr. Dudley's fast colt to go to town for the doctor, because Mrs. Swift was "threatened with one of her spasms."

"But he asked about me!" said Bethy.

"He wanted to know who you was."

Never had Bethy worked with such good-will as on that day. She brought water; she rinsed clothes and put them on the grass; she picked peas for dinner; she hugged Nip at every opportunity, and the little dog shared her joy, giving short, sharp barks just from sheer spirits. To crown the triumphs of the day, at dusk Nip caught a large rat near the corn-bin, and was so proud of his deed that his three friends laughed at him until they were weary.

"Put him down!"

The whole week passed in happiness to the girl. She worked hard. There was butter and cheese to make, and the innumerable duties to do which make up the labors of a farmer and his wife.

Bethy shared nearly all of them. She hoed and weeded. "Uncle Ezry"—for so they told her to call Mr. Dudley—said to his wife in Bethy's presence that he had "never had his onion-bed wed in such good shape in his life."

Bethy had not seen a young person in all the week. Two or three middle-aged men, driving by on the road, had stopped their horses and sat in their open wagons talking with Mr. Dudley, and one woman, in a clean print gown, white apron and white sunbonnet, had brought her work and spent an afternoon.

This visitor had a mild, inexpressive face, and after she had asked the girl her name and been answered that it was Bethy, had asked no more questions in Bethy's hearing.

She had put several questions to Mrs. Dudley, however, which could not be answered. Aunt Esther looked so sober and preoccupied after her visitor had gone that Bethy became sober, too, and went to bed in a melancholy state of mind.

It happened that it was the very next day, when Bethy was picking currants in the back yard and Nip was nosing at a toad he had found, that a boy's head appeared above the wall behind the bushes, and the next moment the owner of the head vaulted over the wall close to Bethy. She sprang back, but restrained the scream she wanted to utter.

Nip flew at the heels of the new-comer, who caught up the dog by his back and held him off to look at him, while Nip growled and wriggled furiously. If there was anything Nip resented, it was to be lifted in that way.

"Put him down!" cried Bethy, impatiently. "Don't you see he doesn't like it?"

The boy, who was almost a young man, obeyed after a moment.

"I hope he doesn't expect to get out of everything he doesn't like," he said.

Then he began to pick currants, and to put them in Bethy's basket. Bethy wished he would go away, but she could hardly ask him to do so.

She kept glancing at him from under her sunbonnet. He was tall and good-looking, and was dressed in a brown linen suit of very different appearance from the clothes generally worn by country boys.

As he brought a very large handful of currants, he said, "You must be the girl they were telling about over at gran'ma's."

Bethy did not speak, but her face grew red. She was afraid he would ask her questions. She shut her lips close, and bent over the bushes.

"My gran'ma," the stranger went on, "is Mrs. Noble. She said she saw you here the other day."

Bethy knew it was the mild old lady who had not disturbed her. She nodded her head.

"My name is Donald Noble," he said. "Now it's fair for you to tell me your name."

He stood up and whistled to the terrier; but he was listening for her reply. She bent still lower after currants.

"My name is Bethy," she said.

"But that isn't the whole of it?"

"No."

"I hope you are not ashamed of it?"

"No!" she answered, sharply.

"Then why don't you tell?"

Bethy now raised herself very upright indeed. "It's none of your business!" she cried. "I didn't ask you your name. I won't tell! They'll find me if I do! Oh, it's too bad! If I behave myself, it's nobody's business that I can see!"

Young Noble looked at her in silence a moment. It seemed as if she were ready to cry hysterically. He could not help seeing how sensitive she was, and how quick-tempered.

But he was very fond of teasing. He opened his mouth to say something tantalizing, when she stopped the words by flinging her basket of currants violently at him, and then running swiftly away down into the valley, followed by Nip at the top of his speed.

Noble gathered up the fruit as well as he could, and walked into the house with it.

"That's a regular spitfire you've got out in the garden," he said to Mrs. Dudley. "Who is she, any way? She almost flew at me when I asked her name."

Mrs. Dudley did not know what to say. Donald sauntered across the fields toward Mrs. Noble's house, "'round the mountain."

Very soon after, Nip-'n'-Tuck's black little nose was thrust into the open kitchen door, and then his mistress entered.

Aunt Esther was picking over the currants. Her face showed that she was annoyed.

Bethy came slowly and sat down on a cricket. She sighed tremulously.

"I watched and saw that hateful thing go away," she said.

Aunt Esther turned quickly toward her.

"I've been wondering," she said, "if you've thought how Ezry and I trusted you, taking you so, and not knowing a thing about you. You might have ben just a common tramp, the same as you seemed."

Bethy's face overflowed with gratitude.

"Oh, don't I think of it all the time?" she cried in an unsteady voice.

"I believe you do," said Mrs. Dudley, gently. "But I guess you haven't thought how we must feel, with you not trusting us even to know your name."

Bethy grew more agitated. It was plain that she had not thought of the matter in that light. Aunt Esther went on.

"I suppose a good many folks would say Ezry and I were very imprudent, taking you as we've done; and maybe we were. But when I saw you looking so forlorn, I thought of my own girl that died when she was little. What would she have done? Somehow I have her in my mind most of the time. If she had got into trouble and needed a friend, and didn't find one—"

Her voice failed her for a time; or, perhaps, she had no more to say.

The girl had listened with her wide eyes intently fixed on Aunt Esther, and when she ceased speaking she knelt quickly down at the woman's side, and leaned on her knees.

"I'm goin' to tell you now," she said, "but I've ben afraid even to whisper things to myself, for fear she'd find me out. She told me once, when she was angry, that she'd find me if I went to the ends of the earth, if I ever dared to run away. She was good sometimes, but she was just awful when she wasn't good.

"You see, I haven't got any father or mother, only Uncle Henry, and he lives 'way off, and my brother; and he had to go out West so he could earn a living for us both.

"Charley—that's my brother—he's about as old as that boy that was here to-day, only he's handsomer and nicer; he is the best brother that ever lived in the world. Uncle Henry gave Nip-'n'-Tuck to us both. When Charley went away I had to go and live with Uncle Jacob's wife. Uncle Jacob is dead, but his wife isn't dead.

"Charley thought he could send for me in a year. He left Nip with me, and said I must take good care of his part of him, and love him for both of us. And don't I? And what do you think—"

Here Bethy rose in uncontrollable excitement, and walked about the kitchen.

"What do you think she did? She said she would drown my dog—Charley's and my dog—and one day she did grab him up and throw him into the hogshead of water. That was the day before I ran away. I was kept watching all the time for fear she would get him when I didn't know it.

"I tell you I couldn't stand it. But I never wrote Charley about it, it would worry him so. I thought I could bear it till he sent for me.

"I think I could have borne being whipped, and almost anything if I hadn't suffered so about Nip. He was all I had; and he seemed somehow like having part of my brother with me. It did seem sometimes as if I should die, just worrying for fear she'd get him when I didn't know it.

"She made me work, you'd better believe; but it wasn't that. Folks said she had spells of drinking; but I don't know, I never saw her drink.

"After she threw Nip-'n'-Tuck into the hogshead, I made up my mind. I took my money—my ten dollars that I had hid, you know—and I went away that very night. I don't think she heard me go, but I ran till I couldn't breathe, hardly. I had Nip in my arms most of the time.

"I got to the station—that was eight miles off—just before a train came along. I got on the train, and was frightened enough when the conductor looked at me so sharp. But he let me keep my dog. He said I looked as if I were running away. That made me think I wouldn't let him know when I got off. I watched my chance, and after I'd ridden about three hours, I slipped off the other side of the cars at some station.

"Then I begun to walk as fast as I could; but I didn't know where I was going. I only felt I was gettin' further and further away from her.

"It wasn't a great while after it grew light that I met a baker's wagon, and I bought some cookies for Nip and me; and we drank at a trough where the water dripped into it from a spout.

"I walked about all that day for fear I shouldn't get far enough away. I inquired where I was, and I knew enough to go opposite from the way I came from.

"When I came down the mountain there, I saw this house, and you know how I came here. I can't ever tell you how thankful I am!"

The tremulous, girlish voice stopped. Bethy looked at Mrs. Dudley with a very passion of gratitude in her expressive face. Her throat swelled, and it was plain she could not speak at once. But she struggled to go on.

"My name is Bethia Gordon Adams, and I ran away from Maysville. Uncle Jacob's wife's name is Rachel Andrews. That's all. I hope you won't think I don't trust you! It did seem as if she'd get me somehow if I told any living thing. You can forgive me, can't you, Aunt Esther?"

The piteous tones were very low, but Mrs. Dudley heard them. She smiled, and the girl was content that she was forgiven.

"'Tisn't a bit likely she'll try to find you," remarked Mrs. Dudley, comfortingly, seeing how the imaginative child's fears had been roused, and believing what she said.

For the rest of the day, and for many following days, Bethy was almost at rest. She grew gay. She began several letters to her brother, but they did not quite suit her. She wished him to feel that she did right in running away from Mrs. Andrews, but she could not write the story as well as she had spoken it.

She took up the studies she had been obliged to drop. She had the promise that she could go to school in the fall.

Meanwhile, the summer days were going swiftly. There was no cloud now between her and her friends. It was a great relief to Mrs. Dudley to be able to tell every one that she knew Bethy's history, though she declined to tell it. She did not doubt the girl's word. It would have been a very suspicious person who could have looked in

Digitized by Google

Bethy's face, and listened to her, and still have suspected her. Bethy was washing dishes one morning when Donald Noble came into the kitchen. He had made friends with Nip, who now flew at him with welcome.

After a few moments of talk with the dog, Noble drew a newspaper from his pocket. He leaned against the door, and deliberately unfolding it, cast a meaning glance at Bethy.

"I found an item that I thought might be interesting," he said. Then he read aloud:

"We chronicled some weeks ago the fact that Bethia Adams had run away from the kind care of her aunt, Mrs. Rachel Andrews. We now understand that the place of her present residence has been discovered, and that she will probably be brought back."

For the Companion.

IN THE GREAT JAVAN UPHEAVAL.

In Two Chapters.—Chapter I.

A Night of Terror.

On the morning of Saturday, the Twenty-fifth of August, 1883, we were in camp on the bank of the Ello River, a small tributary of the Progo which falls into the Indian Ocean thirty miles west of the city of Jokjokarta, near the southern coast of Java. Distant about three miles, and in plain view from our camping-ground, stood the vast, still grandly beautiful ruins of the sculptured temple of Boro-Budor. In the northeast rose the frowning peaks of the great volcano Merapi, and in the west the ill-omened Kendengs, or War-Drum Mountains. Southward in the distance lay the blue sea.

Boro-Budor, deserted now for eight centuries, silent and without a votary, stood venerable and awe-inspiring still. Nearer at hand, on the bank of the Ello, almost buried in detritus, was the beautiful *tjandi*, or shrine, which we, foreigners and strangers in the land, had come so far to excavate, photograph and describe.

The day before our ten Javanese laborers had sunk a shaft beside one of the old bell-shaped domes to a depth of twenty feet, and penetrated one of the chapels which stand in rows about the central shrine.

At seven o'clock, on the morning to which I have referred, my companion, whom I shall call Natt, and who had gone out to see how our Javanese were coming on with their work, hastily returned.

"Come, old fellow, you had better wake up!" he said. "Puteh and Enda-a, with their little Minek, have gone to hide. Lee and all the shovel-men have disappeared. There!" Natt continued. "Do you hear that sound?"

I had heard, as he spoke, a sound as of a far-away cannon-shot.

"That's what they've been hearing for an hour or two," remarked Natt. "It sounds like heavy guns a long way off. The laborers came at six o'clock, Wah Lee says, and went to work in the shaft; but suddenly they came clambering out of it, declaring that a stone Buddha had spoken to them!"

I was not slow in getting out and looking about.

As we soon found that there was no prospect of getting the men back to their work that forenoon, Natt and I set off after breakfast and went down to the great ruin, Boro-Budor, where we busied ourselves for several hours, obtaining another series of photographs of the long rows of stone chapels.

There are not less than two hundred and sixty of these stone chapels within the area of this vast structure, each highly ornamented with carvings, all done in the hard trachyte stone peculiar to this region.

The chapels were built upon three concentric terraces, which rose one above another toward the central dome. The outer terrace was not far from twenty-five hundred feet in circumference. Vast flights of hewn stone steps ascended from terrace to terrace on all four sides of the temple.

During the morning the distant explosions had almost ceased; but as we walked back, three heavy reports jarred the earth. They seemed to come from the westward. The volcano of Krakatoa, in the Straits of Sunda, was in eruption that forenoon, and after several terrific explosions, sank completely out of sight beneath the sea. Its destruction was the beginning of the great convulsion which followed, during which thirty-five thousand people, it is said, perished.

I noticed what seemed to be a vast cloud of smoke hanging low over the rugged Kendeng Mountains, twenty or thirty miles to the southwest of us.

These great mountains extended westward to the Java Head for a distance of seventy miles, but during the third night of the cataclysm they exploded and settled bodily down. Enormous waves from the Indian Ocean rushed in upon the land, and more than two hundred square miles disappeared altogether.

What we were hearing that forenoon was the prelude of the approaching tragedy.

Returning to our camping-place, we found that Puteh, our Javanese servant, and his wife Enda-a had cooked food as usual, and their daughter, little Minek, was playing near.

Before we had finished our noon lunch I saw a dark mass of smoke roll up into the sky from the long, irregular ridges of the mountain Merapi, distant eight or ten miles to the northward. The smoke-clouds over the Kendengs, too, were growing denser and blacker. The sight disturbed me not a little.

Still, I said to myself, it is merely one of the volcanic eruptions which occur in this part of the world at intervals, and although there is always a chance that such an eruption may prove severe, it is far more likely to do no very great damage.

Wah Lee, our Chinese servant, who was setting things to rights about our tent, chanced to pass us, and I pointed to the smoke on the mountain, and asked him what he thought of it.

"Oh, velly black," said he, with a bland smile, and went about his work quite unconcerned.

"That's the true philosophy," remarked Natt, with a smile. "He knows better than to become excited about things he cannot help."

The boom of distant explosions came to our ears at intervals, and I noted five slight shocks of earthquake during the afternoon and evening.

The night came on as dark as if there had been thick fog and clouds. We lay down in our tent, and after a while fell asleep.

About midnight I was aroused by a heavy explosion, which shook the earth. I started up, much confused at first. I became dizzy, and was seized with nausea.

It was no longer dark. A strange, blood-red light was diffused everywhere.

Natt woke at the same time. "Something's on fire!" he muttered.

We went to the flap of the tent and looked out. Objects could be seen dimly. I shall never forget the strange aspect of the earth under that flood of deep ruby light, which seemed to fill the whole western and northern heavens.

Then came a sudden, vast lighting up of the entire landscape. For a few moments the light changed from red to yellow—a blinding glare which showed everything as plainly as daylight.

Before the explosion came which followed we counted fifty, and estimated that the flash must have come from Merapi in eruption; and yet most of the light seemed to have come from the Kendengs.

There was another flash, even brighter than the former. Again we counted fifty-four. Then came a tremendous explosion.

"That was not over ten miles away," said Natt.

A moment after we heard several minor crashes, which appeared to be at no great distance, and the nature of which I did not immediately understand.

Wah Lee Rescues a Fellow Countryman.

We stepped out of the tent. Natt put out his hand.

"Does it rain?" he said. "Something is falling. It is earth; it's ashes," he added.

Soon there came another flashing of the light. We now stood where we could look toward the mountain, and saw shining, fiery masses mount slowly, as it seemed, to a great height, till they appeared to hang far out over the place where we were. Then they came shooting downward in lines of red fire, falling over a vast expanse of country. Soon we heard crashes again, caused, no doubt, by the concussion of these hot rocks in their fall to the ground. One or two of them, I thought, descended at a distance of not more than half a mile.

"This is a grand sight!" I exclaimed, involuntarily. "An awful spectacle!"

"It is," replied Natt, "and I think we had better be going before it gets any grander!"

At my order, Wah Lee proceeded very calmly to strike the tent, roll up our clothing, and collect every dish and kettle of our outfit.

But much of our property was necessarily left behind. I secured our firearms and blankets; Natt shouldered his boxes of plates and negatives, and insisted upon taking along his camera, too. With greater good sense, Wah Lee loaded himself and Puteh with buckets and kettles, in which he stowed such articles of food as were most readily portable.

My friend led the way down the slope toward the bank of the Progo; and Enda-a, carrying little Minek, who had been taken up out of sound sleep, followed in our rear.

Stones were now falling like the first big drops which usher in a shower of rain. Just as we reached the road which runs along the bank of the river, an enormous rock, glowing like an ember, struck in the river-bed among the boulders in the water with a frightful sound, and splitting to pieces, flew out on all sides.

One ugly, red fragment whizzed across the road a few yards in advance of Natt, who said not a word, but ran on, looking neither to right nor to left.

As we hurried down the valley, casting a last glance toward Boro-Budor, indescribably grand in the blood-red light, we heard the cries of frantic fishermen in a village at our left.

Farther along the river delta, to the eastward, there were still other villages, toward which many natives, laden with their household goods, appeared to be making their way.

A great deal of dust was settling slowly down out of the air. We placed our blankets as a shelter upon two poles, and sat down beneath them to see what would follow. No stones had as yet fallen so far down the valley, and it seemed as safe a place as any.

A towering pillar of fire had risen to an enormous height over the Kendengs, and a moment afterward there ensued so frightful a shock of earthquake, that we all instinctively cast ourselves at full length on the ground. Our shelter fell down upon us. Dust everywhere filled the air.

For some moments I was so dizzy and nauseated that I could not rise. Meanwhile there came another shock, which felt like a violent wrench of the whole earth.

An exclamation from Natt roused me to open my eyes.

"Look at the volcano!" he said, in a tone of awe.

Merapi seemed to be wreathed in flames. Down toward the Kendengs two more fiery pillars had mounted into the heavens.

We decided to make another start, and journey along the shore to the eastward.

There was a path along the marshes, and we followed it past two small villages of bamboo huts.

Then, above the booming from Merapi, we began to hear a heavy, roaring noise which seemed to come from off the lowland.

We stopped to listen.

Wah Lee, who was now behind, shouted to us at the same moment to "see the water!" Then we saw what caused the noise. A great wave was sweeping in over the flats from seaward.

Three or four hundred yards away, there was a hillock where stood a rude light-house. Natt started to run toward it, and the rest of us followed.

At the same time we heard a confused outcry in the direction of the native villages. The roar of the advancing waters grew louder, but I for one did not stop to look behind me, till I had gained the little hill.

"Heaven help the poor wretches!" said Natt. "They are drowning there together! And it may be our turn next," he added, "for there comes another wave!"

"Tlimb on house!" cried Wah Lee. We all hastily mounted to the bamboo platform of the crazy old structure.

With a frightful roar the wave came rolling in upon the land, the turbid water rising to the very threshold of the old hut where we stood. We had seen four or five human beings making for the hill, but all lost their footing and were swept away save one Chinese, who reached the hut splashing through water waist-deep.

Wah Lee, reaching down a friendly hand, helped the poor fellow upon the platform of the hut, and began to talk with him in his own language.

Terrible reverberations now rose, apparently from the earth under us. For some time the earth was continually jarring and shaking as if a giant hand were groping and grasping for something deep at the heart of things, leagues beneath our feet.

"Do you suppose that when the end of the world comes, if it ever does come, it will seem any worse than this?" said Natt.

"I doubt it," I replied. "Perhaps this is it."

"Perhaps," said Natt, thoughtfully. "Scientists tell us that the crust of the earth may break up; that the old continents may be submerged, and new ones rise above the ocean. It has happened in the past, and will no doubt happen again. This may be the beginning of a general overthrow of the present order of things."

Several waves, not quite as high and violent, succeeded the first two, and then the waters receded across the flats. But as we could not know how soon another wave might rush in from the sea, we improved the chance to set off inland, and shaped our course toward the hills in the direction of Jokjokarta.

The Chinese refugee showed a disposition to join his fortunes with ours, or rather with those of his compatriot, Wah Lee, who told us that his name was Eng Kee, and that he was a baker by occupation. He gave him a sack of rice to carry.

At last we reached a kind of highway, leading from the coast toward the interior of the island, and followed it several miles. The light of day had begun to soften the wild, volcanic glare of the night. I saw by my watch that it was six in the morning—Sunday morning.

Presently we recognized certain landmarks along the road, and knew ourselves to be on the government post route by which we had come over from Samarang, on the north coast, two weeks before.

As my father and sister, who had come out to Java with me, were at Samarang, my greatest desire was now to reach that place, and learn if they had been touched by the catastrophe.

The road led past several villages, and we met many natives, some crying out as if demented, others lamenting the loss of their friends or their property. One Malay told us that the distance to Samarang was sixty miles.

"But what do you seek in Samarang?" he turned to call out to us.

"Our friends," we replied.

"You will seek them among the dead, then," he cried. "Samarang is swallowed up."

My courage almost failed me, and my heart sank.

EDWARD H. HAMLIN.

For the Companion.

A SLANDERED DOG.

In these days, when it is the fashion to set right the reputations of notorious personages of the past, it seems only fair that a kindly, intelligent, loving creature, which has been so misrepresented that his very name causes a "creepy" feeling, should be put forward in his true and more pleasing colors.

The creature which needs this redress is the bloodhound. Most persons, when they hear this name, are wont, by an accustomed association of ideas, to picture a ruthlessly fierce creature, tearing with savage vindictiveness through the dank morasses of a swamp after a fugitive black, eager to overtake the panting slave, and showing him no mercy when run down.

This notion is radically wrong. The thoroughbred bloodhound is as gentle as a sheep, as affectionate as a child, and intelligent to a more than ordinary degree.

To many such a picture of the bloodhound may seem too good to be true. Very recently I chanced to meet the chief breeder of this class of dogs in this country, and what he told me of them was so pleasantly novel that it has seemed worthy of being communicated to others, who may labor under as great a misconception as my own was in the matter.

This gentleman was waiting on a dock in New York until a steamer should swing down the stream from her anchorage higher up the river, and deliver to him two valuable bloodhounds which he had imported from England for his Vermont kennel.

"The popular estimate of the bloodhound is all wrong," he said to me. "Much of it is no doubt due to the influence of 'Uncle Tom's Cabin' and to the character of the Southern bloodhounds. The dogs that were used on the slave plantations were really of an ill-natured grain; but this was not due to the bloodhound in them. They were all a cross between the bloodhound and a dog which is known sometimes as the Russian hound, sometimes as the Dutch hound, sometimes as the Great Dane.

"This is a fierce dog, and the savage character of the Southern bloodhounds is due to this strain in them.

"The thoroughbred bloodhound is entirely gentle, rather timid in its nature—a ladies' dog more than anything else. It may sound absurd to you to say that a harsh word or scowl has a very depressing effect on the bloodhound, owing to its sensitively affectionate disposition; but it is true. Why, when the dogs overtake the man they are chasing, they fawn upon him with an expression of delight.

"I can give you an instance that will illustrate the gentle nature of this dog. On my farm in Vermont, where I have several bloodhounds, there is one celebrated dog named the Duchess of Ripple.

"One day I was in the yard when my attention was attracted by the deep, mellow bay of one of the bloodhounds. There was nothing fierce in it, but hearing it two or three times at intervals, and seeming to detect a sort of complaint in the cry, it struck me that it indicated something unusual. I went into the front sitting-room to see what it was.

"There was the Duchess of Ripple sitting on the floor, her dark, mournful eyes turned toward me with a melancholy gaze. There is always a pathetic look in the eye of a bloodhound, something that is hard to resist, it is so humble and pleading.

"My little boy, not more than two and a half years old, who was always fond of playing with the hounds, was sitting astride her back with a pair of small scissors in his hand. He had been snipping at the hair of the dog's long, silky ears, and two or three times, without noticing it, had cut the

Digitized by Google

flesh so as to bring the blood. The dog bayed in meek protest against the pain, but would not throw off the child to escape, for fear of hurting him.

"There she sat, uttering this mellow bay under the pain, but making no effort to shake off the boy. When I lifted him away she sprang up, and by her demonstrations of affection for him, said as plainly as a dog could, 'I know you didn't mean anything by it, but it hurt me, so I had to speak.'

"Almost any female dog is inclined to be fierce when she has young puppies, and they are handled. But you may approach a mother bloodhound, take up the puppies and carry them about, and she will show no anger at all.

"The gentleness of bloodhounds makes them quite useless as watch-dogs; and

Bloodhounds.

here is another popular delusion about them. The only time I have ever seen them at all resentful was when they were interfered with when they were closely following a scent. This is such a passion with them that if they are taken from it they protest against it, as if mechanically.

"There are not more than three hundred pure-blooded bloodhounds in the world, probably," said this gentleman. "The two that have been sent to me on this steamer are both well-known dogs. One of them, Belhus, was the bloodhound that was employed by Sir Charles Warren, at the time of the great excitement in London over the series of terrible murders in Whitechapel, in an attempt to track the murderer.

"A dog could not be put to a more difficult test than the following of such a trail. It is crossed and recrossed perhaps a hundred times, and there is nothing but the friction of the boots on a hard pavement to leave the scent. The dog would have been kept at the work, but Mr. Edwin Brough, the owner of the hound, wished Sir Charles Warren to assume the responsibility of the possible loss of the dog, which is worth about a thousand dollars. Sir Charles was unwilling to do this, and so the experiments were discontinued."

When the steamer came in, I went on board to see these famous hounds, Belhus and Rosemary. They were taken out of their kennels, and seemed quite overcome by the strangeness of everything. One might almost have supposed that they were cringing, so timid were they. Still, they accepted gratefully the caresses of strange hands, seeming to have the most confiding trust in all who approached them.

Belhus, in his shape and style, presented nearly all the strong "points" of the thoroughbred bloodhound. The frontal bone was very high and peaked, the head long, and the ears of great length also.

The skin of the bloodhound is exceedingly loose, lying in wrinkled folds about the eyes and mouth, giving an odd, aged expression to the face. But no one could look upon these dogs and not feel that they were gentleness itself.

Belhus has a long, narrow, peaked head, which is always a characteristic of dogs with strong scenting powers, and a loose, abundant dewlap. His legs are rather shorter than they should be, giving him a somewhat squatty look. He has the black-and-tan color which is now most sought in bloodhounds.

The black surface is so sharply defined on his back and sides as to have the appearance of a blanket. The legs, feet and part of the face are tan.

Another delusion common to many in regard to the bloodhound is that he takes to following human trails naturally. The dog requires to be trained to this task.

Mr. Edwin Brough, who has for years made a specialty of training bloodhounds, says it is not well to rub with blood the feet of the person to be followed, as this makes the dogs less keen in hunting the "clean boot."

Puppies three or four months old are taken out after a man, and encouraged to find him. When they become reasonably expert in doing this, difficulties are thrown in their way more and more, until, in overcoming these, the dogs' education as a scenting creature is perfected.

It is an exquisite delight to the bloodhound to follow a trail. Sometimes he will actually pause on the trail to bay his satisfaction, and the mellow, vibrating tones can be heard for miles.

Formerly the bloodhound was chiefly used in following criminals, but he is equally skilful in tracking deer and other animals. He is rather a slow runner, but has great endurance, and is so passionately fond of following the trail that sometimes he will persist in it until he drops dead with fatigue.

The scent of bloodhounds is so keen that they can follow a man on horseback, or keep a trail while several yards away from it.

The bloodhound, then, instead of being a savage brute, ready to bite himself rather than be deprived of the delight of rending something, is a good-natured, affectionate dog, who bites nothing but his food, and is devotedly attached to people about him and sensitive to kindness.

Mr. Brough, who has his kennel at Scarborough, England, is a man of large wealth, and breeds these noble dogs only as a diversion. He says that if one wishes to become thoroughly fond of dogs, a well-bred bloodhound should be kept as a constant companion and friend. The dog's individuality is largely determined by the nature and intelligence of his human associate, and he makes the stanchest of lifelong friends to those near to him.

JOHN J. A BECKET.

THE TONGUE.

From Hebrew wit this maxim sprung:
"Though feet should slip, ne'er let the tongue."
The sacred writer crowns the whole:
"Who keeps his tongue doth keep his soul."
—*Chicago Globe.*

NORWEGIAN DISCONTENT.

It is rarely that the affairs of the united northern Kingdoms of Sweden and Norway attract the world's attention. For the most part their affairs have moved along, if not quite tranquilly, at least without making noise enough to be heard beyond their frontiers.

In recent years Sweden and Norway have not been entangled in the meshes of Continental politics. They have kept pretty clear of wars and foreign complications; but of late a crisis has taken place in Norway, which bids fair to have results of large importance, and which may end in the separation of the two Kingdoms.

The Norwegians have always exhibited a more or less lively state of discontent at their union and relations with the larger neighboring Kingdom of Sweden. Ever since Napoleon's general, Bernadotte, was chosen Crown Prince of Sweden, eighty years ago, and later brought about the cession of Norway from Denmark, against the wish of the Norwegians, these people have felt that they have not been on an entire equality with the sister Kingdom.

One of the main causes of this discontent is the fact that while, nominally, the two Kingdoms are distinct, but are linked together as Austria and Hungary are, by being under the same King, in reality the foreign relations of both Kingdoms are controlled by Sweden alone. The King, with two Swedish ministers, manages the foreign affairs of both. In foreign matters which especially affect Norway, however, a Norwegian minister is consulted.

As each Kingdom has its separate Parliament, ministry, army and navy, and civil administration, and thus governs itself as to local affairs separately from the other, this unequal tie as to foreign affairs is the chief cause of difference between them.

There are in Norway, as in almost every European country, two parties, one of which is moderate and conservative, and the other progressive and radical, and it is the latter party which most forcibly represents the popular discontent.

For the past two years the Conservative party has held power, with Herr Stang as Prime Minister; but a majority of the Storthing, or Parliament, is liberal and radical.

It therefore happened that, late in February, a motion was made in the Storthing for a constitutional amendment securing to Norway an equality with Sweden in managing foreign affairs. This was bitterly opposed by Herr Stang and the Conservatives, but was adopted by a vote of fifty-nine to fifty-four.

Herr Stang went out of office, and Rector Steen, a college professor, and leader of the Radicals, became Prime Minister, at the head of a Radical Cabinet.

This event was very distasteful to the reigning monarch, King Oscar, whose sympathies are strongly with the Swedes and with the Norwegian Conservatives.

Herr Steen, the new Prime Minister, is at the head of the College of Stavanger, and has been the leader of the Radicals for more than twenty years. He is, perhaps, the most obnoxious politician in Norway to King Oscar, because it was in consequence of his action that the veto power was taken from the crown.

The new ministry has resolved to act cautiously, and not to take any extreme step until the election of a new Storthing, which will take place in the autumn.

But the excitement in Norway caused by the accession of Herr Steen is very great, since this event, it is thought, may lead to a complete separation between the two countries, and possibly to the establishment of a Norwegian republic.

"Unless we obtain the fullest self-government," exclaimed Herr Steen, shortly before becoming Prime Minister, "the union between the two countries will be completely dissolved."

From these facts, it is likely that the world will, in the near future, receive more interesting news from "The Land of the Midnight Sun" than it has heard for many years.

THE WIND'S FLIGHT.

The wind is awake and away!
Her loose hair streams behind her
Over hill and hollow,
Where none may follow,
She flies where none may find her,
And only God's hand behind her.
—*Gertrude Alger.*

GOOD YEARS AND BAD YEARS.

In the year 1890 the United States raised only about seven-tenths as much corn as it did in 1889, and less than five-sixths as much wheat. Were the farmers who raised and sold this crop the poorer for the decrease in the amount produced? Assuredly not,—notice that we do not say all farmers, but only those who raised this grain,—for it is estimated by the Department of Agriculture that the smaller crop of corn and wheat of the year 1890 will turn out to have been worth one hundred and fifty thousand dollars more than the large crop of 1889.

This is an interesting example of the working of the law of supply and demand. It has been repeatedly and truly said that the increase in the amount of money which the farmers received for their grain was not merely in spite of the reduction in the amount raised, but on account of it.

The crop of corn in 1889 had been the largest in nine years. It amounted to more than two thousand one hundred millions of bushels, and for this crop the farmers received an average of twenty-eight cents a bushel—the lowest average price in nine years.

The corn crop of last year, on the other hand,—less than fifteen hundred million bushels,—was actually the smallest for nine years, notwithstanding the many thousands of new farms that have been opened; and it is not surprising that the average price of corn should have risen to its highest figure in nine years—a little more than fifty cents a bushel.

It may appear from this that a great drought, or some other condition which makes farmers' crops small, is a blessing rather than a calamity; but it should be remembered that the picture has another side.

The "blessing in disguise" was, as we have already hinted, only a blessing to those agriculturists who succeeded in growing a crop, and had more than enough corn for sale to compensate them for the decrease in their products. Many thousands had none to sell, and many thousands had to purchase corn or sell their stock, losing the profit which they hoped to gain from feeding the stock.

Moreover, on account of the scarcity and high price of corn, millions of half-fattened swine, which the farmers could not afford to feed, were sent to market, causing a low price of pork, and a loss in that direction even to many farmers who succeeded in raising a surplus of corn. The consumers of beef have also obtained a poorer quality than usual.

Nor, though a smaller aggregate crop may be worth more than a larger one, is it to be supposed that it is of advantage to a farmer to raise less corn or wheat than the acres he devotes to either of those crops can be made to produce.

If there is abundance, and the farmer raises a thousand bushels of wheat for which he can get only sixty cents a bushel, it is more to his advantage to have a thousand bushels to sell than it is to have only five hundred.

On the other hand, if crops are very poor, it is perfectly evident that the more wheat the farmer can raise the better off he is. It is not scarcity on his own farm that helps the farmer, but scarcity on other people's farms.

Of course in a year of light crops the number of those who suffer is vastly larger than of those who gain. For scarcity means high prices to all consumers, diminished railroad receipts, a smaller quantity for export and exchange with foreign commodities, and a generally reduced surplus of savings. It is, therefore, a disaster to all except the particular persons who raise a surplus which they can sell at a high price.

It is a practice of producers of grain, sometimes not fully taken into account, to keep back as much of their crop as possible for the period when prices are best. In March, 1891, more than one-third of even the small corn crop of the year before was still on hand, and more than one-fourth of the wheat crop was still in the farmers' granaries. These proportions are considerably larger in years of abundant crops.

Meantime, whether crops are large or small, the quantity used for food steadily rises. Of the small wheat crop of 1890, more was actually consumed in the country than of the large crop of 1889; and for it the consumers paid an average price—to the farmer at his farm—of about eighty-four cents a bushel, as against about seventy cents for the crop of 1889.

The average inhabitant of the United States consumes four and two-thirds bushels of wheat per year; and in most of the Northern States the consumption is about five bushels per head.

HIS FRIEND.

"The American," wrote a keen-sighted French traveller, "has himself, his wife, his child and his business partner in the world; but he has no friend."

There is more truth in this criticism than at first appears. The American is apt, in his hurried struggle from the cradle to the grave, to make many agreeable acquaintances, with whom he good-humoredly exchanges service or kindness.

But how seldom does he form an enduring friendship with another man, a friendship so pure and strong that through life he rejoices in his comrade's success, hastens to help him in his failures, or makes large personal sacrifices for him?

The tie is not so uncommon between men of other nations.

In the dark ages it was usual for men who had thus chosen each other as brothers to exchange a few drops of blood taken from their veins as a solemn pledge of fealty. These bonds and ceremonies may seem fantastic and exaggerated to us, but there was a reality fine and true, in the unselfish affection of which they were the symbol.

"I count myself," says Shakespeare, "in nothing else so happy as in a soul remembering my good friends."

"Gather not to thyself," says Epictetus to a young man, "herds of oxen, but hosts of friends."

"What matters," exclaims another wise heathen, "how long the road or dark the way, if my friend travel beside me, bearing wine for me in a golden cup?"

Is there not danger that the American, busy with his fight for money or place, who jeers at this tie of friendship as unsubstantial sentiment, may put out of his own life this strong factor for good?

The question is at least worthy of serious consideration by young men who have yet measurably the choice of the elements which will make up their future.

CLUMSY FINGERS.

"It is of no use my trying to sew," said a girl in her late teens; "I am so clumsy with a needle. My stitches are an inch long! Mamma does my mending. She says when I do it myself my things look so that she is ashamed to let me wear them."

But if the mother were less self-sacrificing, it is probable that a few hours' practice under her direction would easily reduce those clumsy stitches to a respectably small fraction of an inch in length.

Another young lady admitted, the other day, with a laugh, that she always darned her stockings by drawing the edges of the holes together with the thread, because weaving it in and out as her mother did took so much more time and care.

Girls of this sort belong to the untrained or the lazy class. But the careless are quite as common, and perhaps more exasperating.

"Oh, I'm very sorry; but you know I always was a butter-fingers," explains calmly the dreamy young person who spills gravy in a lady's lap at dinner, because she is passing the gravy-boat with her mind on the last chapter of a story, and does not notice that she is tipping it.

Presently she helps to butter, with the same vague expression in her eyes, and sends the bit, which she attempts to cut from the hard pat without looking at it, flying across the table.

"Did it spot your dress?" she asks her sister; "I hope not; but, of course, I couldn't help its flying off. I'm very sorry." But the trouble is precisely that she is *not* very sorry; at least, not sorry enough to prevent the same thing from happening again.

It is worth while to remember that there is such a thing as being stupid with one's fingers. There should be direct communication between the hand and the brain; but some people, with otherwise excellent brains, do not seem to realize this fact, and allow their hands a kind of helpless liberty which works disaster among bric-à-brac, and makes many simple tasks absurdly formidable.

COURTESY TO A GUEST.

A story, familiar perhaps to the readers of *The Companion*, is told of Mrs. Bingham, a woman of high social position in Washington in the early part of this century.

She once invited a rough Western farmer to dine with her. The guest was dazzled by the splendors and gay company, and while trying nervously to appear at his ease, broke one of a set of costly Sèvres cups. He sat staring at her, speechless with dismay.

Mrs. Bingham laughed. "Ah, that ridiculous china! It breaks with a breath!" and taking up one of the cups as she spoke, she carelessly crushed it in her hand, and dropped the fragments upon the table.

Digitized by Google

The color came again to her guest's face, and he finished his dinner completely at his ease.

"Give to your guest," says the Irish proverb, "the best in your larder, the best in your head, and the best in your heart."

HEROIC ACT.

In the late Admiral Aube France lost a devoted statesman and patriot. The work of his later years was the reform of the administration of the French navy. From the time that he entered a naval school as a boy, his career was marked by a fine courage, sincerity and good sense.

When he was senior midshipman of the *Tonerre*, and not yet twenty-two years old, he distinguished himself by an act of intrepid daring.

The *Tonerre* was anchored in the port of Genoa. One night a fire broke out in the military arsenal of the place. The commander of the French ship at once sent out a boat with a party of sailors to assist the garrison and the inhabitants. The fire threatened to be terribly destructive if its spread could not be checked.

Aube was placed in command of the aiding party. The struggle against the fire was going on well, when suddenly a panic seized the Italians, and they fled precipitately.

A sudden breath of wind had changed the direction of the flames. A quantity of debris on a low structure, the roof of which was only six feet above the ground, burst into flame. This structure was the powder magazine.

Quick as thought Aube perceived and acted upon the one plan by which he could master the situation. He sprang on the smoking roof, climbed to the ridge, and seating himself calmly, went on directing the men from this point of observation.

Electrified by this act of heroism, the Italians retraced their steps, and they and the sailors attacked the fire with vigor and success.

Then Midshipman Aube descended from his perch, and tried to return quietly to his ship; but an ovation was not to be escaped. He was surrounded and carried to the ship's boat, which awaited him, in the midst of enthusiastic applause and expressions of appreciation.

THE AUDUBON MONUMENT.

Audubon was a splendid example of the value of enthusiasm—enthusiasm of the real sort, which does not burn out in a few weeks or a few years, and is not to be quenched by any amount of what the world rightly calls "cold water." He was born to do one thing, and he did it.

When he had been at work for fifteen or twenty years upon his studies of American birds, and had filled his portfolio with about a thousand colored portraits, he was obliged to go upon a journey.

His treasures were deposited, meanwhile, in the warehouse of a friend, and on his return, after a few weeks' absence, he found that the rats had destroyed every picture.

The shock brought on a fever, which was near to proving fatal, but as soon as he recovered from it his natural buoyancy and energy reasserted themselves. He took up anew his gun and his pencil, and after three years of hard work his portfolio was again filled.

Audubon died in 1851. His grave, in Trinity Cemetery, New York City, is unmarked by so much as a common gravestone, and the New York Academy of Sciences has been engaged for several years in raising money with which to erect a suitable monument over the spot.

At this time of the year, when we are all rejoicing in bluebirds, robins, orioles, sparrows and warblers, why not overwhelm the Treasurer of the Audubon Monument Committee with a flood of small contributions? His name is Doctor N. L. Britton, and he is to be addressed at Columbia College, New York City.

GENERAL SHERMAN'S MEMORY.

The prodigious memory of certain great men has often been remarked. It is a surprising fact that military men, whose minds, one would think, would be filled with great and startling circumstances, to the exclusion of all small matters, often remember trifling occurrences.

General Sherman, three years ago, was visiting in Philadelphia. Standing one day at a window, he saw a big policeman, with a very long beard, go by on the street.

The General uttered an exclamation of surprise, but said nothing more. Next day he saw the same long-bearded policeman go by, and this time sent a messenger out and asked the man to come in.

The policeman presently entered the room, and made a military salute to the General.

"Yes," said General Sherman, "it's the very man! Do you remember me, Mr. Officer?"

"Certainly I do, General," said the policeman.

"And do you remember where we first met?"

"Yes, sir. It was in California. You were only a lieutenant then, and I was your drummer."

"That's it," said General Sherman; "and instead of that beard, you had barely a hair or two, maybe, on your chin. And if I am not mistaken, your name is Hutchinson."

"So it is, General," said the policeman.

They entered into a conversation on the old times in California and Mexico. The General had not seen the old drummer since the Mexican War, and had never seen him with a beard, but recognized him at the first glance on the street after forty years had passed by.

A TIMELY FAVOR.

A sense of humor has never been a bar to ecclesiastical preferment, and, indeed, it sometimes happens that dignitaries of the church are famous for their witticisms. This is the case with a certain clergyman of the Church of England, a man of Irish birth, who was lately raised to an exalted bishopric.

Accompanying his appointment, there was a certain readjustment of employments and preferments in the diocese, and with it came a few promotions.

At this time the new bishop was visited by a curate whose manners and services had not commended him to his ecclesiastical superiors, and who thought that his time had now come to make a decided push for a "living"—that is, the charge of a parish.

"Well, my lord," said the curate, "now that it's raining livings, what are you going to give me?"

"I can lend you an umbrella!" said the bishop, coolly.

The curate departed without his preferment.

OVERCOME BY JOY.

In 1839 Philip H. Gosse, afterward so well known as a writer upon natural history, and the father of Mr. Edmund Gosse, was in London in a state of downright poverty. He had just returned from America, and had but a few shillings in his pocket. His only immediate resource was the manuscript of a book which a cousin of his, Mr. Thomas Bell, who had already achieved a reputation as a naturalist, had offered to read and pass judgment upon. The anecdote is related in Mr. Edmund Gosse's biography of his father.

The manuscript was "The Canadian Naturalist," and it pleased Mr. Bell so much that he recommended it strongly to Mr. Van Voorst, the distinguished publisher of scientific works.

Philip Gosse's pride made him conceal his real state from Thomas Bell, and though the latter knew his cousin to be in need of employment, he did not suspect that he was in such bitter straits.

Mr. Van Voorst appointed a day for the young author to call on him. Meanwhile the shillings, nursed as they might be, were slipping, slipping away. The practice of going once a day to a small eating-house had to be abandoned, and instead of it a herring was eaten as slowly as possible in the dingy attic in Farringdon Street.

At last the day broke on which Mr. Van Voorst's answer was to be given, and with as much of the gentleman about him as he could recover, the proud and starving author presented himself in Paternoster Row. He was ushered in to the cordial and courteous Mr. Van Voorst.

He no longer had hope, and expected in a few moments to be out again in the street, with his miserable roll of manuscript in his hands. The publisher began slowly:

"I like your book; I shall be pleased to publish it; I will give you one hundred guineas for it."

One hundred guineas! It was Peru and half the Indies!

The reaction was so violent that the demure and ministerial-looking youth, closely buttoned up in his worn broadcloth, broke down utterly into sob upon sob, while Mr. Van Voorst, murmuring, "My dear young man! my dear young man!" hastened out to fetch food and minister to wants which it was beyond the power of pride to conceal any longer.

STRIKING LIKENESS.

A great many ludicrous mistakes have occurred from the resemblance one person bears to another. A gentleman who is a twin relates the following, with the apology that as we are advised "not to spoil a story for relations' sake," he thinks the rule should hold good where the point of the joke strikes one's-self:

My brother Tom and I are much alike in appearance, being twins, and it is our daily experience to be mistaken the one for the other, and many is the laugh we have enjoyed at some mistaken friend's expense. Not until the other day, however, have I found myself wondering whether I was myself or some one else.

I was in a hurry to see Tom, for it was nearly train time, and hastened for that purpose to the hotel where he was staying.

The rear entrance being nearer, I entered in that way. This door opens into the wash-room, where a mirror extends the entire length of the wall opposite the entrance. Upon opening the door I saw, or thought I saw, Tom in all his manliness approaching from the opposite direction, and I, holding out the article I wished to entrust to his care, began giving certain directions concerning it, but was surprised to see him extend to me, at the same instant, a similar parcel, and —

Well, I had merely mistaken myself for my brother, which had been done hundreds of times before by others, and I suppose I have as much right to do it as they.

AMBIGUOUS.

Most of us would pray to be delivered from an ambiguous epitaph, though perhaps the truly benevolent man would gladly contribute to the world's fund of amusement, even after he is no longer present to join the mirth. In "Scenes Through the Battle Smoke" is the following example of ill-chosen eulogy:

A missionary in India was shot, as he sat in his veranda in the dusk of the evening, by his own *chowkeydar*, or watchman, whether intentionally or by accident will never be known. Near a public road stands his solitary grave. On the stone at the head is the inscription:

Sacred
To the Memory
of the
Rev. —— Sonnenthal.

He translated the Scriptures into the Afghan tongue, and was shot by his own chowkeydar.
"Well done, thou good and faithful servant."

A DESPERATE CHANCE.

A Russian exile relates how he once saved himself by a desperate artifice. A police official searched his house for compromising papers. There was in his possession a document the discovery of which meant serious danger to himself and his friends.

Wherever he might hide it, it seemed certain that it would be found. He coolly handed the document to the official, who scarcely glanced at it, and handed it back.

After the most careful search, the official, his nose blackened with soot and his hair decorated with feathers, — for he had even examined the stovepipes and the bedding, — departed empty-handed.

"I SEE, Fraulein," said a professor, "that my remarks on the ancient Romans do not interest you!" "Ah, yes," replied the hostess, wearily, "pray go on." "No," said the professor, kindly, "I shall change the subject. We will now consider the ancient Greeks."—*Fliegende Blätter.*

No wonder the name of Burnett is so well known; ask for the best Flavoring Extracts in any part of the world, and Burnett's are handed you. At last the foreigners are finding this out. [*Adv.*

DIES AETERNA.

There is no night,
No darkness to cushroud
The worlds in sable cloud;
A shadow falls, and proves
How every planet moves
In sea of light;
One Day's effulgent tide
Flows on through ages wide;
Night is each planet's own,
And darkens it alone.

There is no night;
O soul, God's face benign
Is ever seeking thine;
God's love makes radiant day
While thou art in the way
Of Truth and Right;
Face thou the godless vast,
Love's light will shadows cast;—
The shadows are thine own,
And darken thee alone.

There is no night,
No night of death to bar
Life's all-transcending star;
O Love, why mourn apart?
The cherished of thy heart
Hath found the Light
That casts this shadow Death;
Life never yet drew breath
To tread the vale alone;
This shadow is Life's own.

EDWARD GLENFAUN SPENCER.

"SOMEBODY PAYS."

A druggist in one of our large cities said lately, "If I am prompt and careful in my business, I owe it to a lesson which I learned when I was an errand-boy in the house of which I am now master. I was sent one day to deliver a vial of medicine just at noon, but being hungry, stopped to eat my luncheon.

"The patient, for lack of the medicine, sank rapidly, and for some days was thought to be dying.

"I felt myself his murderer. The agony of that long suspense made a man of me. I learned then that for every one of our acts of carelessness or misdoing, however petty, some one pays in suffering. The law is the more terrible to me because it is not always the misdoer himself who suffers."

This law is usually ignored by young people. The act of carelessness or selfishness is so trifling, what harm can it do? No harm, apparently, to the actor, who goes happily on his way; but somebody pays.

A young girl, to make conversation, thoughtlessly repeats a bit of gossip which she forgets the next moment; but long afterward the woman whom she has maligned finds her good name tainted by the poisonous whisper.

A lad, accustomed to take wine, persuades a chance comrade to drink with him, partly out of a good-humored wish to be hospitable, partly, it may be, out of contempt for "fanatical reformers."

He goes on his way, and never knows that his chance guest, having inherited the disease of alcoholism, continues to drink, and becomes a hopeless victim.

Our grandfathers expressed this truth in a way of their own.

"For the lack of a nail the shoe was lost,
For the lack of the shoe the rider was lost,
For the lack of the rider the message was lost,
For the lack of the message the battle was lost."

Our blindness to the consequences of our shortcomings is a merciful provision of God. Who could look composedly upon the rank outgrowth of all his vice or folly from childhood to middle age?

But though we do not see it, we do well to remember that it is there; and to remind ourselves at the beginning of every day, that each careless act, each unkind word in it, will be paid for, not by us, perhaps, but in the want or pain of some one.

FORGETTING SELF.

The story has many times been told of the storm-chilled traveller, half-paralyzed by the fatal drowsiness of cold, who stumbled over a prostrate man dying in the snow; how in stirring and chafing the freezing stranger he forgot his own distress, and warmed himself to wakefulness and safety by the toil that saved another.

The story might come as a happy inspiration to many an uneasy heart. To the aimless and indolent children of wealth, "dying of ennui;" to the proud, fretting under a personal or family blemish; to the ambitious, discouraged by continual privation; to the morbid, brooding over a secret sorrow; to all such the relief of some useful occupation would be a gospel of light and blessing. After a generous giving of self to active ministry in others' behalf, one can never again take life at its narrowest and worst—

"Nor whine at woes his own right hand can heal."

Every life has some burden. To the Christian the burden becomes a blessed cross, that he finds it easy to bear so long as he imitates his Master by doing good.

STEAM AGAINST GRAVITY.

"I think the most exciting race I ever witnessed was one in which steam and gravity were the contestants, and a human life the stake," writes a *Companion* contributor. "In the autumn of 1885 I allowed myself to become financially interested in a drilling well in the central part of Butler County, Penn. Naturally enough, I spent considerable time round my venture, particularly after the well was nearly finished. Two thousand feet was about the usual depth for that field, and at the time of the accident of which I am to tell, the drill was thundering away more than nineteen hundred feet below us.

"The drill was about forty-five feet long, and weighed something over two thousand pounds. Attached to this was twenty-five hundred feet of cable, which passed from the mouth of the well, over the crown pulley at the top of the derrick, and then down to the windlass, on which the surplus length was coiled. The windlass was operated by the 'bull-rope' running from a band-wheel, which, in turn, was connected with the engine. The tools were pulled from the well by means of the engine turning this windlass and winding up the cable.

"On the day in question the tools had just been pulled, the battered bit unscrewed from the stem and a sharp one substituted, the bailer sent on its three or four long trips into the earth for its load of muddy water, and the tools swung back to place and started down the well.

"All went smoothly for a few seconds,—everything goes by seconds about an oil-well,—when suddenly the drill stuck and stopped, perhaps four hundred feet below the surface. Like a flash the engine, relieved of the strain, ran wild, and began to reel off stiff and dirty cable over the derrick floor at a dangerous rate, throwing one coil of the squirming mass squarely over the tool-dresser's body just as the driller, who acts as engineer, shut off steam.

"Before a hand could be raised to release the unfortunate captive, the blood was nearly frozen in our veins to see that mass of loosened cable running like lightning down the well. The drill had started. We could not reach the man. The floor was literally piled with an animated, writhing mass of horrible death. Stiff and slippery with dirty water, the loops and kinks were hurled about as though in search of other prey.

"The tool-dresser stood in the centre of this twisting heap, unable to make an effort at escape. It seemed there could be no help for him. In an instant or two more the cable would glide down that little hole, and then, with the final jerk of more than a ton of falling metal on the unfortunate man, the force would come again upon the windlass, there to stop or break the line. What matter which to the poor fellow who must die just before?

"Fully half of the loose cable had rushed down the well, when, with a mad impulse to do something, I sprang to the brake.

"'Stop! Keep back!' yelled the driller, and his own hand opened the throttle.

"It came upon me in an instant then that to stop the drill was to throw the full weight on the man's body, while so long as the line could be kept slack he was safe. Then I understood. The driller meant to unreel the rope as fast as it descended.

"Hardly an extra coil was left upon the floor. The line was nearly taut. But at the other end it rolled loose with a speed that was frightful, and gliding swiftly about the man's waist as round a post, plunged out of sight.

"What a race that was between two giant powers working at either end of the same line! The derrick quivered under the strain of that flying windlass, while the drippings from the rope were thrown in all directions, covering the place from end to end.

"In the engine-house one must have trembled, fearing the engine would be torn from its block, but still the driller at the other end of the connecting rod urged it forward.

"Would he never gain on his antagonist? It seemed as if he must, running at such a frightful rate, but every coil of the cable was snatched down the well as soon as it left the windlass. True, he did not lose ground, but when the very slightest loss meant death to the man before us, there was no great assurance of safety in that.

"Fortunately, extra steam had been raised for pulling the tools, so that there was no lack of power. Nor was it spared. The crown pulley was threatening to jump from the block, but the weight held it back. The windlass bearings were sending out clouds of smoke. The bull-rope groaned and creaked. The floor was trembling under the vibrations of the flying wheels, and the very ground shook as though torn by an earthquake. Now stop, at last, the straining engine, for the race is over. Steam has won.

"As soon as possible we released the prisoner. He was burned somewhat about the waist, where the cable had passed, but not so badly as one would have expected. The stiff line had not bent up close, but stood out like a revolving barrel-hoop.

"So the novel race ended well. But I never lost my admiration for the man whose coolness, at so trying a time, prompted him to assist instead of checking that runaway drill."

TOY HISTORY.

It may be a surprising discovery to girls, who think of their dolls as the especial property of girls and of nobody else, that grown people used dolls before children did, and that, in Europe at least, it never seemed to occur to parents that children would find dolls interesting to play with until they saw the children picking up pretty puppets designed for their elders.

The French of the fourteenth century, who first brought the use of dolls into Europe, did not make them to play with, as the grown-up Chinese are said to have done from remote antiquity, and as they still do.

The French ladies of the period we have mentioned used dolls for quite a different purpose. Having no fashion plates, they employed little images as models of the fashions. These figures or dolls were dressed in the latest mode, and sent from one great lady to another, and from one capital to another; and from them the costumes of the period were copied.

In the year 1391, it is recorded, the Queen of France sent the Queen of England a doll "fashioned in the form of a demoiselle [young girl] mounted on horseback, and followed by a varlet on foot."

If any of the little princesses of the English Court happened to get hold of this richly dressed "demoiselle" on horseback, followed by a walking servant, what new emotions of joy must have been aroused in the royal little girl's bosom!

Perhaps it was the accidental discovery of some such childish rapture that first suggested to a royal or rich mother the purchase of a doll for her children.

Europeans and Americans, however, do not seem to have discovered that there may be fun for grown people in playing with dolls. The Chinese are said to cite as a proof of the inferiority of the civilization of the Western world to their own, the fact that the Europeans leave the joys of playing with dolls and kites entirely to children, who thus seem to be wiser than their parents!

The ancients, whether they played with dolls or not, had many toys, which corresponded pretty closely to some of our own. The Romans, for instance, spun with a lash a sort of top, which they called *turbo*. Boys whipped their tops on the streets of Rome in the days of Cicero, and perhaps in the days of Tarquin.

The Roman and Greek youths, indeed, were very well off in games. They had many that have fallen into disuse now; but they played with bat and ball, very much as American boys did in the days before the present somewhat complicated game of base-ball was invented. The Roman ball was made of tow or oakum.

Horace gives an account of the ringed hoop which Roman children used to trundle. They were encouraged by their parents to roll the hoop, because the exercise was regarded as very good for them. The boys and girls of Rome called their hoop *trochus*. Sometimes, too, they called it *Græcus*, because it was borrowed from Greece.

For the Companion.

MORNING.

I feel that every dewdrop has a tone
And sings for ears more sensitive than mine,
While all the flowers their modest heads incline,
And list in fragrant reverence. Alone
And mute I stand before the Morning's throne.
The birds have speech, the breeze, the rhythmic pine,
Each brings its offering glad unto the shrine
Of the fair one, and only I bring none.

Yet, as I feel her breath upon my cheek,
And know there are sweet sounds I cannot hear,
And languages I know not how to speak,
Around me in the dreamy atmosphere,—
For what I've not I neither ask nor seek,
And what I have seems every morn more dear.

MARY A. MASON.

TWIRLING HIS HAT.

William Murdock, a young Scotchman of Bellow Mill, had heard much of the inventions of James Watt. Ambitious to become a skilful mechanic, and eager to see and know what this great inventor was doing, young Murdock resolved to go to Soho, and apply for "a job" at the famous manufactory of Boulton & Watt. When he arrived there, in 1777, he called at the works and asked for employment. Watt was in Cornwall, looking after his pumping-engines; but the young Scotchman had an interview with Boulton, who was usua ly accessible to callers of every rank.

In answer to Murdock's inquiry whether he could have a job, Boulton replied that work was very slack with them, and that every place was filled. During the brief conversation the bashful young man, like most country lads in the presence of strangers, had some difficulty in knowing what to do with his hands, and unconsciously kept twirling his hat with them.

Boulton's attention was attracted to the hat, which seemed to be of peculiar make. It was not a felt hat, nor a cloth hat, nor a glazed hat; but it seemed to be painted, and composed of some unusual material.

"That is a curious sort of hat," said Boulton, looking at it more closely; "what is it made of?"

"Timmer, sir," answered Murdock, modestly.

"Timmer? Do you mean to say that it is made of wood?"

"'Deed it is, sir."

"And pray, how was it made?"

"I made it mysel', sir, in a bit laithey o' my ain contrivance."

Boulton looked at the young man again. He had risen a hundred degrees in his estimation. A fellow who could turn out a hat like that in a lathe of his own contrivance was a mechanic of no mean skill.

"I think I can find a place for you," he said at length. "Can you come in again this afternoon?"

"I can, and thank you, sir," said Murdock, giving a final twirl to his hat.

Such was the beginning of William Murdock's connection with the firm of Boulton & Watt. He was put on a trial job, which proved so satisfactory that he was engaged for two years.

He began as an ordinary mechanic, but he did not stop there. His industry and skill marked him for promotion, and he rose from grade to grade until he became Boulton & Watt's most trusted coworker and adviser in all their mechanical undertakings of importance, and was himself an inventor of no small distinction.

He is best known by his invention of illuminating gas. The slide-valve, the rotary engine, the cylindrical crown-saw for cutting columns out of solid rock, a chemical paint, a cast-iron cement and many other useful inventions owe their origin to William Murdock.

HER DOVE.

An old fisherman who lives in a Maine village, and who has had many experiences by sea and land in his time, told this touching incident to a lady who was passing the summer at the shore, and used to be fond of listening to his quaint "yarns."

"It was all of a dozen years ago," he said, "maybe more; I aint so sartin of times as I use to be. That winter we'd hed some of the toughest storms we ever hed along this coast. I never seen nothin' worse than some of them gales. There was several vessels come ashore along here that year, but there wa'n't no women folks on none of 'em that I knows, 'cept the *Marthy Ann*.

"The cap'n of the *Marthy Ann*—I forgit his name now; he come from along somewhere down Eastport way, but I forgit his name—he sot great store by his wife, and always took her along with him wherever he went. He had her along when the *Marthy Ann* went ashore over to the Davis Point rocks; them that I pointed out to you t'other day when you was out in the boat.

"Wal, it seems that that woman hed a pet dove along 'ith her on shi'board, and one of the crew that was fetched to over to Ira Johnson's house said she always set great store by that dove. When they found her,—it wa'n't till the next day, ef I remember right, an' I aint over sure that it wa'n't the next day but one,—but 't any rate, when they did find the body, it was lyin' in the seaweed on the beach, an' there sot that white dove right on the woman's breast.

"They never thought nothin' 'bout the bird, of course, an' it was kind of scart of them, an' so they took the body an' carried it up to Ira Johnson's house. An' that dove come a-flyin' along behind them, an' the fust thing they knew it was peckin' at the winder to get in.

"Ira was tellin' me 'bout it, an' he said it made him feel jest as ef a sperit was there; but they let it in, an' it stayed right by the dead woman till they took her away an' buried her; an' when they hed the funeril, ef you'll believe it, it perched on the hearse and rode all the way to the grave. Yes, ma'am, that's jest what happened, an' there's all the folks over to Johnson's Beach that will tell you it's jest as I say."

"But what became of the bird?" inquired his listener, as the old fisherman paused to chew meditatively at a bit of shingle he had been whittling.

"Wal, Ira Johnson, he said he couldn't bear to hev that critter starve to death or freeze, an' it bein' early in the spring, the nights was liable to be considerable cold then; so he caught it an' took it home. But it never done well with him. It got kinder picked, an' then it pined away an' died. It was use' t' pettin', I cal'late, an' didn't know how to live without it. Anyhow, it pined away an' died."

He was silent a minute, and then he added:

"An' Ira Johnson, he jus' took it an' buried it at the foot of her grave. He said it seemed kinder the right thing to do."

SHE CAUGHT A PICKPOCKET.

A wealthy lady of New York was going down town in an elevated car, with a considerable sum of money in her purse. At one of the stations there came into the car a man by whose face she was struck, and she instantly said to herself that he must be a pickpocket. When he sat down beside her she thought of her well-filled purse, and resolved to watch him closely.

Suddenly, her suspicious neighbor put his hand down at his side. She felt it slide down until it touched her purse, and instantly she put out her own hand and seized the stranger by the wrist. He did not struggle, and she was in some perplexity as to what she should do next; but she thought that if he should attempt to get away she could, at least, show that she had him by the wrist with his hand in her pocket.

She said afterward, that she could not tell why she did not give an alarm at once, but she sat quiet, waiting for her neighbor to make the first move.

They rode in this way for some distance, when to her amazement the stranger at one of the down-town stations prepared to rise.

"If you will let go of my arm, madam," he said, with the utmost coolness, "I will get out here."

He half-rose as he spoke, and to her utter confusion the lady discovered that his hand, instead of being in her pocket, was thrust into the pocket of his own ulster. The garment hung down so that his hand had pressed against her purse without being in contact with it, and she had been holding him by the wrist with no apparent excuse whatever.

She was overcome with confusion, but managed to say that she had thought his hand to be in her pocket. The stranger smiled and went out, while a gentleman near by leaned forward to say:

"Don't you know who that is, madam? That is the Reverend Doctor Blank."

The name was that of one of the best-known clergymen in the city!

QUEER PENSION CLAIMS.

Among the thousands of applications for government pensions there are, as a matter of course, many that are oddly expressed, as well as many that are put upon queer grounds. The Washington *Post* mentions a few examples.

A Wisconsin veteran was salivated by the excessive use of salt pork, and now puts in a claim for a pension on the ground that he "got salvation in the army."

A Maryland man, in order to show that he was incapacitated for manual labor, sent to Washington a batch of affidavits from his neighbors. In one of these documents the writer said that he had known the claimant for ten years, and that he "wouldn't work unless compelled to." Such testimony was not likely to create a favorable impression, but the man meant to say that the old soldier was really unfit to work, but was sometimes under the necessity of trying to do so.

The widow of a Pennsylvania volunteer reported that her husband had received an axe wound in the right foot. A question or two brought out the fact that the accident occurred in 1879, in Pennsylvania, while the man was splitting wood.

The pension attorney inquired, naturally enough, what bearing such an occurrence could have upon the matter of a pension.

"Why, sir," said the widow, curtly, "the axe he cut his foot with was one he brought home from the war. It was an army axe."

One of the most remarkable declarations on file at the pension-office is that of a Michigan veteran. He makes oath that he picked up a shell on the battlefield of the Wilderness, and took it into his tent. While he was holding it between his knees, examining it, the missile exploded, and "badly shattered his nervous system," though by some miracle it did no other injury.

HOW HE DID IT.

It is one of the marks of a wise teacher, that he aims to impart knowledge in such a way as to make a strong impression upon the pupil's mind. In other words, he keeps in view the well-known law that what is most clearly and vividly realized is longest remembered.

A Yankton correspondent of the Springfield *Republican* says that two young women were alone one day, when a young Indian brave, with whom they were acquainted, came to see the man of the house. The man was absent, and the Indian sat down to wait for him.

The girls were of a lively turn, and improved the opportunity to increase their knowledge of Indian life and character. They questioned the brave about this and that, and along with the rest of their inquiries asked him to give a war-whoop, and show them how he scalped people.

The Indian evaded the point, and after a while the young women ceased their talk with him, and fell into a conversation between themselves. Suddenly the brave sprang to his feet, with a scream that made the house-top ring; at the same moment he seized a big knife that lay on the table, laid hold upon the hair of one of the girls, and ran the back of the blade around her scalp.

The girls were frightened almost out of their wits, but the Indian laughed. He had done nothing more than they had asked him to do, but had taken his own time for it.

HIS TRIAL.

Mr. Bennett is one of those persons who naturally refer isolated facts to some general law. He was talking recently with his neighbor, Mr. Slade.

Mr. Slade was in a low-spirited mood. Sometimes, he said, life seemed to him hardly worth living.

"You must keep busy," answered Mr. Bennett. "Remember the poet Gray's maxim that occupation is the secret of cheerfulness."

"But that's just the trouble. I can't keep my mind employed."

"Well, well," said Mr. Bennett, thoughtfully, "it's easier said than done, I know. It's the little things that trouble us most in this world."

YOU!

"Choose you a tree, my girlie,
To plant on this holiday;
Maple, or elm, or cherry,
Which shall it be, I pray?

"Sycamore, spruce, or holly?
Cedar, or yew, or pine?
What shall it be, my girlie?
Choose one among the nine."

Quick flashed a merry sparkle
Into her eyes of blue.
"Why," came the roguish whisper,
"Papa, dear, I choose yew!"

TWO ORCHARDS.

"I wish we could plant some trees on Arbor Day," said Jim.

"So do I," said Tom; "but the town is so full of trees now that some folks say it is too shady. I don't think so; I like shade myself."

"Well," returned Jim, "I wish we could do something on Arbor Day."

"Begin an orchard," said Jim's father, concisely, appearing on the porch where the boys were lounging.

"How?" cried Tom.

"Where?" said Jim.

"You would have to save up all your spare pennies," said Mr. Fairfield, "but it wouldn't be a bad thing for either of you."

"But what do you mean?" urged the boys.

"I can't tell what your father will do, Tom," said Mr. Fairfield, "but if Jim will agree to stick to it, I will fence him off a piece of land in the south pasture,—a capital place for an orchard, too, on that sunny slope,—and he may set as many trees there as he can afford to buy. The best fruit is the cheapest, so I should advise one good variety to a dozen worthless kinds."

"O father, that is grand of you!" cried Jim. "You mean to set out the trees on Arbor Day?"

"It wouldn't be a bad time," said his father.

"I'm going to ask father if he will, too!" said Tom, starting off on a run.

Jim Fairfield and Tom Blanchard lived on adjoining farms, and were dear comrades. What one did, the other always did or wanted to do, so it was no wonder that Tom was anxious to begin an orchard with Jim.

Of course Farmer Blanchard was willing to do as well by his son as Farmer Fairfield had offered to do by Jim, and for the next few days the two boys were deep in the catalogues of well-known **nurserymen**, and they made all sorts of inquiries **concerning the merits of certain varieties of apples, pears,** peaches and plums. It took them much time to decide which they would have, but at last their orders were off, to everybody's relief.

By Arbor Day Jim found himself the happy possessor of two fine young peach-trees, two apple-trees and a pear-tree. Tom's purse had been fuller than his friend's, so he was able to add an apricot to his collection.

What fun the boys had planting the trees! Of course the two fathers had to be present, to see that everything was done as it should be; but the boys did the work themselves.

"Just you wait till next Arbor Day," said Jim, as he helped Tom set his apricot-tree, "then perhaps I'll have as many as you! I'm going to earn all the money I can this year, and save up."

"Guess I can earn and save up, too," was Tom's laughing reply.

For the Companion.

PLANTING ANGELINA.

O Angelina, are you all here? I'll have you out in a minute. Oh, I'm *so* glad I found you! And I *hope* you haven't caught cold. I did want to help plant some trees this Arbor Day, but O Angelina, I never thought of planting you!

I can't begin to 'magine how I did it. I b'lieve you must have crawled into the hole yourself to look at the roots or something.

How many times have I just begged of you not to be so careless?

I was so worried I couldn't eat hardly one speck of dinner, and I hunted everywhere for you.

I really thought I never should see you again. But at last papa came along here, and he said, "Why, what a queer toadstool! Must have grown since we planted this tree."

And I hurried to look at it; and I just 'most cried and said, "Why, it's Angelina's own dear little foot!"

"Well, bless me!" says papa, "have you been planting Angelina? I don't believe she'll grow!"

I just ran to get the trowel, and I dug and dug, and here you are!

Oh dear, Angelina, I'm 'fraid you'll get the croup.

Come and have your face washed and your clothes changed, and *do* be more careful after this, or you'll really break my heart!

CHILDREN'S SAYINGS.

One day in January Edna stood at the window watching a little boy playing in the snow, in the yard across the way.

"What is he doing?" she asked mamma.

"I should say he was turning somersets," mamma laughed.

"Why," said the little girl, quickly, "*I* should say 'twas *winter*-sets, mamma!"

A little girl, when recovering from scarlet fever, drank a great deal of water. Her nerves were weak, and she cried for slight causes. "I wouldn't cry," said her mother, as the tears began to come. "How can I help it," sobbed the child, "when I am so full of water?"

Enigmas, Charades, Puzzles, etc.

1.

CROSS-WORD ENIGMA.

In daughter, not in child;
In forest, not in wild;
In album, not in card;
In author, not in bard;
In carol, not in hymn;
In shoulder, not in limb;
In garment, not in dress;
In berry, not in cress.

The whole, a time of joy
To many a girl and boy.

2.

NUMERICAL ENIGMA.

The whole, composed of twenty letters, is what we should all do.

The 1, 3, 7, 14, 16, 5 is a bird of gay plumage.
The 15, 9, 13, 4, 10 grow in the garden.
The 2, 19, 18, 20 is a title.
The 6, 8, 12, 11, 17 is a musician.

3.

ANAGRAMS.

The trees that Tommy wishes to set on Arbor Day:

Yethrie Cork; Green Teora; Arsage Plum; All Mango; Poangam-tree; Laurenor Peach; Cusynrow Pear.

"Well," returned Jim, "I wish we could do something on Arbor Day."

"Begin an orchard," said Jim's father, concisely, appearing on the porch where the boys were lounging.

"How?" cried Tom.

"Where?" said Jim.

"You would have to save up all your spare pennies," said Mr. Fairfield, "but it wouldn't be a bad thing for either of you."

"But what do you mean?" urged the boys.

"I can't tell what your father will do, Tom," said Mr. Fairfield, "but if Jim will agree to stick to it, I will fence him off a piece of land in the south pasture,—a capital place for an orchard, too, on that sunny slope,—and he may set as many trees there as he can afford to buy. The best fruit is the cheapest, so I should advise one good variety to a dozen worthless kinds."

"O father, that is grand of you!" cried Jim. "You mean to set out the trees on Arbor Day?"

"It wouldn't be a bad time," said his father.

"I'm going to ask father if he will, too!" said Tom, starting off on a run.

Jim Fairfield and Tom Blanchard lived on adjoining farms, and were dear comrades. What one did, the other always did or wanted to do, so it was no wonder that Tom was anxious to begin an orchard with Jim.

Of course Farmer Blanchard was willing to do as well by his son as Farmer Fairfield had offered to do by Jim, and for the next few days the two boys were deep in the catalogues of well-known **nurserymen**, and they made all sorts of inquiries **concerning the merits of certain varieties of apples, pears,** peaches and plums. It took them much time to decide which they would have, but at last their orders were off, to everybody's relief.

By Arbor Day Jim found himself the happy possessor of two fine young peach-trees, two apple-trees and a pear-tree. Tom's purse had been fuller than his friend's, so he was able to add an apricot to his collection.

What fun the boys had planting the trees! Of course the two fathers had to be present, to see that everything was done as it should be; but the boys did the work themselves.

"Just you wait till next Arbor Day," said Jim, as he helped Tom set his apricot-tree, "then perhaps I'll have as many as you! I'm going to earn all the money I can this year, and save up."

THE ARCH OF ELMS.

At noontide, on a sultry day,
Two travellers walked a shady way,
Where elm-trees lifted high an arch
That fiercest sun-rays could not parch;
Said one: "God bless the kindly hand
That set this archway cool and grand!"
The other cried: "Ah, who can say
What comfort yields this leafy way!
Better such monument of green
Than marble pile of King or Queen."

EMMA C. DOWD.

CHESSIE'S ARBOR DAY.

Jimmie Savage is a very naughty boy, if he is my cousin. Mamma and papa said so, and you will say so, too, when I tell you about it.

Yesterday was Arbor Day, and I didn't know how to keep it, so I asked Jimmie. I keep Valentine's Day by sending valentines, and I make presents at Christmas, and I eat all the good things I can Thanksgiving; but I didn't know what to do on Arbor Day.

Well, Jimmie said that all the little girls must take their dolls and their sewing, and go and sit in the arbor all day long, and that was Arbor Day.

So I dressed all my dolls in their best clothes, and took the handkerchief that I am hemming for Blanche, and carried them out in the arbor.

Then I asked Katie for a lunch, and she gave me some beautiful jumbles and a cranberry tart, and I got a banana and an orange off the sideboard—just what I would eat for dessert if I were there to dinner, and I carried it all out to the arbor.

I thought I had better put on my thickest coat and cap, because it wasn't so very warm, and I put the dolls up on one seat, in a row, and gave them some bits of jumble to keep them quiet, while I sewed on my handkerchief.

It was very pleasant there, because the sun shone in so brightly, and the wind didn't blow much that day.

I almost finished the handkerchief, and then I was hungry and I ate up all my luncheon, and then the sun made me shut my eyes, and I suppose I went to sleep. For the next thing I knew, I was lying on the seat, and there were papa and mamma, and mamma said:

"Why, Chessie, child, what are you doing out here?"

When I told them how I was keeping Arbor Day, they laughed; but mamma cuddled me up in her arms, and hurried me off into the house, because she was afraid I had taken cold; for there it was the middle of the afternoon, and they had been looking everywhere for me, and I had been asleep all that time.

Papa said Jimmie was a naughty boy to tell me such stuff, and he told me that Arbor Day was to plant trees, and not to sit in the arbor at all, and he says I may plant a tree this afternoon, because it is so long to wait till next Arbor Day.

I suppose I shall have to forgive Jimmie, because he is my cousin, and he lets me wind up his engine and take my dolls to ride on his railway-train.

4.

DOUBLE ACROSTIC.

1. The name of a crime.
2. What you do when you climb.
3. To talk like a goose.
4. A thing of great use.
5. For a girl a sweet name.
6. A gown for the same.
7. A curious bird.
8. An affirmative word.

My *primals* name a holiday grand;
My *finals* the State where first 'twas planned

Conundrums.

What kind of cards are most used on Arbor Day? Spades.

When people enter into the general occupation of Arbor Day, what kind of trees are they? They are plantain trees (plantin' trees).

What is the difference between the century plant and Arbor Day? One is a day of many plants, the other a plant of many days.

What kind of trees are never planted on Arbor Day? Axle-trees.

What tribe of Indians are people like on Arbor Day? The Diggers.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

SELECTION OF EYE-GLASSES.

Never purchase glasses from a peddler or a jeweller. Even opticians, except the most careful ones, practically allow the customer to make his own selection, and if he is near-sighted, he commonly selects glasses which are too strong, while if he is far-sighted, he selects such as enlarge the print, or else are of too low a number, from the false idea that this will favor a longer preservation of his sight.

Many persons suffer from astigmatism, a defect which prevents the rays of light from converging at the same focus. The trouble may be slight or severe. The afflicted person is sometimes born with it, but sometimes it develops after adult age is reached. Any one who has astigmatic eyes should consult a skilful oculist.

Sometimes there is spasm of the muscles of accommodation. In this case, the person may seem to be near-sighted while really far-sighted, or greatly near-sighted while only slightly so. The oculist alone can treat such eyes.

The medical name of near-sight is myopia. In this defect the rays of light converge to a focus before reaching the retina. The opposite of this, in which the converging point is beyond the retina, is called hyperopia. Hyperopia gives rise to headaches and neuralgia, from the constant strain of the muscles of accommodation in viewing distant objects. Persons afflicted with it need convex glasses, but naturally select concave ones. The glasses should be the strongest that can be worn with comfort, and should be used all the time, both for far and for near vision.

In myopia, the glasses should be the *weakest* that bring the sight to nearly normal vision when the print is at a distance of fourteen to sixteen inches. Many persons, when first fitted, are unable to wear with comfort any glass that makes the vision perfect. They complain of vertigo, and objects appear small and unnatural. In such cases the strength of the glass should be decreased, even though the person does not see so well. It is desirable to wear the glasses about half an hour before deciding on them.

Old sight—presbyopia—begins at about the age of forty. It is first noticed by the tendency to hold the paper further off. The glasses should not enlarge the letters, but simply render them clear and natural at the ordinary reading distance. Whatever the ocular defect, the proper glasses should be obtained as soon as it is discovered.

In addition to the above defects, there may be a weakness of one or more of the ocular muscles, with a constant strain on the weaker, in order to do its full share of the work. This strain may cause severe neuralgia of the head and nervous symptoms generally. In such a case, consult a skilful oculist.

In the above we have given the substance of an article in *Medical Classics* by Doctor Norton, professor in the New York Ophthalmic Hospital.

PAPER HORSESHOES.

Railroad car-wheels are now quite often constructed of paper. It would be hard to make an announcement of a new use of that material which should cause any lively surprise. And yet the introduction of horseshoes made of paper in the cavalry service of the German army seems extraordinary enough to excite interest.

Several cavalry horses were first shod with paper shoes, and the effect was observed. It was found that not only did the lightness and elasticity of the shoe help the horse on the march, making it possible for him to travel faster and further without fatigue than horses shod with iron, but that the paper shoe had the property of being unaffected by water and other liquids.

It is now proposed to replace iron with paper horseshoes in the entire German army.

The new shoes are made of a great number of thin sheets of paper pressed closely together, one above another, and rendered impermeable to water by the application of oil of turpentine. The sheets are glued together by a sort of paste composed of turpentine, whiting, gum and linseed oil, and then submitted to a powerful hydraulic pressure.

Paper horseshoes are also made by grinding up the paper into a mass, combining it with turpentine, sand, gum, litharge and certain other substances, pressing it and afterward drying it. But these shoes are less tough and elastic than those which are made of thin sheets of paper laid one upon another.

The paper shoes are fastened to the horse's feet either by means of nails, as in the case of the ordinary shoe, or with a kind of glue composed of coal-tar and caoutchouc.

The German cavalry horses are reported very happy and lively in their new shoes.

WOULDN'T ACCEPT IT.

People who strive to elevate certain classes in the social fabric, often find, to their surprise, that these very persons jealously guard the barriers of class distinctions. The following illustration of that fact is given by the author of "Four Years in Rebel Capitals."

A Richmond lady had a maid who—devoted and constant to her mistress—still burned with curiosity for a sight of everything pertaining to "Mars' Linkum's men," and especially for "de skule."

For swift indeed had new-comers been to preach the gospel of Alphabet, and negro schools seemed to have been brought in by every army ambulance, so numerously did they spring up in the captured capital. So, early one day, Clarissa Sophia donned her very best, and with shining face, hied her, like anything but a snail, to school.

Very brief was her absence; her return reticent, but pouting and with unduly tip-tilted nose.

It soon came out that the teacher had begun by impressing the children with the fact that all present were born "free and equal," and that each of them was quite as good as she was.

"Wa' dat yo's sayin' now?" interrupted Clarissa Sophia. "Yo' say I'se jes' ekal as yo' is?"

"Yes, I said so, and I will prove it to you."

"Ho! 'taint no need," was the response. "Reck'n I is, sho' 'nuff. But does yo' say dat I'se good as missus, *my* missus?"

"Certainly you are."

"Den I'se jes' gwine out yere, right off," cried Clarissa Sophia, suiting action to word. "Ef I'se good as *my* missus, I'se goin' ter quit, feer I jes' know. *she* ent 'soshiatin' wid no sich white trash like you is!"

SLIPPERY.

It is not always pleasant to see ourselves as others see us, and it is perhaps well for our peace of mind that we cannot always read our neighbors' mental comments upon our conduct, or upon our personal appearance. Here is an illustration:

A trader named Smith, from the interior, visited Galveston, and purchased a bill of goods from a prominent firm there. He was politely received, and one of the proprietors conducted him over the immense store. On reaching the fourth floor, the customer perceived a speaking-tube on the wall, the first one he had ever seen.

"What is that?" he asked.

"Oh, that is a speaking-tube. It is a great convenience. We can converse through it with the clerks on the first floor without taking the trouble of going downstairs."

"Can they hear everything you say through that?" asked the visitor.

"Certainly, and they can also reply."

"You don't say so! May I talk through it?"

"Certainly."

The visitor put his mouth to the tube and asked, "Are Sam Smith's goods packed up yet?"

The people in the office supposed it was the salesman who had asked the question, and in a moment the distinct reply came back:

"No, we have not packed them yet. We are waiting for a telegram from his town. He looks like a slippery fellow."

HUNTING BEARS.

General E. F. Burton describes a novel method of catching bears practised by the native hunters of India. Four or five sturdy men are armed, two with long spears, cross-barred on the handles close to the sharp two-edged blades, and two or three with ten-foot bamboos, of which the ends are smeared with bird-lime.

Thus equipped, and leading several powerful dogs, the hunters sally out an hour or so before dawn, and pass along the base of the hills with the fresh morning wind blowing up from the plains below.

If the hunters have luck, it is not long before the fierce dogs wind the bear; and though dogs of this species hunt as silent as death, their straining on the leash informs their masters that the shaggy game is nigh.

The dogs are slipped and disappear in the darkness, and soon the roaring and growling show that they have found the game. The hunters run up to the spot where the bear is fighting with the dogs.

The men with limed poles poke the bear in the ribs, and adroitly twist the ends in its long hair, thus holding it fast on either flank, and the spearmen complete the tragedy by repeated spear-thrusts. It is said that a party of experienced men with good dogs never fail to secure the bear in this way.

PERTINENT.

The force and value of a remark depend largely on the age and standing of the person who utters it.

Leslie Robinson is a boy about four years old. His father was employed for a few days by two maiden sisters, who had some work to be done about their place.

One of them, wishing to see him, said to the other, "Where is Robinson?"

Leslie overheard the question, and responded at once in a very demure, drawling manner:

"How—would—it—do—to—call—him—Mister—Robinson?"

JUST IN TIME.

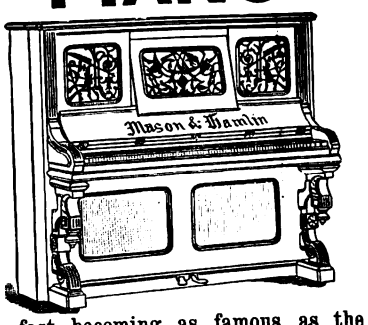
An Irish gentleman getting upon a street-car found one place vacant, which he proceeded to occupy.

"Sure," said he, with a twinkle in his eye, "I came just in the nick of time."

"How is that?"

"Arrah! If I was to come *now*, I shouldn't find a seat in the car!"

To cleanse and preserve the teeth use "*Brown's Camphorated Saponaceous Dentifrice.*" Microscopical examinations have proved that the use of soap is the only safeguard against the accumulation of animal and vegetable parasites on the teeth. Camphor strengthens and relieves soreness of the gums. Price, 25 cents a bottle. Sold at drug stores. [*Adv.*



A lamp that has all the lamp virtues must be well balanced. The "Pittsburgh" gives the best light and makes no trouble. What trouble do other lamps make? A dozen sorts of trouble, every sort enough to condemn them.

THE MERIT SYSTEM

By Hon. Theodore Roosevelt,

United States Civil Service Commissioner.

By civil service reform we mean the introduction of the merit system of making appointments to the public service. In the early days of the republic, under Washington, and to a somewhat less extent under his immediate successors, appointments to the public service were made with comparatively little regard to politics, and the appointees were very rarely removed for merely political reasons. Gradually, however, the spoils system, or patronage system, of making appointments and removals was introduced.

This system proceeds on the theory that "to the victors belong the spoils," a sentence which one of its founders boastfully uttered in public. For over fifty years succeeding 1829, when Jackson was inaugurated as President, the federal offices were administered purely on the patronage system.

Under this "spoils" system men are appointed to office primarily because of the fact that they are in sympathy with the politics of the dominant party for the time being, and are removed when the party in power changes, solely because of their politics, without regard to their efficiency.

Three-fourths of the offices in the federal government are still administered in accordance with this theory; but during the last few years a fourth of them have been made non-political, and put under the control of the Civil Service Commission.

Under the patronage system any man who wishes to get a public office must first of all placate some powerful politician, and persuade the latter to get the office for him. Under the patronage system, therefore, the active party workers are the ones who usually get the offices.

Sometimes these workers fulfil the duties of the offices well. Sometimes they do not; but they are always appointed and removed primarily for political reasons.

Most of the smaller governmental positions, however, really ought to have nothing at all to do with politics. The founders of the republic had no idea that they were political offices, and they would not be so considered to-day if people had not grown accustomed to regard with indifference the abuses of the spoils system.

A government clerk, a letter-carrier, a railway mail clerk or an official stenographer does not really occupy a political position at all; his politics should have nothing to do with his appointment to or retention in office. His duty is to serve the whole public, and it is wrong to pay him with money obtained by taxation from the whole public merely in order that he may work, or in order to reward him for having worked, for the benefit of a particular party.

The public at large is interested in having its letters delivered speedily and accurately, but it has no concern whatever in the question whether the letter-carrier believes in free trade or protection, monometallism or bimetallism.

Of course when letter-carriers, custom-house employees, departmental clerks, and the like, are appointed by the intercession of powerful politicians, these politicians take care to see that none but their own friends have the benefit of the government patronage, and they use the appointees to build up machines or political organizations, drilled with the discipline of an army and bound to support the wishes of their party chiefs.

These party chiefs thus have at their control organized bands of political mercenaries, who take an active part in running politics simply for the sake of the offices they receive. This tends to establish a caste of office-holders, appointed for political reasons, and interested in controlling politics, not for the good of their country, but for the benefit of themselves and their partisan leaders.

Such a system is very demoralizing in its effect upon public life and upon public men. During the last sixty years it is safe to say that no other one cause has had so strong a tendency as this has had to degrade and demoralize our politics.

The merit system, or civil service reform system, does away with all this demoralization and degradation, and not only immeasurably betters the tone of public life but also gives the government a better service.

We have now applied this merit system to about thirty thousand government offices, including almost all the clerks and subordinate officials in the departments at Washington, in the railway mail service, and in the larger post-offices and custom-houses. These men get their places now purely because in a series of practical competitive tests they have shown themselves to be presumably the men best fitted to fill the positions.

All questions of creed and politics are ruled out. If, for instance, a young man wishes to be a government clerk in Washington, he does not now have to apply to some prominent politician, and hang about in a miserable state of suspense for months, wasting his time and destroying his moral fibre and self-respect.

On the contrary, all he has to do is to write to the Commission for a set of blanks, which are forwarded to him at his home. These contain full information as to where he can be examined and on what subjects. He has to furnish testimony to his good moral character, and then, at his own convenience and without interruption of the regular work in which he may happen to be engaged, he takes one of our examinations.

The examination is thrown open to him and to all other competitors without regard to favoritism of any kind. If he desires an ordinary clerkship, he is tested in exactly the subjects on which a clerk needs to show proficiency; that is, in spelling, handwriting, copying, letter-writing, grammar and arithmetic. No questions of any other sort are asked, and all the questions are absolutely common-sense and practical.

He is marked by examiners who do not even know his name. He is then graded according to his mark, and if he stands high enough, compared with the other competitors, he receives the appointment.

If he wishes to become a letter-carrier instead of a clerk, he is tested chiefly as to his knowledge of his own local delivery and as to his skill and accuracy in reading addresses. A stenographer is examined in stenography. A railway mail clerk is examined as to his knowledge of United States geography, and especially as to his skill and accuracy in reading addresses, and his knowledge of the various railroads of his railroad district.

Every examination is perfectly practical in character, and men of all parties — Democratic, Republican, Prohibitionist, or Farmers' Alliance—are admitted without any discrimination whatsoever. Once in the service, they stay in just as long as they do their work faithfully and intelligently, without regard to change of administration.

No man nowadays who seeks a position in the classified service need neglect his work or pay court to a powerful politician, nor in any way do aught that would make him forfeit his self-respect. He simply has to show, in fair, open competition, by a series of practical tests, that among all the applicants he is the best fitted to perform the duties of the position he seeks; and he is then appointed without regard to politics.

If he gets his appointment, he has the right to feel, with the utmost satisfaction, that he owes it to his own capacity and not to the favor of any one, and that he has fairly earned it, as all American citizens should earn everything, by his own capacity and industry, under a system which guarantees fair play and justice to all.

For the Companion.

OVER THE CLIFF.

About four miles west of Independence, Kansas, stands a timbered hill, known as the Table Mound. This large mound, which is situated on the right bank of Elk River, rises to a height of over a hundred feet above the surrounding country.

At its base the river is narrow and rapid, and for nearly a mile dashes over a bed of jagged rocks. A long line of precipitous cliffs extends along the bank of the stream, varying in height from ten to fifty feet.

Here, on the banks of this stream, at the foot of the Table Mound, there lived, not many years ago, a man by the name of Henry Dykeman. He had a wife and two children, Tom and Bessie.

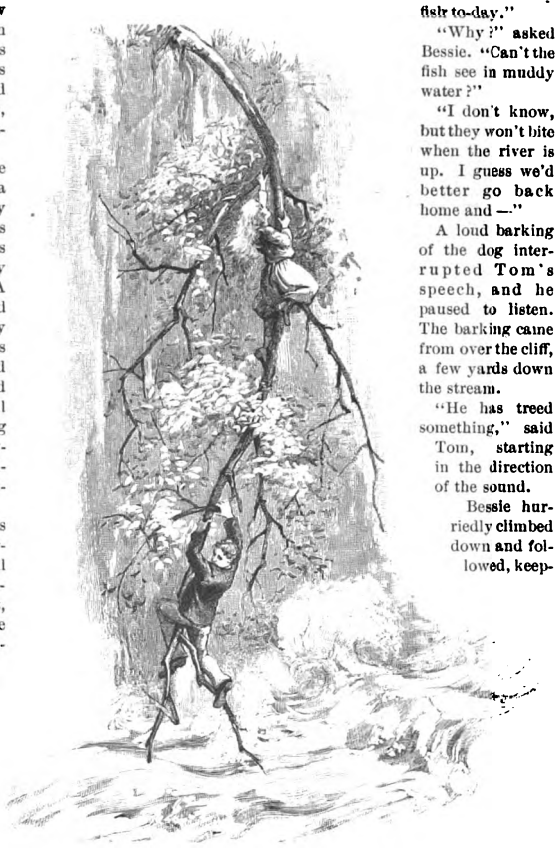
Tom was a bright, industrious lad fourteen years old, fond of out-door sports. He spent nearly all his spare time hunting squirrels and ducks along the stream, or fishing for black bass in the cool shadows of the cliffs.

Bessie, three years younger, was a shy, pretty child, with a cloud of light hair falling about her shoulders, and great blue eyes.

Early one June, a heavy rain had been falling for two days; but on the third day the clouds broke away, and the sun came out bright and warm.

It was too wet to work in the field, and in the afternoon Tom took his fishing-tackle and started toward the river.

Bessie, who was perched in the branches of a large cherry-tree, dropped nimbly to the ground, disappeared into the house, and quickly returned with her mother's permission to accompany Tom.



"Mamma says I may go with you if I won't go near the river," she exclaimed.

Tom was quite willing, and the two walked on along the grass-fringed path, Tom's dog Ring running ahead and barking with delight.

At the bank of the river Tom stopped to dig bait, while Bessie, who was as fond of climbing as a squirrel, had climbed into the branches of a mulberry-tree, and was gathering the large black berries and putting them into a little cup which she had made of leaves.

Tom had dug his bait, and was going a little farther down the stream, where the cliffs were not so high, when he happened to notice the swollen and muddy appearance of the river.

He gave a long whistle. "I forgot about the rain making the river rise," he said. "I guess I sha'n't catch any fish to-day."

How Bessie saved Tom.

"Why?" asked Bessie. "Can't the fish see in muddy water?"

"I don't know, but they won't bite when the river is up. I guess we'd better go back home and —"

A loud barking of the dog interrupted Tom's speech, and he paused to listen. The barking came from over the cliff, a few yards down the stream.

"He has treed something," said Tom, starting in the direction of the sound.

Bessie hurriedly climbed down and followed, keeping well back from the high cliff that overhung the river, in obedience to her mother's wish.

As Tom drew near the sound, he found that it came from over the cliff, down next the river. The cliff at this point was about twenty-five feet above the water and almost perpendicular; but nearly twenty feet below the summit a long shelf projected from its face. As Tom looked over the rocks from above, he saw the dog standing on this shelf, barking furiously at something that had taken refuge in the rocks.

"I wonder how he got down there," exclaimed Tom, looking for some way to reach the place. By going up the stream a short distance he discovered a place where he could, with some difficulty, descend to the water's edge. Here he found a footing on the ledge of rock that protruded out from the cliff and extended several yards along its face.

Taking his fishing-rod with him, he ran hastily along the ledge toward the dog, which was still barking sharply. The shelf extended slightly upward, and on reaching the dog Tom found himself several feet above the water.

The dog was barking at one of several large holes in the cliff.

"Ground hog, I guess," said Tom, stooping down and trying to peer into the holes. "Whatever it is, I can smoke it out."

He drew some matches from his pocket, and, gathering some leaves and sticks that had lodged on the rocks, he kindled a small fire in the mouth of the holes. Then he took his hat and fanned the smoke back into the openings.

For a long time he replenished his fire and fanned the smoke, but nothing appeared. Then he took his fishing-rod and thrust it into the holes. He thought he heard a low growl, but he was not sure of this, for the roar of the waters drowned the sound.

Tired at last, he called his dog, and turned to retrace his steps along the ledge.

Then he made a startling discovery. The river had risen several feet, and had completely cut off his retreat. Patches of driftwood and huge logs were now running rapidly on the surface of the stream, and a strong, swift current was setting in toward the cliff.

He looked about for some means of scaling the rocky wall, but could see nothing but the smooth face of the cliff, rising nearly twenty feet above his head, and nowhere upon its face could he find a foothold.

If he could only manage to scale the wall far enough to reach the branches of a little sapling that leaned over the edge of the cliffs, he could easily draw himself up; but even its lowest branches that hung down over the ledge were many feet above his head. He must look for some other means of escape.

He might call Bessie and send her home after a rope, but he did not care to have her venture too near the edge of the cliff unless it was absolutely necessary.

Perhaps the river would soon go down as rapidly as it had risen; and in that case he could go back by the way he had come.

He felt quite sure that he was in no danger. The river, he was satisfied, would not rise above the rock he stood upon. He would wait a little while, at any rate, and see.

He was about to seat himself on the rocks, when he uttered an exclamation of surprise. The river was beginning to flow over his rocky shelf! Then it dawned upon him that his position was a very perilous one. If the river continued to rise at the same rate, it would soon sweep him away.

He was a good swimmer, but as he looked across the broad waste of foaming waters, covered with floating debris, he saw how hopeless it was to attempt to escape from his position by the way of the river.

He examined the face of the cliff again. By thrusting his fingers into small crevices in the rocks he managed to draw himself up three or four feet. Then his hold gave way, and he fell back to the rock.

The water was now running rapidly over the shelf beneath his feet, and the roaring of the river through the rocks grew louder and louder. Great trees swept past swiftly, and a little farther down the stream Tom could see these trees turn over and over and leap wildly through the seething waters.

Tom cast a startled glance about him and shouted loudly for Bessie. That was his only hope of escape now. He must send her for his father, and no time must be lost.

He shouted again and again, and then watched eagerly for her to appear on the cliff above.

The water had now risen to Tom's knees, and as he clung to the cliff for safety, he saw his dog swept from his position on the rock, and a few moments later, disappear down the foaming rapids.

Just then Bessie looked down from above, and saw Tom's situation. She glanced hurriedly about her, with a terrified little sob, but could see no way to aid him.

"Run home and tell father to bring a rope!" Tom shouted.

But his voice, drowned by the roaring waters, reached Bessie only in an indistinct sound. She could see that he was giving some command, and knew that she must try to help him.

The current of the river was now changing, and setting in rapidly toward the cliff, roaring and leaping in foam against the rocks. Now a mass of floating timbers swirled shoreward, and striking the cliff with a loud crash, was swept under the boiling waters to reappear at the surface a moment later to be swept onward.

Bessie's face was white with fear.

"Oh, Tom!" she sobbed, "what must I do? What can I do?"

Tom was about to call to her again when a thought occurred to him, as his eyes rested on the slender tree that leaned over the cliff. Perhaps he could throw his fishing-line over the limbs, and draw them down within his reach.

This thought gave him a gleam of hope, and he hurriedly unwound his line. Then, reaching upward as far as he could, he swung the rod to and fro, and making a swift movement upward, threw the line over the slender limbs.

To his delight it wound around one of the branches and held securely. He heard a little cry of joy from Bessie.

The line was a strong one. Slowly Tom begun pulling on the rod. The slender top of the tree bent downward. Bessie watched with beating heart the branches bending lower and lower.

"Oh, if it will only hold!" she gasped.

As she spoke, the small end of the rod broke with a snap, and the top of the tree flew upward to its place.

Bessie screamed as she saw Tom stagger backward, drop the rod into the water and clutch the cliff for support. Tom turned his face, white with fear, up to Bessie as the hurrying waters rushed about him.

"Go—home—get father!" he shouted slowly.

The words came faintly to Bessie above the roar of the rushing stream, and, with a face as white as the foam on the river, she ran toward home.

Tom saw her disappear. The water was now up to his waist, and it was with the greatest difficulty that he kept his footing on the rocks. If he relaxed his hold on the cliff for a single moment, he would be swept away.

The river was rising still more swiftly. He could feel it as it crept about him. It was a half-mile to the house; help could never reach him in time from that quarter.

A look of despair settled on his face. He could only hold on a few more minutes, and then —

A shadow appeared on the cliff above.

Bessie had gone but a little way when she halted

Digitized by Google

suddenly and hurried back to the edge of the cliff, a look of determination on her white face.

Throwing her hat aside, she climbed swiftly out on the little tree that leaned over the edge of the cliff. Tom, looking up from below, saw her, and called loudly:

"Go back, Bessie! Go back!"

If she heard him she did not heed his warning.

The slender sapling swayed beneath her weight as she crept out among its branches. Then, as she climbed farther and farther, the tree bent downward foot by foot, till its top was many feet below the summit of the cliff.

She paused now, finding the incline so great, and, turning about, crept downward feet foremost. She reached the slender top branches of the tree, and they bent downward rapidly under her weight until she hung suspended in the air, only a few feet above Tom's head.

A strong wind, sweeping along the rocks, swung her to and fro like a pendulum.

For one brief, terrible moment she hung suspended over the boiling waters, her face white with fear—her little hands clinging desperately to the swaying limbs, her long hair streaming in the wind. In that brief time she saw the turbid waters plunging among the rocks below.

A great tree that had been uprooted by the floods came swiftly in toward the cliff, and, striking on some hidden rock, rose majestically from the foaming waters, and stood for a moment as if rooted in the bosom of the stream. Then with its broken and splintered branches quivering as if moved by a mighty wind, it reeled downward and was swept away by the roaring flood.

"Quick—now—catch the limbs," Bessie called out. At that very moment Tom leaped upward and grasped the branches of the tree.

Bessie felt the tree sway with the additional weight. She heard Tom calling to her to climb back—and she knew she had succeeded.

Then hurriedly clambering to the top of the cliff she fell in a dead faint on the rocks above.

A few moments later, after he himself had climbed up, Tom found her there and carried her safely home.

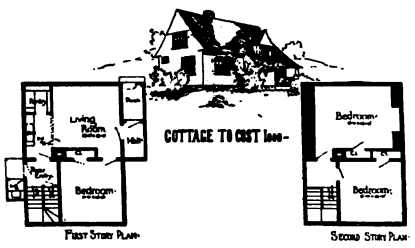
For the Companion.

TASTEFUL COTTAGES.

The purpose of the following sketches for houses, to cost from five hundred dollars to two thousand dollars, is not merely to show how much may be given for the money, but to present something that will also be artistic. Of course a house having



First Story Plan. Second Story Plan.

neither beauty of exterior nor a convenient arrangement may be made larger for the same cost than the houses built after these sketches. All that I can do is to show what can be done for a small sum in planning the rooms so that they shall be convenient, and give what I think are pretty exteriors. I hope thus to help some young people who have limited means, but more taste, to a snug little home—something that they can feel has a character of its own, and is distinct from its neighbors.

A Five-Hundred-Dollar House.

A house to cost only five hundred dollars must of necessity be small and simple. The sketch is for such a house. It will have a cellar only under a part of it. One room on the first floor will suffice for a living room and kitchen, and there are two bedrooms on the second floor. The following rough specification will give some idea of how the house is built.

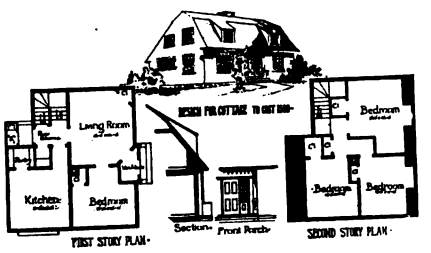
The cellar is six feet deep, and the underpinning of field stones laid in mortar. The walls and roof are covered with clear cedar shingles. The veranda has posts and railing of rustic cedar. The

outside finish is of second quality pine, painted in two coats; the shingles are not to be painted.

All the floors are of second quality spruce. The walls and ceilings are plastered, one coat. The windows are of second quality glass, without blinds. The stairs are a box flight with no posts or rail. There is a white-pine plank sink with one and one-quarter inch lead waste carried to cesspool. All the doors and inside finish are of whitewood, finished with two coats of shellac.

A One-Thousand-Dollar House.

This has a cellar under the whole house six feet deep, and the underpinning is of field stone. The outside walls and roof are covered with cedar shingles, and left in natural color; the other outshingles, and left in natural color; the other outside finish is painted two coats, and is of white pine. There are no gutters.



The floors are of spruce, except in the living-room, which is of birch. The doors are of second quality white pine, and the finish of the same; all to be painted two coats.

The stairs are of seven-eighths-inch white pine, the treads and rises painted.

The pantry has shelves and cleat doors underneath. There is a common iron sink, with a cupboard underneath, with lead supply and waste to cesspool or sewer.

The windows are double sliding and glazed with second quality American glass. A wood mantel in the living-room will cost ten dollars. The chimney is of hard bricks, with thimble in each room. The walls and ceilings are plastered in two coats, to be papered by the owner.

This house is arranged with two rooms on the first floor—a living-room and bedroom—with two

bedrooms on the second floor. The living-room is also used for the kitchen by placing the sink in a recess so that it can be screened from the other part of the room. The pantry, also, can be reached from the recess.

Each bedroom has a good closet.

A Fifteen-Hundred-Dollar House.

As will be seen by the plan, this house will have six rooms. The first floor is arranged with a sitting-room, kitchen and bedroom. The stairs are conveniently placed for easy access from the living-room, and also to the cellar from the back entrance, so as to be near the kitchen and living-room.

The chimney is between the three rooms, so that there may be a thimble in each room if necessary, and in two of the rooms above. As the plumbing in such a house must be very simple, the plan is arranged for an earth closet.

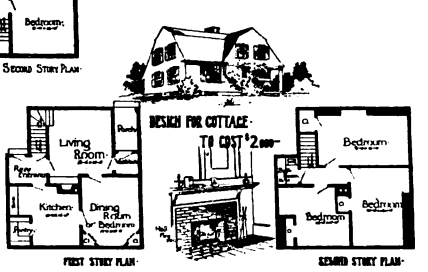
The cellar, under the whole house, is six feet deep, and has coal-bins and so forth. The underpinning is of rough, common bricks, burned ends, with cobble stones built in. The chimney is topped out to match the underpinning.

The outside walls are of second quality cedar shingles, with one coat of stain. The roof shingles will be left in their natural state. The other outside finish will be of second quality white pine, painted with two coats of white. All the inside finish will be of whitewood and painted two coats. The doors are of whitewood with four panels.

The floors are of second quality spruce, except that of the kitchen, which is of birch. The stairs have birch treads and whitewood rises. The windows are with double-hung sash, and have no blinds.

The only plumbing will be for a sink; cold water supply and waste to be carried by two-inch drain to open cesspool, should there be no sewer.

The pantry has shelves and cleat doors. All walls and ceilings are plastered, two coats.



A Two-Thousand-Dollar House.

This plan is for six rooms and a bath-room, though the only work that could be put into the bath-room would be a water-closet, with a chance to put in a tub later.

The sitting-room has a fireplace in a small recess, which gives a cozy effect to the room. A vestibule in front gives a protection to the living-room, and the arrangement of the passage or back entrance cuts the living-room off from the odors of the kitchen. The third room in the first story can be used for a dining-room or bedroom. The stairs go up from the living-room, and the cellar stairs are reached from a back entry.

The cellar has a room for vegetables and coal-bins. A furnace may be put in at any time, but not for the price given.

The cellar is to be six and one-half feet deep. The underpinning is of local ledge stones laid in mortar, and a cemented floor. The walls and roof are shingled with clear cedar shingles, and there will be paper on the walls. The floors are of spruce except that in the kitchen, which is of birch; all

other outside finish to be pine. All outside finish on the walls will be stained red. All the inside finish will be of whitewood, except in the sitting-room, which will be of cypress; all are to have two coats of varnish.

The doors will have four panels, and be of white wood or cypress. The fireplace in the sitting-room is of common brick, with facings and hearth laid in red mortar; the mantel to cost fifteen dollars.

All the walls and ceilings are to be plastered two coats. The windows are double hung and glazed with first quality American glass. The iron sink will have lead supply and wash. There are short hopper closets, and the house is piped for gas.

SANFORD PHIPPS.

For the Companion.

BEHIND THE SCENES.

The ambition of my girlhood was to become a shining star in the theatrical firmament. Theatre-going was my ruling passion. I remember, with much amusement, the exciting rehearsals upon which I wasted much time in the privacy of my own room. There I essayed the most difficult rôles of comedy and tragedy. The natural displeasure of my guardian at my determination to go upon the stage, the bitter feelings which possessed me, when Fate, in the form of ill-health, nipped my brilliant plans in the bud, the tears of disappointment shed in those hours, I recall with new force in the light of later experiences. I have learned that the destiny or the circumstances which order our life-work other than we have planned it often prove kind when we have deemed them cruel.

Lately I was compelled by business to travel for several days with a company of professional actors, a small company, but one above the average of merit, and of the sort in which, under ordinary circumstances, an actor must be trained before he can hope to be successful.

The company consisted of the star, Mrs. S——, her husband, and a few young actors and actresses. Though it was engaged in playing only in the smaller cities and towns, several of its members were credited with the possession of dramatic talents of a fairly high rank.

Let us visit the little theatre at the company's first stopping-place. Here, in the recesses of a cramped and gloomy stage, upon a cold day, the "leading actors" are hard at work. Heavy trunks must be dragged up a flight of rickety stairs, and, as help is scarce in the town, some of the company must lend a hand. There is certainly nothing romantic about this occupation.

At last the trunks are in the dressing-rooms or upon the stage. Such scenery as the stage contains must be taken down and the company's scenery set up. The stage manager, who is also the leading actor, has gone through this many times, but there is scarcely a theatre or a hall which does not present new mechanical difficulties for him to solve. It is hard and taxing work.

In the meantime Mrs. S——'s room at the hotel has been transformed into a dressmaking establishment. The costumes for a new farce must be prepared.

One lady sits at a borrowed sewing-machine—borrowed with great difficulty, too, for all the women in the town seem to be a little suspicious of "those actresses." She is stitching industriously. Another sews together, by hand, widths of filmy China silk, and the "star" herself measures off the lace to complete a costume.

The next two hours are spent by the "star" in examining a play which has been written for her, to adapt it to her own use.

She cuts out passages here, adds sentences there, and molds her part to suit her own taste and ability. This is more interesting than the dress-making, perhaps, but more wearing to the nerves, for the actress is quite uncertain how her arrangement of the matter will "take" with the public, which is to be the judge.

At four o'clock a rehearsal of a new farce is called. This with professional actors is downright hard work, and has none of the diverting features that it might be supposed to possess.

A light supper—probably a very poor one—follows, and then the company are ready for their evening's work.

A feeble ray of light, struggling through a dusty lamp chimney, barely prevents the ladies from breaking their necks as they climb to the forlorn dressing-rooms, which are separated from one another only by rough board partitions. A few nails driven into the walls, cracked looking-glasses, and shaky tables are the only toilet conveniences provided. Everything is uncomfortable, squalid and depressing.

After the play each actress must pack her own trunk. The men of the company take down the scenery and pack it away. It is twelve o'clock when the tired company return to the hotel.

They are tired still, when at eight o'clock next morning, with scanty sleep and scanty breakfast, they take the train to continue their journey to the next town. Their incessant travel is laborious, uncomfortable and wearisome.

The private wardrobes carried on such a trip are meagre. All trunks, save those containing costumes for the plays, are left in the large city around which the troupe is circling. Mrs. S——'s valise contained a loose wrapper and slippers for bedroom wear, the scantiest provision of necessary clothing,—which, if washed at all, must be washed and dried in her own apartment,—a bottle of camphor and one of ammonia, an alcohol lamp, a package of ground coffee and a tiny coffee-pot.

"You see," she explains, "it's very handy to have these for one-night 'stands.' If we leave directly after the performance and travel all night, a cup of good coffee is a great comfort."

Neither lodgings nor meals are good. One musty bedroom succeeds another, and one illy-cooked meal is like all the rest. As I went about with this company, how these unpleasant surroundings made me long for my own pleasant home!

The actress has no home ties, no home life. The family reunions at Thanksgiving, Christmas, or on other occasions are unknown to her, although she has a husband, sons, and other dear relatives. Holidays find her at work the hardest. The migratory life she leads deprives her of all social enjoyment.

The contract which the ladies of her company sign forbids them to accept social attentions. One young lady was obliged to decline an invitation to attend an afternoon concert given at a military post near the city in which the troupe was then playing—a deprivation to any pleasure-loving girl.

If, among my readers, there are any who, after this glimpse behind the scenes, still feel the spark of dramatic ambition burning, and think that in such a life they could find happiness, let them study well over the following questions:

Have you an iron-clad constitution which will withstand the wear and tear of late hours, constant travelling and stage draughts?

Is your digestion strong enough to defy dyspepsia—the ghost that sits unseen at every hotel table?

Are your nerves hardy and your heart stout to brave early failures, criticism and social ostracism?

Are you willing to work early and late, and forego all the ordinary pleasures and comforts of life?

If you can truly answer all these questions in the affirmative, perhaps you are fitted for a dramatic career, but you are also fitted for almost any other more desirable profession as well.

ANNA S. RICHARDSON.

For the Companion.

THE TRANSPLANTING OF TREES.

Perhaps you have some time lain under the great bell of a flowering cherry-tree in May, and looked up through its full, fragrant, white, arrested snow-storm of blossoms, and when you shut your dazzled eyes, the droning of the bees made music in your ears, even as the blossoms had filled your eye with their white beauty.

"The music of the bee a witchcraft hath for me," and Arbor Day comes in the midst of the witchcraft of the spring, when all nature—birds, bees and flowers—takes part in the joyous celebration.

But were it not for those who long ago transplanted the cherry-tree from its home in the East, we should have no white-domed cherry-trees full of blossoms under which to look up to a blue heaven and dream away a spring day. We must go a long way back to find the proper person to thank for the delicious fruit of this tree.

It was Lucullus, who, after the war with Mithridates in Asia Minor about 70 B. C., introduced cherries from Pontus into Italy.

The fruit found great favor, and Pliny says that one hundred and twenty years later it passed over into Britain. But these cherries from the city of Cerasus in Pontus were lost during the Saxon period, and were only restored by the gardener of Henry VIII., who again brought them to England from Flanders.

The planting and transplanting of trees is not a novelty, but the setting apart of an especial day in which groups of children take part in planting trees is indeed a feature of the latter part of the nineteenth century.

Arbor Day claims a place in the calendar which every one is delighted to accord to it. It adds interest to the day to know that we are carrying on the work of public-spirited and practical men, who in former years and centuries have transplanted from other climes and countries the fruit and shade trees which we could never have enjoyed without their labors.

Isaac D'Israeli, the father of Lord Beaconsfield, gives us in his essay on the "Introducers of Exotic Flowers, Fruits, etc.," much interesting information. He says, "Had Evelyn composed only the great work of his 'Sylva, or a Discourse of Forest Trees,' his name would have excited the gratitude of posterity."

Evelyn himself says in his dedication of the book to Charles II., "I need not acquaint your majesty how many millions of timber-trees, beside infinite others, have been planted throughout your vast dominions at the instigation and by the sole direction of this work."

It is said that Henry IV. of France gave up his orangeries, which were a personal luxury, in order to introduce mulberry-trees into his kingdom. De Serres (1599) made the king acquainted with these trees. To him, as having made silk culture possible by this means, France owes much of her national revenue to-day.

It would require too much space to speak of all the trees which transplanters have brought from the East to England and thence to our own country.

But when we read that apricots—first known in England in the sixteenth century—were originally no larger than damson plums, and contrast them with the fruit produced in our California orchards, we can appreciate the improvement consequent on care and culture.

We may recall a tract of Samuel Hartlib, to whom Milton addressed his tract on Education, entitled "A Design for Plenty by an Universal Planting of Fruit Trees." The project consisted in enclosing the waste lands and commons, and appointing officers, whom he calls fruiterers or woodwards, to see that the plantations were duly attended to. He says, "The child and the poor man prefer fruit before better food, as the story goeth which he has preserved in these ancient and simple lines."

"The poor man's child invited was to dine,
With flesh of oxen, sheep and fatted swine,
(Far better cheer than he at home could find.)
And yet this child to stay has little mind.
'You have,' quoth he, 'no apple, froise nor pie,
Stewed pears, with bread and milk and walnuts by.'"

Fruit and shade trees symbolize refreshment and rest. They cannot be too carefully guarded when we have them, nor too sedulously labored for when we do not possess them.

A tree is a thought of God. The beautiful outline existed in His mind before it took shape and threw its glorious head up to the sun. Every one, therefore, who plants a tree is reproducing a thought of God.

If we have helped to plant a tree we cannot

Digitized by Google

thereafter regard a tree indifferently. In the planting of thousands of trees all over our country this Arbor Day of 1891, many will no doubt begin a life-long study and heartfelt love for the crown of the vegetable world—a tree!

MRS. MERRILL E. GATES.

For the Companion.

GARDENING APRON.

A handsome gray linen towel with fringed ends and colored borders was chosen for the apron which served as a model for the accompanying sketch.

About one-third of the length of the towel was cut off for the pocket-piece; the side borders cut from the remaining two-thirds were made into a long belt, and finished with a large button at one end and two buttonholes at the other. The extra buttonhole was for raising or lowering the apron; also to accommodate different members of the family.

The fringed end of the longer piece—after the plain end and sides were hemmed—was folded over the waist band and stitched firmly to it; then the pocket-piece was stitched in position as shown, a double row of stitching in the middle dividing it into two parts.

The fringed ends, at the waist and at the bottom, were held slightly full, but not enough for gathers.

Being washable, as well as strong and serviceable, it was in almost daily use throughout the season, and was so pretty and convenient that it has many times been duplicated by those who have observed its usefulness.

It is very handy when gardening to have twine, wire, cord, pegs, shears, gloves, etc., conveniently near, where one may get them without a moment's notice. It is handy to have a protector not too nice to rest one's soiled, tired hands on when enjoying a short rest from labor. It is also handy, when one is done gardening for the time, not to be obliged to restore every little thing used to its own separate box, drawer or shelf, but instead, to simply take off the apron, button the belt, and suspend it—bag-fashion—upon a hook, where, with contents undisturbed, it may remain until again wanted; and that is just what the possessor of the towel-apron of our sketch had and did.

If preferred, a narrow strip might be cut from the top of the pocket-piece and be stitched across the apron above the two large pockets, and divided into several small pockets, for packets of seeds, by cross rows of stitching a few inches apart.

Similar aprons made of bed-ticking for clothes-pin-holders have already been described in a former number of *The Companion*.

For the Companion.

"OUR DONATELLO."

No sculptor, save Michael Angelo, more potently influenced Florentine art and architecture than did Donatello. His name was Donato; but Donatello is the "love-word," the affectionate, friendly form, for Donato; and Donatello was what all Florence called Donato, and calls him to this day.

If you wonder why, the key is easily found in the sculptor's character. A glimpse or two at his life will reveal it. He was very ambitious when he was young, and eager to do good and great things. He had a friend—his most intimate friend—named Filippo Brunelleschi, the great architect. Filippo was ambitious also, but not in Donatello's outspoken, sincere way.

Both were very young when Donatello made a crucifix of which he was very proud. It stands now in the Church of Santa Croce. It was Donatello's first important work, and he was impatient to show it to his friend. He had spoken of it so lovingly that Brunelleschi expected great things of it; but when he stood before it, his lips curved in a curious smile and he said nothing.

Donatello, troubled by his silence, pressed him for an opinion.

"If you will have it," said Brunelleschi, "it is a peasant that you have hung upon the cross—a peasant, and not the Christ."

Donatello's quick, frank temper was roused, and he cried, "Perhaps it is not so easy as you think. You had best take a piece of wood and make one yourself."

Brunelleschi smiled again, and said nothing; but secretly he went to work on his own behalf. It took him several months to carry out his idea; and all this time he seemed busy about other matters, and said nothing.

At last his task was accomplished, and he asked Donatello to come and dine with him. On their way to Brunelleschi's room they went through the market, and bought their bread and fruit and eggs; and as Donatello wore an apron, he volunteered to carry in it these materials for their little feast.

When they reached the door, Brunelleschi said he had another errand to do, and sent Donatello in alone.

He opened the door, and there, in the still room, he saw Brunelleschi's crucifix. He was so seized upon by its perfection that he forgot what he carried, and threw up his hands in wonder. The contents of his apron fell upon the floor, and all the eggs were broken.

Brunelleschi came in, saw the wreck, and cried out, laughing, "How shall we dine when the eggs are broken?"

"Dine as you please," said Donatello, "if you want any dinner. I have had my share for this morning."

His love for what was noble conquered whatever of envy he may have had, and he said, humbly, "To you it has been given to make the Christ. I could only make the peasant."

After all, I think one would rather have been Donatello of these two.

He could be as enthusiastic about his own work, when it deserved it, as about that of another. He made a statue called the "Zuccone," for the decoration of Giotto's Campanile, and was so much pleased with it when it was finished that he struck it with his hand, and called on it to "Speak!"

His strongest oath thereafter was, "By my faith in my Zuccone!"

He never became rich, for he kept all his money in a basket, hung upon a beam in his workshop, and allowed his friends and workmen to help themselves, according to their needs, without rendering him any account. But he never suffered the pangs of want.

When he was growing old, Piero de Medici gave him a farm which brought him in a large revenue. Before a year was over, Donatello came to Piero begging him to take back his gift, for it was so much trouble to see to his workmen that he would rather die of hunger.

Piero laughed, and resumed possession of the farm, but gave the sculptor, instead, a pension, on which he lived comfortably and without care.

Death met him at last in the street, when he was on his way to take a look at his Zuccone, and led him in another direction. But he had lived already to be eighty.

He lives in Florentine hearts, still. Mothers point out his works to their little children, and say, "That was done by our Donatello!"

LOUISE CHANDLER MOULTON.

For the Companion.

A PERSEVERING TREE-PLANTER.

In Mr. E. A. Dix's interesting book on the Pyrenees, he tells of a very persevering intendant, or governor, of Bigorre and Béarn, Baron D'Etigny, who was especially devoted to the beautiful town of Luchon. Luchon, however, did not accept kindly the improvements which he designed for her benefit.

Having built many roads throughout the surrounding country, D'Etigny built still better ones for Luchon. He levelled the rough ground in the city, and proceeded to make greater innovations, opening three additional avenues, and planting them with quadruple ranges of trees.

This focussed the growing opposition. Every chair-carrier and pony-hirer in Luchon, together with every owner of the land condemned, spitefully resented the opening of the new routes. Combining with the neighboring mountaineers, they rose one night, and demolished all three of the avenues, and uprooted the young trees, leaving the ways strewn with debris and wholly impassable.

D'Etigny calmly built them up again, and with increased care.

They were demolished again.

Even the intendant's patience failed then. He built the roads a third time, but in addition to trees he studded them with troops.

They were not molested after that. Their enemies found they had a man against them who meant what he said, and was prepared to stand by it. Eventually they veered around even into respect. Luchon in the end grew to rejoice in her *allées* unreservedly.

They stand to this day, and D'Etigny's name is all but canonized under the lindens which once heard him vigorously cursed.

DISEASED PERCEPTIONS.

An American physician, eminent as a specialist in nervous diseases, has said that a certain kind of insanity is frequently preceded by what may be called a mania of the sense of smell.

The patient is tormented by certain imaginary odors, generally of a foul and offensive character. One man detected the scent of decaying bananas wherever he went; another was haunted by the odor of the small-pox ward of a hospital in which he had been a physician. A rose, the salt sea air, the most dainty and pure things all gave out to his diseased nerves only this sickly, poisonous odor.

The victims of this peculiar hallucination cannot be convinced that the offensive odor does not exist. They insist that it is there, but that the perceptive faculties of other men and women are too blunt to detect it.

There is another hallucination very like to this, and much more common and better known. It is that of certain well-meaning people who have a sleuth-hound scent for detecting bad motives and purposes in every human being whom they meet.

If their friend is gay and talkative, he is, in their opinion, shallow and frothy; if he is reticent, he is grim and morose. If he is cold in his manner, he is ungrateful, while if he professes friendship to them, he is false and tricky.

In the least action they find some sinister motive; the most honorable man is, to their keen sense, a rogue; the best woman is deceitful and not to be trusted.

Unfortunately, too, this diseased moral sense is contagious. One suspicious, uncharitable man or woman will taint a whole school or family, or even a church, with evil doubts.

Lunatics of the first class are much to be pitied; but surely it is better to go through life haunted by the smell of decaying bananas than by the imaginary presence of vice in the innocent people around us.

For all purposes of a pain-reliever, for both internal and external use, "*Brown's Household Panacea*" is highly recommended. Price, 25 cents. [Adv.

ECIFFO TRADE MARK is guaranteed to rid any building of Water Bugs and Roaches or money refunded. A fatal food, yet non-poisonous. Insist upon having it. Scores of testimonials. If your druggist or grocer does not keep it, send 60 cts. for pound package to **HOUGHTON & CO., 25 Hawley St., Boston.**

The EVERETT PIANO.

A good piano or a bad piano indicates in degree musical culture or lack of musical culture in its possessor. It costs more to make a good piano than it does to make a poor one. Please bear this in mind. This difference is principally in quality of material and labor.

If not for sale by your local dealer, address THE JOHN CHURCH CO., Cincinnati, Ohio.

"From Andante to Allegro," an illustrated pamphlet, will be sent free to any one who will mention where this advertisement was seen.

The above engraving was made by one of our pupils, who began the study recently, when 17 years old. It is all done by means of chemicals, the use of which, at home, any bright young person of either sex may learn from our illustrated book of instructions, and find a pleasant and remunerative employment, experts earning as high as $50 weekly, as explained in the book, sent on receipt of $1.20. Address the publisher, **T. W. MORRISON, 11 Somerset St., Plainfield, N. J. Lock Box I.**

WOULD YOU LIKE TO HAVE A NEW DRESS FOR NOTHING

READ THIS

Every lady reader of THE YOUTH'S COMPANION can have twelve (12) yards of seasonable Dress material delivered to her address free of all charge, on the conditions mentioned below.

McCall & Co publish, monthly, THE BAZAR JOURNAL and MOTHER'S ASSISTANT, the largest and best fashion and domestic magazine in the United States. This publication should be in every family. We have determined to adopt extraordinary means to introduce it into your home. If you will subscribe for the BAZAR JOURNAL and MOTHER'S ASSISTANT now, or not later than July 1st, (sending us $2.25 for one year's subscription) we will send you, free of all cost, the 12 yards of very desirable material for a dress and any one of our patterns you may select to make it up with.

HOW CAN WE AFFORD TO DO THIS?

If we secure you as a subscriber for our magazine, you will, we know, continue to be a subscriber, year after year, and if we get you to try our patterns once, we are sure you will always use them. By giving you a dress for nothing we tempt you to subscribe for the magazine and, by giving you a pattern free of charge, we get you to test it. Send at once for THE BAZAR JOURNAL and MOTHER'S ASSISTANT, with the dress premium, to

Jas. McCall & Co. (manufacturers of McCall's BAZAR Patterns) 46 East 14th St. New York.

SAMPLE COPY OF THE BAZAR JOURNAL and MOTHER'S ASSISTANT MAILED FOR 25 CENTS.

VASELINE

For **ONE DOLLAR** sent us by mail we will deliver, free of all charges, to any person in the United States all the following articles, carefully packed in a neat box:

One two-ounce bottle Pure Vaseline,	10cts.
One two-ounce bottle of White Vaseline,	25 "
One two-ounce bottle Vaseline Pomade,	15 "
One jar of Vaseline Cold Cream,	15 "
One cake of Vaseline Camphor Ice,	10 "
One cake of Vaseline Soap, scented,	25 "
One cake of Vaseline Soap, unscented,	10 "

Or any single article at the price named for it. **$1.10.**

If you have occasion to use **Vaseline** in any form, be careful to accept only genuine goods put up by us in original packages. A great many druggists are trying to persuade buyers to take **Vaseline** put up by them. Never yield to such persuasion, as the article is an *imitation without value*, and will not give you the result you expect. A bottle of Blue Seal **Vaseline** is sold by all druggists at **ten cents.**

THE POWDER-MONKEY.

By Rear Admiral S. B. Luce, U. S. N.

The word *monkey* is a diminutive often attached by sailors to another word to denote a smaller object of the same kind. Thus we have *monkey-jacket*, a short pea-jacket; *monkey-yard*, a small yard with the sail bent, crossed on one of the masts a few feet above the deck, for the exercise and instruction of boys; *monkey-reef*, a short extra reef formerly put in topsails and shaken out in a free wind. A *monkey-tail* was a short iron bar used in training a carronade, and so on.

So the smallest and youngest member of a gun's crew was assigned to the duty of bringing the charges of powder from the magazine to the gun, and was sometimes called a powder-monkey, but more generally a powder-boy.

Readers of Scott's novels may remember that, in "Guy Mannering," the young hero, who was proclaimed by Meg Merrilies, the gypsy-queen, at the Kairn o' Derncleugh, as Henry Bertram of Ellangowan, had been sent in his early youth, by a wicked relative, as "a cabin-boy, or powder-monkey, on board an armed sloop or yacht belonging to the Revenue."

This is one of the very few instances, it is believed, where the expression appears in a printed narrative.

Farragut as a Powder-Boy.

It is interesting to know that Admiral Farragut was once an amateur powder-boy. When a little less than thirteen years of age he served under Commodore Porter, on board the United States frigate *Essex*, in her memorable fight with the English frigate *Phœbe* and the sloop-of-war *Cherub*, off Valparaiso, in 1814.

He tells his own story with characteristic simplicity. "During the action," he says, "I was like Paddy in the catharpings, 'a man on occasions.' I performed the duties of captain's aid, quarter-gunner, powder-boy, and, in fact, did everything that was required of me."

He then goes on to describe the "horrid impression" made upon him by the sight of the first man he had ever seen killed, and continues: "Soon after this some gun-primers were wanted and I was sent after them. On going below, the captain of the gun opposite the hatchway was struck by an eighteen-pound shot, and fell back on me. We tumbled down the hatchway together. I lay some moments stunned by the blow, but soon recovered consciousness enough to rush up on deck. The captain, on learning that I was not wounded, said, 'Where are the primers?' This first brought me to my senses, and I ran below again and carried the primers on deck.

"When my services were not required for other purposes, I assisted in working a gun; would run and bring powder from the boys, and send them back for more, until the captain wanted me to carry a message, and this continued to employ me during the action."

Equally interesting is it to know that one of our most eminent journalists and men of letters served as a powder-boy on board a line-of-battle ship for a full cruise of three years. During that time he circumnavigated the globe. His ship, one of our staunch old "seventy-fours," after rounding the Cape of Good Hope, touched at Java, lay some time in Canton River, passed thence through the Yellow Sea and visited Yedo Bay, Japan, thus antedating the arrival of Commodore Perry by about seven years. At the Sandwich Islands he enjoyed the experience of seeing "two Sundays come together," and finally reached the coasts of California in time to take part in the Mexican War.

The Powder-Boy's Duties.

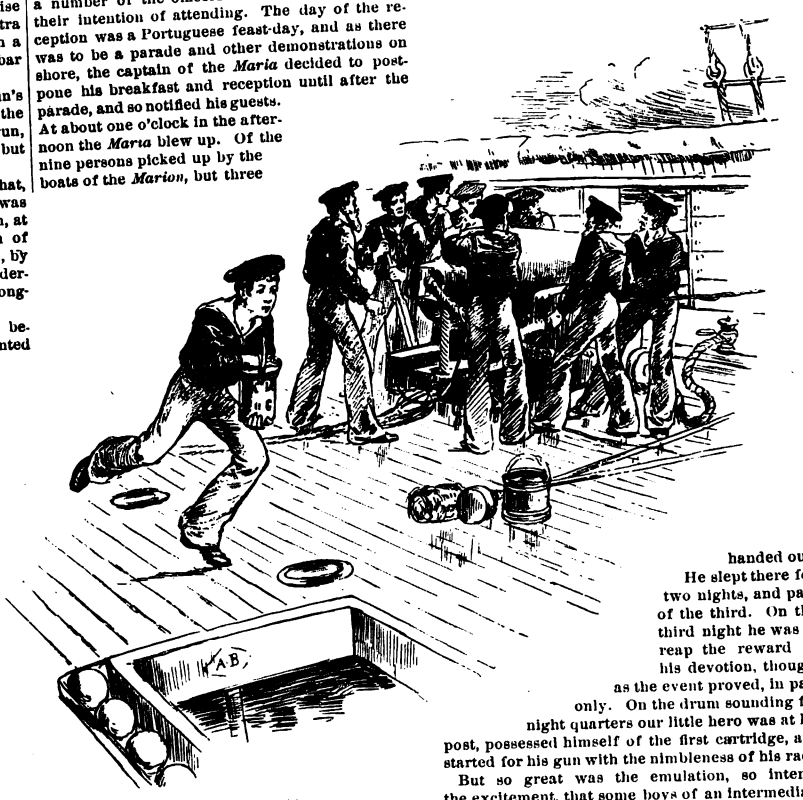
The part of a powder-boy, though somewhat subordinate, requires activity and judgment; for while he must keep his gun so well supplied with powder as not to lessen the rapidity of fire, he must not allow the cartridges to accumulate on deck, lest an explosion take place and cause more destruction than the fire of the enemy.

In the desperate encounter between the *Bon Homme Richard* and the English frigate *Serapis*, an accident took place from that cause on board the *Serapis*.

The powder-boy must exercise great care also, to prevent sparks or fragments of burning cartridges from getting into his passing-box—the leather box in which the cartridge is carried. As a precaution, the passing-box on being presented for a fresh cartridge, must be carefully shaken over a tub of water, to empty it of anything that might communicate fire.

An explosion at the magazine passage would be likely to communicate to the magazine itself, and blow up the ship.

History furnishes a number of instances of ships blowing up in battle. The case of the *L'Orient*, the flag-ship of the French fleet at the battle of the Nile, which took fire and subsequently blew up, gave rise to Mrs. Hemans's beautiful poem, "Casabianca." No doubt young Casablanca acted very much as young Farragut did, and contributed his full share to the fight, according to his years.



In the same way the *Congress*, frigate, blew up at Newport News, Virginia, in 1862. And was not that powder-boy a hero who brought up the last cartridge that enabled the *Cumberland* to fire a parting shot as she sank beneath the waves?

The magazine from which the powder-boy draws his supplies is always a source of danger. History records a number of instances of ships being blown up while lying quietly at anchor in a friendly port. Among the most noteworthy cases may be mentioned that of the English frigate *Amphion*, Captain Pellew. The ship was lying in Hamoaze, Plymouth, England, in 1796, the crew being employed in overhauling and refitting the rigging.

Captain Pellew was drinking a glass of wine with a friend in the cabin, when suddenly, without the slightest warning, the ship blew up with a terrific explosion, killing and wounding many of her people.

About the year 1850 the United States ship *Marion* and the Portugese "jackass frigate" *Donna Maria Segunda* were lying at anchor quite near each other, in the Typa anchorage, near Macao, China. As the *Donna Maria* was about to sail for home, the captain had sent out invitations to a breakfast, to be followed by a reception, and a number of the officers of the *Marion* signified their intention of attending. The day of the reception was a Portuguese feast-day, and as there was to be a parade and other demonstrations on shore, the captain of the *Maria* decided to postpone his breakfast and reception until after the parade, and so notified his guests.

At about one o'clock in the afternoon the *Maria* blew up. Of the nine persons picked up by the boats of the *Marion*, but three survived. It is estimated that, including visitors, bumboat women and trades-people, together with the ship's company, fully three hundred people must have perished by the explosion. Owing to the postponement of the hour none of the American officers were on board. It is supposed that the firing of the magazine was due to the deliberate act of the gunner, who sought that means of revenge for the ill-treatment he had received the day before, at the hands of the captain.

Carrying a Cartridge.

In 1829 the United States steam-frigate *Fulton*, since known as the *Fulton the First*, while in service as receiving-ship at the Navy Yard, New York, blew up, killing Lieutenant Breckenridge and forty-seven others, and wounding as many more. She had been built in 1814 under the immediate supervision of Robert Fulton, and was the first coast-defence vessel ever constructed in this country.

But, as the French say, let us return to our mutton, or rather, our monkey.

Quick Work at a Gun.

The experiment has been made of stationing crews of boys at the great guns of a vessel of war, to ascertain how far, by careful training, they could be brought up to a high state of efficiency. The results were very satisfactory.

The pieces to be handled were the Dahlgren smooth-bore, nine-inch gun, weighing in round numbers nine thousand pounds. The iron carriage weighed twelve hundred pounds, the cartridge thirteen, and the loaded shell seventy-three pounds, making a total weight of the gun to be run out to battery—not counting metal sights, and side tackle blocks—more than ten thousand pounds. Each of the sixteen boys who form the crew of a nine-inch gun had six hundred and forty-two pounds to handle. This estimate does not include the powder-boy himself.

After a few months' instruction at the battery a series of competitive exercises was instituted, and the result demonstrates the potency of drill. The first day of the series, the ship being at sea, and the battery properly secured for heavy weather, on the drum beating to general quarters a nine-inch gun was cast loose, run in, loaded, run out and fired in one minute and thirty-seven seconds.

On the day following, for a test of accuracy combined with rapidity of fire, a nine-inch gun was fired four times at a regulation target. The time of the first fire being recorded, the gun was loaded and fired three more times and the time called at the fourth fire, the interval being one minute and forty-eight seconds.

The first shot struck, and completely demolished the target, distant from eight hundred to one thousand yards. The remaining three shots were fired without much regard to accuracy.

On the third day of the series, the guns being secured for sea, the ship's company, without previous warning, was called to quarters a little after midnight, when a nine-inch gun—handled, as in the previous cases, entirely by boys—was cast loose, run in, loaded, run out, and fired (the shell exploding) in two minutes and eight seconds, counting from the first tap of the drum.

Now, the statement that the call to quarters was "without previous warning," must be taken with some qualification. The crew knew that "night quarters" was one of the exercises belonging to the series; but no one, save the commanding officer, knew what night, or at what hour of the night, the summons would come.

Every one was on the *qui vive*, of course. Moreover, the powder-boys knew that success in the competition depended in a great measure on the prompt supply of powder. This idea was so fully impressed on the mind of one powder-monkey, as we shall call him, that when it was his watch below, instead of repairing to his hammock, as any well-ordered powder-monkey would or should do, he preferred rather to pick out a soft plank, on the lower deck, near the entrance to the magazine passage, so that, when the hour of trial came, he would be on hand to receive the cartridge first handed out.

He slept there for two nights, and part of the third. On the third night he was to reap the reward of his devotion, though, as the event proved, in part only. On the drum sounding for night quarters our little hero was at his post, possessed himself of the first cartridge, and started for his gun with the nimbleness of his race.

But so great was the emulation, so intense the excitement, that some boys of an intermediate crew, their spirit of rivalry quite overcoming their sense of justice, caught the poor little fellow "on fly," as it were, "downed" him, took the cartridge from his box, passed it to the loader of their own gun and thus won the prize.

From "Monkey" to "Donkey."

But to quote Sir Walter Scott once more:

> "Old times have changed, old manners gone,
> A stranger fills the Stewart's throne."

The sportive monkey is giving way to the demure "donkey."

When the young laird of Ellangowan served as a powder-monkey, the charges of powder weighed not more than from four to six pounds, and the powder itself, tied up in a woollen bag, looked like coarse black sand. With an increase in the size of the gun came an increase in the weight of the projectile, and a demand for an increase, not only in the quantity but in the energy of the powder.

If to this be added the change in the method of loading a gun, by inserting the charge in the breech, instead of at the muzzle, as formerly, it will be seen how greatly the conditions have been altered, and how necessary to employ new agents to meet those changes.

For example, in the account of the recent accident on board the French battle-ship, the *Admiral Duperré*, due to the bursting of one of her guns, being a calibre of thirteen and four-tenths inches, we read that the projectile weighed seven hundred and twenty-six pounds, while the charge of powder weighed two hundred and fifty-eight pounds. The powder was of the description known as "cocoa," a brown prismatic powder of hexagonal prisms. Prepared for use, it is placed in a long metal case, the handling of which would be rather too much even for such an one as the late "Mr. Crowley" himself.

To work guns of large calibre, therefore, and to supply them with ammunition, machinery must be resorted to. To run the machinery there must be steam, and to generate steam for minor purposes a donkey-boiler is used. Hence the transformation.

The prefix "donkey" is applied to a small engine also, in common use on board ship: so called, probably, because it does a great deal of honest work with very little pretension. What more natural then, that, as a labor-saving machine, the donkey should be employed to hoist ammunition from the magazine to the guns, and thus supplant the monkey?

The charge of powder of the eight-inch breech-loading rifles of the *Boston* and the *Atlanta* weighs one hundred and twenty-five pounds. The charge of the ten-inch guns of the battle-ships is to be two hundred and fifty pounds, while that of the twelve-inch guns of the *Texas* will be four hundred and twenty-five pounds.

Verily, to pass such a charge of powder by the old plan would require a "wilderness of monkeys" of the powder variety. When the distance is inconsiderable, these heavy charges are "whipped up," that is to say, they are hoisted from one deck to another by means of a small purchase or tackle called a whip.

So between the *whip* and the *donkey* good-by to the *monkey*.

For the Companion.

PHEBE AND THE PHRENOLOGIST.

The store windows in Birchville were gay with posters. They were not in the least like those which announced the coming of a circus, and the oldest inhabitant could not remember to have seen anything of their sort before.

At the top was the picture of a human head with a mild but animated countenance. Here, however, its resemblance to the ordinary head ceased; for the crown, instead of being adorned with anything suggesting hair, was platted off into small sections, labelled "Veneration," "Approbation," "Acquisitiveness," and the like.

Below this enigmatical wood-cut was the announcement, in very black letters, that "J. Manville Herring, the greatest living phrenologist," had arrived in Birchville, and was prepared to disclose to each citizen, by cranial examination, his or her exact character. The importance of the examination was set forth more fully in smaller handbills, headed "Know Thyself," which were sprinkled plentifully about in door-yards.

Great was the sensation that followed. "The new science," as the posters called it, was discussed by the loiterers at the post-office, and by the ladies at the sewing society.

But it was among the pupils at the Birchville Academy that it gained most credence. It seemed to their youthful minds quite within reason that science, which has discovered so much, should have devised this time-saving method of reading human character, once for all.

There was not one who took the matter quite so much to heart as Phebe Graham. Her own eager, faulty little self had always been a most interesting subject to Phebe, and she longed inexpressibly to know what the phrenologist would say about her.

Moreover, Phebe had ambitions. In her secret heart she cherished a dream of doing something else than housework when she was a woman; but it was a dream in which no one encouraged her.

It seemed to Phebe not impossible that this acute phrenologist, if he had the opportunity, might make some suggestions as to the true bent of her talents which would open her Aunt Eunice's eyes, and make that good woman a little less irritable if she found her niece scribbling away in the corner of the garret when she might have been darning stockings.

Phebe thought the matter over, as she took the long walk home from school one night, and arranged a little plea by which she hoped to win her aunt's consent.

After supper, as she stood at the sink wiping dishes, she remarked, in quite a casual manner, "Do you know, Aunt Eunice, there are ever so many people going to that phrenologist, and they say it's perfectly wonderful the way he tells them all about themselves!"

"H'm!" said Aunt Eunice. "'A fool and his money are soon parted.'"

Phebe flushed a little. "I don't see what there is foolish about it," she said. "Everything he tells them is true. It seems as if he could look right into people's minds. It's just as if he'd known them all their lives."

"I don't believe a word on't," said Aunt Eunice, scraping fiercely at the spider she was washing. "It don't stand to reason that a perfect stranger can come up to you, and just by feeling round on the top of your head tell all about you. The Lord didn't make folks to be found out that way."

"Well, but, Aunt Eunice," said Phebe, a little vexed, "I should think people who have been to him ought to know, and they say he tells perfectly. Bert Fry had an examination, and his mother owned up that she couldn't have told as much about him as the phrenologist did."

"H'm!" said Aunt Eunice, again. "Well, I never did think Mrs. Fry had much sense about that boy."

After a moment she demanded sharply, "And what good would it do if he could tell folks all about themselves? They ought to know their own faults already, and the less said to 'em about their good points the better. I tell you, Phebe, I haint a mite of patience with it."

"But, Aunt Eunice," protested Phebe, "he tells people more than just their faults and virtues. He shows them what kind of work they are best fitted to do. There are thousands who fail in life just because they try to do things they were never designed for."

Aunt Eunice did not answer, and Phebe went on. "Mr. Herring says that is why there are so many unsuccessful people in every kind of business, and that what folks need more than anything else is to have somebody put them on the right track while they are young."

Phebe had revolved this little speech on her way home, and felt that she had made a strong point; but Aunt Eunice shook her head inexorably.

"I guess if folks do their duty according to the light they've got, and mind the leadings of Providence, the Lord'll give 'em the kind of work He wants to have 'em do. Of course if a body haint got any heart for a thing, he hadn't ought to go into it; but if he has, and takes right hold the best he knows, there aint any need of his making a failure."

She paused for a moment, and then gave the subject a practical turn for which her niece was quite unprepared. "I'll tell you one thing, Phebe Graham, if you don't learn to put your mind on your work and stop dreaming over it, you'll never amount to anything. Here you've been wipin' on that nappy for the last five minutes and you haint got it smooth an' shiny neither. Put it back in the pan and give it another rensing."

Digitized by Google

Phebe obeyed with a dejected expression. It was clear that with Aunt Eunice's consent she would never enjoy a phrenological examination. For a moment the good woman, who had stood to her in the relation of a mother ever since she could remember, seemed to her a sort of dragon, keeping her back from the tree of knowledge.

She wiped the rest of the dishes in silence, and then stole out to the barn to confer with Ted.

Ted was her brother, a year or two older than herself, and though Phebe sometimes considered him the greatest trial of her life on account of his propensity to tease, she could not help appealing to him for sympathy at a time like this.

He was giving the cattle their last feed for the night, whistling cheerfully as he went from stall to stall.

Phebe watched him for a few minutes in melancholy silence. Then she burst out, "O Ted, I do wish Aunt Eunice wasn't so set against my having a phrenological examination!"

"What do you want of one anyway?" asked Ted, bluntly. "I wouldn't give the fellow a wisp of hay for all he could tell about me."

"Why, Ted," said Phebe, "can't you see that it might be worth something to you if a person should point out your strong qualities, and show you what you could make of yourself if you tried?"

"I know what I mean to make of myself," said Ted, sturdily, "and I wouldn't thank any stranger for putting in his advice."

Phebe made a gesture of despair. "Well, Ted," she said, rather bitterly, "everybody doesn't feel as certain as you do, and some people—have aspirations."

The last clause was unlucky. Ted's eyes gleamed with sudden mischief.

"Yes," he admitted with a reflective nod, "some people aspire to write poetry and keep their diaries in rhyme for weeks at a time. I tell you, Phebe, it's a clear case what a body's cut out for when they can make up such verses as —"

"Ted!" shrieked Phebe, putting both hands over her ears.

But Ted was not to be headed off. He went on without mercy:

"'To-day, alas, that cruel Ted
Killed a poor blue jay,
Dead, dead, dead!'"

Even with her ears closed Phebe knew perfectly what he was saying.

"Ted Graham, you're real mean!" she cried, her eyes flashing. "You know you stole my diary and read it when you had no right to. Besides, that was the worst rhyme in it. That's why you always torment me with it."

She fled from the barn back to the house, resolving not to say another word on the subject to her unfeeling relatives.

But the next day put a different phase upon the matter. There was news at school that J. Manville Herring was to give a free lecture at the town hall the following evening. The citizens of Birchville, one and all, were invited to attend.

Phebe's hopes revived. Perhaps Aunt Eunice could be induced to go, and the strong arguments which the phrenologist would surely put forth in behalf of his science might have a convincing effect.

But Aunt Eunice could not be induced to go. She declined to be enlightened on a subject for which she declared that she cared no more than for the man in the moon. However, she consented that Phebe should hear the lecture, and, as Ted showed no very lively desire to accompany her, suggested that the girl should spend the night in town with her friend May Allen.

Phebe wore her best dress to school the next morning, and through the day could scarcely study for thinking of the great event of the evening.

Long before it was time for the lecture to begin, she and May, with Lu Brown, another special friend, were in the hall, seated well to the front, where they could be sure to see and hear everything.

The small room filled rapidly, and when, at eight o'clock, the lecturer stepped upon the platform, it was a good audience which gave him greeting.

He was well provided with charts and diagrams, and the manner in which he demonstrated his theory seemed to Phebe, at least, in the highest degree convincing.

After an hour of fluent discourse the lecturer paused and said:

"Now, my friends, to test the truth of what I have been saying and my own power as a teacher of this great science, I propose that some of you come forward and take a phrenological examination. I shall be most happy to give it to you free of charge."

There was a minute of silence. Then a foolish titter ran around the room, but no one started.

"Don't be backward," said the orator, encouragingly. "I assure you it is not a painful ordeal."

Still no one started. The phrenologist sent a keen glance around the room, and his eyes fell upon the three girls seated in the front row.

"My young friends," he said, bending towards them with a persuasive smile, "will you do me the favor to step forward to the platform? I am sure there can be no better subjects in this room than yourselves."

The girls looked at each other with startled faces, and Phebe's grew for an instant decidedly pale.

The lecturer saw the hesitation, and went on more coaxingly than before:

"Of course I should not have time to read your characters in detail, but I could outline, in a general way, your special gifts. You are young and hopeful. It might be of lasting service to you."

Phebe's heart began to flutter. She had not a doubt that he was right in the last suggestion. Still it was not she who made the first move forward. Lu Brown put up her hand and began to whisper.

"Come on, girls," she said, her black eyes dancing. "Let's all go up together. He won't dare to say anything bad about us, and 'twould be lots of fun."

Lu had always been a leader among her mates. She liked to do striking things. When she rose and gave a determined little pull at May's sleeve, May started, and Phebe, gasping a little, followed.

"I thank you, young ladies," said the phrenologist, impressively.

He set three chairs for them on the platform, and invited them to take off their hats quite as if he were receiving them into his parlor. The girls did as requested, and sat blushing like three peonies.

Phebe, for her part, felt very foolish. She had a distinct impression that it was not a nice thing to do, this going forward to be talked about in the presence of others, and she was glad Ted and Aunt Eunice were not there.

The examination began with Lu, and whether the phrenologist read it in the conformation of her brain, or drew his conclusions from the very poise of her head and the expression of her bright, fun-loving eyes, he quickly credited her with the energetic and venturesome qualities which her schoolmates knew so well.

Pretty, gentle May came next, and certainly he did not miss the mark when he spoke of her generous disposition and good-natured fondness for pleasing everybody. He even dwelt a little on her excellence as a scholar, which made Phebe open her eyes and wonder what he would say about her. She had always had to help May with her grammar lessons and with the greater part of her essays.

Poor Phebe! she was destined not to hear anything from the phrenologist on that point. Perhaps, having bestowed so much praise on the others, he felt that it would be well to make a little variation in her case.

Perhaps, as she afterwards reflected, her style of wearing her hair gave him a better chance to discover her cranial defects. It was not crimped or coiled like the others, but drawn straight back from her forehead, and cut off just below the tips of her ears, in the manner which Aunt Eunice considered most appropriate for a girl of fifteen.

The phrenologist felt her brown head solemnly. Then he cleared his voice and began in an impressive manner:

"Order is Heaven's first law, but it is evidently not the first law of the young person on whose head my hand is now resting."

Phebe felt herself flush to the very roots of her hair. It was true enough that order was not one of her strong points. To have a place for everything and keep everything in its place, was, in her opinion, the hardest commandment which had ever been added to the decalogue, and was the one in which she most constantly failed.

After dwelling at some length on the importance of order, the phrenologist proceeded to point out a graver fault.

"It is a common error among young people," he remarked, "to be somewhat too fond of their own sweet wills. In the case of our young friend, that fondness would seem to be peculiarly strong; and I should be unworthy of my profession," he continued, with a firm, but fatherly accent, "if I did not warn her against the danger of following too obstinately her own inclinations, instead of accepting the judgment of those who are older and wiser."

The fire in Phebe's cheeks burned ten times hotter than before. It seemed to her that the worst must be said of her now, but the examiner had still another point to make.

"A strong will and an impetuous temper do not always go together," he continued, "but in this subject we find both combined, each in a marked degree. I do not find here the evidence of a disposition which cherishes resentment, but our young friend is liable to hot and hasty outbursts of temper, in the course of which she is likely to say things which she has cause to repent of at her leisure."

Phebe writhed in her chair. She bit her lips and clenched her small hands desperately.

From the time of stepping upon the platform she had not been able to lift her eyes. Something at this instant seemed compelling her to do so. She looked across the audience, and there, at the back of the hall, leaning easily against the door, stood Ted Graham!

She remembered now that she had heard the door open just as the phrenologist began to talk about her. No doubt her brother had entered then, and had heard every word.

Phebe started up and walked straight down the aisle, amid a profound silence, her gray eyes looking almost black, and a little red spot burning fiercely on each cheek.

"Ted," she whispered, as she came up to him, "let's go home!"

Ted nodded, and they passed out of the door together.

"What in the world did you come for?" she demanded, when it had closed behind them.

"To hear the nice things that were being said about you, of course," gurgled Ted, who seemed to be undergoing some kind of inward convulsion. Then, straightening himself, he managed to say more soberly, "Why, you see Aunt Persis and the children came over from Goodrich this afternoon, and we thought you'd better come home."

"Well, I'm glad of it," said Phebe. "I wouldn't stay with May now for anything."

When they were seated in the wagon she asked piteously, "Ted, are you going to tell every word of this as soon as you get home?"

"Not if you don't want me to," said Ted, generously. "But I say, Phebe, what made you go up? I could have told you all that, and so could Aunt Eunice."

Phebe groaned.

"Oh, it was dreadful to go up there! I know it; but I had no idea he'd go into things the way he did. What he said about the others was real nice," she added, bitterly.

"He didn't have time to get to your good points. Perhaps if you had stayed he might have brought in something about the poetry," said Ted.

Phebe was afraid he was going to recite that rhyme again, but he refrained, and on the whole she felt that his behavior was very good.

He kept his promise and said not a word of the affair to Aunt Eunice, but he reserved the right to make a private allusion to it himself now and then.

If his sister appeared with a hole in her glove he was apt to remark, in an oracular manner, "Order is Heaven's first law," and the glove was sure to be mended. If she showed signs of a gathering temper, he was certain to draw down his face, extend his hand, and observe solemnly, "Our young friend is liable —," at which point Phebe usually bit her lip and kept silence.

Really, though not in the way she expected, perhaps the queer little phrenological examination was not without its benefits.

CHARLOTTE M. VAILE.

For the Companion.

TRAPPERS AND HUNTERS OF THE INSECT WORLD.

II.—The Purseweb Spider's Trap.

A few years ago I spent an April in Florida, and my hap was to fall upon "Fairyland," a plantation at the southern end of Merrit's Island, on the Indian River. While wandering through the palmetto grove of my host, keeping a sharp lookout for the living creatures that inhabit the woods, I noticed many ribbon-like strips of soiled silk hung against the trunks of trees close to the ground. In fact, they penetrated the surface.

These were the nesting-tubes and snares of a species of spider long known as the black Atypus, but whose proper scientific name is *Atypus abbotii*, and its popular name the Purseweb Spider.

In visiting Florida I had hoped to determine the life behavior of this animal, of whose habits I knew something in a general way. Here was my chance! Everywhere in the beautiful park and surrounding groves and jungles I found its tubular structures.

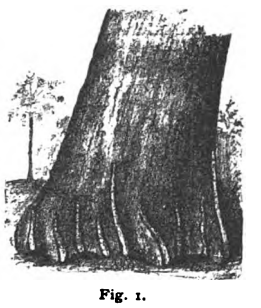


Fig. 1.

Here, against this palmetto tree, I count thirteen tubes. (Fig. 1.) Some are large, some are small. The large are half an inch to three-fourths of an inch in diameter, and eight or ten inches high; the small a few inches long, and not much thicker than pipe-stems.

This is a colony of Pursewebs, young and old, all having found support for their tubes upon one trunk. Almost every sapling that I examined had a similar tube attached to it, the longest that I have seen being fully a foot in length.

The first thing that attracts one's attention is that these tubes are almost the color of the tree from which they hang. They are attached at the top and at several other points by clusters of silken threads that show distinctly against the bark, being of a steel-blue color; but all the rest of the tube is so much the tint of the tree that the careless passer-by would be apt to overlook them, or at least to think them nothing more than stems of decayed plants.

This appearance is not the result simply of the ageing or weathering of the web. The spider has assisted the work of the elements, for the tube, from the very top to its entrance into the ground, has been carefully covered with particles of sand and bits of vegetable mold and sawdust, brought from the ground beneath, or scraped from the outer surface of the bark.

Evidently, the intention of the builder of this snare is to disguise its appearance. What can be its motive for doing this? We shall see presently.

Meanwhile, let us follow this tube along the base of the trunk to its terminus in the ground. We dig away the sand, which is thickly mingled with brown, decaying vegetable mold, and find that the web runs downward into the ground for a distance about equal to its length above the surface, but generally a little less. (Fig. 2.) Sometimes one finds a short branch running out to this side or that into the adjoining sand, and often a rounded cell or den at the end of the underground tube. Within this den one will be pretty sure to find the occupant of the snare, if he has not bit upon it before. (Fig. 3.)

It is an odd-looking creature, as it lies bunched up in one's hand. It has a broad chest or cephalothorax, widest at the head, two black, curving mandibles or fangs, eight black legs, rather short and stout, with whitish rings marking the joints of the limbs, a plump abdomen covered with black, furry hairs, and having at the tip four pairs of spinnerets, of which the upper ones are twice as long as the others, and jointed like the legs.

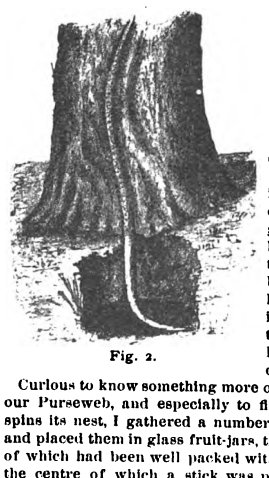

Fig. 2.

This is the Purseweb Spider of Florida. It is half an inch in length or more, if full grown, and of less size down to the little baby spiderling that lives in a tube no thicker than a knitting needle.

Curious to know something more of the habits of our Purseweb, and especially to find out how it spins its nest, I gathered a number of specimens and placed them in glass fruit-jars, the lower parts of which had been well packed with sand, and in the centre of which a stick was placed. It was thus intended to give the animal an environment as nearly like its natural habitat as possible.

For a while the captive spiders did nothing to satisfy my curiosity. They lounged around their artificial home, and sunned themselves upon the surface of the sand. But at last I caught one of them at work, and solved the problem that had vexed my curiosity. I discovered how the Purseweb Spider builds its tube.

Fig. 3.

First she stretched a series of silk lines against the lower part of the stick, fastened at one end to the soil in a half circle, set a short distance from the point where the stick entered the sand. The other ends were carried about an inch and a quarter upward and attached in a like circle to the bark of the twig.

These threads, to use a familiar illustration, looked like a lot of straight bean-poles leaned up against the trunk of a tree, their tips touching the bark and their butts placed in a circle upon the earth. (Fig. 4.)

These lines were the framework of a tube. The spider next placed herself inside the frame, grasped several threads with her feet, threw her body upward, and set her little spinning factory working.

Thick filaments of white silk rapidly issued from the spinning tubes, and as her body moved down and up, down and up, this spinning stuff was beaten against the lines, to which it readily adhered. Then the spider ceased her spinning for a moment, and, moving her long-jointed spinners back and forward over the material already spun, she plastered it down and smoothed it over, much after the manner of a mason who is plastering mortar against the lathing of a wall.

One little patch being thus finished, the weaver moved to an adjacent point and repeated the process already described, until at last she had encompassed the whole inner surface and covered herself from view. (Fig. 5.) A similar stretch of silk was plastered against the stick, which united with the part woven against the framework lines, and completed the tubular snare.

Now I possessed the secret of the spider's handicraft, and it was not long before I was able to determine that the tube is gradually carried up the tree by simply repeating the process already described. That is to say, the tube is built in sections and carried up story after story, until it has reached a height which quite satisfies the ambition of the cunning architect.

I cannot affirm that this is the only mode of construction, but that it represents the ordinary manner I have no reason to doubt. It certainly shows an admirable method of work.

One would think that our Purseweb Spider would be quite satisfied with such a structure; but no! there is something more to be done. The tube is entirely too white, and perhaps much too sticky by reason of the silken material of which it is composed, to suit the purposes of the architect. She therefore descends to the earth, gathers a pellet of sand within her jaws, remounts her tube and deliberately proceeds to daub the outer surface with the sand. This process is continued until the exterior of the tube is sanded over.

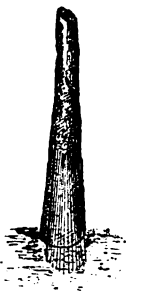

Fig. 4.

Thus it seems probable that the peculiar appearance of the webs is not accidental, but results from a deliberate purpose. As the sand in the groves and woods is mixed so thoroughly with brown mold of decayed leaves, the white appearance of the silk is soon destroyed, and the tube, as it hangs against the tree, has the color of the trunk which supports it.

If one cuts the tube open, however, he finds that the inside is kept scrupulously smooth and clean.

Having thus studied the character of the snare and its method of construction, and determined the fact that it is deliberately disguised by being daubed with sand or forest mold, we may ask, What are the uses of this snare, and the purpose of this "mimicry?" Why should the spider wish to make her tube look like the tree on which it is supported?

If we have patience to sit in the woods and watch during the day, and perhaps also throughout the night, we may find an answer. The trunk of a tree is a favorite gangway for insects. All sorts of flies, beetles, and ants are in the habit of passing to and fro upon it in search of food or resting-places.

One may sometimes see a column of ants streaming up a tree, and, close by, a similar column streaming down and straggling away into the woods.

These are foragers who have been to the outmost branches for honeydew, perhaps, and who, having filled themselves with the delicious store, are on their way home to feed the workers, antlings, winged sexes and larvæ.

From such insect travellers the Atypus secures her prey. See that insect slowly climbing the tree. It straggles, at last, towards the point where the Purseweb snare hangs.

The web lies almost flat against the bark and looks so much like it, and feels so much like it to the delicate touch of the insect, that it is no wonder it does not suspect it to be the fatal trap of its hereditary foe.

But the spider is well aware of the matter. She is lurking inside her tube with her back against the tree and her legs outspread, lying as motionless and seemingly dead as the bark alongside her tube.

The unwary insect has reached that part of the snare just over the spider. Swift as death the eight claws close in, swinging the folds of the tube

Digitized by Google

around the victim, while with equal rapidity the sharp fangs, and perhaps also the claws, cut from the inside a slit into the snare, through which the jaws are thrust and the insect seized.

The prey is secured, and through the opening thus made is dragged into the tube. When the victim is devoured, the spider proceeds to close the rent it has made, plastering it over with silk and carefully covering with sand the new material used for this purpose, so that it may look like the rest of the snare.

An English observer, Mr. Enoch, has fully described this method of trapping insects as practised by an English Atypus (*A. piceus*), closely related to our Florida Atypus.

This species makes a burrow in the ground, and an external tube precisely like that of our Florida Purseweb; but instead of carrying it along a tree and attaching it perpendicularly to the same, it bends the tube, just after it leaves the burrow, and supports it upon the surface of the ground or tufts of moss, grass or other vegetation growing on the surface. (Fig. 6.)

Fig. 5.

An American observer, Mr. Poteat, has recently seen a similar mode of trapping prey practised by our Purseweb Spider in North Carolina. When an insect alights upon the tube, the spider is advised of the fact by the agitation of the web, and stealthily creeps up to it. Then she flings the folds of her tube around the hapless victim, slits the snare and drags her prey inside.

A French savant, M. Eugene Simon, says he has often taken the European Atypus while holding earthworms within its mandibles, and he believes that these creatures form much of the spider's nourishment, thus dispensing with the need to mount to the surface for prey.

This seems to me a curious fact, indeed; and it raises the suggestion, May not the burrow of the Atypus and other spiders of the Trap-door family be made, in part at least, with the intention of capturing other burrowing animals?

We know that earthworms are restless creatures, moving to and fro in the ground, and edging their way upward to the surface. There they leave those little mud-towers or "casts," as they are called, which one may see in great numbers on a spring morning, and which form the subject of the last book written by the distinguished naturalist, Charles Darwin.

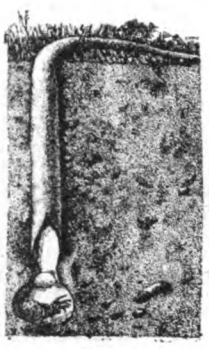

Fig. 6.

Of course one cannot think of the Atypus travelling outside the limits of her den to hunt worms; but we may imagine the worms thrusting themselves unexpectedly into the den of the Atypus. What must they think, when, after pushing their gimlet-like noses through the slight silken lining, they find themselves suddenly within such strange quarters? Not much time can be given them for thinking, however, for if M. Simon's theory is true, the lurking Atypus suddenly pounces upon the intruding worm, snaps off a part of the head and body, and retires to enjoy the luscious morsel.

No doubt burrowing insects, such as beetles, also find their way within the silk-lined hall of the Purseweb Spider.

Perhaps, also, the peeping noses of ants are thrust through the silken curtain, only to bring their owners into the clutches of their hereditary foe.

Strange things are these which are wrought in the secret places of the earth. What struggles for life! What battles for daily food! What romances of "hairbreadth 'scapes i' the imminent deadly breach" could one unfold, if he could enter the subterranean realms of insect and spider world, and attune his ears to the stories which, in their dumb language, these creatures of the ground might tell!

HENRY C. MCCOOK.

SELF-SATISFIED.

Schopenhauer, the great German philosopher, afforded one of the most remarkable examples of self-complacency that has ever been known. His naïve eulogiums on his own productions are almost beyond belief.

In writing to his publishers of his work, he says, "Its worth and importance are so great that I do not venture to express it, even toward you, because you could not believe me;" and he proceeds to quote a review "which speaks of me with the highest praise, as the greatest philosopher of the age, which is really saying *much less* than the good man thinks."

"Sir," he said to an unoffending stranger who watched him across a table d'hote, where he acted the part of the local "lion" habitually, "Sir, you are evidently astonished at my appetite. True, I eat three times as much as you, but then I have three times as much mind!"

Auerbach, the German novelist, also had a great appreciation of his own powers and work, and many stories are told of the obtrusive way in which he displayed his vanity. A German writer says of him:

"Every year Auerbach visits three or four fashionable watering-places, at each of which the following episode occurs at least thirty times. The novelist indulges in small talk with the little children of the natives, and invariably ends the conversation thus: 'Knowest thou who has been talking with thee? Berthold Auerbach! Tell that at home!'"

Itching Piles.

A TROUBLESOME PET.

An elephant is a very pretty and pleasing pet under certain circumstances—if one has plenty of room for him, experienced servants to care for him and keep him in health, and abundance of money to spend in making his surroundings just what they should be. But a pet elephant in a great city, with no better place in which to keep him than an ordinary city stable, is likely to turn out an "elephant on one's hands" in fully the proverbial sense.

Notwithstanding the proverb, a New York gentleman, Mr. R—, in visiting Europe about a year ago, was so greatly pleased with a baby elephant which he saw at Hamburg, that he resolved to purchase it and bring it home with him.

The elephant was only two years old, but it already weighed two tons. Its name was Mademoiselle Fanchon, and it was born in captivity in Hamburg. It did not need any taming, for it was already perfectly tame.

Mr. R— brought his new pet to New York on a steamer, and set about giving her a brilliant education for an elephant. She was lodged in a stable across the Hudson in Hoboken, but was so poorly taken care of there, and seemed so plainly to be entering upon a decline, that Mr. R— removed her to his own stable in New York city.

Here she made famous progress, and not only increased rapidly in strength and size, but learned how to put a tall hat on her head with her trunk, to take it off and bow gracefully, and even to ride on a great velocipede and balance herself upon a ball.

All went well with Mademoiselle Fanchon until one day Mrs. B—, the wife of Mr. R—'s coachman, was astonished and alarmed to see the young elephant enter the door of her kitchen. Mrs. B—, uttering a shriek, rushed upstairs and the elephant followed her.

Then Mrs. B—, seizing her children, rushed out and down the front steps of the house into the street, still uttering cries of alarm. A crowd gathered, but Mrs. B— was so much excited that she could not tell what was the matter.

Presently the elephant appeared at the front window, and the crowd understood the woman's alarm. Mr. R— and a policeman were sent for.

All sorts of efforts were made to make Mademoiselle Fanchon go downstairs. She could neither be coaxed nor forced to take a single step downstairs. Whoever had taught her to go upstairs had totally neglected to teach her to go down again.

Hours and days went by. Mademoiselle Fanchon was apparently quite well satisfied with her new quarters. She sat at the front window, waving her trunk back and forth at the crowd which gathered on the street.

The daily newspapers learned of the affair, and sent their reporters to record the baby elephant's funny proceedings.

In the meantime Mr. R— set carpenters at work making a staging and a gradual descent to the street, down which Fanchon was to be persuaded to walk. When this was done, and a great crowd had gathered to see the descent, and a detachment of police had formed a line in front of the staging, Mr. R— and a colored servant appeared at the front door with the elephant.

Mr. R— held Fanchon by the trunk, and the colored man pulled her by one ear. She advanced unwillingly upon the staging, and just as she did so she made a quick turn which pushed Mr. R— off the staging and upon the ground, fifteen feet below.

The crowd gave an exclamation of terror, but laughed when Mr. R— sprang up uninjured.

It was evident that Fanchon could not readily go down the slope, so several bundles of hay were brought, spread carefully around the foot of the incline, and the elephant pushed bodily down.

She landed upon the hay without any injury, except a scratch upon one of her fore-legs, and soon resumed her old quarters in the stable.

INQUISITIVE.

Children are all the time holding up a mirror in which older people may see their own characters reflected. Here, for example, is a picture for nervous invalids.

"Have you got a pain, my little puss?" said Mary's mother.

"Yeth, mamma; it hurth like anything when I touch it."

"Then I wouldn't touch it, dear."

"But, mamma, I want to thee how much it hurth."
—*Jester.*

AMBIGUOUS.

He is a very discreet man who never says either too much or too little.

At a business meeting, reports the Lowell *Citizen*, the chairman announced:

"Brother Skinner submits his resignation as a member of this society. What action shall be taken upon it?"

"I move you, sir," said one of the parliamentarians present, "that the resignation be accepted, and that a vote of thanks be tendered to Brother Skinner."

TRUE GENTLEMAN.

Old words are continually receiving new definitions. Two negroes were talking about their respective employers.

"Well, now," said one, "nobody can't say but Mr. Loftus is a real gentleman."

"Oh no," answered the other, "he's well enough. But he aint no such man as my boss. My boss is always jes' so. Why, I see him step on a bananer peel t'other day, an' it didn't frustrate his dignity the leastest bit."

HONORABLE MENTION.

Newspaper notoriety is an evil not confined to the United States. A German paper reports this dialogue:

Customer (reading a newspaper): Here I see I am referred to in the paper again.

Landlord: Indeed! What do they say about you?

Customer (reading aloud): "At the close of last week Berlin numbered 1,573,421 inhabitants." I am one of that number.

PATRICK was numbering his family for the census-taker. "There's a b'y," he said, "and a b'y and a b'y; meself, me wife and a b'y; and three great grown girls—and a b'y."

Ladies' Underwear should be made from KING PHILIP CAMBRIC, LAWNS and NAINSOOKS. Send stamp for samples. King Philip Mills, Worth St., N. Y. [*Adv.*

Restore Strength

quicken the appetite, prevent complications, and tone up the System

After La Grippe

by taking the most reliable and successful medicine,

Ayer's Sarsaparilla

Cures others, will cure you

Why Suffer One Moment

From Torturing Skin Diseases

When a single application of the **Cuticura Remedies** will, in the great majority of cases, instantly relieve the most agonizing of itching, burning, scaly, crusted, pimply, and blotchy skin and scalp diseases, and point to a permanent and economical (because so speedy) cure, when the best physicians and all other remedies fail? **Cuticura Remedies** are the greatest skin cures, blood purifiers, and humor remedies of modern times, are absolutely pure and agreeable to the most sensitive, and may be used by the youngest and most delicate with perfect success.

CUTICURA the great skin cure, instantly allays the most intense itching, burning, and inflammation, permits rest and sleep, speedily heals the skin, and restores the hair. CUTICURA SOAP, an exquisite skin beautifier, is indispensable in cleansing diseased surfaces. CUTICURA RESOLVENT, the new Blood and Skin Purifier and greatest of Humor Remedies, cleanses the blood of all impurities and poisonous elements, and thus removes the cause. Hence the **Cuticura Remedies** cure every disease and humor of the skin, scalp, and blood, with loss of hair, from infancy to age, from pimples to scrofula.

☞ "ALL ABOUT THE BLOOD, SKIN, SCALP, AND HAIR" mailed free to any address, 64 pages, 300 Diseases, 50 Illustrations, and 100 Testimonials. A book of priceless value to every sufferer.

CUTICURA REMEDIES are sold everywhere. Price, CUTICURA, the Great Skin Cure, 50c.; CUTICURA SOAP, an Exquisite Skin Purifier and Beautifier, 25c.; CUTICURA RESOLVENT, the greatest of Blood Purifiers and Humor Remedies, $1. Prepared by POTTER DRUG AND CHEMICAL CORPORATION, Boston.

Bad Complexions, pimples, blackheads, red, rough, and oily skin and hands are prevented and cured by that greatest of all Skin Purifiers and Beautifiers, the celebrated **Cuticura Soap.** Incomparably superior to all other skin and complexion soaps, while rivalling in delicacy and surpassing in purity the most expensive of toilet and nursery soaps. *The only medicated toilet soap, and the only preventive of inflammation and clogging of the pores, the cause of most complexional disfigurations.* **Sale** greater than the combined sale of all other skin soaps. Sold throughout the civilized world. Price, 25c.

BUNION IS A SUBCUTANEOUS swelling seated on the inner side of the ball of the great toe. In its early stage it is a thin-walled sac filled with clear fluid and then causes very little uneasiness, but subsequently, in consequence of constant pressure and friction, becomes hard and tender. Sometimes, particularly after active exercise, the swelling becomes very painful and inflamed, and forms an abscess. The treatment should be immediate, and consist in the application of ALLCOCK'S BUNION SHIELDS. They will always give relief, and in most cases, if continued, effect a cure.

CORNS IF A PORTION OF THE cuticle or scarf skin becomes greatly thickened, and penetrates into the true skin, causing great pain and annoyance, it is called a corn. Corns are commonly spoken of as *hard* and *soft;* the hard are those situated on the more exposed surfaces of the foot, where the cuticle gets dry and hard, and the soft, where the cuticle is moist, generally between the toes.

For treatment apply ALLCOCK'S CORN SHIELDS. Absolute comfort will be obtained while wearing them, and if continued a final cure effected.

A package of the CORN SHIELDS or a sample of the BUNION SHIELDS will be mailed on receipt of 10 cents. POROUS PLASTER CO., 274 Canal Street, New York

ICE CREAM MADE IN THIRTY SECONDS. Throw Away Your Old Freezer.

SIGN OF GRACE.

In 1843 the great mass of Scotchmen left the Established Church, and cast in their lot with the Free Church. Those who remained were called moderates, and were rather despised as lukewarm church-members by their more decided brethren. In "Scenes and Stories from the North of Scotland" is an anecdote concerning a new minister in the parish of Alness, who resolved that he would act as if all church-members were his parishioners, whether they would or not.

One day he visited a Free Church elder, who was no friend of the moderates. The minister did his best to be affable and conciliatory, but his reception was cold, and, in fact, little more than civil.

At length, without any special intention in the act, the minister drew his snuff-box from his pocket, and invited the elder to make trial of its contents. A decided thaw set in immediately.

"Oh, ye tak snuff, do ye?" said the Free Kirk man, yielding to a gentle smile.

"Oh, yes," said the visitor, somewhat afraid that the admission might lead him into trouble. "I take snuff; but what of that?"

"Well," said the elder, "that's the first sign o' grace I've seen about ye."

"Sign of grace! Why, how do you make out that snuff-taking is a sign of grace?"

"Nothing easier," said the elder, with a knowing twinkle in his eye. "Don't you remember that in the ancient temple all the snuffers were of pure gold? That denotes the best of all qualities."

HIS "BRAWSES."

The American system of checking trunks is sometimes a puzzle to foreigners. An amusing story is told in the Chicago *Tribune* of a young Englishman who evidently understood one part of the subject—namely, that the checks must not be lost.

"Have me bawxes arrived?" he said to the hotel clerk.

"Hey?"

"Me bawxes."

"Eh! Oh, your trunks. Front, find the gentleman's trunks!"

They were not to be found, and their owner decided to go to the station for them himself.

"Have you me bawxes here?" he said to the agent.

"Huh?"

"Me bawxes."

"Trunks, d'ye mean? Let's see yer checks."

"Me checks! checks!" was the puzzled answer. "Bless me stars! Cawn't understand! I —"

"I want your trunk checks. Here, these things," explained the agent, showing a check.

"Oh, it's me brawses you want? I locked them in me bawxes. I'll have to get me bawxes first."

"Well, that beats my time!" ejaculated the baggageman. "Oh yes, certainly, I'll find 'em," and he did.

HOW SIGISMUND WON.

"A carpenter in our family!" cried Karl Edelmann. "Never! We have been musicians for generations. My grandfather was a good violin-player; my father was a better one, and Munich may speak for me. Sigismund, too, shall play the violin, and he shall outdo us all. Is it not so, my son?"

"A worse fate might befall him than to have a good trade, with which he might support himself and family," replied his wife Elise, who was always practical.

"It shall never be!" exclaimed the violinist. "But why anticipate such a misfortune? Why, if all the boys who whittle were to become carpenters, we should soon have nothing else in the world!"

The mother shook her head. "Mark my words: you will never make a violinist of Sigismund. Content yourself with his sister Lieschen. In her we have something quite different. She has the voice of an angel, and already it is a joy to hear her play the piano."

"She is two years older."

"That does not make the difference. When she was a baby she would listen hours to your playing. When did Sigismund ever notice your music?"

"He shall notice it, and from this time!" responded Karl. "I have neglected him too long. To-morrow his lessons shall begin. But now, my dear, I must go to the rehearsal. I am late already."

Taking up his violin-case, and kissing his wife and child, he hurried away.

Karl Edelmann was a member of the great orchestra at Munich. He was already quite celebrated as a musician, and had many pupils.

He gave Sigismund his first violin lesson next day. It was not pleasant, either to Sigismund or to his father.

The lessons went on for a year, during which time the boy made so little progress that even his sanguine father was well-nigh discouraged. However, after a time the unpromising pupil began to improve. He could hardly have failed to possess some aptitude for music, and skilful instruction and two hours of daily practice were not without fair results.

But with all his progress, many of those who heard the child play felt that a bitter disappointment was in store for the father. His brother artists ventured to hint something of the sort to him, but he said:

"You shall see what patience and courage can do. It is impossible that he should not possess the genius of my family. It sleeps, it is under some spell. But when it is waked at last, the melody that will burst forth may thrill the heart of all Germany. You shall see!"

It was soon evident, even to his mother, that the boy was not destined to be a carpenter. He continued to find his chief delight in a piece of wood and a knife, but the articles that he made were carved solely that he might have the pleasure of ornamenting them afterward.

Wood-carving cannot be done very successfully when the only available tool is an old knife; but little Sigismund's patience seemed inexhaustible.

Sometimes his mother, who was a Swiss, talked to him of her Interlaken home, and of the wood-carvers and their pretty work; and she promised that he should see them all some day, if he would be a faithful boy and please his father by learning to play the violin.

"The child is becoming sullen and moody," she said to herself, "it will cheer him to look at this bit of brightness on beyond."

She did not imagine how everything in Sigismund's life began to revolve around this darling dream of seeing the Swiss wood-carvers. The mother only smiled when she was awakened in the morning by the sound of his violin, and thought perhaps her husband was right, after all.

Three years passed slowly away. Sigismund toiled on with true German courage and perseverance. His heart was made glad by a word of praise from his father, for each hard-earned "Bravo!" carried him one step nearer Switzerland. He could afford to work and wait.

But the mother often sighed as she listened to Sigismund's playing, and one day her husband asked her why she was always so melancholy when the boy was practising.

"Ah!" she replied, "Patience and faithfulness may accomplish great things, but, after all, they will never work miracles. Dear heart!" she added, tenderly, "He has done his best."

"Yes," said Karl, with a grave face, "that is true. The boy has done his best."

"He deserves a holiday, Karl," she said. "May we not go to visit my parents now?"

After a little reflection, Karl consented, and on the morning of his twelfth birthday Sigismund awoke in Interlaken. He could hardly believe that his dream of years had come true, and he pinched himself and rubbed his eyes vigorously to be sure that he was not still dreaming.

Sigismund's Victory.

Early on the very first day he disappeared to seek the wood-carvers. Twelve o'clock came, but Sigismund did not appear. His grandparents were hurt at his absence, and his mother was seriously annoyed. All the long, bright afternoon Elise sat in the little porch with her sewing, watching for a glimpse of Sigismund.

Just as the day was drawing to its close, she descried a familiar figure far down the dusty road. She dropped her sewing and ran to meet him. The boy looked pale and tired, but there was a radiant light in the blue eyes.

The mother understood, and her heart misgave her. Perhaps it would have been better if Sigismund had never heard those stories of her Swiss home; and yet she had only longed to help and encourage Sigismund in his irksome task.

She had unwittingly brought fresh trouble to the boy and vexation to her husband. Well, it was done now. Sigismund must have his holiday; she must abide by her promise.

The month in Interlaken passed away far too rapidly for Sigismund, and the day of departure drew near. He bade farewell to the men in the little hut of wood-carvers which he had found by the mountain-side, and carried away with him the pretty things he had carved and the few tools which the kind carvers had given him.

All the way from Interlaken the box which held these treasures was the boy's chief care, and as soon as the first greetings had been exchanged at home, he opened the box and proudly exhibited its contents.

His father frowned.

"Ah!" he exclaimed. "This has been a mischievous journey. Sigismund has been led into folly. We shall see how he will play the violin to-morrow!"

Sigismund's fingers had suffered from lack of practice, and he played next day much worse than usual. Elise paused at the half-open door a moment, hearing her husband's loud voice.

"Oh," she said, "Karl will always try to make a nightingale out of a woodpecker, and in the end he will have neither! It is a pity, for the woodpecker is a good little bird, after all!"

The tempest in the music-room raged on. At last Karl Edelmann lost control of his temper. He seized the violin and bow from Sigismund's hands, and threw them to the floor.

"Have you, then, no heart," he cried, "that you can play the divine melodies of Mozart in such fashion?"

Poor Sigismund! No heart! He stood quite still on the spot where he had been standing when the storm burst upon his head, the picture of silent woe. His hands were tightly clasped, and his face was white and set.

Suddenly the father took his own violin and bow from the piano and began to play. At first the music was stormy and passionate, but gradually the player's mood changed, and the music grew softer and sweeter.

Lieschen, who had been in the next room, crept softly in and stood before her father. She was now a graceful girl of fourteen, with the enthusiastic, emotional nature of a born musician, and was a constant delight to her father. He glanced at her as she entered the room, but continued his playing, well pleased that she had come.

It was always an inspiration to play for the child, who sighed or smiled at the will of his bow, and this afternoon he seemed to find a rare enjoyment in watching her sensitive face. Finally he closed with an exquisite lullaby.

As he laid down his violin, the overwrought girl threw herself into her father's arms, sobbing as if her heart would break.

"My little Zoldan lary," he said, "responsive to the faintest breath that passes over you! You have feeling; you have a soul! But your brother Sigismund! I do not understand him."

He turned to address the boy, but Sigismund had slipped quietly away, and was in his little room in the attic. His troubled mother had followed him, hardly knowing what she could say when with him. Her heart ached for her boy, but she was a dutiful wife, and most loyal to her husband.

When she opened the door, she was alarmed by Sigismund's haggard face.

"Mother," he cried, angrily, "I hate the violin! I can never play to satisfy father, and I am never going to try any more. I will play just as badly as I can, and then perhaps he may see how useless it all is, and allow me to give it up and be a wood-carver."

"No, no, my dear child!" said his mother, soothingly. "Only those who wait patiently may realize the desire of their hearts. An undutiful son can never hope to succeed. Who knows what may be in store for you, if you are dutiful?"

Before Sigismund could answer, his father entered the room.

"Father," said the boy, "let me give up violin-playing! You will be disappointed in me, and ashamed of me. If you will only let me carve, I will work until you are proud to call me your son."

The violinist started toward Sigismund's work-table with an angry gesture.

"This has made all the trouble," he exclaimed. "We will have an end of it."

Sigismund darted in between his father and the table. "Father!" he cried, wildly.

The violinist paused and looked into his son's excited face. "Foolish child!" he said. "Did you think I would harm your dear transperry?"

"Father, you do not forbid me to carve!" he said, imploringly.

Edelmann reflected a moment. If he forbade the boy to carve, would he not be tempted to deceive him? The more he was opposed, the more determined he might be. He would allow Sigismund to go on as before, hoping that the passion might wear itself out.

Reluctantly he gave the boy permission to continue his carving.

He turned away as he spoke, and went downstairs, followed by his wife.

"Karl," she said, "did you love the violin when you were a boy?"

"Did I love it?" repeated the violinist. "Yes, with all the might of my young heart."

"Karl, if your parents had denied you the joy of following your own choice, and had forced you to learn a trade —"

"Hush!" he said, flushing and putting his hands to his ears. "Will you oppose me, too?"

"You are wiser than I," said Elise, "but listen to me this once."

Edelmann left the room, but her words went with him; and try as he might, he could not escape them. He returned home at supper-time, but said little during the meal, and all the evening he looked grave and preoccupied.

As Sigismund took his lamp and said, "Good-night," he motioned to him to wait. He went to the boy, and laid his hand kindly on his head.

"God forbid that your father should be the cause of a life-long discontent," he said. "Now listen. I have little faith in your carving, but when you can prove to me that you will make a better carver than violinist, you shall choose for yourself. Meanwhile, the violin lessons shall continue as before, and in the future, as in the past, you will do your best."

Sigismund was so overcome with surprise and delight that he could not speak; but no words could have touched his father as did his happy, grateful face.

Digitized by Google

The lessons went on more smoothly. Sigismund's gratitude led him to work harder than ever, and his father was more patient and gentle.

Sigismund began to feel dissatisfied with his progress in wood-carving, and to long for instruction. One day, his father sent him to a part of the city that was unfamiliar to him. As Sigismund was walking through a narrow street, his attention was arrested by the sight of a man who sat near the window of his shop, busily engaged in carving a large panel.

The door was open, and that was a sufficient invitation to Sigismund to enter. The man glanced up at the sound of the footsteps, but continued to carve, merely nodding by way of salutation.

Sigismund had never seen such work before. It made all that he had thought so beautiful seem rough and coarse.

For an hour he stood watching the man. Then he said, "I must go. May I come to-morrow?"

The man nodded again, and Sigismund went home, full of hope and wonder.

Day after day he went to the little shop, and stood silent and watchful before the skilful old workman. His quiet, respectful demeanor and his intense interest in the carving finally won Fritz Wagner's approval, and one Saturday he gave him a piece of wood and some tools, and pushing a model toward him, said shortly, "Begin!"

Sigismund had always worked in soft wood before, and he found it far more difficult to carve the piece of oak now in his hands.

For two hours, Fritz and Sigismund worked in silence. Then the old carver laid down his panel, took the pipe out of his mouth, and examined Sigismund's work.

A few questions sufficed to draw from the lad his story, and the sympathies of his new friend were at once enlisted.

"You shall win," he said. "Listen. Every day you shall come to me. How long? Two years."

Sigismund uttered an exclamation of dismay and disappointment.

"As you will," returned Fritz, shrugging his shoulders. "I shall be spared the trouble of teaching you."

"Oh!" said Sigismund; "I will do anything that you want, and wait any time if you will only help me."

Good times began with the lad. He studied and carved patiently, and the two years passed quickly, even for Sigismund, for he was busy and happy.

Most of the time had been spent on an oak cabinet, which was designed to hold his father's music, and was to be presented to him on his forty-fifth birthday.

It was finished just a week before the appointed time, and Fritz Wagner surveyed his pupil's work with pride and delight.

"Courage, child!" he said, kindly, noticing the anxious face before him. "You have won!"

The eventful day dawned—the day which Sigismund instinctively felt was to decide his future career.

Karl Edelmann arrayed himself in holiday attire, and seated himself in the parlor to receive the felicitations and gifts of friends and pupils. A *Geburtstag* is a very important anniversary in Germany. Karl's parents, his wife and daughter presented their remembrances early in the morning; but where was Sigismund?

The morning slipped away, and then the afternoon, yet Sigismund offered neither presents nor congratulations to his father. Occasionally he stole quietly into the room for a few moments, but soon vanished again.

At the close of the afternoon, as Herr Edelmann stood at his door, bidding farewell to the last departing guest, two men appeared before him, bearing an oak cabinet. They placed their burden in the hall, and then Karl noticed that Sigismund was there. His face was pale, and the hand which he extended to his father trembled.

"Dear father," he said in a low voice, "I congratulate you."

Edelmann took the lamp in his hand, and examined his son's gift in silence. He passed his hand critically over the beautifully adorned pilasters. No rough work there! Then he examined the doors. As before, he passed his fingers over the vine that ran around the margins, and touched gently the violin and scroll of music that were carved on the two doors, beautiful in design, and faultlessly smooth and clean-cut.

He raised the lamp, and above his head read these words carved in German text across the top of the cabinet, "For a Remembrance, on your Birthday."

For some minutes the violinist remained standing with his back toward Sigismund, apparently still attentively studying the words. Then he walked to the hall table, set down the lamp and approached Sigismund.

"My boy," he said in a husky voice, "you have earned the right to choose for yourself."

Sigismund caught his father's hand in both of his own and tried to thank him, but he could say little.

"No, Sigismund," said his father; "rather thank your patience and faithfulness—your courage and perseverance."

Sigismund, looking up, saw for the first time that there were tears in his father's eyes.

"O father!" he cried, remorsefully. "I will play the violin just as before. I can do both!"

"No, my child," replied the violinist. "Life is too short. It is seldom that one can excel in two callings. Remember," he added, smiling, "you are to become famous, and be your father's pride. I shall hold you to your part of the bargain, Sigismund."

Did Sigismund fulfil his promise to his father? The end is not yet, for he is still young; but it is with mingled pride and amusement that Herr Edelmann hears himself designated as "the father of that wonderful young wood-carver."

"Ah, well," he says, when regrets sometimes come to him that his son is not following his own career; "it is art, and high art; and if one may believe what one hears, perhaps Germany may yet ring with the praises of my boy. Who can tell?"

BETHY.

In Three Chapters.—Chapter III.

Bethy's Burglar.

When Donald Noble read the paragraph from the Maysville paper, Bethy dropped the dish she held in her hands, and she did not notice it as it crashed on the floor. She was very white. She turned and called to Nip, who ran to her, and lifted himself up to be taken.

"Where is Aunt Esther?" she asked.

Charley.

She went toward the door. Donald hurriedly placed himself before her.

"I beg your pardon," he said, earnestly. "I didn't know you would care so much; I didn't, indeed."

"You didn't care, anyway!" she cried, in a sharp tone. "You don't know what it is to live with Uncle Jacob's wife! Oh, where is Aunt Esther?"

She flung out of the room, and Donald heard her rushing upstairs, saying to himself that he felt like a sneak, and went out of the house.

He heard the stamping of a horse's feet in the barn, and went around to the wide-open doors.

To his surprise, there was Mrs. Dudley harnessing the colt into the gig.

"Do take hold, Donald!" she exclaimed, when she saw him. "I can't seem to bring buckle and tongue together. Ezry's going to try to get to Marlow's station to catch the train to reach Maysville. Do you suppose the colt can do it?"

Donald was glad to help. He harnessed the horse quickly, and looked at his watch.

"I guess this colt can do it, if Uncle Ezry starts right off," he said.

"That's just what I'm going to do," said Uncle Ezra's voice. "You're just the boy to go to Marlow's with me, and drive back the colt," he continued. "Jump in!"

Donald was glad to do as he was told.

As the two settled themselves on the narrow seat, a light figure seemed to fly into the barn and upon the hub of the wheel next to Mr. Dudley. Donald had a glimpse of a white face; he saw two arms go round the old gentleman's neck, and heard a voice that seemed half-strangled say:

"Dear Uncle Ezry, good-by!"

The girl was gone. The light gig whizzed out of the yard, and as it turned the corner into the road, Mr. Dudley shouted to Bethy and his wife:

"Don't you worry one grain! I'll fix everything, and be back to-morrow."

Bethy kept very close to Mrs. Dudley. The two milked the cows at night and did all the barn chores.

It was unfortunate that, when they were resting at twilight, after their work was done, some one who had been to the post-office should stop and leave the mail. It consisted of Mr. Dudley's weekly paper and a letter returned from the Dead Letter Office for Bethy. This proved to be her own letter, sent some time ago to her brother, wherein she had at last told him how she had run away, and what friends she had found, and had begged him not to think she had done wrong.

Bethy was bewildered as she looked over the familiar lines upon which she had so labored. For a long time she could not understand that Charley had never received the letter, and that, because she had given her address, it had come back finally to the writer.

"But where *is* Charley?" she asked, a new terror coming into her mind.

Mrs. Dudley was somewhat puzzled, too; but she tried to explain that perhaps Charley had gone to some other place; that he might have written to Maysville to tell his sister, and if he had done so, of course Bethy would not have received the letter.

This was all perfectly reasonable, and the girl tried to accept it and believe it.

When bedtime came, Aunt Esther locked the doors carefully—for she and Bethy were alone with Nip-'n'-Tuck for a protector—and went to Bethy's door and anxiously looked in.

There was Bethy, lying with very wide-awake face on the pillow, and cuddled closely in at the back of her neck was the little gray ball which was the terrier.

"I hope you aint afraid," said Mrs. Dudley. She herself had a certain sense of timidity, as she thought of the great house with its many untenanted rooms.

"I aint afraid of anything but Uncle Jacob's wife," said the girl, fervently.

As Mrs. Dudley slowly went up the stairs, she said aloud that she wished she had asked Donald Noble to sleep there that night. She did not know why she was so "fidgety."

She paused on the first landing, and looked out of the small-paned, blindless window. It was a black night, the clouds hanging low and shutting out the mountain entirely. A south wind was making the old sign creak and moan.

"I sha'n't sleep a wink to-night," she thought.

But when she lay down she was so tired that she fell asleep immediately, and was in a heavy slumber when she began to dream that she heard the terrier barking. Finally she became conscious that the dog was indeed barking furiously.

She sprang out of bed and began to dress in the dark, having an odd notion that it would be better for her not to light a lamp.

Just as she had flung on a dress she heard a creaking on the stairs, and Nip's barking came much nearer.

The next moment she saw the glimmer of a light under the door, and then the door was flung open, and Bethy appeared with a small kerosene lamp in one hand, and in the other and resting on her shoulder, was an old-fashioned shotgun which generally stood behind the door in the back kitchen.

Close to the girl's heels, and never ceasing to bark, was the terrier.

"Aunt Esther," cried Bethy under her breath, "there must be somebody here!"

She set down the lamp, and looked at the cap and trigger of the weapon.

A new terror was added to Mrs. Dudley's fears. She tried to get behind Bethy.

"It's loaded!" she exclaimed.

"I know it," replied Bethy. "Uncle Ezry said it was loaded to shoot crows. I'm thankful enough, for now I can protect you, Aunt Esther. It's burglars, aint it?"

She had closed the door by which she had entered, and the terrier was scratching furiously at it, keeping up his shrill bark.

"Did you hear anything?" Mrs. Dudley asked.

"Yes. I was 'most sure I heard somebody out by that door next the sheds; but Nip keeps up such a racket I can't listen. I'll go down and see, and I'll have my gun ready."

Mrs. Dudley was pulling on her shoes. She did not hear what the girl said, and Bethy directly left the room, Nip-'n'-Tuck squeezing out with her.

Bethy had never been so much frightened before; but she felt that it devolved upon her to protect Aunt Esther, and she felt that the shotgun was the only means by which she could do it. The gun was very heavy; but, having carried it upstairs, she succeeded in getting it down again.

She entered the long passage that ran outside what was once the tavern dining-room. There was a door at the end of this passage, toward the sheds.

She again heard, unmistakably this time, the sound of feet. She ran forward. This door was now never used. It was bolted, and it also had a chain upon it. Bethy had not neglected to explore and examine every bit of the old house.

She set her lamp down on the floor, and quickly flung open the door the few inches of the length of the chain. Nip put his nose out and snuffed.

Bethy thrust her gun through the opening.

"I shall shoot!" she shouted at the top of her voice, and then Nip burst out again, almost barking himself off his feet in his energy.

When he made an instant's pause there was the sound of feet moving outside.

Bethy was startled unspeakably by feeling some one grasp her arm. It was Mrs. Dudley, who whispered in her ear:

"We've got to run away! I guess the house is surrounded!"

She pulled the girl along, the gun dragging its stock on the uneven floor. Bethy was not at all afraid of it, but Aunt Esther feared the old gun, quite reasonably, almost as much as she feared the burglars.

They came to what had once been the bar-room. The counter and shelves were still there. It was Mrs. Dudley who now carried the lamp.

"We'll get out here, and run round the mountain to Mrs. Noble's," she whispered in Bethy's ear. "You must stop that dog's noise! They'll follow us, as sure's you're alive!"

Bethy hurriedly set the gun against the counter, and caught up Nip, enveloping his head in the folds of her skirt.

Just then the gun fell; its hammer struck the floor and it was discharged.

Luckily, neither Mrs. Dudley nor Bethy was shot; but both were frightened much worse than before. In spite of her fears, Bethy tried to say something against going away from the house; but Mrs. Dudley hurried her to the bar-room door, which opened on a porch. She opened the door, the rusty hinges creaking.

"Le's run!" whispered Mrs. Dudley.

The two ran over the grassy yard, quite unable to see anything, and apparently going against a black wall.

It seemed as if a voice shouted something. Bethy paused. A strange emotion darted through her heart. Nip writhed in her skirt but was held fast, and could only give a strangled bark.

The girl looked back. She saw the sudden glow and fading of the tiny flame of a match held by somebody.

Then Mrs. Dudley pulled her along again. They found the road fence and followed it. After a little it seemed to grow lighter, or their eyes became accustomed to the darkness.

Aunt Esther panted heavily, but she would not pause until they had gone around the mountain to Mrs. Noble's. Nip had ceased barking, and now appeared greatly depressed.

Perhaps he was weary. His companions certainly were, and the moments they waited before they could rouse any one were very long.

Mr. Noble said something about going back to the old tavern with Donald and some pistols, but finally put off the expedition until daylight.

Bethy and the terrier slept uneasily on the lounge until dawn, when the covered wagon was harnessed, and the refugees were taken back over the road they had come in such terror a few hours before.

Mrs. Dudley said that she expected to find the house in ashes; but there it stood, with the bar-room door open just as they had left it.

Nip began to grow excited again. He sprang out of the wagon before the horse stopped, and rushed in at that open door. One would have said that he was possessed by joy instead of any other emotion.

Bethy was on the ground almost as soon as the dog.

"He is certainly glad," she cried. She ran after him.

On a bench in the bar-room lay the figure of a man; and at that figure Nip leaped and writhed and twisted and whined, and licked as if beside himself.

Bethy was not much behind him.

"O Charley!" she cried, half-articulately. She had recognized her brother.

The figure of the young man rose with Bethy in one arm, and Nip in the other. He was standing thus when the rest of the party came up to the door.

"You see, it was Charley," said Bethy, laughing and crying, "and I might have shot him!"

Charley Adams did not use many words to explain that he had come East unexpectedly on business for his employer; that he had two days to spend with his sister, and not finding her with Uncle Jacob's wife, had started on the evening train for Marlow's, and walked from that station, arriving after midnight. He had had difficulty in getting upon the right road.

"Then I was taken for a burglar, and Nip barked so, and the wind blew so, and my sister protected so, that I couldn't make any one hear a word I tried to say."

"It did sometimes seem as if Nip was barking for joy," said Bethy, "but, of course, I thought I was mistaken. He knew you all the time."

"Certainly he did. You can't deceive a Yorkshire."

"What about Uncle Jacob's wife?" asked Bethy.

"She told me how you ran away, and how she had found out, through some one that came from Marlow's, where you were. It was lucky for me she did know, or what should I have done? She said she 'got along fully as well without you.'"

"Uncle Ezry's gone to see about it," said Bethy, with some pride.

That day Charles Adams had a long talk with Mrs. Dudley. He said he had intended to find a different home for his sister before he went back West, for, in truth, Mrs. Andrews was not a proper guardian.

When Mr. Dudley returned that afternoon he also asserted that Mrs. Andrews ought not to have the care of any one.

"Not that I believe at all in running away," he said, gravely.

"It was to save Nip-'n'-Tuck," said Bethy, earnestly. "I'd have borne almost anything myself, but when it came to him —"

The months went by rapidly. Bethy went to school; she was eager to learn. Hardest of all her struggles was the struggle to control her quick temper, but she made headway in that battle.

One day she brought herself to ask young Noble's pardon for her rudeness to him; better than that, she was careful not to be rude again.

"She's just been a blessing to us from the day she come," said Uncle Ezra one day to Mrs. Noble. "I've watched her, and I see she always wants to do the right thing. I do' know how we shall get along if she ever leaves us. Yes, I know we took her in; we ought to be kind to all poor human beings, but you don't always get paid for your kindness as we've been. There she is, now."

Coming up the same path from the valley which she had followed almost a year before was a girl with a rough terrier under her arm. She was singing. When she saw the group on the porch she waved her hand gaily, and hurried forward.

MARIA LOUISE POOL.

The End.

For the Companion.

IN THE GREAT JAVAN UPHEAVAL.

In Two Chapters. — Chapter II.

Adventures by the Way.

Natt did not accept the native's statement that Samarang had suffered so great a calamity.

"Don't confide in such a rumor," he said. "There must be more false reports than true ones at such an hour."

This was quite reasonable, but the apprehension that my father and sister were involved in the catastrophe had taken a disturbing hold upon my thoughts.

We continued along the post-road, and gradually ascended the wooded plateau to the northeastward of Merapi. Volcanic dust was sifting down in a continuous shower, and the trees were becoming loaded with it.

We saw several herds of the *rusa* deer and even rhinoceroses in the woods near the road. Presently Natt called my attention to two striped animals which lay outstretched near the foot of a palm.

"Tigers!" said he. "But they look as if they were frightened or dazed."

We could have shot them, but we had no thought of firing upon any of the poor brutes.

About noon we gained the summit of the plateau, and entered what in the old days must have been an extensive public garden. The remains of sculptured masonry were to be seen on both sides of the road.

Toward five o'clock we came to a large, rectangular monument, or mausoleum, more than thirty feet high, and carved with subjects connected with the religion of Buddha.

We passed the night beneath this old mausoleum. Despite the glare and the thunderings of the volcanoes, I dozed through the night, with many strange dreams. We had been quite worn out with the excitement and constant walking.

All the food which we were able to prepare was sprinkled with dust and grit. After making such breakfast as we could, our forlorn little party resumed its way along the government road, across the plateau, and afterward down the slope of a long mountain-side of partially cleared land.

Here and there we passed deserted villages, but for eight or ten miles we saw only a single human being, a woman gathering bananas from a dusty garden. Everywhere the fields of cane, paddy, indigo and tobacco were loaded down beneath the thick coat of ashes and dust.

We passed many cracks in the ground across the road, some of them a yard in width, caused, no doubt, by the shocks of earthquake which, with diminishing violence, recurred every few minutes during the whole forenoon.

At length, turning the base of a hill, we heard a confused babel of human voices, and presently found ourselves in the suburbs of a large town many of the houses of which had fallen, or had been burned.
